Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S167 Akatarawa Valley Residents - Allan and Sarah Kelly

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
167.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
167.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
167.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
167.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
167.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
167.006	General comments	General comments - economic	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		cost/impact		been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
167.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
167.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
167.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
167.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
167.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
167.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
167.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S149 Akatarawa Valley Residents - Allan MacDonald

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
149.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property. 		permitted activity.			
149.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
149.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
149.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
149.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

				costs could be unsustainable for the average property owner.	

S154 Akatarawa Valley Residents - Ash Barker & Kes Barker

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
154.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
154.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
154.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
154.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
154.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
154.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
154.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
154.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
154.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. 	Whanganui-a-Tara	activities on a property of between 4 hectares and 20 hectares - permitted activity.		and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
143.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

S166 Akatarawa Valley Residents - Dr Anna De Raadt & Roger Fairclough

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
166.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
166.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
166.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
166.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
166.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
166.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
124.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
124.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
124.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
124.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
124.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
124.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
124.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
124.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
124.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		on a property of between 4 hectares and 20 hectares - permitted activity.		is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	
124.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
124.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
124.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
124.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of

Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
139.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
139.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
139.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
139.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.
139.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
139.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
139.012	8 Whaitua Te	Rule WH.R26: Farming	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII,

	Whanganui-a-Tara	activities on a property of between 4 hectares and 20 hectares - permitted activity.		and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
139.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

		permitted activity.			
171.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
171.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
171.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
171.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

				costs could be unsustainable for the average property owner.	

S128 Akatarawa Valley Residents - Joany Grima & Allen Rockell

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
128.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
128.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
128.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
128.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
128.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
128.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
128.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
128.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
128.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and 20 hectares - permitted activity.			
152.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

S163 Akatarawa Valley Residents - John Simister

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
163.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
163.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
163.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
163.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
163.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
163.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
163.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact socking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
163.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
163.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.
163.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
163.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
163.012	8 Whaitua Te	Rule WH.R26: Farming	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII,

				time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	
146.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.
146.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
146.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
146.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		and 20 hectares - permitted activity.			
146.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

S133 Akatarawa Valley Residents - Len Drabble

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
133.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
133.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
133.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
133.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
133.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
133.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. 	Whanganui-a-Tara	r from new unplanned greenfield development - prohibited activity.		them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	
174.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
174.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S142 Akatarawa Valley Residents - Paul Arnold

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
142.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
142.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
142.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
142.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
142.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
142.006	General comments	General comments -	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		economic cost/impact		available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
142.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
142.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
142.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares -	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.

Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

S162 Akatarawa Valley Residents - Phil Kirycuk

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
162.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
162.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
162.003	General comments	General comments -	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of

		consultation		consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	consultation and engage with affected communities according to the Local Authorities Act.
162.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
162.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
162.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
162.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact socking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
162.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and	Reinstate the exclusions as given to the other districts.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	
162.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.
162.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
162.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
162.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.

All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
123.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
123.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
123.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	
123.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact stocking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
123.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm accessways, and that GWRC has not provided justification or evidence for this change.	Reinstate the exclusions as given to the other districts.
123.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.
123.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
123.011	8 Whaitua Te	Rule WH.R13: Stormwater	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	r from new unplanned greenfield development - prohibited activity.		them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	
123.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.
123.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

S164 Akatarawa Valley Residents - Sarah Purdy

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
164.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
164.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
164.003	General comments	General comments - consultation	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of consultation and engage with affected communities according to the Local Authorities Act.
164.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.

No decision requested. –GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
172.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and time implications for resource consents and other requirements, including maintenance of non-farm	Reinstate the exclusions as given to the other districts.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				accessways, and that GWRC has not provided justification or evidence for this change.	
172.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Considers that landowners should be able to continue to farm at the level practicable for the land rather than be constrained to an arbitrary stocking level. Considers that changing levels of farm activity is normal for rural property farm management, and that the current provisions would see some residents say their land is incapable of reasonable use.	Review stocking rates to allow for low intensity farming. Provide information on how rates have been determined. Include an additional category for small breeds of cattle and deer.
172.010	2 Interpretation	Unplanned greenfield development	Oppose	Considers terminology used in this document describing areas such as the Akatarawa valley as "Unplanned Greenfields Areas" is misrepresentative.	Change the terminology of "Unplanned Greenfield Areas" to "Non-Urban Areas" or "Rural Areas".
172.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns that under PC1, landowners intending to build and live on their properties would need a District Plan change from rural to urban to allow them to do so and associated uncertainty and costs. Considers that urban zone rules are not fit for purpose for rural areas. Considers people who live in rural areas add value to the biodiversity of the area, adding to ecosystem health, including that of the waterways.	Uphold and maintain current landowner property rights and delete all rules that uphold the position taken in this document about this aspect, such as Rule WH. R13.
172.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares -	Oppose	Considers there is no data to suggest low intensity hobby farms and lifestyle blocks are the cause of poor water quality and the requirement to register and provide information is onerous and unjustified. Considered registration should be reserved for properties where there is a risk of elevated nitrate levels.	Delete the registration requirement for these properties. GWRC to accept the designation of property management plans set out in the gazette NPS-IB namely QEII, Conservation and other approved property management plans which may include small farms of 4 or more but less than 20 hectares.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		permitted activity.			
172.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Considers there is no data that points to farming on larger properties being the cause of poor water quality and notes that the RMA currently prohibits clearing of bush to scales that will increase erosion. Considers the requirement to register and provide a farm management plan is onerous and not justified when residents are already incurring costs to maintain the land and/or regenerate indigenous biodiversity, including pest control activities, and costs could be unsustainable for the average property owner.	Consider introducing additional categories of properties that reflect the actual range of properties E.g. add a new category for properties over 20 hectares that are largely unproductive and delete the requirement for this type of property to be registered. Exclude land registered in the Emissions Trading Scheme, QEII Trust, Conservation, approved property plan as per the NPS-IB.

S138 Akatarawa Valley Residents - Tony Wood & Helen Wood

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
138.001	General comments	General comments - overall	Oppose	Supports the intention for quality regarding freshwater and ecosystems but seeks an evidence-based approach that supports targeted strategies tailored for particular eco systems and environments. Considers that PC1 fails to provide sufficient evidence or appropriate targeting to rationalise its implementation and would render their land incapable of reasonable use (per section 85 of RMA), especially for those landowners who have yet to build on their property.	Stop the PC1 process immediately and engage with the affected communities using a proper and meaningful consultation process once government direction is clear.
138.002	General comments	General comments - current legislation	Oppose	Notes that the coalition government intends to replace the National Policy Statement for Freshwater Management and repeal the RMA reform and considers that it is unreasonable and a waste of ratepayer funds to consult with communities that lacks government policy direction.	Stop PC1 process until the policy direction is known.
138.003	General comments	General comments -	Oppose	Considers GWRC has failed to meaningfully consult with the community as required by the Local Government Act (2002) and GWRC's principles of	All documents related to this proposal should be communicated in plain language as per the Plain Language Act (2002). Expects GWRC to meet the principles of

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		consultation		consultation. Considers meaningful participation was difficult due to the lack of a summary being made available for consultation earlier in the process.	consultation and engage with affected communities according to the Local Authorities Act.
138.004	General comments	General comments - definitions	Oppose	Considers a definition is needed for "river" and there is a need to define how a 1m water course is measured.	Define important terms to address lack of clear definition and prevent uncertainty and inconsistency. Include picture references to inform what a "river" is.
138.005	General comments	General comments - fresh water	Oppose	Considers that data on river quality throughout the catchment is required to understand the extent of the problem and then determine the causes.	Use relevant scientific evidence of sufficient spatial "resolution" as a basis to inform policy.
138.006	General comments	General comments - economic cost/impact	Oppose	Concerns about cost to be borne by rural landowners with no evidence that they are the cause of the issue, and the lack of information available on what fees and charges GWRC will levy. Considers that for landowners who have not yet been in a position to build a home, this plan change is unreasonable and unfair. Concerned that proposed changes by GWRC are out of alignment with regulations soon to be imposed by Upper Hutt City Council. Considers it is difficult to stay on top of regulatory changes and is concerned that PC1 is out of alignment with regulations soon to be imposed by Upper Hutt City Council. Questions which regulations have precedence where conflicting.	All rules that add cost to landowners be reconsidered and "recalibrated" with scientific evidence, whereby the more important issues are tackled instead of a "broad brush approach" to all perceived issues. A reconciliation and analysis of the GWRC proposal and other local authority regulations relevant to rural landowners (e.g. UHCC PC50) is completed to identify instances where regulation is inconsistent.
138.007	General comments	General comments - overall	Oppose	Notes that residents deal with incursion of pest species onto their land from GWRC land and seeks GWRC manage pests on their own land. Notes that pest species adversely impact socking levels and prevent landowners from increasing indigenous biodiversity.	No decision requested. GWRC to actively manage the pests on GWRC land that borders the Akatarawa Valley and review its practices regarding the management of its land particularly forestry.
138.008	2 Interpretation	Earthworks	Oppose	Considers the definition of "Earthworks" is confusing and can be interpreted in multiple ways, with the exceptions being more limited than those for other districts. Considers the definition has not been thought through enough to understand the cost and	Reinstate the exclusions as given to the other districts.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S48.001	General comments	General comments - overall	Not Stated	Supports the Wellington Branch of the New Zealand Farm Forestry Associations submission.	Recommend that GWRC take notice of the information presented in the NZFFAW submission.
S48.002	General comments	General comments - plantation forestry	Not Stated	Concerned proposed planning and paperwork increases in PC1 may lead to forest owners seeking a quick way out by harvesting and not continuing with another rotation and loss of significant areas of productive land. Considers that GWRC should make sure the forest owners do a good job of their roading on all types of land. States the owner gets to utilise their investment in land and infrastructure and water quality due to there being ongoing interest in the land.	Not stated
S48.003	12 Schedules	Schedule 34: Plantation Forestry	Amend	Considers the proposed Plantation Forestry Erosion and Sediment Management Plan, will have detrimental effects on forestry operations and produce negligible water quality improvements.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Erosion and Sediment Management Plan.		Concerned land used for forestry will be rendered unusable due to highest erosion risk land (HERL) mapping as presented in Map 95. Concerned about the lack of compensation and financial assistance for losses of workable land, broader economic impacts, and permanent woody species required to restore and revegetate HERL. Concerned discontinuing forestry rotations may lead to a decline in investment for roads resulting in poor quality roads and environmental outcomes. Concerned requirements to revegetate HERL do not align with ETS obligations which may result in fees around NZU sequestration. 'Questions what in a 'natural state' is and at what point the land was in a 'natural' state. Concerned not all Registered Forestry Advisers will have the expertise to develop plantation Forestry Erosion and Sediment Management Plans that effectively minimises sediment loss.	

S278 Alex Pfeffer

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S278.001	General comments	General comments - overall	Not Stated	Supports maintaining a high level of water quality. Concerned new regulations are blanket rules that are unnecessary in some catchments, would be unfairly applied, and prevent further development of productive use of land.	Not Stated
S278.002	General comments	General comments - target attribute states	Not Stated	Considers restrictive regulations should be applied only when attributes have exceeded acceptable levels and these have been attributed to farming. Considers showing the Mangaroa River as representative of rural streams in Table 8.4 is disingenuous as the river lies in farmland with a	Not Stated.

Support	<p>Concerns surrounding rule 5.4.8 that makes dams that are 10 years+ a permitted activity should original permission have been adhered to despite fish passage having not been addressed in earlier consenting.</p>	<p>Provide discretion to Council to require fish passage be provided in such cases, where this would be practical and is required to enable access for fish around an artificial fish passage barrier.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S248 Ara Poutama Aotearoa the Department of Corrections

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S248.001	General comments	General comments - overall	Support	Supports note under the Chapter 8 heading 'Whaitua Te Whanganui-a-Tara Section 8.2: Policies', as it provides for a range of existing operative policies to continue to apply within the whaitua, including those that recognise the beneficial use and development of regionally significant infrastructure.	Retain as notified
S248.002	General comments	General comments - unplanned greenfield development	Oppose	<p>Considers approach taken by PC1 to "unplanned greenfield development" is potentially inappropriate due to the definition of "unplanned greenfield development" being broad and uncertain, particularly as it is unclear whether all development is prohibited by the approach, or only specific kinds of urban development. Notes approach could prohibit works associated with maintenance, upgrading and development of Rimutaka and Arohata prisons in areas identified as "unplanned greenfield development areas", where such works are considered "greenfield development". Notes PC1 does not define what "greenfield development" is.</p> <p>Submitter also raises concerns about practicality and efficiency of this approach noting it creates significant jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation (because the provisions are coastal provisions) on the management of development in "unplanned greenfield development areas".</p> <p>Notes this raises procedural concerns about concurrent process that must be used to manage development in "unplanned greenfield development" areas. Decisions on separate plan changes must be made separately by the territorial authority and regional council, and in this case, any change to the</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>unplanned greenfield development area maps must also be approved by the Minister of Conservation. Notes territorial authorities and the regional council have a duty to avoid unreasonable delay which, when applied to separate plan change process, may result in concurrent plan changes becoming unsynchronised. Such an ad-hoc process is likely to be highly inefficient for those seeking changes to regional and district plans and frustrating for those submitting on them, and the risk of inconsistent decision making in relation to the same resource management issue is high. Considers if it is Council's position this issue requires a combined regulatory approach with territorial authorities, then the appropriate means of providing for this is through a combined planning document to address the issue (and the Council is obliged to consider this under section 80(7) of the RMA). Notes this is what the RMA anticipates in this circumstance, but it is not what PC1 provides for.</p>	
S248.003	General comments	General comments - earthworks	Oppose	<p>Considers the proposed earthworks policies and rules do not provide for a reasonable level of earthworks activities. Under the earthworks rules proposed by PC1, earthworks on any scale are no longer a permitted activity (unless they are to implement actions in a farm erosion risk treatment plan or farm environmental plan). As a result, all earthworks are a restricted discretionary activity regardless of scale and are a non-complying activity if those earthworks (again regardless of scale) occur between 1 June and 1 October.</p> <p>Although submitter understands the above notified rule framework is an error, submitters comments are made on the plan change as notified given the legal effect of the provisions.</p> <p>Considers it inefficient to require resource consent for almost all earthworks regardless of scale and</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>has concerns this will create a significant administrative burden for applicants and Council with little clear environmental benefit. Considers adverse environmental effects associated with small scale earthworks can be appropriately addressed through permitted activity conditions in the NRP and District Plans.</p> <p>Considers restricting all earthworks activities between 1 June and 1 October is overly restrictive and submitter recognises earthworks should be planned so that the majority of bulk earthworks occur outside of the winter months. Notes there may be instances where earthworks are unavoidable at this time, and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff. Notes that the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), which is referred to in the earthworks provisions as the guiding document for earthworks practice, provides a pathway for earthworks to be undertaken during the winter months subject to careful management (refer specifically to section G5.0 of the guideline), and considers that pathway should continue to be available to applicants through the consent process. Considers that non-complying activity status for earthworks that do not meet restricted discretionary conditions does not sufficiently facilitate the maintenance, upgrade, or development of its sites which leads to a high degree of uncertainty as to whether consents for maintenance, development, or upgrades to corrections sites will be granted under section 104D of the RMA, even where adverse effects of the part of the proposal that triggered non-complying activity status can be appropriately managed through consent conditions.</p> <p>Considers a reasonable level of earthworks,</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				including potentially necessary earthworks during the winter months, should be enabled subject to appropriate conditions to manage potential adverse effects.	
S248.004	General comments	General comments - maps	Not Stated	<p>Questions the appropriateness of the mapping used to identify where resource consent is required for vegetation clearance, plantation forestry, or earthworks on erosion-prone pasture. Notes the mapping for these features includes numerous small and incohesive areas and submitter questions the efficiency or effectiveness of regulating numerous small (which in many cases measure no greater than 5m by 5m) incohesive areas to manage land stability.</p> <p>Considers maps should be amended to only identify cohesive areas being subject to the rules. In relation to policies, rules, and schedules in relation to plantation forestry, submitter suggests these could be refined to enable plantation forestry operations to continue, particularly where it provides benefits for minimising soil erosion and carbon sequestration.</p> <p>Considers much of Schedule 34 duplicates statutory requirements contained in other documents (particularly the NES-CF) and considers Schedule 34 should be part of a Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>	Not stated
S248.005	General comments	General comments - stormwater management	Amend	<p>Considers the mandatory requirement to take financial contributions provided for by PC1 are not consistent with the effects management hierarchy set out under the NPS-FM. PC1 promotes mandatory financial contributions as a method of offsetting residual adverse effects of contaminants from impervious surface runoff. Approach taken by PC1 is to require financial contributions to offset all residual adverse effects regardless of scale.</p>	<p>Seeks the mandatory requirement for financial contributions as a condition of the rules is removed, but that the financial contributions regime proposed by PC1 continues to be provided for through PC1's policies, as an optional method alongside other offsetting or compensation methods provided for by NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Submitter considers this is inconsistent with the effects management hierarchy in the NPS-FM, which requires only residual adverse effects that are more than minor be offset (or compensated). Considers applicants should be given reasonable opportunity to avoid, minimise, or remedy adverse effects associated with contaminants in stormwater runoff, to the extent that residual adverse effects are minor or less than minor. Considers only in circumstances where residual adverse effects are more than minor should offsetting (or compensation) be required. Further, in circumstances where offsetting or compensation is required, applicants should not be bound to financial contributions, and should have an option to propose offsetting or compensation in line with Appendix 6 and Appendix 7 of the NPS-FM.</p> <p>Submitter recognises the financial contributions method proposed by PC1 could be an effective method of offsetting and should remain open as an option in circumstances where offsetting is required. Notes however, financial contributions will only be effective where they are used to deliver appropriate offsetting projects. Considers projects must be planned for and delivered through the Council's Long-term Plan and Infrastructure Strategy for this to occur.</p>	
S248.006	General comments	General comments - fresh water	Amend	<p>Notes inappropriate use of the freshwater planning process for vegetation clearance and earthworks provisions.</p> <p>Provisions for vegetation clearance and the permitted activity rule for earthworks, have been included in this freshwater planning instrument. Considers this is an inappropriate use of the freshwater planning instrument as principal purpose of these provisions is to control the use of land for</p>	Seeks provisions be reallocated to the Part 1 Schedule 1 planning instrument.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the purpose of soil conservation. Also considers none of these rules manage discharges to freshwater.	
S248.007	General comments	General comments - definitions	Not Stated	Provide definitions for "raingarden" and "bioretention device".	Include definitions for terms including "raingarden" and "bioretention device".
S248.008	General comments	General comments - overall	Not Stated	Amendments to long-term vision objectives for both whitua, to recognise that restoration of natural character may not be possible in relation to regionally significant infrastructure.	Amend long-term vision objectives for both Whitua to recognise that restoration of natural character may not be possible in relation to regionally significant infrastructure.
S248.009	General comments	General comments - earthworks	Not Stated	Amendments to general policy for management of earthworks to improve practicality of policy.	Amend earthworks policy to improve practicality
S248.010	General comments	General comments - overall	Not Stated	Amendments to all provisions related to high-risk industrial and trade premises to ensure focus of provisions is on the management of hazardous substances, not on contaminants generally.	Amendments to all provisions related to high-risk industrial and trade premises to ensure that focus of provisions is on the management of hazardous substances, not on contaminants generally (which are already provided for under other provisions).
S248.011	General comments	General comments - plantation forestry	Not Stated	Amendments to permitted activity rule for vegetation clearance on highest erosion risk land (woody vegetation) to ensure vegetation clearance less than 200m ² is clearly provided for under rule (and is not an innominate discretionary activity).	Amendments to the permitted activity rule for vegetation clearance on highest erosion risk land (woody vegetation) to ensure that vegetation clearance less than 200m ² is clearly provided for under the rule (and is not an innominate discretionary activity).
S248.012	General comments	General comments - earthworks	Not Stated	Amendment to restricted discretionary activity rule for earthworks, to recognise discharges of sediment are not included under permitted activity rule for earthworks (and are instead covered by the NRP's minor discharge rule R91).	Amendment to the restricted discretionary activity rule for earthworks, to recognise discharges of sediment are not included under the permitted activity rule for earthworks (and are instead covered by the NRP's minor discharge rule R91).
S248.013	2 Interpretation	High risk industrial or trade premise	Amend	Supports appropriate control through NRP over high-risk industrial or trade premises but notes provisions proposed by PC1 for high risk industrial or trade premises are unreasonable with respect to control of impervious surfaces, which provide for	Considers amendments are necessary to the rules that relate to new or redeveloped impervious surfaces to provide for a reasonable level of impervious surface development or redevelopment at high-risk industrial or trade premises as a

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				redevelopment of existing or the creation of new impervious surfaces at high-risk industrial or trade premises as a discretionary activity. Considers approach does not enable a reasonable level of maintenance, upgrading, or development (subject to appropriate conditions) and rules incentivise retaining existing degraded impervious surfaces, and do not recognise new or redeveloped impervious surfaces will perform better at containing hazardous substances and other contaminants than existing ones. Considers this counter-productive and contrary to objectives of the NRP, which seek to maintain or improve water quality.	permitted or controlled activity, subject to appropriate conditions.
S248.014	2 Interpretation	Highest erosion risk land (pasture)	Neutral	Notes their submission on the provisions and maps that relate to this definition.	Retain as notified (noting the submission points on the maps and provision).
S248.015	2 Interpretation	Highest erosion risk land (woody vegetation)	Neutral	Notes their submission on the provisions and maps that relate to this definition.	Retain as notified (noting the submission points on the maps and provision).
S248.016	2 Interpretation	Impervious surfaces	Neutral	Notes their submission on the provisions and maps that relate to this definition.	Retain as notified (noting the submission points on the provisions).
S248.017	2 Interpretation	Redevelopment	Amend	<p>Seeks reference to redevelopment of existing urbanised property is removed, as the definition also applies to rules that are not exclusively limited to redevelopment of urbanised property - refers to WH.R11 for example.</p> <p>Secondly, reference to "minor" under the first bullet point should be removed as the term 'minor' is subjective and adds uncertainty to scope of definition.</p>	<p>Amend as follows: For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e. brownfield development, upgrades to existing roads etc.) in relation to stormwater effects, this includes is the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: -minor maintenance or repairs to roads, carparking areas, driveways, and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					resurfacing -activities that only involve the re-roofing of existing buildings.
S248.018	2 Interpretation	Unplanned greenfield development	Oppose	<p>Notes term "greenfield development" is undefined resulting in a high degree of uncertainty about types of development that are prohibited under the rules. Considers this level of uncertainty is inappropriate for a definition that determines the scope of prohibited activity rules.</p> <p>Considers if the term "greenfield development" is interpreted as development on greenfield land (as defined on the planning maps) then this would include all types of development, which covers all existing developed area at Arohata Prison and part of Rimutaka Prison. But notes if the intent of the definition and associated provisions is to manage urban development on land not previously developed, then this should be clearly stated.</p> <p>Considers that the term "greenfield development" must be defined and suggests that this is similar to the definition of "greenfield" used in the Auckland Unitary Plan. Considers to support this definition, the term "urban development" should also be defined in the Plan and the "urban development" definition from the Regional Policy Statement would be appropriate and support integration between the RPS and the NRP.</p> <p>Considers this package of amendments to the definitions will provide sufficient certainty about the scope of the term "greenfield development", provide for integration with RPS, and ensure development of prison sites is not prohibited in "unplanned greenfield development" areas.</p>	<p>Amend the definition of "unplanned greenfield development" as follows: Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p> <p>Provide a definition of "greenfield development" as follows: Greenfield development Urban development on land that has not been previously developed for urban land uses.</p> <p>As a consequential amendment, add a definition for "urban development" in the NRP to match the Regional Policy Statement definition as follows: Urban development Urban development is subdivision, use and development that is characterised by its planned reliance on reticulated services (such as water supply and drainage) by its generation of traffic, and would include activities (such as manufacturing), which are usually provided for in urban areas. It also typically has lots sizes of less than 3000 square metres.</p>
S248.019	5.2 and 5.3	Rule R101:	Oppose	Seeks the operative permitted activity rule for earthworks continues to apply within Whaitua Te	Retain rule R101 so that it continues to apply in Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Discharges to land and water and land use rules	Earthworks - permitted activity.		Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua, as rules WH.R23 and P.R22 do not provide any permitted activity threshold for earthworks smaller than 3,000m ² per property, and the operative rule provides reasonable conditions for undertaking all other earthworks that are less than 3,000m ² that are not otherwise permitted by WH.R23 and P.R22.	
S248.020	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Considers policy is inappropriate because definition of "unplanned greenfield development" is broad, uncertain, and could prohibit maintenance, upgrading and development of regionally significant infrastructure. Considers prohibition on unplanned greenfield development is inappropriate and must be removed. If relief sought by submitter on the definition of "unplanned greenfield development" is granted in full, submitter would adopt a neutral position on this aspect of policy.</p> <p>Considers amendment to policy is necessary to ensure it is consistent with effects management hierarchy set out in NPS-FM. Aquatic offsetting is only necessary where residual adverse effects are more than minor, and resource consent applicants should be encouraged to minimise residual adverse effects so they are no more than minor (in which case aquatic offsetting is not required). Considers if aquatic offsetting is required, financial contributions as proposed by PC1 should be available as a discretionary option for achieving offsetting, but not a mandatory requirement. If applicants can provide alternative effective methods of aquatic offsetting as part of proposal in accordance with Appendix 6 of NPS-FM, then financial contributions should not be required.</p>	<p>Amend as follows:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives</p> <p>Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the discharge of stormwater contaminants from greenfield development, and where residual adverse effects from the discharge of stormwater contaminants are more than minor, requiring aquatic offsetting or compensation (which may include financial contributions) as to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S248.021	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	<p>Considers it impracticable to avoid contaminants being entrained in stormwater and notes this is acknowledged in section 32 report and by policies such as WH.P15.</p> <p>Focus of the policy is on management of hazardous substances prepared, used or stored at high risk industrial and trade premises, so reference to contaminants generally should be removed from the policy, in order that the policy is implementable and retains clear focus on the management of hazardous substances.</p> <p>Notes management of stormwater contaminants generally is provided for under policies WH.P10 and WH.P14, which will also apply to high risk industrial or trade premises.</p>	<p>Amend policy as follows:</p> <p>Policy WH.P11: Discharges of contaminants-hazardous substances in stormwater from high risk industrial or trade premises</p> <p>The discharge of stormwater to water, including discharges via the stormwater network, from a high risk industrial or trade premise shall be managed by:</p> <p>(a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and (b) avoiding contaminants hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and (c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and (d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.</p>
S248.022	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new	Amend	Notes raingardens and bioretention devices referred to in Clause (a)(ii) are not defined terms in the plan and both terms need to be added to Plan to provide certainty for users.	Amend definitions section to include a definition of "raingarden" and "bioretention device".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and redeveloped impervious surfaces.			
S248.023	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Considers policy be amended so that its consistent with effects management hierarchy set out in NPS-FM, which requires aquatic offsetting or compensation is provided in circumstances where residual adverse effects are more than minor.</p> <p>Considers financial contributions should not be a mandatory means of providing aquatic offsetting, and resource consent applicants should have reasonable opportunity to provide aquatic offsetting or compensation in accordance with Appendix 6 or 7 of NPS-FM as part of proposals.</p>	<p>Amend as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting or compensation for new greenfield development The More than minor adverse effects of residual (post-treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of: (a) aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the National Policy Statement on Freshwater Management 2020; or (b) a financial contribution in accordance with Schedule 30 (financial contribution).</p>
S248.024	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on prison assets or areas that are already effectively developed but are located within areas identified as "unplanned greenfield development areas", where such works are considered to be "greenfield development.</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation on the management of development in "unplanned greenfield development areas". Noting decisions on separate plan changes must be made separately and considers this will be highly inefficient for</p>	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>applicants and submitters and applicants and risks inconsistency.</p> <p>Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on rule.</p>	
S248.025	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Amend	<p>Questions feasibility of point (c) of this policy with regard to disparate areas of high erosion risk plantation forestry land identified in Map 92. Notes under this policy, it appears harvesting plantation forestry and replanting in pine is to be avoided. Noting the incentives for replanting provided in section B3 of Schedule 27 (relating to undertaking programmes to actively support revegetation of and sediment management on highest erosion risk land (plantation forestry)), the practicality of replanting in natives can be challenging, and may result in forestry owners not replanting the land at all. Considers replanting with pine still provides benefits for stabilising erosion-prone land and considers this policy could be counterproductive.</p> <p>Considers this point would appear to be contrary to the Emissions Trading Scheme, which requires forests are registered to the scheme are replanted after harvesting, as they provide important carbon sequestration benefits.</p> <p>Submitter seeks that point (c) of this policy be deleted and notes this policy would be subject to consequential amendments resulting from the relief it is seeking on Schedule 34.</p>	<p>Amend policy as follows:</p> <p>Policy WH.P28 Achieving reductions in sediment discharges from plantation forestry Reduce discharges of sediment from plantation forestry by:</p> <p>(a) identifying highest erosion risk land (plantation forestry), and (b) improving management of plantation forestry by requiring erosion and sediment management plans to be prepared and complied with., and (c) requiring that on highest erosion risk land (plantation forestry), plantation forestry is not established or continued beyond the harvest of existing plantation forest.</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S248.026	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Amend	<p>Considers the word "risk" should be replaced with "adverse effects", as resource management policies should seek to manage actual or potential adverse effects of an activity, rather than risks generally.</p> <p>Notes the requirement to retain soil and sediment on site under clause (a) does not recognise that soil and sediment may need to be removed from site in a controlled manner (for example, to a cleanfill area) as part of the works associated with the maintenance, upgrading, or development of existing developed sites. To recognise this, submitter considers that clause (a) should be amended to seek the uncontrolled loss of soil and sediment from site is minimised, rather than requiring all soil and sediment to be retained on site.</p> <p>Considers clause (b) should be qualified with "where practicable" to recognise that any limits placed on land disturbance should be reasonable and proportionate, particularly in the context of the good management practices already required by clause (a)</p>	<p>Amend as follows:</p> <p>Policy WH.P29: Management of earthworks</p> <p>The risk adverse effects of sediment discharges from earthworks shall be managed by:</p> <p>(a) requiring retention minimising the uncontrolled loss of soil and sediment on the land using good management practices for erosion and sediment control measures that are appropriate to the scale and nature of the activity, and in accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), for the duration of the land disturbance, and</p> <p>(b) limiting, where practicable, the amount of land disturbed at any time, and</p> <p>(c) designing and implementing earthworks with knowledge of the existing environmental site constraints, specific engineering requirements and implementation of controls to limit the discharge of sediment to receiving environments, and</p> <p>(d) requiring erosion and sediment control measures to be installed prior to, and during earthworks and ensuring those controls remain in place and are maintained until the land is stabilised against erosion</p>
S248.027	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Support	Considers standards set out in policy to be reasonable.	Retain as notified
S248.028	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of	Oppose	Considers a policy requiring all earthworks over 3,000m ² to be shut down over the winter months is inappropriate, as it does not recognise there may be circumstances where earthworks need to occur over those months in order to provide for safe and efficient operation, maintenance, upgrading, or	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		earthworks.		<p>development of prison infrastructure.</p> <p>Considers there are instances where earthworks are unavoidable at this time, and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff. Notes GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), which is referred to in the policy, provides a pathway for earthworks to be undertaken during the winter months subject to careful management and considers pathway should continue to be available to applicants through consent process.</p>	
S248.029	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	<p>Considers permitted activity conditions to be reasonable, with exception of the point (e) which implies the bore is shallow and is abstracting water from an unconfined aquifer. Notes if this is the case, it should be clarified in the standard.</p> <p>Considers note at the end of the rule should be amended to improve clarity. Also considers reference to "redeveloped premises" be removed, as it is addressed through separate rule cascade related to new or redeveloped impervious surfaces (rules R5 to R7).</p>	<p>Amend as follows:</p> <p>Rule WH.R2: Stormwater to land - permitted activity</p> <p>The discharge of stormwater onto or into land, including where contaminants may enter groundwater:</p> <p>(a) that is not from a high risk industrial or trade premise, or</p> <p>(b) that does not discharge from, or to, a local authority stormwater network,</p> <p>is a permitted activity provided the following conditions are met:</p> <p>(c) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(d) the discharge shall not cause or exacerbate the flooding of any other property, and</p> <p>(e) the discharge is not located within 20m of a shallow bore (<20m depth), extracting from an unconfined aquifer, used for water abstraction for potable supply or stock water.</p> <p>Note</p> <p>In respect of a discharge of stormwater from an existing high risk industrial or trade premise refer to Rule WH.R4, and for discharges of stormwater from new or redeveloped</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>premises high risk industrial or trade premises refer to Rule WH.R11. For existing discharges from or into a local authority stormwater network refer to Rule WH.R9.</p>
S248.030	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Amend	Considers permitted activity conditions reasonable but seeks the note at the bottom of the rule be amended to improve its clarity.	<p>Amend as follows:</p> <p>Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity</p> <p>The discharge of stormwater from an existing individual property into water, or onto or into land where it may enter a surface water body or coastal water,</p> <p>(a) that is not from a high risk industrial or trade premise, or (b) that is not from a port, airport or state highway, or (c) that does not discharge from, or to, a local authority stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(d) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and (e) the discharge does not contain wastewater, and (f) the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m³ where the discharge enters any other water, and (g) the discharge shall not cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and (h) the discharge shall not give rise to the following effects beyond the zone of reasonable mixing: (i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (ii)</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>any conspicuous change in the colour, or (iii) a decrease in water clarity of more than 1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or 2. 30% in any other river, or (iv) any emission of objectionable odour, or (v) the freshwater is unsuitable for consumption by farm animals, or (vi) any significant adverse effects on aquatic life.</p> <p>Note In respect of the discharge of stormwater from an existing high risk industrial or trade premise refer to Rule WH.R4. Discharges from a port or airport refer to Rule WH.R8. For discharges from an existing individual property into the stormwater network refer to Rule WH.R9.</p>
S248.031	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Amend	<p>Considers limiting the application of this rule to existing high risk industrial or trade premises may result in new activities involving the likes of chemical storage or engineering-related activities being a discretionary activity under rule WH.R11. Subject to amendment to condition (d), considers conditions are appropriate to manage potential adverse effects associated with stormwater discharges from existing or new high risk industrial or trade premises, as both should be provided for under the same rule.</p> <p>Considers condition (d) of rule should be amended to remove reference to contaminants and retain a focus on hazardous substances. Considers the term "contaminants" is too broad and given purpose of managing high risk industrial or trade premises is to manage potential adverse effects associated with discharge hazardous substances, it is appropriate condition (d) manages only hazardous substances, rather than contaminants more broadly (which are managed under the remainder of the conditions).</p>	<p>Amend as follows:</p> <p>Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity</p> <p>The discharge of stormwater from an existing high risk industrial or trade premise, that is not a port or airport, into water, or onto or into land where it may enter water, including via an existing local authority stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(a) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and (b) the discharge does not contain wastewater, and (c) if the discharge is to land where it may enter groundwater, (i) the discharge cannot cause or exacerbate the flooding of any other property, and (ii) the discharge is not located within 20m of a bore used for</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers note at the end of rule be deleted as part of giving effect to relief sought in this submission, as well as relief sought by submitter in relation to rules for new or redeveloped impervious surfaces.</p>	<p>water abstraction for potable supply or stock water, and (d) any contaminants stored or used on site, or hazardous substances stored or used on site, cannot be entrained in stormwater and enter a surface water body or coastal water, including via the stormwater network, or</p> <p>(i) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or</p> <p>(ii) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, and</p> <p>(e) if the discharge is into a surface water body, coastal water or via an existing local authority stormwater network, the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m³ where the discharge enters any other water, and where the discharge is not via an existing local authority stormwater network the discharge shall also not:</p> <p>(f) cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and</p> <p>(g) give rise to the following effects beyond the zone of reasonable mixing:</p> <p>(i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or</p> <p>(ii) any conspicuous change in the colour, or</p> <p>(iii) a decrease in water clarity of more than</p> <ol style="list-style-type: none"> 1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or 2. 30% in any other river, or <p>(iv) any emission of objectionable odour, or</p> <p>(v) the freshwater is unsuitable for consumption by farm</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>animals, or (vi) any significant adverse effects on aquatic life. Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to WH.R11.</p>
S248.032	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	<p>Notes some activities at prison and community corrections sites in the region are likely to be considered as "high risk industrial or trade premises" under the proposed definition (e.g. chemical / fuel storage and/or engineering-related activities). Notes proposed rules make new or redeveloped impervious surfaces at high risk industrial or trade premises a discretionary activity under rule WH.R11. Concerns this could lead to perverse environmental outcomes, where impervious surfaces are left to degrade because redevelopment of the surface would require a discretionary activity consent and notes degraded impervious surfaces will be less effective at containing contaminants (including the accidental spillage of hazardous substances) than redeveloped impervious surfaces.</p> <p>Considers it necessary to provide for new and redeveloped impervious surfaces as permitted or controlled activity under rules WH.R5, WH.R6 and WH.R7, subject to appropriate conditions. Considers additional conditions under (d) of rule WH.R4 are appropriate to manage potential adverse effects associated with hazardous substances and considers these be incorporated into rule WH.R5.</p> <p>Considers Condition (c)(ii) should be amended so hydrological control is only required for new impervious surfaces, as redevelopment of existing</p>	<p>Amend as follows:</p> <p>Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity</p> <p>The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment activities of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing or new local authority stormwater network, that is not a high risk industrial or trade premise or unplanned greenfield development, is a permitted activity, provided the following conditions are met:</p> <p>(a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m² (baseline property existing impervious area as at 30 October 2023) and (b) all new building materials associated with the development shall not include exposed zinc (including galvanised steel) or copper roof, cladding and spouting materials, and (c) the proposal provides hydrological control measures (for example rain tanks) onsite or offsite, where discharges will enter a surface water body (including via an existing local authority stormwater network): (i) for all impervious areas impervious surfaces associated with a greenfield development, or (ii) for all redeveloped and new impervious areas</p>

					<p>treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons.</p> <p>Matters of control</p> <ol style="list-style-type: none"> 1. Whether the design and layout of the on-site stormwater treatment system incorporates best practicable option measures to achieve (to the extent practicable) the capture of 85% of the mean annual stormwater runoff and treatment in accordance with Schedule 28 (contaminant treatment) 2. Whether the design and layout undertakes a best practicable option approach to the provision of hydrological control measures either onsite or offsite, where stormwater will enter a river 3. Where an off-site (or a combination of on-site and off-site) stormwater treatment system is utilised, whether this has capacity, availability (timing) and appropriate authorisations to connect into 4. The long-term operational, maintenance and ownership requirements of the stormwater treatment system 5. Whether there are topographical limitations influencing the provision of stormwater hydrological control and contaminant treatment 6. Whether sufficient use of water sensitive urban design methods have been applied to the site design and layout 7. For high risk industrial or trade premises, the adequacy of any proposed containment system, interceptor system, or other proposed methods for the management of hazardous substances 8. Conditions to monitor compliance associated with any stormwater treatment system, or hydrological control measures, or measures required under condition (e). <p>Notification</p> <p>In respect of Rule WH.R7, applications are precluded from limited and public notification (unless special circumstances exist).</p> <p>Note</p> <p>For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to Rule WH.R11.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S248.035	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Amend	<p>Opposes default discretionary activity status for new or redeveloped impervious surfaces at high risk industrial or trade premises for reasons set out in its submission of rules WH.R5, WH.R6 and WH.R7. Considers a reasonable level of new or redeveloped impervious surfaces should be provided for as a permitted or controlled activity under rules WH.R5, WH.R6 and WH.R7, subject to appropriate conditions to manage the potential adverse effects associated with hazardous substances.</p> <p>As per submission on policy WH.P15, considers it is not consistent with NPS-FM to require mandatory financial contributions for purposes of aquatic offsetting, as the effects management hierarchy in NPS-FM only requires offsetting in circumstances where residual adverse effects are more than minor. Where residual adverse effects are more than minor, applicants should have opportunity to propose aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the NPS-FM. Considers it inappropriate to require financial contributions as a condition. Where aquatic offsetting or compensation (which may include financial contributions under Schedule 30) is considered to be necessary, this can be provided for as a condition of consent with reference to requirements of policy WH.P15.</p>	<p>Amend as follows:</p> <p>Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity</p> <p>The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing local authority stormwater network, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or Rule WH.R7, or prohibited under WH.R13 is a discretionary activity provided the following conditions are met:</p> <p>(a) the resource consent application includes a Stormwater Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and (b) if the proposal is for greenfield development a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).</p>
S248.036	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Amend	<p>Considers the move to non-complying activity status for all other stormwater discharges is not clearly explained or justified in section 32 report. Concerned with the jump between permitted activity status for stormwater discharges under rules WH.R2, WH.R3, and WH.R4, and non-complying activity status under this rule. Minor non-compliances with conditions under these rules will trigger the non-complying activity rule.</p> <p>Notes non-complying activity status for minor</p>	<p>Amend rule as follows:</p> <p>Rule WH.R12: All other stormwater discharges - non-complying discretionary activity</p> <p>The:</p> <p>(a) discharge of stormwater onto or into land, including where contaminants may enter groundwater, that is not permitted by Rule WH.R2, or (b) discharge of stormwater into water or onto or into land</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>breaches rule conditions can be a particular issue for development or upgrading existing assets, which can involve complex, bundled consents for a broad range of activities, some of which may have adverse effects that are more than minor. Notes this leads to a high degree of uncertainty as to whether consents for development or upgrading of Ara Poutama's assets will be granted under section 104D of RMA, even where minor non-compliances with stormwater conditions under rules WH.R2, WH.R3, or WH.R4 can be appropriately addressed through consent conditions.</p> <p>Considers non-complying activity rule is not sufficiently justified in section 32 report and does not appropriately provide for activities that do not meet permitted activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity. Submitter does consider that non-complying activity status should be retained for proposals that do not provide a Stormwater Impact Assessment under rule WH.R11, as this would clearly be contrary to objectives and policies of the Plan.</p>	<p>where it may enter a surface water body or coastal water, that is not permitted by Rule WH.R3, or a restricted discretionary activity under Rules WH.R8 or WH.R9, or (c) discharge of stormwater from a high risk industrial or trade premise that is not permitted by Rule WH.R4, or the use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater from a high risk industrial or trade premise that does not meet the conditions of Rule WH.R11, or (d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater into water or onto or into land where it may enter water, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or WH.R7, or a discretionary activity under Rule WH.R10 or WH.R11, or a prohibited activity under WH.R13,</p> <p>is an non-complying discretionary activity.</p> <p>As a consequential amendment, provide a new non-complying activity rule for stormwater discharges that are not a discretionary activity under rule WH.R11.</p>
S248.037	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Notes it is unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works associated with the maintenance, upgrading and development of Ara Poutama's existing assets in areas identified as "unplanned greenfield development areas" where such works are considered "greenfield development".</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation on the</p>	Delete rule.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>management of development in "unplanned greenfield development areas". Notes that except for combined planning documents under section 80 of RMA, there are no provisions in the RMA that provide for combined hearing, decision making, and appeals on proposed changes to separate regional and district plans.</p> <p>Notes decisions must be made separately by the territorial authority and regional council, and in this case, any change to the unplanned greenfield development area maps must also be approved by the Minister of Conservation. Notes this is likely to be highly inefficient for those seeking changes to regional and district plans, as well as those submitting on them, and the risk of inconsistent decision making is high.</p> <p>Considers if it is Council's position this issue requires a combined approach with territorial authorities, then appropriate means of providing for this is through a combined planning document (and the Council is obliged to consider this under section 80(7) of the RMA).</p> <p>Notes that its principal concern with this rule is that it is unclear whether it would prohibit the upgrading or development of its existing assets. If the relief sought on the definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on this rule.</p>	
S248.038	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Neutral	Submitter has neutral position on rule, subject to relief sought on Schedule 34.	Retain as notified (noting the submission points on Schedule 34).
S248.039	8 Whaitua Te	Rule WH.R21:	Neutral	Submitter has neutral position on rule, subject to relief sought on Schedule 34.	Retain as notified (noting the submission points on Schedule 34).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Plantation forestry - discretionary activity.			
S248.040	8 Whaitua Te Whanganui-a-Tara	Rule WH.R22: Plantation forestry on highest erosion risk land - prohibited activity.	Amend	<p>Seeks clarification as to whether prohibition on "earthworks" and "mechanical land preparation" in rule only applies to "afforestation" as defined by NES-CF (i.e. this rule only applies to land where no commercial forestry or harvesting has occurred within the past 5 years), or whether prohibition on "earthworks" and "mechanical land preparation" applies to all new plantation forestry, including re-establishment of recently harvested forests. Considers if rule only applies to new forests as per the definition of "afforestation" in the NES-CF, submitter considers this rule is reasonable.</p> <p>Notes if rule applies to re-establishment of recently harvested forests, submitter considers the Prohibited activity status for this rule is unnecessarily onerous, and evidence in the Section 32 report does not support a Prohibited activity status. Considers there should be a consent pathway for re-establishing plantation forests after harvesting for reasons set out in its requested relief for Policy WH.P28.</p>	<p>Clarify whether the rule applies to "afforestation" only as defined by the NES-CF, or whether the rule applies to all plantation forestry, including re-establishment.</p> <p>If the rule applies to all plantation forestry including re-establishment, amend the rule to enable a consent pathway for re-establishing plantation forests after harvesting.</p>
S248.041	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	<p>Notes effect of use of "and" at the end of condition (b) is to exclude all earthworks not related to implementing farm erosion risk treatment plans or farm environmental plans from the permitted activity rule. As a result, all other earthworks, regardless of size or whether they meet conditions (c) to (h) will be a restricted discretionary activity under rule WH.R24. Considers this is an error and acknowledges Council have corrected this under clause 16 of Schedule 1 to the RMA by way of a memo published on 6 December 2023.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R23: Earthworks - permitted activity</p> <p>Earthworks is a permitted activity, provided the following conditions are met:</p> <p>(a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m² per</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Notes it cannot be efficient or effective to require resource consent for all earthworks, regardless of scale. Considers this does this appear to be consistent with policies WH.P30 and WH.P31, which place emphasis on controlling earthworks over 3,000m2. Considers that it is appropriate that smaller scale earthworks are generally provided for as a permitted activity under rule (subject to the conditions set out under the rule). To achieve this, "and" should be replaced with "or" at the end of condition (b). Any further changes to this rule will be dependent on how 'earthworks' are defined and any exclusions.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation. As rule does not provide for discharges associated with earthworks, there is no justification for including it in freshwater planning instrument, seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021). In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S248.042	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	<p>Depending on the outcome of other submission points, submitter considers several amendments to the rule are necessary.</p> <p>Considers rule should be restructured to locate "associated discharge" element of rule to follow on from "Earthworks that do not comply with Rule WH.R23" as discharges associated with permitted earthworks are not provided for under rule WH.R23 (which only permits earthworks). Discharges from permitted earthworks are instead provided for under</p>	<p>Amend rule as follows:</p> <p>Rule WH.R24: Earthworks - restricted discretionary activity</p> <p>Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23, and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>the "minor discharges" rule R91.</p> <p>Considers a condition requiring earthworks be shut down over the winter months is inappropriate, as it does not recognise circumstances where earthworks need to occur over those months in order to provide for safe and efficient operation, maintenance, upgrading, or development of regionally significant infrastructure.</p> <p>Recognises earthworks should be planned so majority of bulk earthworks occur outside of winter months. Considers instances where earthworks are unavoidable and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff.</p> <p>Notes GWRC Erosion and Sediment Control Guideline for Wellington Region (2021), which is referred to in policy WH.P31 (and in the note to permitted activity rule WH.R23), provides a pathway for earthworks to be undertaken during winter months subject to careful management. Considers rather than a blanket restriction on all earthworks over this period, reference is made to matters set out under section G5.0 of guideline as a matter of discretion for earthworks.</p>	<p>may enter a surface water body or coastal water, including via a stormwater network, is a restricted discretionary activity, provided the following conditions are met:</p> <p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than:</p> <p>(i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and</p> <p>(b) earthworks shall not occur between 1st June and 30th September in any year.</p> <p>Matters for discretion</p> <ol style="list-style-type: none"> 1. The location, area, scale, volume, duration and staging and timing of works 2. The design and suitability of erosion of sediment control measures including consideration of hazard mitigation and the risk of accelerated soil erosion associated the staging of works and progressive stabilisation 3. The placement and treatment of stockpiled materials on the site, including requirements to remove material if it is not to be reused on the site 4. The proportion of unstabilised land in the catchment 5. The adequacy and efficiency of stabilisation devices for sediment control 6. Any adverse effects on: <ul style="list-style-type: none"> (i) groundwater, surface water bodies and their margins, particularly surface water bodies within sites identified in Schedule A (outstanding water bodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (mana whenua), Schedule F (ecosystems and habitats with indigenous biodiversity), Schedule H (contact recreation and Māori customary use) or

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>Schedule I (important trout fishery rivers and spawning waters) (ii) group drinking water supplies and community drinking water supplies (iii) mauri, water quality (including water quality in the coastal marine area), aquatic and marine ecosystem health, aquatic and riparian habitat quality, indigenous biodiversity values, mahinga kai and critical life cycle periods for indigenous aquatic species (iv) the natural character of lakes, rivers, natural wetlands and their margins and the coastal environment (v) natural hazards, land stability, soil erosion, sedimentation and flood hazard management including the use of natural buffers 7. Duration of the consent 8. Preparation required for the close down period (from 1st June to 30th September each year) and any maintenance activities required during this period Where earthworks will be undertaken within the period from 1 June to 30 September, the matters set out under section G5.0 of the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021) 9. Monitoring and reporting requirements Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).</p>
S248.043	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Amend	<p>Considers that the move to non-complying activity status for all other earthworks is not clearly explained or justified in the section 32 evaluation report. Non-compliance with conditions under rule WH.R25 will trigger the non-complying activity rule.</p> <p>Considers non-complying activity status for minor breaches of rule conditions can be a particular issue for development or upgrading of existing assets, as</p>	<p>Amend rule as follows:</p> <p>Rule WH.R25: Earthworks - non-complyingdiscretionary activity</p> <p>Earthworks, and the associated discharge of sediment into a surface water body or coastal water or onto or into land where it may enter a surface water body or coastal water from earthworks, including via a stormwater network, that</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>it can sometimes involve complex, bundled consents for a broad range of activities, some of which may have adverse effects that are more than minor (for example, visual effects). Considers this leads to a high degree of uncertainty as to whether consents for development or upgrading of Ara Poutama's assets will be granted under section 104D of the RMA, even where the adverse effects of the part of the proposal that triggered non-complying activity status can be appropriately addressed through consent conditions.</p> <p>Considers the non-complying activity rule is not sufficiently justified in section 32 report and does not appropriately provide for activities that do not meet restricted discretionary activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity.</p>	<p>does not comply with Rule WH.R24 is a non-complying discretionary activity.</p>
S248.044	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Considers policy is inappropriate because definition of "unplanned greenfield development" is broad, uncertain, and could prohibit maintenance, upgrading and development of existing assets and considers that the prohibition on unplanned greenfield development is inappropriate and must be removed. If relief sought by submitter on the definition of "unplanned greenfield development" is granted in full, submitter would adopt a neutral position on this aspect of policy.</p> <p>Considers amendment to policy is necessary to ensure it is consistent with effects management hierarchy set out in NPS-FM. Aquatic offsetting is only necessary where residual adverse effects are more than minor, and resource consent applicants should be encouraged to minimise residual adverse effects so they are no more than minor (in which case aquatic offsetting is not required). Further, if aquatic offsetting is required, financial contributions</p>	<p>Amend policy as follows:</p> <p>Policy P.P2 Management of activities to achieve target attribute states and coastal water objectives</p> <p>Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the discharge of stormwater contaminants from greenfield development, and where residual adverse effects from the discharge of stormwater contaminants are more than minor, requiring aquatic offsetting or compensation (which may include financial contributions) as to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load,</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				as proposed by PC1 should be available as a discretionary option for achieving offsetting, but not a mandatory requirement. If applicants can provide alternative effective methods of aquatic offsetting as part of proposal in accordance with Appendix 6 of NPS-FM, then financial contributions should not be required.	and (c) imposing hydrological controls on urban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S248.045	9 Te Awarua-o-Porirua Whaitua	Policy P.P11: Discharges of a contaminant in stormwater from high risk industrial or trade premises.	Amend	<p>Considers it impracticable to avoid contaminants being entrained in stormwater and notes this is acknowledged in section 32 report and by policies such as P.P14 which recognises potential for residual stormwater contaminants associated with development.</p> <p>Focus of the policy is on management of hazardous substances prepared, used or stored at high risk industrial and trade premises, so reference to contaminants generally should be removed from the policy, in order that the policy is implementable and retains clear focus on the management of hazardous substances.</p> <p>Management of stormwater contaminants generally is provided for under policies WH.P10 and WH.P14, which will also apply to high risk industrial or trade premises.</p>	<p>Amend policy as follows:</p> <p>Policy P.P11: Discharges of a contaminant hazardous substances in stormwater from high risk industrial or trade premises</p> <p>The discharge of stormwater to water from a high risk industrial or trade premise shall be managed by:</p> <p>(a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and (b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and (c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.
S248.046	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Notes raingardens and bioretention devices referred to in Clause (a)(ii) are not defined terms in the plan and both terms need to be added to Plan to provide certainty for users.	Amend the definitions section to include a definition of "raingarden" and "bioretention device".
S248.047	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Considers policy should be amended so its consistent with effects management hierarchy set out in NPS-FM, which requires aquatic offsetting or compensation is provided in circumstances where residual adverse effects are more than minor.</p> <p>Considers financial contributions should not be a mandatory means of providing aquatic offsetting, and resource consent applicants should have reasonable opportunity to provide aquatic offsetting or compensation in accordance with Appendix 6 or 7 of NPS-FM as part of proposals.</p>	<p>Amend policy as follows:</p> <p>Policy P.P14: Stormwater contaminant offsetting or compensation for new greenfield development The More than minor adverse effects of residual (post-treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of: (a) aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the National Policy Statement on Freshwater Management 2020; or (b) a financial contribution in accordance with Schedule 30 (financial contribution).</p>
S248.048	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on prison assets or areas that are already effectively developed but are located within areas identified as "unplanned greenfield development areas", where such works are considered to be "greenfield development.	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation on the management of development in "unplanned greenfield development areas". Noting decisions on separate plan changes must be made separately and considers this will be highly inefficient for applicants and submitters and applicants and risks inconsistency.</p> <p>Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on rule.</p>	
S248.049	9 Te Awarua-o-Porirua Whaitua	Policy P.P26: Achieving reductions in sediment discharges from plantation forestry.	Amend	<p>Questions feasibility of point (c) of this policy with regard to disparate areas of high erosion risk plantation forestry land identified in Map 92. Notes under this policy, it appears harvesting plantation forestry and replanting in pine is to be avoided. Noting the incentives for replanting provided in section B3 of Schedule 27 (relating to undertaking programmes to actively support revegetation of and sediment management on highest erosion risk land (plantation forestry)), the practicality of replanting in natives can be challenging, and may result in forestry owners not replanting the land at all. Considers replanting with pine still provides benefits for stabilising erosion-prone land and considers this policy could be counterproductive.</p> <p>Considers this point would appear to be contrary to the Emissions Trading Scheme, which requires forests are registered to the scheme are replanted</p>	<p>Policy P.P26 Achieving reductions in sediment discharges from plantation forestry</p> <p>Reduce discharges of sediment from plantation forestry by:</p> <p>(a) identifying highest erosion risk land (plantation forestry), and (b) improving management of plantation forestry by requiring erosion and sediment management plans to be prepared and complied with., and (c) requiring that on highest erosion risk land (plantation forestry), plantation forestry is not established or continued beyond the harvest of existing plantation forest.</p>

S248.058	9 Te Awarua-	Rule P.R7: Stormwate	Amend	Notes some activities at prison and community corrections sites in the region are likely to be	Amend rule as follows:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	r from new and redeveloped impervious surfaces of existing urbanised areas-controlled activity.		<p>considered as "high risk industrial or trade premises" under the proposed definition (e.g. chemical / fuel storage and/or engineering-related activities). Notes proposed rules make new or redeveloped impervious surfaces at high risk industrial or trade premises a discretionary activity under rule P.R10. Concerns this could lead to perverse environmental outcomes, where impervious surfaces are left to degrade because redevelopment of the surface would require a discretionary activity consent and notes degraded impervious surfaces will be less effective at containing contaminants (including the accidental spillage of hazardous substances) than redeveloped impervious surfaces.</p> <p>In order to provide for a reasonable level of maintenance, upgrading and development of impervious surfaces, submitter considers it necessary to provide for new and redeveloped impervious surfaces as permitted or controlled activity under rules P.R5, P.R6 and P.R7, subject to appropriate conditions. Considers additional conditions under (d) of rule P.R4 are appropriate to manage potential adverse effects associated with hazardous substances and considers these be incorporated into rule P.R7.</p>	<p>Rule P.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity</p> <p>The use of land for the creation of new and/or redevelopment of impervious surfaces of an existing urbanised property and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing local authority stormwater network, that is not a high risk industrial or trade premise, is a controlled activity, provided the following conditions are met:</p> <p>(a) the proposal involves the creation of new, or redevelopment of impervious surfaces of between 1,000m2 and 3,000m2 (baseline property existing impervious area as at 30 October 2023)</p> <p>or,</p> <p>(b) the proposal involves the creation of new, or redevelopment of impervious areas of less than 1,000m2 but is not permitted under the conditions of Rule P.R6, and,</p> <p>(c) where stormwater directly or indirectly (through an existing local authority stormwater network) discharges to a river, hydrological control is provided either:</p> <p>(i) on-site, or</p> <p>(ii) off-site through an existing local authority stormwater network or privately owned stormwater network that has been sized to accommodate the proposed stormwater discharges, and</p> <p>(d) contaminant treatment of stormwater is provided either:</p> <p>(i) on-site through a stormwater treatment system, or</p> <p>(ii) off-site through an existing local authority stormwater network or privately owned stormwater treatment system that has capacity to treat contaminant loads from the site and where the new or redeveloped impervious surface is for a high risk industrial or trade premise:</p> <p>(e) any hazardous substances stored or used on site cannot be entrained in stormwater and enter a surface</p>

**Proposed Change 1 to the Natural Resources Plan –

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>water body or coastal water, including via the stormwater network, or (i) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or (ii) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons.</p> <p>Matters of control</p> <ol style="list-style-type: none"> 1. Whether the design and layout of the on-site stormwater treatment system incorporates best practicable option measures to achieve (to the extent practicable) the capture of 85% of the mean annual stormwater runoff and treatment in accordance with Schedule 28 (contaminant treatment) 2. Whether the design and layout undertakes a best practicable option approach to the provision of hydrological control measures either on- site or off-site, where stormwater will enter a river 3. Where an off-site (or a combination of on-site and off-site) stormwater treatment system is utilised, whether this has capacity, availability (timing) and appropriate authorisations to connect into 4. The long-term operational, maintenance and ownership requirements of the stormwater treatment system 5. Whether there are topographical limitations influencing the provision of stormwater hydrological control and contaminant treatment 6. Whether sufficient use of water sensitive urban design methods have been applied to the site design and layout 7. For high risk industrial or trade premises, the adequacy of any proposed containment system, interceptor system, or other proposed methods for the management of hazardous substances 8. Conditions to monitor compliance associated with any stormwater treatment system, or hydrological control measures, or measures required under condition (e). <p>Notification</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					In respect of Rule P.R(NEW RULE)7, applications are precluded from limited and public notification (unless special circumstances exist). Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to refer to Rule P.R8.
S248.059	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-discretionary activity.	Amend	<p>Opposes default discretionary activity status for new or redeveloped impervious surfaces at high risk industrial or trade premises for reasons set out in its submission of rules P.R5, P.R6 and P.R7. Considers a reasonable level of new or redeveloped impervious surfaces should be provided for as a permitted or controlled activity under rules P.R5, P.R6 and P.R7, subject to appropriate conditions to manage the potential adverse effects associated with hazardous substances.</p> <p>As per submission on policy P.P14, considers it is not consistent with NPS-FM to require mandatory financial contributions for purposes of aquatic offsetting, as the effects management hierarchy in NPS-FM only requires offsetting in circumstances where residual adverse effects are more than minor.</p> <p>Where residual adverse effects are more than minor, applicants should have opportunity to propose aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the NPS-FM. Considers it inappropriate to require financial contributions as a condition. Where aquatic offsetting or compensation (which may include financial contributions under Schedule 30) is considered to be necessary, this can be provided for as a condition of consent with reference to requirements of policy P.P14.</p>	<p>Amend rule as follows:</p> <p>Rule P.R10: Stormwater from new and redeveloped impervious surfaces - discretionary activity</p> <p>The use of land for the creation of new or redevelopment of existing impervious surfaces (including greenfield development and redevelopment of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including via an existing local authority stormwater network, that is not permitted by Rule P.R5, or a controlled activity under Rule P.R6 or Rule P.R7, or prohibited under P.R12 is a discretionary activity provided the following conditions are is met:</p> <p>(a) the resource consent application includes a Stormwater Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and- (b) if the proposal is for greenfield development, a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S248.060	9 Te Awarua-o-Porirua Whaitua	Rule P.R11: All other stormwater discharges - non-complying activity.	Amend	<p>Considers the move to non-complying activity status for all other stormwater discharges is not clearly explained or justified in section 32 report. Concerned with the jump between permitted activity status for stormwater discharges under rules P.R2, P.R3, and P.R4, and non-complying activity status under this rule. Minor non-compliances with conditions under these rules will trigger the non-complying activity rule.</p> <p>Notes non-complying activity status for minor breaches rule conditions can be a particular issue for development or upgrading existing assets, which can involve complex, bundled consents for a broad range of activities, some of which may have adverse effects that are more than minor. Notes this leads to a high degree of uncertainty as to whether consents for development or upgrading of Ara Poutama's assets will be granted under section 104D of RMA, even where minor non-compliances with stormwater conditions under rules P.R2, P.R3, or P.R4 can be appropriately addressed through consent conditions.</p> <p>Considers non-complying activity rule is not sufficiently justified in section 32 report and does not appropriately provide for activities that do not meet permitted activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity. Submitter does consider that non-complying activity status should be retained for proposals that do not provide a Stormwater Impact Assessment under rule P.R10, as this would clearly be contrary to objectives and policies of the Plan.</p>	<p>Amend rule as follows:</p> <p>Rule P.R11: All other stormwater discharges - non-complying discretionary activity</p> <p>The:</p> <p>(a) discharge of stormwater onto or into land, including where contaminants may enter groundwater, that is not permitted by Rule P.R2, or</p> <p>(b) discharge of stormwater into water or onto or into land where it may enter water, that is not permitted by Rule P.R3, or a restricted discretionary activity under Rule P.R8, or</p> <p>(c) discharge of stormwater from a high risk industrial or trade premise that is not permitted by Rule P.R4, or the use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater from a high risk industrial or trade premise that does not meet the conditions of Rule P.R10, or</p> <p>(d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater water or onto or into land where it may enter water, that is not permitted by Rule P.R5, or a controlled activity under Rules P.R6 or P.R7, or a discretionary activity under Rule P.R9, or a prohibited activity under Rule P.R12, is non-complying discretionary activity.</p> <p>As a consequential amendment, provide a new non-complying activity rule for stormwater discharges that are not a discretionary activity under rule P.R10.</p>
S248.061	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater	Oppose	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Notes it is unclear if all development is prohibited or just specific kinds of urban development. Concerns the</p>	Delete rule.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges from new unplanned greenfield development - prohibited activity.		<p>approach could prohibit works associated with the maintenance, upgrading and development of Ara Poutama's existing assets in areas identified as "unplanned greenfield development areas" where such works are considered "greenfield development".</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation on the management of development in "unplanned greenfield development areas". Notes that except for combined planning documents under section 80 of RMA, there are no provisions in the RMA that provide for combined hearing, decision making, and appeals on proposed changes to separate regional and district plans.</p> <p>Notes decisions must be made separately by the territorial authority and regional council, and in this case, any change to the unplanned greenfield development area maps must also be approved by the Minister of Conservation. Notes this is likely to be highly inefficient for those seeking changes to regional and district plans, as well as those submitting on them, and the risk of inconsistent decision making is high.</p> <p>Considers if it is Council's position this issue requires a combined approach with territorial authorities, then appropriate means of providing for this is through a combined planning document (and the Council is obliged to consider this under section 80(7) of the RMA).</p> <p>Notes that its principal concern with this rule is that it is unclear whether it would prohibit the upgrading or development of its existing assets. If the relief sought on the definition of "unplanned greenfield</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				development" is granted in full, submitter would consider adopting a neutral position on this rule.	
S248.062	9 Te Awarua-o-Porirua Whaitua	Rule P.R20: Plantation forestry - discretionary activity.	Neutral	Submitter has neutral position on rule, subject to relief sought on Schedule 34.	Retain as notified (noting the submission points on Schedule 34).
S248.063	9 Te Awarua-o-Porirua Whaitua	Rule P.R21: Plantation Forestry on highest erosion risk land - prohibited activity.	Amend	<p>Seeks clarification as to whether prohibition on "earthworks" and "mechanical land preparation" in rule only applies to "afforestation" as defined by NES-CF (i.e. this rule only applies to land where no commercial forestry or harvesting has occurred within the past 5 years), or whether prohibition on "earthworks" and "mechanical land preparation" applies to all new plantation forestry, including re-establishment of recently harvested forests. Considers if rule only applies to new forests as per the definition of "afforestation" in the NES-CF, submitter considers this rule is reasonable.</p> <p>Notes if rule applies to re-establishment of recently harvested forests, submitter considers the Prohibited activity status for this rule is unnecessarily onerous, and evidence in the Section 32 report does not support a Prohibited activity status. Considers there should be a consent pathway for re-establishing plantation forests after harvesting for reasons set out in its requested relief for Policy WH.P28.</p>	Clarify whether the rule applies to "afforestation" only as defined by the NES-CF, or whether the rule applies to all plantation forestry, including re-establishment. If the rule applies to all plantation forestry including re-establishment, amend the rule to enable a consent pathway for re-establishing plantation forests after harvesting.
S248.064	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Notes effect of use of "and" at the end of condition (b) is to exclude all earthworks not related to implementing farm erosion risk treatment plans or farm environmental plans from the permitted activity rule. As a result, all other earthworks, regardless of size or whether they meet conditions (c) to (h) will be a restricted discretionary activity under rule P.R23. Considers this is an error and acknowledges	<p>Amend rule as follows: Rule P.R22: Earthworks - permitted activity</p> <p>Earthworks is a permitted activity, provided the following conditions are met:</p> <p>(a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Council have corrected this under clause 16 of Schedule 1 to the RMA by way of a memo published on 6 December 2023.</p> <p>Notes it cannot be efficient or effective to require resource consent for all earthworks, regardless of scale. Considers this does this appear to be consistent with policies P.P28 and P.P29, which place emphasis on controlling earthworks over 3,000m2. Considers that it is appropriate that smaller scale earthworks are generally provided for as a permitted activity under rule (subject to the conditions set out under the rule). To achieve this, "and" should be replaced with "or" at the end of condition (b). Any further changes to this rule will be dependent on how 'earthworks' are defined and any exclusions.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation. As rule does not provide for discharges associated with earthworks, there is no justification for including it in freshwater planning instrument, seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>(b) the earthworks are to implement an action in the farm environment plan for the farm, and or</p> <p>(c) the area of earthworks does not exceed 3,000m2 per property in any consecutive 12-month period, and</p> <p>(d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and</p> <p>(e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(f) the area of earthworks must be stabilised within six months after completion of the earthworks, and</p> <p>(g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021). In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S248.065	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	<p>Depending on the outcome of other submission points, submitter considers several amendments to the rule are necessary.</p> <p>Considers rule be restructured to locate "associated discharge" element of rule to follow on from "Earthworks that do not comply with Rule P.R22" as discharges associated with permitted earthworks</p>	<p>Amend rule as follows:</p> <p>Rule P.R23: Earthworks - restricted discretionary activity</p> <p>Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				scheme are replanted, as they provide important carbon sequestration benefits.	
S248.068	12 Schedule s	Schedule 28: Stormwater Contaminant Treatment.	Amend	<p>Consider the target load reductions for copper and zinc outlined in Table 1 of Schedule 28 are potentially unfeasible given the levels most stormwater treatment devices can achieve are generally around 59% for zinc and 70% for copper. Submitter suggests a better way to achieve reductions in copper and zinc would be to target minimisation of suspended solids.</p> <p>Considers amendment to the first sentence under the heading "Target Load Reductions" is necessary in order to clarify the rules require stormwater discharges from impervious surfaces to be treated (as distinct from the surfaces themselves being treated).</p>	<p>Amend schedule as follows:</p> <p>Schedule 28: Stormwater Contaminant Treatment This schedule relates to Rules WH.R6, WH.R7, P.R6 and P.R7. Target Load Reductions All Stormwater discharges from new and redeveloped impervious surfaces are to be treated to meet an equivalent target load reduction for suspended solids. -copper and zinc to those set out for a raingarden/bioretention device, as per Table 1. Table 1: Target Load Reductions for Suspended Solids for Copper and Zinc [Consequential amendments to Table 1 to include relevant suspended solids targets in Table 1.] Treatment Device Copper Zinc Bioretention (rain garden) 90% 90%</p>
S248.069	12 Schedule s	Schedule 29: Stormwater Impact Assessments.	Amend	<p>Seeks amendment to bullet point 3 to remove reference to redeveloped impervious surfaces. Considers no benefit in calculating volume and flow rate of discharges from redeveloped impervious surfaces, as there will be no change to discharge volume and flow rate (when compared to existing).</p> <p>Seeks amendment to bullet point 5 to remove references to wording that is extraneous and difficult to interpret. Wording sought to be deleted is generally covered by definition of "water sensitive urban design".</p> <p>Regarding bullet point 8, supports engagement with mana whenua but notes bullet point 8 creates a wide-ranging obligation to engage with mana whenua on all stormwater impact assessments,</p>	<p>Amend schedule as follows:</p> <p>Schedule 29: Stormwater Impact Assessments</p> <p>A stormwater impact assessment shall include the following analysis:</p> <ol style="list-style-type: none"> 1. Site evaluation: the site must be assessed for its topography, soil type, land use, drainage patterns (including wetlands/water courses), natural features, topographical and geotechnical constraints and potential flood areas. 2. Catchment evaluation: analyse catchment wide characteristics and requirements (utilising existing local authority stormwater management strategies where available) to consider the proposed development in a broader stormwater discharge and receiving environment context to understand relevant catchment issues, including

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>without regard to scale and significance of the discharge. Considers this broad requirement to engage does not recognise capacity constraints for mana whenua that may make engagement on all impact assessments impractical.</p> <p>Seeks amendments to bullet point 8 to improve the clarity and efficiency of the requirement by:</p> <ul style="list-style-type: none"> - Ensuring engagement is appropriately targeted to circumstances where the discharge is to an identified site of significance; - Where there is relevant information made available by iwi authorities about cultural values associated with waterbodies (such as through iwi management plans), these should be able to be relied on by applicants; - Focus of provision should be on the outcomes of any engagement, rather than the engagement itself; - Provision should focus on engagement with iwi authorities in the relevant catchment, rather than mana whenua generally. The term mana whenua is broadly defined and provides no certainty about the specific parties applicants should engage with. <p>Seeks amendment to bullet point 2 under list of matters specific to high risk industrial and trade premises to replace term "contaminants" with "hazardous substances", on as the purpose of the rules is to manage potential entrainment of hazardous substances within stormwater (rather than contaminants generally).</p>	<p>flooding, climate change projections (frequency and volume), water quality and any additional design or mitigation measures required to address wider catchment matters.</p> <p>3. Stormwater discharge calculation: calculation of stormwater discharge volumes and flow rates along with analysis of stormwater contaminant generation from and new and/or redeveloped impervious surfaces.</p> <p>4. Identification of actual and potential stormwater impacts: undertake evaluation of the actual and potential impacts on the receiving environment, including water quality, natural flow regimes of waterways, soil erosion, flooding, changes in hydrology and climate change (frequency and volume).</p> <p>5. Implementation of Water Sensitive Urban Design principles: provide an analysis of how Water Sensitive Urban Design measures have been identified and incorporated into the site design and layout, building and road/paving materials and features and how existing natural features and new stormwater treatment systems have been enhanced and integrated to mimic natural processes.</p> <p>6. Mitigation measures: Assessment of proposed mitigations to reduce the effect of stormwater discharges on water quantity and quality, including the approach to treat in accordance with Schedule 28 (contaminant treatment) and implement hydrological control. Measures must support achieving relevant target attribute states (beyond zinc and copper) for ecosystem health, including nutrients, visual clarity and E. coli or enterococci.</p> <p>7. Operation and maintenance of stormwater management systems: analyse the long-term (life-cycle) operational and maintenance requirements including funding mechanisms and identification of persons responsible for ongoing maintenance.</p> <p>8. Cultural considerations (where the discharge is directly to Ngā Taonga Nui a Kiwa identified in Schedule B or a Site of Significance identified in Schedule C): to be informed by engagement with mana whenua information supplied by, or the outcomes of any consultation with, the relevant iwi authorities for the catchment within which the discharge is located.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>Where the application includes a high risk industrial or trade premise the stormwater impact assessment analysis must also consider the following:</p> <ol style="list-style-type: none"> 1. Procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, to ensure these are not entrained in stormwater, and 2. Management practices proposed to avoid or minimise entrainment of contaminants hazardous substances into stormwater, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring.
S248.070	12 Schedule s	Schedule 30: Financial Contributions.	Amend	<p>References to offsetting should be accompanied by references to compensation as there is insufficient certainty about whether the financial contribution will be used (as set out in section E) to address the residual stormwater contaminants from new impervious surfaces discharged within the catchment (which is offsetting), or whether it will be used to improve water quality across a range of values, not limited to impervious surface contaminants, in the whitua generally (which is compensation).</p> <p>As per submission points on policies WH.P15 and P.P14, submitter considers applicants should be given a reasonable opportunity to undertake their own aquatic offsetting or compensation to address more than minor residual adverse effects, in line with the effects management hierarchy provided for under the NPS-FM.</p> <p>As per submission points on policies WH.P15 and P.P14, submitter considers an amendment to the final paragraph is necessary to reflect the NPS-FM only requires offsetting or compensation in circumstances where residual adverse effects are more than minor.</p>	<p>Amend schedule as follows:</p> <p>A Context</p> <p>Under section 108(2)(a) and (10) of the Resource Management Act 1991, a consent authority may impose a condition on a resource consent requiring a financial contribution to be made for the purpose of offsetting, or compensating for, an environmental adverse effect. The creation of impervious surfaces through new greenfield development, new roads (not directly associated with a greenfield development) and state highways will result in an increase of stormwater contaminants entering freshwater receiving environments. Stormwater contaminant treatment will be required of new development proposals, however, treatment of contaminants is only practicable for a portion of the contaminant load received from the site. This results in a residual contaminant load still entering freshwater and coastal water receiving environments. The National Policy Statement for Freshwater Management 2020 requires freshwater quality to be maintained or improved. A financial contribution is-may be required to offset or compensate for the adverse environmental effects (where they are more than minor) of the residual stormwater contaminants entering freshwater receiving</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					environments where policy WH.P15 and P.P13 anticipates a deterioration of water quality could arise.
S248.071	12 Schedule s	B Purpose	Amend	<p>Considers applicants should be given a reasonable opportunity to undertake their own aquatic offsetting or compensation to address more than minor residual adverse effects, in line with effects management hierarchy provided for under NPS-FM. Considers amendments necessary to clarify the financial contribution is not for greenfield development generally, but new impervious surfaces created as part of greenfield development.</p> <p>Seeks references to offsetting be accompanied by references to compensation as there is insufficient certainty about whether the financial contribution will be used (as set out in section E) to address residual stormwater contaminants from new impervious surfaces discharged within catchment (which is offsetting), or whether it will be used to improve water quality across a range of values, not limited to impervious surface contaminants, in whatua generally (which is compensation).</p>	<p>Amend schedule as follows:</p> <p>B Purpose</p> <p>A financial contribution ismay be required for all-the creation of new impervious surfaces as part of new greenfield development, new roads and state highways requiring a resource consent to offset or compensate for more than minor residual contaminant load from stormwater discharges entering freshwater and coastal water receiving environments to ensure the maintenance or improvement of water quality within the affected whatua. Financial contributions collected will be utilised to fund and construct new, or upgrade existing, catchment scale stormwater treatment systems serving existing urban development, within the same whatua and if practicable, the same part Freshwater Management Unit.</p>
S248.072	12 Schedule s	C Definition of an Equivalent Household Unit	Amend	<p>Considers consistent terminology should be used across policies, rules and Schedule 30 when referring to impervious surfaces. As such the terms "roofing or roading/hardstand area" should be replaced with "new impervious surfaces". The term "new" is important, as financial contributions should be calculated on the basis of new surfaces, not redeveloped ones. Considers the term "dramatically" unnecessary and should be removed.</p>	<p>Amend schedule as follows:</p> <p>C Definition of an Equivalent Household Unit</p> <p>An Equivalent Household Unit (EHU) is the basis for assessing the residual environmental impact (measured for copper and zinc contaminants in this instance) of the development of an average-sized residential unit for the purposes of calculating a financial contribution. Each average-sized new residential unit is deemed to create one unit of impact (one EHU). Because non-residential developments and new roads/state highways (not in direct support of a greenfield development) also impact contaminant levels, but can vary dramatically in size, every 100m2 of roofing or roading/hardstand area a new impervious surface is deemed to create one unit of impact,</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					rather than using the EHU unit of measure used for residential development. Financial contributions are calculated based on the number of EHUs expected to be delivered in greenfield areas in the two whitua. Non-residential and new road/state highway financial contributions are calculated based on the amount of roofing and roading/hardstand new impervious surface expected.
S248.073	12 Schedule s	D Calculatio n of level of contributio n	Amend	Considers section D of schedule be amended to clarify the financial contribution is based on area of new impervious surface, not total area of development.	Amend schedule as follows: D Calculation of level of contribution Financial contributions shall be calculated per EHU for residential greenfield development (Table D1), or per 100m2 of new impervious surface area for non-residential greenfield development and new roads/state highways (not in direct support of a greenfield development) (Table D2). Table D1. Financial contribution calculations for residential greenfield development Whaitua Residential Financial Contribution per EHU* Whaitua Te Whanganui-a-Tara \$4, 240 Te Awarua-o-Porirua Whaitua \$4, 599 *dwellings with <55m2 of roof site coverage shall be charged at 0.6 of the financial contribution rate Table D2. Financial contribution calculations for non-residential greenfield development and new roads/state highways Whaitua Non-residential (i.e new commercial, industrial, town centre areas) Financial Contributions per 100m2 of new impervious surface New roads and state highways (not in direct support of a new greenfield development) Financial Contribution per 100m2 of new impervious surface Whaitua Te Whanganui-a-Tara

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					\$858 \$360 Te Awarua-o-Porirua Whaitua \$858 \$360 Financial contributions shall be imposed as a condition of consent and will be collected prior to the consent being given effect to.
S248.074	12 Schedule s	E Use	Neutral	<p>Submitter is neutral on the content of this provision, but has concerns the use of financial contributions to fund catchment scale stormwater treatment projects undertaken by the stormwater network utility operator creates a real risk of "double dipping" of the kind prohibited under section 200 of the LGA. Notes this is particularly the case as development contributions are already used to fund upgrading and development of the stormwater network.</p> <p>Considers it is unclear whether Council's Long-term Plan/Infrastructure Strategy provides for the catchment scale stormwater treatment projects that will be funded by the financial contribution. Notes if these are not clearly provided for in the LTP/Infrastructure Strategy, there is no certainty that financial contributions will be spent for their intended purpose. Considers if catchment scale stormwater treatment projects are not provided for in the LTP/Infrastructure Strategy, this would be contrary to section 106 of the LGA, which provides that financial contributions relate to capital expenditure in the Council's LTP.</p>	Retain as notified
S248.075	12 Schedule s	Schedule 33: Vegetation Clearance Erosion and Sediment	Oppose	Opposes schedule being included within freshwater planning instrument, as purpose of the schedule is to manage land use for the purposes of soil conservation. Seeks schedule be reallocated to the Part 1 Schedule 1 planning instrument.	Reallocate schedule so that it is of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Management Plan.			
S248.076	12 Schedules	C Requirements of the Erosion and Sediment Management Plan	Amend	Considers terms "critical source areas" and "hotspots for sediment loss to surface water" under clause (b)(ix) are unclear, and should be defined so that it is clear to plan users what these terms mean, and what is sought to be mapped under this clause.	Define the terms "critical source areas" and "hotspots for sediment loss to surface water" in relation to Schedule 33 C1(b)(ix).
S248.077	12 Schedules	C1 Contents of the Erosion and Sediment Management Plan	Amend	Considers terms "critical source areas" and "hotspots for sediment loss to surface water" under clause (b)(ix) are unclear, and should be defined so that it is clear to plan users what these terms mean, and what is sought to be mapped under this clause.	Define the terms "critical source areas" and "hotspots for sediment loss to surface water" in relation to Schedule 33 C1(b)(ix).
S248.078	12 Schedules	Schedule 34: Plantation Forestry Erosion and Sediment Management Plan.	Oppose	Opposes schedule being included within freshwater planning instrument, as purpose of the schedule is to manage land use for the purposes of soil conservation. Seeks schedule be reallocated to the Part 1 Schedule 1 planning instrument.	Reallocate the schedule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.
S248.079	12 Schedules	A Purpose of the Erosion and Sediment Management Plan	Amend	In relation to clause B(2), submitter considers the term "avoid" is a very high and potentially unachievable threshold, and should be replaced with "minimise". Contained within the same clause, notes it is unclear which state the term "natural state" refers to, particularly where existing land uses have occurred for some time. In terms of measuring whether a plantation forest can achieve the same risk of sediment loss to water compared to a natural state, sediment loss from a	Amend clause B(2) to clarify the term "revegetation", and reword as follows: 2. avoid minimise any increase in risk of loss of sediment to water relative to the risk of loss that exists from the land in a natural state, ... Retain clause B(3) as notified. Delete clause B(4). Delete sections C1, C2, and D.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>plantation forest will vary over the course of its 25 year span. Submitter is neutral on clause B3, which aligns with its positions on Rules WH.R20 and P.R19, but questions the feasibility of clause B4. The practicality of replanting land with natives after harvesting a plantation forest can pose challenges and replanting with pine still provides benefits for stabilising erosion-prone land. Notes the Emissions Trading Scheme requires that forests registered to the scheme are replanted, as they provide important carbon sequestration benefits.</p> <p>Seeks the term "revegetation" under clause B3(1)(a) be clarified to include a range of vegetation types, including plantation forestry. Regarding the required contents, certification, and amendment of erosion and sediment management plans, the provisions in sections C1, C2, and D of this schedule appear to be a duplication of the requirements in NES-CF Schedule 4 for forestry earthworks management plans and the Regional Council's earthworks and sediment control management plan guidelines. Questions why these requirements need to be duplicated and suggests these be removed. Notes references to these requirements and guidelines can be inserted if considered necessary.</p>	
S248.080	12 Schedule s	Map 77: Habitats of nationally threatened freshwater species - Te Awarua-o- Porirua and Te Whanganu	Amend	Considers GIS mapping of riverine habitats described in Map 77 and Schedule F1 does not appear to accurately align with actual river extents. Plan users will rely on the mapping of scheduled riverine habitats to interpret spatial application of Schedule F1.	Amend GIS mapping of riverine environments described in Map 77 to accurately reflect the habitat extents covered by Schedule F1.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S173.003	General comments	General comments - urban development	Oppose	Opposes non-complying activity status for winter earthworks. Considers current approach to managing winter earthworks is effective. Considers that a blanket non-complying activity status does not take into account the scale, nature or duration of works. Considers the requirement to stabilise earthworks and implement sediment controls prior to shut down may not be feasible resulting in unintended environmental outcomes. Concerned the prescribed shut down period may not align with specific site conditions. Considers blanket restrictions do not effectively address the diversity of different sites and applicants which demonstrate the required management of winter works should be supported to avoid delays of housing supply.	Not stated
S173.004	General comments	General comments - unplanned greenfield development	Oppose	Opposes new provisions relating to unplanned development, and that they deny a consenting pathway for proposals that may have positive outcomes for the community or for freshwater. Notes the s32 evaluation suggest that contaminants can be addressed through a combination of treatment and financial contributions, therefore considers prohibited activity status inappropriate. Considers the need for two plan changes to enable greenfield development poses challenges for the private sector's responsiveness to housing needs, and is onerous and costly. Considers the approach may jeopardise the economic viability of development and hinder the supply of affordable housing.	Not stated
S173.005	General comments	General comments - stormwater management	Oppose	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers the standards pose significant burdens on property owners and developers. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers PC1	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				does not adequately evaluate financial costs on landowners, developers and ratepayers, including flow-on costs on the commercial viability of housing supply and affordability.	
S173.006	General comments - urban development	General comments - urban development	Oppose	<p>Considers implications of PC1 on affordability of housing and land development will be significant and are not appropriately addressed. Considers financial contributions for new residential units will have cascading effects on housing affordability and new requirements are inconsistent with provisions relating to housing affordability in the NPS-UD, and are not addressed in the s32 report. Opposes Schedule 30 and associated provisions and considers the financial contribution requirements burdensome and will adversely affect housing availability and affordability.</p> <p>Considers PC1 and its supporting documentation does not assess impacts on landowners and developers.</p> <p>Notes potential impacts on the commercial viability of the private sector and considers a mandatory flat fee financial contribution may incentivise large lots over intensification, which is inconsistent with Objective 2 and associated policies of the NPS-UD, and is not addressed in the s32 report.</p> <p>Considers the policy relies on financial contributions without consideration for alternatives or acknowledgement of changes in land use that may improve water quality, highlighting limitations due to stormwater contaminant treatment only being practicable for a portion of the contaminant load.</p> <p>Highlights lack of clarity on the feasibility, effectiveness and timing of mechanisms outlined in the schedule. Opposes clarification from GWRC that financial contributions will be required for developments achieving reductions greater than 85%. Considers the proposed contributions are not effects-based.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S173.007	2 Interpretation	Hydrological control	Amend	Considers the definition will not assist in the interpretation of provisions as it does not outline actual controls. Notes the definition of "stormwater treatment system" provides examples as well as specifications in Schedule 28.	Amend definition to outline what hydrological controls are, including examples and a schedule with technical standards.
S173.008	2 Interpretation	Impervious surfaces	Amend	Considers a roof with rainwater collection should be not be considered an impervious surface where it complies with hydraulic neutrality rules. Considers the implementation of greywater reuse is not a regulatory requirement and will significantly add to development costs.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs, paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas, porous or permeable paving, slatted decks which allow water to drain through to a permeable surface, porous or permeable paving and living roofs, roof areas with rainwater collection and reuse, any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S173.009	2 Interpretation	Redevelopment	Amend	Seeks for the definition to exclude extensions to existing buildings, to allow a permitted baseline for small redevelopment of existing sites.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point: For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving, installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing, activities that only involve the re-roofing of existing buildings, extensions to existing buildings
S173.010	2 Interpretation	Unplanned greenfield	Oppose	Notes the definition is associated with prohibited activity rules, which are opposed by the submitter.	Delete definition

		developm ent			
S173.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes provisions for unplanned greenfield growth. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Notes that the s32 report states that all contaminants can be mitigated through treatment and financial contributions, and considers that prohibited activity status is inappropriate in this case. Further considers the prohibited activity status inconsistent with Policy 8 of the NPS-UD. Notes that the s32 report sets out the prohibited activity status to require both a regional and district plan change to enable greenfield development. Considers the need for two plan changes will be expensive and will make it difficult for market responsiveness to the provision of housing.	Amend policy as follows and make any other consequential relief necessary to give effect to this submission point: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S173.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers that clauses (a), (b) and (c) may pose significant burdens on property owners and developers.	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		stormwater discharges		Considers that communal stormwater treatment may not be practical in all scenarios. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers the s32 report does not adequately assesses the costs of PC1 on landowners and developers, nor the broader impacts on urban growth and housing supply.	
S173.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the proposed financial contributions framework. Recognises the importance of managing stormwater contaminants, however considers financial contribution requirements burdensome, hindering greenfield development, housing availability and affordability. Considers costs to landowners/developers are not assessed, including flow-on impacts on housing supply and affordability, and consequential effects on commercial viability to provide for urban growth. Considers a mandatory flat fee financial contribution may incentivise large lots over intensification. Considers the policy relies on financial contributions without consideration for alternatives or acknowledgement of changes in land use that may improve water quality, highlighting limitations due to stormwater contaminant treatment only being practicable for a portion of the contaminant load. Highlights lack of clarity on the feasibility, effectiveness and timing of mechanisms outlined in the schedule. Opposes clarification from GWRC that financial contributions will be required for developments achieving reductions greater than 85%. Considers the proposed contributions are not effects-based.	Delete policy
S173.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges	Oppose	Opposes the avoidance/prohibited approach to greenfield development. Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.
S173.026	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes provisions for unplanned greenfield growth. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Notes that the s32 report states that all contaminants can be mitigated through treatment and financial contributions, and considers that prohibited activity status is inappropriate. Further considers the prohibited activity status inconsistent with Policy 8 of the NPS-UD. Notes that the s32 report sets out the prohibited activity status to require both a regional and district plan change to enable greenfield development. Considers the need for two plan changes will be expensive and will make it difficult for market responsiveness to the provision of housing.	Amend policy as follows and make any other consequential relief necessary to give effect to this submission point: Policy P.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S173.027	9 Te Awarua-	Policy P.P10: Managing	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S014 Bede Crestani

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S14.001	General comments	General comments - consultation	Amend	Submission period not long enough to provide response given the document size.	Not stated
S14.002	4 Policies	Policy P70: Minimising effects of rural land use activities.	Amend	Concern it is not possible to economically plant small pockets of land, and conditions make planting viable only in protected areas. Concern their land would have to be retired.	Remove the need to plant or retire land if the discharge is acceptable, otherwise come up with an appropriate treatment. Seeks current discharge quality be determined before deciding on the action to maintain or improve.
S14.003	4 Policies	Policy P73: Implementation of farm environment plans in priority catchments.	Amend	Concerns about time and cost needed to check stream quality and risk areas of the farm under different weather conditions prior to putting a plan together.	Seeks development of water quality tests and plans to understand causes before being required to prepare Farm Environment Plan, allow 5 years for implementation.

S254 Best Farm Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S254.001	General comments	General comments - consultation	Oppose	Considers there has been a lack of consultation on PC1. Considers little or no consideration has been given to the NPS-UD, and that there is a disconnect between the outcomes being sought by territorial	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		engagement		authorities giving effect to the NPS-UD through urban area intensification and green field areas.	
S254.002	General comments	General comments - consultation	Oppose	Considers there is little or no consideration given in the plan change to the NPS-Urban Development 2020 that has equal status in the RMA plan hierarchy.	Not stated
S254.003	General comments	General comments - urban development	Oppose	Considers there is a disjoint between the outcomes being sought by the Territorial Authorities who are giving effect to the NPS-UD and are actively promoting new growth through both intensification of the existing urban area and green field areas.	Not stated
S254.004	General comments	General comments - overall	Oppose	Opposes the plan change.	The plan change be withdrawn or alternatively the hearing be suspended until the direction of the new government is clear.
S254.005	2 Interpretation	Earthworks	Amend	Notes the definition of earthworks has been expanded and therefore opening a trench to install services would trigger the need for a resource consent if the area of disturbance exceeded 3000m ² .	The original definition be retained or the definition be amended by adding activities such as service trenches and scraping a site for the purpose of determining site levels to the exclusions list.
S254.006	2 Interpretation	Hydrological control	Amend	Considers the definition is vague and ambiguous, noting 'range' does not define what event or flow scenario must be attenuated or controlled, and that the requirement to 'replicate' natural processes is onerous and likely impossible to achieve.	Simplify the definition to state the design event that must be controlled and delete 'in a way that replicated natural processes'.
S254.007	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers the associated rule that 85% of mean annual runoff volume from new impervious surfaces must be treated is excessive and unreasonable.	Amend the policy to a more reasonable volume such as 50%.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S254.008	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Oppose	Does not support the financial contribution as per Schedule 30 to offset residual stormwater contaminants as it will contribute to increasing unaffordability of homes. Considers this excessive and unreasonable (refer submission point on Schedule 30)	Delete the policy.
S254.009	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers the policy effectively ring-fences the City and provides an urban fence that could not be breached. Suggests GWRC would never support a plan change application and the approach flies in the face of the local authorities' responsibility to provide for their own growth. Considers the policy is a back-door way of achieving a specific and unreasonable stormwater management approach.	Delete the policy.
S254.010	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	Notes that for turbidity to be measured using a new method of Total Suspended Solids requires a laboratory test to measure and cannot readily be done in the field.	Amend the Policy to refer to an NTU standard.
S254.011	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Considers it is entirely possible and reasonable to work into June or start in September after a dry winter and argues against preventing earthworks during these months. Notes such an approach has been in place for many years but does not work and unreasonably affects business operations.	Delete the policy or amend to have more flexibility for winter works.
S254.012	9 Te Awarua-	Rule P.R5: Stormwater from new	Oppose	Considers the rule is poorly written and will restrict development in the City, and focusses on improving water quality at any cost including the achievement	Delete the policy or amend to exclude roads and the redevelopment of existing

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

	o-Porirua Whaitua	and redeveloped impervious surfaces - permitted activity.		<p>of outcomes sought under other National Policy Statements (including the NPS-UD).</p> <p>Considers the rule in its current form will increase the cost of land and housing with social impacts for communities that GW have disregarded, and equates to another tax on development which will increase costs for all.</p>	urbanised properties, and for all other activities captured have a higher threshold for permitted activities e.g. 4000m ² .
S254.013	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Oppose	<p>Considers area threshold to be too low and arbitrary and objects to the introduction of a financial contribution to offset residual effects. Considers an additional tax on land will contribute to housing unaffordability and that developers already pay development contributions to local authorities, and considers it unreasonable to collect the tax prior to consent being given effect to.</p> <p>Notes the schedule also requires the tax be based on the number of EHU's expected to be delivered which is impossible if the application relates simply to earthworks. Concerns about who will be charged with calculating this and what happens if any future development delivers less than what was calculated.</p>	Delete the rule
S254.014	9 Te Awarua-o-Porirua Whaitua	Rule P.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas- controlled activity.	Oppose	Considers stormwater from new and redeveloped impervious surfaces of existing urbanised areas should be excluded from the impervious surface rules. Does not support the continuation of the rule through to controlled status.	Delete the rule

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S254.015	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-discretionary activity.	Oppose	Considers stormwater from new and redeveloped impervious surfaces of existing urbanised areas should be excluded from the impervious surface rules. Does not support the continuation of the rule through to discretionary status.	Delete the rule
S254.016	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Amend	Does not support stormwater discharges from unplanned green field development and considers the approach promotes the outcomes sought by the NPS-FM and ignores the outcomes sought by the NPS-UD. Notes there is no reference in Plan Change 1 to this NPS. Opposes prohibited activity status and considers there should always be an ability to seek a regional council consent for discharge, particularly where TA's are supporting a development in their City.	Amend R12 to be a Non-Complying Activity.
S254.017	9 Te Awarua-o-Porirua Whaitua	Rule P.R16: Vegetation clearance on highest erosion risk land-permitted activity.	Oppose	Concerns regarding the area considered to be highest erosion risk and how these were mapped, noting it appears the maps were drawn based on a desktop assessment of what is probably LIDAR data and aerial photographs. Considers this is unreliable and unsuitable for a regional plan. Notes there is no limit on area so long as you are clearing pest plants but there is no definition of this. considers the clearance of non-pest plants being limited to 200m ² as a controlled activity under R17 is too low given earthwork are permitted up to 3000m ² .	Delete the map
S254.018	9 Te Awarua-	Rule P.R17: Vegetation	Oppose	Concerns regarding the area considered to be highest erosion risk and how these were mapped, noting it appears the maps were drawn based on a	Delete the map The threshold for controlled activity status be increased to 3000m ² .

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S053 Bob Curry

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S53.001	12 Schedule s	Schedule 35: Small farm registratio n.	Amend	Considers that the winter stocking limits are arbitrary, and that the limitation of stock limits would affect their farming ventures, where existing stocking rates of 20-30 stock units per hectare have not had adverse effects on the land, groundwater, or adjacent waterways.	Limit the area of land requiring the submission of a Farm Plan to areas greater than 20 ha. Limit the stocking rate threshold for needing resource consent to 24 stock units per hectares of effective grazing areas on flat, fertile, productive land. Await the review of national policy statements before implementing changes to the Natural Resources Plan.
S53.002	General comment s	General comments - current legislation	Oppose	Considers there is conflict and inconsistency between the implementation of the National Policy Statement - Highly Productive Land by Upper Hutt City Council and the implementation off the National Policy Statement on Freshwater Management by GWRC. Notes that government has indicated National Policy Statements will be reviewed to ensure land is available to meet population increase.	Await government Review of National Policy Statements before implementing Change 1 to the Natural Resources Plan.

S258 BP Oil NZ Ltd, Mobil Oil NZ Ltd, Z Energy Ltd - The Fuel Companies

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S258.001	2 Interpreta tion	High risk industrial or trade premise	Oppose	Submitter not opposed to concept or intent of the definition of High Risk Industrial and Trade Premises, which is assumed to address the likes of the bulk fuel storage terminals at Seaview, Kaiwharawhara or Miramar. Notes uncertainty in definition that needs to be clarified to ensure broad category of 'petroleum or petrochemical industries' does not include service stations and/or other similar scale refuelling activities undertaken in compliance with the Environmental Guidelines for Water Discharges from Petroleum Industry Sites in New Zealand, Ministry for the Environment,	Amend definition of High Risk Industrial and Trade Premises to exclude service stations and truck stops with a complying interceptor. This could be achieved by making the following changes, or changes to the same effect: High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include: • boat construction and maintenance • commercial cement, concrete or lime manufacturing or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>December 1998 (MfE Guidelines for Water Discharges). Does not accept that these types of activities constitute 'high risk' industrial or trade premises. The MfE Guidelines for Water Discharges provides an effective regime for ensuring that stormwater discharges do not cause significant adverse effects on the environment. Those guidelines cover stormwater discharges from sites including: retail service stations, truck stops, terminals and depots and lubricating oil blending and grease manufacturing plants. Accepts that, a stormwater consent may be considered appropriate at bulk fuel storage terminals given a range of other operational discharges from such facilities that need to be considered and managed as part of the overall site management, and recognising stormwater management needs to be integrated into the regime. Such a matter is best dealt with through the consent process. Notes for service stations, truckstops and commercial refuelling facilities the risks are well understood and readily managed via compliance with the MfE Guideline for Water Discharges. A number of other jurisdictions effectively address this matter and recognise that service stations, truckstops and commercial refuelling facilities that comply with the MfE Guideline for Water Discharges do not represent a 'high risk'. For example: Environment Waikato has included a "deemed to comply" provision for discharges from service stations and truckstops complying with MfE Guideline for Water Discharges; Auckland Unitary Plan (operative in part) permits industrial and trade discharges listed as moderate risk activities (i.e. service stations are moderate if they comply with the MfE Guidelines as are truckstops (non-service station) having an activity area of less than</p>	<p>storage</p> <ul style="list-style-type: none"> • chemical manufacture, formulation or bulk storage, recovery, processing or recycling • fertiliser manufacture or bulk storage • storage of hazardous wastes including waste dumps or dam tailings associated with mining activities • petroleum or petrochemical industries including a petroleum depot, terminal, blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, but excludes service stations, truck stops and refuelling facilities that comply with Ministry for the Environment 1998 Environmental Guidelines for Water Discharges from Petroleum Industry Sites in New Zealand.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				1,000m ²); and Northland Regional Plan specifically excludes service stations, truck stops and refuelling facilities complying with MfE Water Discharge Guidelines from the definition of High Risk Industrial or Trade Premises and provides for such facilities as a permitted activity. Considers service stations, truckstops or commercial refuelling facilities that comply with MfE Water Discharge Guidelines should be excluded from definition of high risk industrial and trade premises, and managed through stormwater provisions in a way that is commensurate to the level of risk.	
S258.002	2 Interpretation	Hydrological control	Support	Supports hydrological control definition	Retain definition of hydrological control.
S258.003	2 Interpretation	Impervious surfaces	Support	Supports impervious surfaces definition	Retain definition of impervious surfaces.
S258.004	2 Interpretation	Redevelopment	Amend	Supports exclusion of trenching and resurfacing associated with installation, maintenance or repair of underground infrastructure. Supports exclusion of minor maintenance or repairs to carparking areas, driveways and paving. Seeks exclusion for resurfacing that does not involve re-direction of existing stormwater flows or drainage networks, for minor works to pave surfaces that may not fall into one of the other categories of excluded activities, but which will not alter existing stormwater flows or volumes.	Amend the definition of 'redevelopment' to also exclude resurfacing that does not involve re-direction of existing stormwater flows or drainage networks, as follows: Redevelopment For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e. brownfield development, upgrades to existing roads etc.) in relation to stormwater effects, this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: • minor maintenance or repairs to roads, carparking areas, driveways and paving • installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing • activities that only involve the re-roofing of existing buildings; and

		port or airport.		treatment and management procedures can be supported.	
S258.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Support	Supports WH.P14	Retain Policy WH.P14 as notified.
S258.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Oppose	Concerned with wording of the proposed rule and consider it may result in unintended outcomes. E.g., clause (iv) prohibits point source discharge of liquid fuels, except where treated by an interceptor system to contain no more than 15 mg/l TPH. Considers this potentially creates a requirement that all discharges from roads must be directed via an interceptor system for treatment, which would be a significant undertaking and is not expected to be the case. Notes it also creates uncertainty for emergency services in responding to emergency events, such as a road accident. While management practices will be in place around clean-ups and to inform any need to secure a site during event (e.g. to clear spilled fuel from an area to respond to a life-threatening situation), some such actions may be deemed prohibited under this rule. Concerns exception for discharges that are treated via an interceptor system also has potential unintended consequences of sanctioning intentional disposal of liquid fuels direct to an interceptor in reliance on the ability of the interceptor to treat contaminants. This would not be accepted practice at a Fuel Company site and is contrary to the principle of source control i.e. managing the risk of	Delete Rule WH.R1.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>the discharge of contaminants in the first instance. Further, the listing of specific contaminants in the rule as prohibited discharges may have the unintended consequence of parties assuming that the discharge of other contaminants is not controlled.</p> <p>Refers to Section 15 of RMA and notes need for Rule WH.R1 is unclear, as the discharge of the listed contaminants is already restricted by the RMA and Council's already have the ability to take enforcement action if necessary. Those parties that illegally discharge the listed contaminants are unlikely to change their behaviour on the basis of a new prohibited activity rule.</p> <p>Considers rule unnecessary, may result in unintended and inappropriate outcomes and should be deleted.</p>	
S258.018	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Amend	<p>Considers Rule WH.R4 provides appropriate recognition of industry best practice and practicable measures for managing the risk of contaminants and hazardous substances becoming entrained in stormwater from existing high risk industrial or trade premises.</p> <p>Submitter does not consider service stations, truck stops and commercial refuelling facilities that comply with MfE water discharge guidelines constitute 'high risk' industrial or trade premises. Considers Rule WH.R4 could be appropriately applied to existing MfE Guideline compliant service stations, truck stops and commercial refuelling facilities.</p> <p>Suggests Rule WH.R4 be amended to apply also to existing service stations, truck stops and commercial refuelling facilities that comply with MfE water discharge guidelines as a result of the definition change of high risk industrial or trade premise.</p> <p>Notes there may be other industrial or trade facilities</p>	<p>Amend Rule WH.R4 to also apply to service stations, truck stops and commercial refuelling facilities that comply with the MfE discharge guidelines, and, which the Fuel Companies consider do not meet the definition of 'high risk industrial or trade premises. This could be achieved by including specific reference to MfE discharge compliant service stations, truck stops and commercial refuelling facilities, or alternatively to industrial or trade premises in general, as follows:</p> <p>Rule WH.R4: Stormwater from an existing industrial or trade premise and high risk industrial or trade premise - permitted activity</p> <p>The discharge of stormwater from an existing industrial or trade premise, including a high risk industrial or trade premise, that is not a port or airport, into water, or onto or into land where it may enter water, including via an existing local authority stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(a) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with</p>

					treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons.
S258.021	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Support	Considers the discretionary activity status set by Rule WH.R11 for discharge of stormwater from new and redevelopment impervious surfaces at high risk trade and industrial sites, or for other sites where compliance with Rules WH.R5, WH.R6 or WH.R7 is not achieved, is accepted, subject to amendments sought to wording of Schedule 28 to clearly provide for source control and/or contaminant management measures as a means of addressing target load reductions for copper and zinc.	Retain Rule WH.R11 as notified.
S258.022	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Amend	Submitter understands activities not meeting the target load reductions for copper and zinc, as set out in Schedule 28, will default from discretionary under Rule WH.R11 to a non-complying activity status under Rule WH.R12. Submitter is not opposed provided amendments sought to the wording of Schedule 28 are made to clearly provide for source control and/or contaminant management measures as a means of addressing the target load reductions for copper and zinc.	Retain Rule WH.R12 as notified.
S258.023	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Clause (c)(iv) sets a zero tolerance approach to any sediment content in stormwater runoff during earthworks. The requirement to entirely prevent silt or sediment from entering the stormwater system is considered too absolute and unlikely to be able to be achieved in all situations even where best practice silt and sediment control measures are in place. This approach is likely to generate high consenting costs that are not reflective of the level of potential contaminants generated by small-scale earthworks that are well managed in accordance with best practice erosion and sediment control measures, or the additional benefits, in terms of sediment reduction, that might be achieved by	Amend Rule WH.23(c)(iv) to focus on implementation of best practice erosion and sediment control measures rather than the absolute avoidance approach currently proposed. This could be achieved by making the following changes or changes to the same effect: Rule WH.R23: Earthworks - permitted activity Earthworks is a permitted activity, provided the following conditions are met: a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or b) the earthworks are to implement an action in the farm environment plan for the farm, or

Proposed Change 1 to the Natural Resources Plan –

		point source discharges			
S258.031	9 Te Awarua-o-Porirua Whaitua	Policy P.P6: Point source discharges	Oppose	<p>Concerns with Policy P.P6. It is unclear in chapeau whether exclusion for stormwater networks is intended to apply in relation to network discharge consents or consents held by other parties (such as industrial or trade premises) for discharges to the receiving environment that are via the stormwater network.</p> <p>Notes Clause (b)(i) of the policy applies to all existing discharges and specifies that where target attribute states are met those discharges are only appropriate if the consent conditions include a defined programme of work for improving discharge quality. Considers this suggests all existing discharge consents will need to be reviewed to ensure such consent conditions exist. Submitter opposes any such review of existing stormwater and operational water discharge consents, particularly where target attribute states are met. Considers this unreasonable and inappropriate. Clause (c) relates to situations in which the target attribute states are not met and requires the conditions of existing consents to require a reduction of the adverse effects. Whilst an expectation for improvements in the quality of discharges is not necessarily opposed where the target attribute states are not met, the Fuel Companies have the same concern as in relation to Clause (b) in that there appears to be an expectation that all existing discharge consents will be reviewed and additional conditions required. That would be opposed. Considers policy be deleted due to uncertainty and inappropriateness.</p>	Delete Policy P.P6.
S258.032	9 Te Awarua-	Policy P.P7	Support	Supports Policy P.P7	Retain Policy P.P7as notified.

					surface water body or coastal water, and (d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.
S258.037	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Support	Supports P.P13	Retain Policy P.P13 as notified.
S258.038	9 Te Awarua-o-Porirua Whaitua	Rule P.R1: Point source discharges of specific contaminants - prohibited activity.	Oppose	Concerned with wording of the proposed rule and consider it may result in unintended outcomes. E.g., clause (iv) prohibits point source discharge of liquid fuels, except where treated by an interceptor system to contain no more than 15 mg/l TPH. Considers this potentially creates a requirement that all discharges from roads must be directed via an interceptor system for treatment, which would be a significant undertaking and is not expected to be the case. Notes it also creates uncertainty for emergency services in responding to emergency events, such as a road accident. While management practices will be in place around clean-ups and to inform any need to secure a site during event (e.g. to clear spilled fuel from an area to respond to a life-threatening situation), some such actions may be deemed prohibited under this rule. Concerns exception for discharges that are treated via an interceptor system also has potential unintended consequences of sanctioning intentional disposal of liquid fuels direct to an interceptor in reliance on the ability of the interceptor to treat contaminants. This would not be accepted practice at a Fuel Company site and is contrary to the	Delete Rule P.R1.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>principle of source control i.e. managing the risk of the discharge of contaminants in the first instance. Further, the listing of specific contaminants in the rule as prohibited discharges may have the unintended consequence of parties assuming that the discharge of other contaminants is not controlled.</p> <p>Refers to Section 15 of RMA and notes need for Rule WH.R1 is unclear, as the discharge of the listed contaminants is already restricted by the RMA and Council's already have the ability to take enforcement action if necessary. Those parties that illegally discharge the listed contaminants are unlikely to change their behaviour on the basis of a new prohibited activity rule.</p> <p>Considers rule unnecessary, may result in unintended and inappropriate outcomes and should be deleted.</p>	
S258.039	9 Te Awarua-o-Porirua Whaitua	Rule P.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Amend	<p>Considers Rule P.R4 provides appropriate recognition of industry best practice and practicable measures for managing the risk of contaminants and hazardous substances becoming entrained in stormwater from existing high risk industrial or trade premises.</p> <p>Submitter does not consider service stations, truck stops and commercial refuelling facilities that comply with MfE water discharge guidelines constitute 'high risk' industrial or trade premises.</p> <p>Considers Rule P.R4 could be appropriately applied to existing MfE Guideline compliant service stations, truck stops and commercial refuelling facilities.</p> <p>Considers Rule P.R4 be amended to apply also to existing service stations, truck stops and commercial refuelling facilities that comply with MfE water discharge guidelines as a result of the definition change of high risk industrial or trade premise.</p> <p>Notes there may be other industrial or trade facilities</p>	<p>Amend Rule P.R4 to also apply to service stations, truck stops and commercial refuelling facilities that comply with the MfE discharge guidelines, and, which the Fuel Companies consider do not meet the definition of 'high risk industrial or trade premises. This could be achieved by including specific reference to MfE discharge compliant service stations, truck stops and commercial refuelling facilities, or alternatively to industrial or trade premises in general, as follows:</p> <p>Rule P.R4: Stormwater from an existing industrial or trade premise and high risk industrial or trade premise - permitted activity</p> <p>The discharge of stormwater from an existing industrial or trade premise, including a high risk industrial or trade premise, that is not a port or airport, into water, or onto or into land where it may enter water, including via an existing local authority stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(a) the discharge is not from, onto or into SLUR Category III</p>

					<p>or: (a) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or (b) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons. Note: Where a property connects to a local authority stormwater network, additional connection requirements and authorisations may be required by the network utility operator. For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to P.R10.</p>
S258.041	9 Te Awarua-o-Porirua Whaitua	Rule P.R31: Take and use of water - restricted discretionary activity.	Amend	<p>Does not consider service stations, truck stops and commercial refuelling facilities that comply with MfE discharge guidelines constitute 'high risk' industrial or trade premises. Considers it appropriate to provide a permitted activity pathway for stormwater discharges from new and redeveloped impervious surfaces at MfE guideline compliant service stations, truck stops and commercial refuelling facilities on the same basis as for other land uses. Supports Rule P.R7, particularly the approach of treating the ability to achieve the target load reductions for copper and zinc, as set out in Schedule 28, through best practicable option measures as a 'matter of control' rather than as a prerequisite condition for new or redeveloped impervious surfaces to be able to be treated as a controlled activity under Rule P.R7.</p>	<p>Amend Rule to provide for stormwater discharges from new and redeveloped impervious surfaces at MfE guideline compliant service stations, truck stops and commercial refuelling facilities on the same basis as for other land uses. This could be achieved by making the following changes or changes to the same effect:</p> <p>Rule P.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity The use of land for the creation of new and/or redevelopment of impervious surfaces of an existing urbanised property and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing local authority stormwater network, that is not a high risk industrial or trade premise, is a controlled activity, provided the following conditions are met: (a) the proposal involves the creation of new, or redevelopment of impervious surfaces of between 1,000m2</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>and 3,000m2 (baseline property existing impervious area as at 30 October 2023) or, (b) the proposal involves the creation of new, or redevelopment of impervious areas of less than 1,000m2 but is not permitted under the conditions of Rule WH.R5, and, (c) where stormwater directly or indirectly (through an existing local authority stormwater network) discharges to a river, hydrological control is provided either: (iii) on-site, or (iv) off-site through an existing local authority stormwater network or privately owned stormwater network that has been sized to accommodate the proposed stormwater discharges, and (d) contaminant treatment of stormwater is provided either: (iii) on-site through a stormwater treatment system, or (iv) off-site through an existing local authority stormwater network or privately owned stormwater treatment system that has capacity to treat contaminant loads from the site; and (e) where the discharge is from a service station, truck stop or commercial refuelling facility any contaminants stored or used on site, or hazardous substances, cannot be entrained in stormwater and enter a surface water body or coastal water, including via the stormwater network, or: (iii) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or (iv) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons.</p>
S258.042	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redevelop	Support	Considers the discretionary activity status set by Rule WH.P10 for discharge of stormwater from new and redevelopment impervious surfaces at high risk trade and industrial sites, or for other sites where compliance with Rules P.R5, P.R6 or P.R7 is not achieved, is accepted, subject to amendments	Retain Rule P.R10 as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ed impervious surfaces-discretionary activity.		sought to wording of Schedule 28 to clearly provide for source control and/or contaminant management measures as a means of addressing target load reductions for copper and zinc.	
S258.043	9 Te Awarua-o-Porirua Whaitua	Rule P.R11: All other stormwater discharges - non-complying activity.	Amend	Submitter understands activities not meeting the target load reductions for copper and zinc, as set out in Schedule 28, will default from discretionary under Rule P.R10 to a non-complying activity status under Rule P.R11. Submitter is not opposed provided amendments sought below to the wording of Schedule 28 are made to clearly provide for source control and/or contaminant management measures as a means of addressing the target load reductions for copper and zinc.	Retain Rule P.R11 as notified.
S258.044	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Clause (c)(iv) sets a zero tolerance approach to any sediment content in stormwater runoff during earthworks. The requirement to entirely prevent silt or sediment from entering the stormwater system is considered too absolute and unlikely to be able to be achieved in all situations even where best practice silt and sediment control measures are in place. This approach is likely to generate high consenting costs that are not reflective of the level of potential contaminants generated by small-scale earthworks that are well managed in accordance with best practice erosion and sediment control measures, or the additional benefits, in terms of sediment reduction, that might be achieved by requiring a consent to be obtained. Suggests a more appropriate approach is to require implementation of best practice erosion and sediment control measures to reduce the risk of sediment becoming entrained in stormwater.	Amend Rule P.22(c)(iv) and (v) to focus on implementation of best practice erosion and sediment control measures rather than the absolute avoidance approach currently proposed. This could be achieved by making the following changes or changes to the same effect: Rule P.R22: Earthworks - permitted activity Earthworks is a permitted activity, provided the following conditions are met: a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or b) the earthworks are to implement an action in the farm environment plan for the farm, or c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (i) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (ii) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>(iii) the area of earthworks must be stabilised within six months after completion of the earthworks, and (iv) best practice erosion and sediment control measures shall be used to minimise the risk of a discharge there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (v) best practice erosion and sediment control measures shall be used to minimise the risk of prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network. Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).</p>
S258.045	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	<p>Notes Rule WH.R24 requires a concentration of no more than 100mg/l of total suspended solids (TSS) in discharges from earthworks, with a default to non-complying activity status (under Rule WH.25) where that threshold cannot be achieved. Considers a broad range of variables will affect sediment loading in discharges from earthworks including soil types, slope length and angle, rain events and intensity during an earthworks project, as well as the nature scale and duration of the earthworks involved. The ability to achieve and clearly demonstrate the ability to comply with a specified TSS threshold may not be known prior to the commencement of any given earthworks project. Suggests a more practicable approach would be to require implementation of best practice erosion and sediment control measures to reduce the risk of sediment becoming entrained in stormwater as part of a restricted discretionary activity consenting process under WH.R24.</p>	<p>Amend Rule P.R23, to focus on implementation of best practice erosion and sediment control measures rather requiring compliance with a sediment loading threshold. This could be achieved by making the following changes or changes to the same effect:</p> <p>Rule P.R23: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule P.R22 is a restricted discretionary activity, provided the following conditions are met: (a) best practice erosion and sediment control measures shall be used to minimise the risk of a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network. the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m3, except that, if at the time of the</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers there is unlikely to be any significant benefit in requiring a non-complying activity consent, rather than a restricted discretionary activity consent, where there is uncertainty around the ability to comply with the specified 100mg/l TSS threshold at all times (for example where an intense rainfall event may occur), and there is an ability for council to review, impose conditions and monitor proposed erosion and sediment control measures through the RD consent process in any case.	discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (iii) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F4 (rivers/lakes), or (iv) 30% in any other river, and (c) earthworks shall not occur between 1st June and 30th September in any year.
S258.046	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Support	Supports Rule P.R24, subject to the changes sought to Rule P.R23	Retain Rule P.R24 as notified.
S258.047	9 Te Awarua-o-Porirua Whaitua	Rule P.R30: Take and use of water - permitted activity.	Support	Supports exclusion of dewatering activities undertaken in accordance with R159 or R160.	Retain Rule P.R31 as notified.
S258.048	9 Te Awarua-o-Porirua Whaitua	Rule P.R31: Take and use of water - restricted discretionary activity.	Support	Supports exclusion of dewatering activities undertaken in accordance with R159 or R160.	Retain Rule P.R32 as notified.
S258.049	12 Schedules	Schedule 28: Stormwater Contaminants	Amend	Considers focus of Schedule 28 is on stormwater contaminant treatment without recognising role of source control and/or other contaminant management measures to reduce copper and zinc loading in stormwater discharges. Considers this does not reflect the approach set out	Amend Schedule 28 to clearly enable source consent and/or other contaminant management measures to be used as an alternative means of achieving the target load reductions; and make all necessary amendments to clarify the assessment pathway (including the applicable rules) for activities that cannot achieve the copper and zinc target load

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		nt Treatment.		<p>in proposed policy framework, which clearly recognises and encourages use of source control. As per MfE Water Discharge Guidelines, a comprehensive approach is taken to management of stormwater runoff from the Fuel Companies' facilities and managing risk of contaminants becoming entrained in stormwater discharges including source control, site management and emergency response procedures as well as use of treatment devices suited to industry and anticipated contaminant types and loads.</p> <p>Opposes an approach that favoured the treatment of stormwater runoff through raingardens/bioretention at expense of other proven stormwater contaminant management methods. Schedule 28 should be amended to ensure consistency with the policy direction.</p> <p>In addition, under Rule WH.R11, an application for resource consent must include a Stormwater Impact Assessment prepared in accordance with Schedule 29. Clause 6 of Schedule 29 provides a clear reference to the contaminant treatment approach in Schedule 28. However, a statement at beginning of Schedule 28 specifies that Schedule 28 relates to Rules WH.R6, WH.R7, P.R6 and P.R7. No reference is made, however, to WH.R11, which creates the potential for confusion as to the extent to which target load reductions for copper and zinc apply to activities seeking resource consent under Rule WH.R11, and whether an inability to achieve the target load reductions specified in Schedule 28 will result in non-compliance with Rule WH.R11, such that the activity would default to non-complying under Rule WH.R12.</p> <p>Considers this assessment pathway needs to be clarified.</p>	<p>reductions. This could be achieved by making the following changes or changes to the same effect:</p> <p>Schedule 28: Stormwater Contaminant Treatment This schedule relates to Rules WH.R6, WH.R7, WH.R11, P.R6, and P.R7 and P.R10.</p> <p>Target Load Reductions All new and redeveloped impervious surfaces are to be treated to meet an equivalent target load reduction for copper and zinc to those set out for a raingarden/bioretention device, as per Table 1. Table 1: Target Load Reductions for Copper and Zinc, Bioretention (rain garden) - Copper 90% - Zinc 90%</p> <p>Equivalent Target Load Reduction A treatment train approach, source control and/or contaminant management may be used to achieve an Equivalent Target Load Reduction set out in Table 1. The equation below provides an example of how the total load reduction factor of a given treatment chain can be calculated</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S258.050	12 Schedule s	Schedule 29: Stormwater Impact Assessme nts.	Amend	Supports Schedule 29, particularly the additional assessment matters applying to high risk industrial or trade premises are considered to be appropriate. With regards to the changes sought to the definition of 'high risk industrial or trade premises', submitter considers these additional clauses could be appropriately applied to any new or redevelopment impervious surfaces at service stations, truck stops or commercial refuelling facilities that are not otherwise provided for as a permitted activity under Rule WH.R5 or P.R5 or a restricted discretionary activity under Rule WH.R7 or P.R7.	Amend Schedule 29 to clarify it's application to service station, truck stop and commercial refuelling activities that the Fuel Companies seek be excluded from the definition of 'high risk' trade and industrial activities. This could be achieved by making the following changes or changes to the same effect: Schedule 29: Stormwater Impact Assessments A stormwater impact assessment shall include the following analysis: ... Where the application includes an industrial or trade premise or a high risk industrial or trade premise the stormwater impact assessment analysis must also consider the following: i. Procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, to ensure these are not entrained in stormwater, and ii. Management practices proposed to avoid or minimise entrainment of contaminants into stormwater, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		on highest erosion risk land - permitted activity.		a water where this is not to implement the erosion risk treatment plan or for the control of pest plants is not provided for as a permitted or controlled activity. Therefore, it is a discretionary activity under Rule WH.R19. Considers it is unclear whether it is council's intention for vegetation clearance of 200m ² or less, in this erosion risk overlay, to be a discretionary activity. Assumes this to be a drafting error. Considers the discretionary activity as it stands is onerous and unnecessary. Considers where there are large properties and track maintenance is required to clear woody vegetation, a permitted activity standard of 200m ² per property is too small. Considers clearance of 2000m ² per property as a minimum or provision for clearing of vegetation for track maintenance should be considered.	surface water body is a permitted activity provided the following conditions are met: (a) the vegetation clearance is a total of 200m² or less per property in any consecutive 12-month period, or (a)(b) the vegetation clearance is: (i) to undertake track maintenance , or (ii) to implement an action in the erosion risk treatment plan for the farm, or (iii) for the control of pest plants, and (b) (c) debris from the vegetation clearance is not placed where it can enter a surface water body.
S260.014	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	Considers where there are large properties and track maintenance is required to clear woody vegetation, a permitted activity standard of 200m ² per property is too small. Considers clearance of 2000m ² per property as a minimum or provision for clearing of vegetation for track maintenance should be considered. Considers consequential amendments to this controlled activity rule are sought.	Amend as follows: Vegetation clearance on highest erosion risk land (woody vegetation), of more than a total area of 200m ² per property in any consecutive 12-month period, and any associated discharge of sediment to a surface water body, that is not a permitted activity under Rule WH.R17 , is a controlled activity provided an erosion and sediment management plan has been prepared in accordance with Schedule 33 (vegetation clearance plan) and submitted with the application for resource consent under this Rule.
S260.015	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Amend Support	Supported if Rules WH.R17 and WH.R18 are amended as sought.	Not stated.—Amend Rule WH.R17 and WH.R18 as sought.
S260.016	8 Whaitua Te	Rule WH.R23:	Amend	Notes an error with rule wording and that GWRC relayed the intention of this rule is to provide for all	Amend Rule WH.R23 as follows:

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Earthworks - permitted activity.		<p>earthworks less than 3000m² per property as a permitted activity, subject to conditions, and will look to correct this error through Clause 16 of the RMA or a submission.</p> <p>Opposes the earthworks rule as it stands and supports any amendment to the Rule to provide for all earthworks where they do not exceed 3000m² per property in any consecutive 12 month period as a permitted activity.</p>	<p>Earthworks is a permitted activity, provided the following conditions are met: (a) the area of earthworks does not exceed 3,000m² per property in any consecutive 12-month period, or (a) (b) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) (c) the earthworks are to implement an action in the farm environment plan for the farm, and (c) (d) the area of earthworks does not exceed 3,000m² per property in any consecutive 12-month period, and (d) (e) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, And (e) (f) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) (g) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) (h) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) (i) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p>
S260.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	<p>Opposes the shut down period for earthworks included in condition (b) and mater of discretion (8) restricting winter works and preparation for closedown for reasons outlined in submission on Policy WH.P31, subject to the acceptance of amendments to Rule WH.R23 as sought above.</p>	<p>Amend Rule WH.R24 as follows:</p> <p>Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met:</p> <p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about</p>

**Proposed Change 1 to the Natural Resources Plan –

					wetlands and their margins and the coastal environment (v) natural hazards, land stability, soil erosion, sedimentation and flood hazard management including the use of natural buffers 7. Duration of the consent 8. Preparation required for the close down period (from 1st June to 30th September each year) and any maintenance activities required during this period 9. Monitoring and reporting requirements
S260.018	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Oppose	Considers the necessity for having unplanned greenfield areas identified on the proposed PC1 maps (and the consequential definition of unplanned greenfield development) is not adequately justified in PC1 or the accompanying S.32 Report. Considers in relation to the Cannon Point site, Map 88 does not accommodate planned residential development where this is provided for in the Rural Lifestyle Zone of the Upper Hut District Plan, nor where it is proposed through re-zoning subject to existing notified plan changes PC50 and the IPI for Upper Hutt. Considers map 88 does not reflect the GWRC officer recommendation that the item should be included as planned development in Upper Hut in the FDS. Considers the definition and approach to what is unplanned urban development is flawed and needs to be reconsidered consistently across each district council.	(a) Delete Maps 86-89 Greenfield Areas (planned and unplanned) OR if relief is not accepted then (b) Amend Map 88 to include the site extent of Cannon Point as a planned/existing urban area as shown on the map included in Appendix A, and further described in paragraph 1.12 of the submission.
S260.019	13 Maps	Map 94: Highest erosion risk land (Woody vegetation clearance) - Te Whanganu i-a-Tara.	Amend	Concerned about the pixelated display of the highest erosion risk areas and the associated physical boundaries identified in Map 94. Understands the display is to be corrected, based on discussions with GWRC, and supports this change only on the proviso that the maps accurately located the highest erosion risk on site. Until these are displayed accurately depicting the site these maps are opposed.	Amend the display of Map 94 to better identify the actual physical boundaries of land that is at highest risk of erosion (woody vegetation clearance), to enable related PC1 provisions be interpreted correctly.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S247 Carrus Corporation Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S247.001	General comments	General comments - definitions	Amend	<p>Considers without a definition, there may be uncertainty about what constitutes a greenfield development in comparison to an infill/brownfield development.</p> <p>Considers a definition of 'greenfield' development will assist in providing certainty regarding the application of new rules.</p> <p>Considers the proposed definition of 'greenfield' development aligns with the definition of an urban environmental allotment under section 76(4C) of the RMA. Suggests this definition will not hinder the ability of large lots to accommodate the establishment of up to 2 dwellings, which is permitted by most District Plans in the region.</p>	<p>Amend as follows: Add definition of greenfield development: Greenfield Development: The use of land that is predominately vacant with a site area of 4,000m² or greater, where the proposal will result in the development of 3 or more lots or dwellings for residential purposes regardless of staging.</p>
S247.002	General comments	General comments - overall	Oppose	<p>Supports initiatives to improve the quality of freshwater and the state of freshwater and coastal environments.</p> <p>Opposes PC1 in its current form and requests it be withdrawn to allow for genuine consultation to occur, consideration of matters raised through this submission process, and consideration of the new direction from the central Government.</p> <p>Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules</p> <p>Considers PC1 will have significant financial impacts particularly on pre-committed development projects.</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules.	
S247.003	General comments	General comments – urban development	Oppose	Considers PC1 potentially conflicts with the intended outcomes of the NPS-UD to provide for well-functioning urban environments, including both through infill, and greenfield developments. Notes Policy 6 requires planning decisions that affect urban environments to consider the benefits of urban development and the contributions that development makes to provide or realise development capacity, and this has not been sufficiently considered in PC1 as economic impacts have not been assessed.	Withdraw PC1
S247.004	General comments	General comments - consultation	Oppose	<p>Considers adequate consultation was not carried out with the development community and is concerned the draft version was not sent to the development community despite Subpart 1 of the NPS-FM requiring regional councils to engage with communities and tangata whenua</p> <p>Considers that given the impact and extent of the proposed changes, the publication of a draft plan and consultation with the development community would minimise potential appeals and aid towards a more workable and functioning Natural Resources Plan.</p>	Withdraw PC1
S247.005	General comments	General comments - consultation	Oppose	<p>Considers GWRC should wait to see what changes to the NPS-FM are proposed by the new government coalition to ensure PC1 is in alignment.</p> <p>Considers PC1 was rushed as the plan does not</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>need to be notified until 31st December 2024.</p> <p>Considers the imposition of new rules with immediate legal effect is inconsistent with subpart 1 of the NPS-FM as there is still a significant amount of time before the plan change has to be notified.</p>	
S247.006	2 Interpretation	Hydrological control	Amend	<p>Suggests the hydrological control definition should be expanded to include reference to the measures proposed to manage the flows and volumes and an acceptable solution that is easily and commonly able to be implemented.</p> <p>Considers the current definition does not provide certainty regarding the rate or degree to which hydrological controls need to be implemented on-site and whilst there is mention throughout PC1 on retention, there is no definition as to an acceptable volume of water that needs to be provided for.</p> <p>Considers permitted activity standards (and the supporting definitions) should be clear and easy to understand without any ambiguity.</p> <p>References Table E10.6.3.1.1 of the Auckland Unitary Plan which contains hydrological controls. Notes a 5mm runoff depth has been used in the decision sought but recommends GWRC complete modelling to determine the runoff depth for each catchment as sensitivity to volume changes will vary between catchments. Suggests technical standards could also be referenced.</p>	<p>Request the following to the definition be added : Management measures may include: a) Rapid Infiltration devices such as soak pits; b) Permeable paving; or c) Rainwater retention tanks which: i) are plumbed into the toilet and/or an outdoor tap or taps; and ii) where connected to toilets, are capable of being topped up by potable water supply to a maximum volume of 100L.</p> <p>Where these measures provide a minimum retention volume of 5mm runoff depth over the impervious area which hydrology controls are required; and</p> <p>Provide detention (temporary storage) for the difference between the predevelopment and post-development runoff volumes from the 95th percentile, 24 hour rainfall event minus the 5 mm retention volume or any greater retention volume that is achieved, over the impervious area for which hydrology mitigation is required (unless further detention or infiltration measures are utilised downstream).</p> <p>Note: Compliance with the definition can be demonstrated by installing a rainwater tank in accordance with Approved Solution #1 of Wellington Water's Managing Stormwater Runoff Version 4 June 2023.</p>
S247.007	2 Interpretation	Redevelopment	Amend	<p>Considers the definition should exclude minor alterations and additions to existing buildings to provide for the small redevelopment of existing sites</p>	<p>Amend definition and make any other consequential amendments necessary to give effect to this submission point, to provide for small scale alterations and additions to</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>as a permitted activity in associated rules.</p> <p>Notes the suggested 30m² amendment aligns with recent changes to the Building Regulations for sheds to avoid consenting requirements.</p>	<p>existing buildings:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing activities that only involve the re-roofing of existing buildings New buildings or alterations and additions to existing buildings of less than 30m²</p>
S247.008	2 Interpretation	Unplanned greenfield development	Oppose	<p>Opposes the proposed prohibited activity rules.</p> <p>Considers the current provisions would make rezoning more costly, and take longer as they would require a plan change to a District Plan and the Natural Resource Plan.</p> <p>Considers that in some instances resource consent is more appropriate than a plan change. For example, when the size of the site or development is not such that a plan change is economically viable, or the effects are discrete and localised making a resource consent process more appropriate.</p> <p>Considers other proposed rules within PC1 that apply greenfield development adequately address effects on water quality effects without needing to prohibit development.</p>	<p>Requests the deletion of this definition and all subsequent references to unplanned greenfield development. Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023. Amend definition to align with zones under a District Plan and avoid a plan change to both District and Regional Plans:</p> <p>Should the above relief not be obtained, submitter seeks the following revision:</p> <p>Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 not zoned as urban within a District Plan. which also require an underlying zone change (from rural/nonurban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are identified on maps 86, 87, 88 and 89 these areas and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					include those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023. And consequential amendments to other references or policies as needed to align with the above amendment.
S247.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes prohibited policy and rules. Concerned prohibiting activities can lead to perverse outcomes (experienced with the NES-FW) as there is no consenting pathway to consider proposals that have a net positive impact on the environment, including freshwater and coastal systems.	Amend policy to remove reference to prohibiting unplanned greenfield development. (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants.
S247.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers there will be instances where it is not practicable to achieve hydrological controls i.e. when retention is not possible and there are low infiltration rates, more water will be discharged to a water network, even though the peak flows are being contained. Considers source control measures should be included in this policy as they are a way of reducing copper and zinc loads.	Amend policy wording to remove (b) and replace (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system (b) Source control techniques that result in copper and zinc load reductions equal to or greater than what would be achieved through on-site or communal stormwater treatment systems or devices designed in accordance with (a).
S247.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes use of the term "avoid". Opposes the requirement to seek two separate plan changes if land is to be rezoned.	Request policy is deleted. Policy WH.P16: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.

S247.029	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend	Considers the timing should align with the feedback provided for Rule WH.R6	<p>Amend wording to reference 2024, not 2023 (a)the proposal involves the creation of new impervious surfaces of between 1,000m2 and 3,000m2 (baseline property existing impervious area as at 30 October 2034)</p> <p>Amend Rule WH.R6 to as follows ... (d) where stormwater directly or indirectly (through an existing local authority stormwater network) discharges to a river, hydrological control is provided either: i) on-site, or ii) off-site through an existing local authority stormwater network or privately owned stormwater network that has been sized to accommodate the proposed stormwater</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>discharges; oriii) Where a suitably qualified person has confirmed that soil infiltration rates are less than 2mm/hr or there is no area on the site of sufficient size to accommodate all required infiltration that is free of geotechnical limitations (including slope, setback from infrastructure, building structures or boundaries and water table depth), and rainwater reuse is not available because:</p> <p>i. the quality of the stormwater runoff is not suitable for on-site reuse (i.e. for non-potable water supply, garden/crop irrigation or toilet flushing); or</p> <p>ii. there are no activities occurring on the site that can re-use the full 5mm retention volume of water.</p> <p>The retention volume can be taken up by providing detention (temporary storage) for the difference between the pre-development and post development runoff volumes from the 95th percentile, 24 hour rainfall event minus any retention volume that is achieved, over the impervious area for which hydrology mitigation is required.</p>
S247.030	9 Te Awarua-o-Porirua Whaitua	Rule P.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas-controlled activity.	Amend	Considers the timing should align with the feedback provided for Rule WH.R5	Submitter refers to their proposed amendment to Policy WH.R7

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S247.031	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	Submitter refers to feedback provided on Rule WH.P23 (note no feedback was provided on rule WH.P23 within the submission.	Submitter refers to proposed amendment to Policy WH.R23 (that no amendment was provided for policy WH.P23 within the submission)
S247.032	12 Schedules	Schedule 30: Financial Contributions.	Amend	Considers payment of financial contributions for greenfield development should be based on the point source of contaminants, being the impervious area, rather than on a per lot (or EHU) basis. Suggests this should be on a m ² basis as it applies to non-greenfield development.	Amend the Part D calculation of level of contribution of Schedule 30 to: D Calculation of level of contribution Financial contributions shall be calculated per EHU for residential greenfield development (Table D1), or per 100m2 for non-residential greenfield development and new roads/state highways. And consequential amendments to other references or policies as needed to align with the above amendment.
S247.033	12 Schedules	D Calculation of level of contribution	Not Stated	Considers the payment of financial contributions should be levied by a local authority at the same time as the payment of other development contributions, for ease of administration, enforcement, and better alignment with when the effect is likely to be present. Suggests the payment of financial contribution be undertaken in a similar manner to rates payments where rates are paid and administered by a local authority, but allocated between regional and local councils. Concerned the current timing of the payment (when consent is given effect to) will add to upfront development costs, particularly for large staged development, putting many projects at risk as many developers rely on pre-sales to obtain funding for works.	Amend the Part D calculation of level of contribution of Schedule 30 to: Financial contributions shall be imposed as a condition of consent and will be collected by the local authority at the same time as payment of any other financial or development contributions are paid prior to the consent being given effect to. And consequential amendments to other references or policies as needed to align with the above amendment. Note a reduced contribution will be applied if the post-development residual contaminant load is less than 15%, or where treatment contributes towards a reduction in off-site contaminants.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers provisions should be made for circumstances where residual contaminants are being treated on-site i.e. where using a treatment device further reduces contaminants beyond the assumed residual contaminants or where it treats contaminants off-site, such that the net contamination load is reduced following the development i.e. if the development treats flow from upstream.	
S247.034	12 Schedule s	D Calculatio n of level of contributio n	Amend	Notes that Schedule 28 states the target load reduction factor for bioretention is 90%, however the financial contribution is calculated based on treating 15% of remaining contaminant loading. Concerned there has not been an Economic Impact Assessment completed to inform these numbers and if PC1 is requiring treatment to 90%, then any financial contribution should be reduced proportionately i.e. 1/3.	Amend the Part D financial contribution as follows: Whaitua Te Whanganui-a-Tara \$4,240 2,827 Te Awarua-o-Porirua Whaitua \$4,599 3,066 (Noting the submission point above, whereby we seek to remove charges based on EHU and therefore this table should be deleted in entirety) Whaitua Te Whanganui-a-Tara \$858 572 \$360 240 Te Awarua-o-Porirua Whaitua \$858 572 \$360 240 Furthermore, these numbers should be assessed following a peer reviewed Economic Impact Assessment.

		state sites (rivers) - Te Whanganui-a-Tara.			Alternatively, if the mapping extent is not erroneous, provide explanation for the unit boundary and the discrepancy between map layers.
S93.011	13 Maps	Map 82: Coastal water management units - Te Awarua-o-Porirua.	Amend	Concerned about how the boundaries for the management units have been mapped. Considers that the Wellington Urban FMU should apply to land and that Te Whanganui a Tara harbour and estuaries management unit should apply to the CMA.	Amend the boundary of the Te Whanganui-a-Tara harbour and estuaries' unit to accurately reflect the extent of coastal marine area adjacent to CentrePort's container wharf, and to ensure that there is not overlap with the Wellington urban FMU. Remove the Wellington urban FMU from wharves and apply the 'Te Whanganui-a-Tara harbour and estuaries' coastal water management unit to these areas. Alternatively, if the mapping extent is not erroneous, provide clear and reasoned explanation for the unit boundaries and the discrepancy between map layers.

S288 China Forest Group Company New Zealand Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.001	General comments	General comments - overall	Not Stated	"Considers several aspects of PC1 are poorly founded and require considerable research and explanation. Notes the following points of concern: - the consultation/representation process is flawed and short-changed, directly impacting sectors. - controls extend beyond the recommendations of whatua committee reports. - rules that apply to forestry that are not supported by GWRC data and past records. - the rules are unable to be implemented without loss of estate due to the spatial logistics of harvesting and roading. - there has been no consideration of the ETA and other cost liabilities contingent upon non-replant of	Remove the sections of PC1 related to forestry. Align rules to those of the NES-CF. Work collaboratively with industry participants and land-owners to implement good practice, and where needed, engage on how to refine and plan land management outcomes that will fulfil the objectives without excessive bureaucracy and cost.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				land retired from PC1 rules. - duties under the NES Regulation 6 Stringency insufficiently executed. - the s32 analysis is inadequate. "	
S288.002	General comments	General comments - consultation	Not Stated	<p>"Acknowledges the necessity of PC1 to respond to the requirements of the NPS-FW, and acknowledges the purpose of the whitua committees to resolve issues before plans or rules were made. However, notes there was only one identifiable party with forestry expertise in Te Awarua-o-Porirua Whitua until 2018, and no such expertise within Te Whitua te Whanganui-a-Tara. Concerned further engagement with affected sectors was not undertaken between completion of action plans and publishing of PC1, noting a divergence between PC1 rules to achieve freshwater objectives and the whitua committees' recommendations. Notes replanting on nominated high risk land is not included as a non-complying use, but is intended to be rectified by way of submissions by GWRC. Considers it inappropriate to insert rules that have not been included in public documentation. Considers it is bad faith to notify significant changes from the NRP with limited time to make submissions.</p> <p>Considers forestry, and sectors that may potentially be significantly adversely affected, have been under-represented in development of the PC1 outcomes. Considers direct engagement with the sector should have been undertaken to understand the implications and practicality of the rules. No concerns raised by the submitter with the recommendations of the whitua committees, noting the expectations of those recommendations that the sector and GWRC would work within the existing framework to achieve water quality objectives. Considers the outcomes are materially different,</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				and notes the timeframe for the submission process limited for the required research and engagement needed. Concerned submissions are used to rectify oversights not included in PC1. "	
S288.003	General comments	General comments - plantation forestry	Not Stated	Notes major disparities between the whitua committee recommendations and PC1 rules. Notes the TAP committee considered more stringent rules for forestry to achieve the sediment objectives, but concluded the permitted framework of NESPF should be given time to be implemented, and that understanding and mapping erosion prone land at the local whitua scale was important to inform future planning. Notes that no recommendations were made by the TAP that plantation forests should be retired, nor the need identified for stringency beyond the (then) NES-PF. Notes that while recognising potential water quality risks from forestry, neither whitua committee recommended an explicit need to retire areas of production forestry. Notes neither whitua committee considered a need for major strengthening of the regulatory regime, but rather recognised the (then) NES-PF and urged a focus on education, implementation, monitoring and enforcement where necessary. Notes the whitua recommendations sought close liaison between the sector and GWRC land management staff when looking at land use management planning around high-risk erosion sites. Notes neither whitua committee made recommendations to address an explicit link between forestry and water quality attribute standards or objectives.	Not stated
S288.004	General comments	General comments - plantation forestry	Not Stated	"References data from monitoring sites and an ecological assessment which indicate very small proportions of the Pouewe Catchment-Horokiri have been exposed to potentially elevated levels of sedimentation above baseline from forestry activity, and that there is at least reasonable water quality.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers it unlikely that forestry has led to the poor state of the Horokiri for the following reasons:</p> <ul style="list-style-type: none"> - timing and scale of forestry activity - the small percentage of the catchment under harvest over the prior 20 years - large proportions of the catchment under closed canopy forest at any one time - the large percentage of the catchment under livestock management - immediate proximity of major highways and highway construction. " 	
S288.005	General comments	General comments - plantation forestry	Not Stated	<p>Cites aerial sequences and monitoring data which suggest the effects of harvesting have not been as significant as assumed, given harvesting and earthworks have been in train for an extended period until the latest published monitoring, and given assumed effects are expected to be cumulative downstream. Notes a survey which ranked the catchment as "average" and likely representative of fish diversity. Notes almost all harvesting and earthworks undertaken in the contributory forest was undertaken prior to the NES-PF/CF.</p>	Not stated
S288.006	General comments	General comments - plantation forestry	Not Stated	<p>Cites aerial sequences and monitoring data which suggest the effects of harvesting and earthworks have not been as significant as assumed, given harvesting and earthworks have been in train for an extended period until the latest published monitoring, and given assumed effects are expected to be cumulative downstream.</p>	Not stated
S288.007	General comments	General comments - plantation forestry	Not Stated	<p>Cites aerial sequences and monitoring data which suggest factors other than harvesting are influencing lowered attribute states in the Te Awa Kairangi forested mainstems-Pakaratahi.r catchment, given there is no harvesting activity and there is a dominance of closed canopy vegetation within the catchment.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.008	General comments	General comments - plantation forestry	Not Stated	<p>"Cites aerial sequences and monitoring data which suggest it is unlikely that plantation forest activities are a major factor in poor clarity and MCI attribute states within the Te Awa Kairangi rural streams-Mangaroa catchment, given there are low suspended sediments and the low proportion of the total catchment subject to recent or long-term harvesting and earthworks. Considers the long length of the main stem of the catchment proceeding through pastoral and agricultural land use is a more likely explanation. Notes the tributaries that are under pine forest were modelled at a higher status than the main stem and while this may reflect the harvesting status at the time the modelling was done, it also reflects the established science that over a long time series, plantation forests will generate better water quality than current pastoral use.</p> <p>Notes an ecological report which detected the presence of fish, indicating that water quality in the small plantation tributaries are likely better than the main stem of the Mangaroa."</p>	Not stated
S288.009	General comments	General comments - plantation forestry	Not Stated	<p>"Recognises that forest harvesting and earthworks can locally and temporarily raise sediment levels during and immediately after operations. However, considers over the long-term, impacts on waterbodies are low and often trend towards baselines established for native forest areas. Notes forestry activities have been undertaken in preceding years in catchments displaying good water quality results. Notes harvesting occupies relatively small proportions of the total catchments for extended timeframes, and have not resulted in NoF attribute values declining below objectives. Further notes that due to the spatial layout of surrounds, expansion of plantations, other than onto farmland, is not possible.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Notes council monitoring results in other catchments, particularly Horokiwi and Mangaroa, are relatively poor and while harvesting in portions of these catchments has been undertaken in recent years the proportions of the total catchment areas subject to harvest are low. Notes the waterbodies in these catchments pass through large proportions of pastoral agricultural land and in the case of the Horokiwi and its main tributary, remain close to long reaches of heavily used highway and the earthworks associated with the recently completed Transmission Gully SH1. Considers it is highly likely given the current status of the streams, that a focus on the other land uses will generate the standards required notwithstanding that updated and upgraded attention to sediment controls in forestry earthworks is a legitimate expectation.</p> <p>Considers the temporal effects of forestry in relation to land use contaminant effects have not been recognised.</p> <p>Considers while all land use creates contaminant effects, a short term increase in adverse effects that then return to levels similar to natural baseline especially if assisted by other land use good practice, is very different to an adverse effect (even when mitigated by good practice) arising every day from a land use such as farming or urban use. By definition that becomes a permanent 'pressure' change to the environment. "</p>	
S288.010	General comments	General comments - plantation forestry	Not Stated	"Considers GWRC's assessments of the efficacy of the regulatory framework is based on standards that predate the current regime, noting forestry activity in some catchments has been ongoing since before the NES-PF and NES-CF. This includes first rotation planting that had no regulated riparian setbacks from streams or regulation related to	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>harvesting around or over streams nor discharge permits.</p> <p>Notes neither whaitua committee recommended the introduction of stringent new rules, and instead advocated that the NES-PF is given time to adjust and bed in backed up by, education, monitoring and where and if necessary, enforcement. Notes existing operations with constructive interactions between monitoring staff and forest management, including testing alternatives to achieve the best results possible.</p> <p>Notes most forestry companies review their plantable boundaries after harvest and as a result, most second rotation estates see increased non-productive reserve, retirements, and riparian areas, and in many cases riparian buffers are much larger than the minimum. Considers past retirements and riparian exclusions from previous operations reflect the sentiment of the whaitua committees in respect of promoting good land use and land use decision making, education, and working with Council land managers to achieve good outcomes. Concerned that this existing work has not been recognised."</p>	
S288.011	General comments	General comments - plantation forestry	Not Stated	<p>Considers there is no argument that earthworks at the time of harvest is the largest manageable contributor to sediment yield in forestry. These concerns were recognised in regulations of the NES-PF and NES-CF to target sediment generation, similar to the requirements of farm plans. Notes the requirement for erosion and sediment controls plans in Policy WH.P28(b), Rule WH.R20(b) and Schedule 34, which reference forest practice guides, which have had limited time to bed in. Notes that based on GWRC data, the state of stream water quality reflected the cumulative effects of activities predating the NES-</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>PF. Considers the discharge standard of 100g/m3 does not relate to a particular stream attribute, topography, geology or soils of the whaitua. Considers the standard is a uniform standard irrespective of activity or location/circumstance and appears to be principally designed around the use of point source discharges to water from large sediment capture and concentration ponds with fixed infrastructure or without flocculation, which cannot often be utilised in a forestry context. Considers the standard difficult to implement, does not deliver real-time feedback, and has no temporal component. Notes main methods for managing forestry earthworks as set out in forestry practice guides, and that discharges are largely diffuse. Considers the requirements for farm plans a corollary. Considers the visual clarity standard is more relevant to rural land use. Nevertheless, considers here is a perversity in the requirement for a lower decline in visual clarity in class 1 and schedule F1 rivers, as those rivers often come from areas inclusive of plantation forestry. Considers allowing higher clarity loss in lower quality rivers acknowledges continuation of higher levels of contaminants. Considers this area needs reconsideration and there should be an approach focused on education, training and where necessary enforcement, as recommended by the whaitua committees, rather than new rules and variants of the NES-CF.</p>	
S288.012	General comments	General comments - plantation forestry	Not Stated	<p>Considers there is little cognisance in PC1 of the spatial and temporal patterns of harvesting, and the influence this may or may not have on the attribute states of relevant catchments. Considers NPS-FW obligations have been relied on to avoid delaying actions notwithstanding incomplete information. Notes that from the data available, NoF targets were being met in catchments that are largely</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>forested and where harvesting took place and are expected to continue to do so. Considers GWRC has overlooked that in catchments with a relatively small proportion of plantation, and where their reaches aligned with pastoral and urban infrastructure, there were poorer attribute results. Notes this conforms with NZ-wide trends that water quality attributes decline in order from undisturbed native forest, exotic forest, pastoral land use and urban. Considers GWRC has assumed that regulations for earthworks and harvesting under the NES-PF have no efficacy toward achieving the goals of the NPS-FW, but at the time of the published data being collected, the NES-PF was new and most of the harvesting that may have contributed to adverse freshwater outcomes had been undertaken in the prior decade. Considers GWRC have not considered that as forests progressed through their first to second rotations, normal practice and NES regulatory requirements saw provision of increased setbacks and retirement and reservation of problematic harvest areas. Concerned that while not all desired data was available, and an absence of such data was not a reason to avoid mitigatory actions, data that was available did not trigger a need or urgency for the whitua committees to recommend significant and stringent changes to the regulatory framework surrounding forestry.</p>	
S288.013	General comments	General comments - plantation forestry	Not Stated	<p>Concerned with the approach taken to define areas of "high erosion risk" and the application of those findings. Considers it impractical and will result in write-off of much larger areas than estimated by GWRC. Notes that predictions from cutover are likely to significantly overestimated yield in the universal erosion model. Notes research that confirms sediment contributions from poorly controlled earthworks outweigh those from the</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>cutover. Concerned about the use of a lidar surface to inform the mapping of highly erosion prone areas, as lidar surface does not represent the underlying bedrock surface.</p>	
S288.014	General comments	General comments - plantation forestry	Not Stated	<p>Considers the erosion susceptibility layers are based on information that excludes geological considerations and has not been peer reviewed.</p> <p>Considers the 5m2 resolution of the underlying lidar and the method applied will invariably be wrong, and a poor predictor of stability in the field, leading to areas being retired that were not at risk of slipping, as well as areas not being retired that may suffer landsliding in severe weather events.</p> <p>Considers the methodology for "Highest Erosion Risk - Plantation" has led to 'pixilation', which is impractical for forestry activities as rules could enable forestry in one patch and disallow it in an adjacent patch.</p> <p>Notes several factors which determine harvesting feasibility, resulting in more land needing to be retired than suggested in GWRC data. Estimates that in the estate GFG manages, anything from an average of 9% up to 18% might be retired due to PC1 rules. Notes recommendations from whaitua committees that could be applied to forestry, including developing site and property level plans with landowners, and funding and support for sediment mitigation activities.</p>	Not stated
S288.015	General comments	General comments - plantation forestry	Not Stated	<p>Considers the total area of compulsory retirement could be substantially greater than assessed by GWRC. Concerned there is the potential for the total write-off of plantation sites, and that this should have been assessed in the s32 analysis.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.016	General comments	General comments - plantation forestry	Not Stated	Notes the rates relief set out in Method M44 are likely to be miniscule to zero, given the land will have no commercial value upon implementation of PC1. Considers advice should be free given the public interest being served. Concerned there is no meaningful certainty or long-term commitment, given the short-term nature of local body priorities.	Not stated
S288.017	General comments	General comments - plantation forestry	Not Stated	Considers the obligations under the ETS have not been given consideration. Questions why a forest owner should pay for restocking an area for the benefit of the wider public, to avoid liabilities from a rule created in the wider public interest. Questions who will bear the cost and the liability of ongoing management of native forest reforestation and the risk and cost of a ETS compliant forest where reversion is the chosen route. Concerned non-harvest may be the best option for forest owners due to the cost of PC1 and lack of future economic land use options, and questions who will compensate for stranded assets or potential liabilities if there is synchronous collapse. Considers proposed compensation and assistance methods are practically worthless.	Not stated
S288.018	General comments	General comments - current legislation	Not Stated	Concerned about the reliance on Regulation 6 of the NES-PF (now NES-CF) to enable rules which require consenting for forestry activities and abandonment of a portion of productive estate without demonstrating the need for this stringency in PC1. Considers GWRC's water quality data is insufficient and does not support the stringency upon forestry it seeks to apply. With respect to forestry activities, considers there is insufficient evidence to support the objectives and attribute limits sought. Notes some monitoring sites are already meeting attribute targets, and where not, the relative role of forestry activity is small.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers drivers for poor quality likely arise from the extended proximity of reaches to agricultural activity, major highways and urban and semi-rural development.</p> <p>Notes it is unclear how an "equitable" share based on area aligns with an effects-based response to partitioning sediment budget against land uses.</p> <p>Considers the proposed rules are unjustified due to well-established knowledge that production forests are likely to produce more sediment during harvest than pastoral agriculture on the same landform but return to near natural baselines shortly thereafter; and nationwide consistency of trends across land use of declining water quality across most attributes from native forest, exotic forest, pastoral agriculture, cropping and urban.</p> <p>Considers increased sediment yield relative to pastoral land use is offset by decades of below average yield, and that effects are a permanent day-to-day feature on pastoral sites.</p> <p>Concerned a justifiable, quantifiable link between the action and the water quality response has not been provided for blanket rules to retire an allocated portion of private forestry land use. Considers that at the time of the deliberations of the whitua committees, any effects on water in the whitua that could have been attributed to forestry activity were a cumulative summation of previous years of activity predating the NES-PF/CF. Disagrees that the NES-PF/CF allows activities as permitted and does not enable control over operations, noting several mechanisms for control under the NES-PF/CF. Considers the recommendations of the whitua committee should be reflected, and effort devoted towards understanding industry practice guides,</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				working with the sector, and focusing on education, awareness, monitoring, compliance and engagement. Notes similar methods are normalised in response to issues around pastoral agriculture (via farm plans), but not for forestry.	
S288.019	General comments	General comments - current legislation	Not Stated	<p>Concerned the section 32 report does not adequately demonstrate the need for the stringency proposed in PC1.</p> <p>Submitter references parts of the section 32 analysis which they disagree with.</p> <p>Notes the s32 analysis states forestry is a major land use in the two whitua at 13.5% and 8% respectively and considers these figures unhelpful in isolation from other uses of land, noting it is also stated that the area has recently reached or is nearing commercial maturity, so harvesting is consistently occurring and expected in these FMU.</p> <p>Concerned GWRC have undertaken their section 32 analysis on the basis of a value judgement comparison between their 'preferred' option being PC1, the 'status quo' and an alternative with additional measures which involves option 1 plus a ""exposed area"" regulation.</p>	Not stated
S288.020	General comments	General comments - overall	Not Stated	The submitter has provided their own detailed response to the options assessment of costs, benefits and efficiency and effectiveness in pages 39-43 of their original submission.	Not stated
S288.021	2 Interpretation	Afforestation	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S288.022	2 Interpretation	Earthworks	Support	Avoids unintended capture in general earthworks rules	Retain deferral of definition to the NES-PF/CF earthworks definition.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					Align with NES-C.
S288.023	2 Interpretation	Erosion and sediment management plan	Amend	Considers separate schedules creates confusion, noting there is overlap between existing NES-CF requirements and PC1.	Work to NES-CF schedule 4 & 5. Avoid cross-over and overlap with existing processes developed under the NES-CF.
S288.024	2 Interpretation	Harvesting	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S288.025	2 Interpretation	Highest erosion risk land (plantation forestry)	Oppose	Considers the map process inappropriate for purpose and unjustified.	Delete. Consult properly and work with industry.
S288.025	2 Interpretation	Highest erosion risk land (woody vegetation)	Oppose	Considers the map process inappropriate for purpose and unjustified.	Delete. Consult properly and work with industry.
S288.026	2 Interpretation	Mechanical land preparation	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S288.027	2 Interpretation	Registered forestry adviser	Amend	Notes registered members of the NZ Institute of Forestry are automatically also Registered Forestry Advisors.	Add sub-clause (d): and includes a Registered Member of the New Zealand Institute of Forestry.
S288.029	2 Interpretation	Replanting	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.030	2 Interpretation	Stabilisation	Amend	Notes other methods are not included. Concerned PC1 proposes Schedule 34 ESC, that references methods from forest practices guides, but these are missed from the definition, which only includes GWRC ESC guideline 2021.	Clarify relationship between earthworks and forestry earthworks.
S288.031	2 Interpretation	Vegetation clearance (for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20)	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S288.032	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Amend	Considers there is misalignment with the NES-CF.	Amend to: has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry Regulations 2023).
S288.033	6 Other methods	Method 39: Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-	Amend	Notes threatened freshwater species exist within and utilise habitat provided by plantations.	Require action plans for species to include partnership with landowners/ forest owners within whose areas such species occupy habitat or are dependent upon the ecosystem services supporting the habitat.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Porirua Whaitua.			
S288.034	6 Other methods	Method M40: Fish passage action plan programme for Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Supports objective, however notes the need to include working with landowners.	Require prioritisation to include consultation with landowners where action identified as required.
S288.035	6 Other methods	Method M41: Identifying and responding to degradation in freshwater bodies within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Considers the text, purpose and execution unclear. Supports publishing of trends provided monitoring is sufficient. Considers the identification of the trend of degradation as "not being natural" is mis-scoped. Considers the purpose should be identification of trend(s) related to TAS that are negatively divergent from the Whaitua action plans. Considers prior to introducing a plan change, any response should involve reviewing the plan TAS for applicability, reliability of data, the degree to which current regulation has spurred changes in practices, and any other influences on efficacy.	Review and rewrite.
S288.036	6 Other methods	Method M43: Supporting	Support	Notes national trend of water in urban environments as consistently the poorest and considers it is essential this is addressed.	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		the health of urban waterbodies.			
S288.037	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Considers this reflects the recommendations of whaitua committees.	Amend to include: deliver a specific programme of engagement with forestry practitioners
S288.038	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganu i-a-Tara is progressively improved and is wai ora by 2100.	Amend	Seeks clarification on "waiora state", noting natural character is not a condition fixed in time. Considers the description needs to include the caveat that natural character refers to a waterbody's state in response to input conditions that are managed to achieve a level of naturalness. Notes climate change may mean natural character is not the same as current targets, which risks a mismatch between what is legally enforced and what is achievable.	Include the caveat that natural character refers to a waterbodies state in response to a variety of input conditions that are managed to achieve a level of naturalness.
S288.039	8 Whaitua Te Whanganui-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganu	Support	Not stated	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		i-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.			
S288.040	8 Whaitua Te Whanganui-a-Tara	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganu i-a-Tara is maintained or improved to achieve the coastal water objectives	Support	Not stated	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		set out in Table 8.1.			
S288.041	8 Whaitua Te Whanganui-a-Tara	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.	Support	Not stated	Not stated
S288.042	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water quality, are maintained.	Support	Not stated	Not stated
S288.043	8 Whaitua Te	Objective WH.O8: Primary	Support	Not stated	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.			
S288.044	8 Whaitua Te Whanganui-a-Tara	Objective WH.O9: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Oppose	Considers the requirement for attribute improvement in all river reaches if TAS is not met in Part FW management unit monitoring sites does not reflect good management. Considers a failure to meet TAS at a part FMU monitoring site should require identification of the problem source and focus on raising TAS performance in that area. Notes TAS in some sub-catchments may already be met and are not practicably able to be improved.	Adjust to reflect good management.
S288.045	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Considers the term 'land use' in sub-clause (d) is more associated with rural or primary production land uses. Seeks the inclusion of urban land use as it is a major source of contaminants.	Clarify to include urban land use.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.046	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Regarding clause (f), notes the specified activities are already actively managed and seeks amendment to reflect management in accordance with established regulatory frameworks and good practice. Suggests similar amendments can be applied for clause (h), noting farm plans themselves are not actions that improve water quality, but are a means to describe good practice, regulations and actions to be applied to a site.	Amend clause (f) to reflect management of specified activities in accordance with established regulatory frameworks and good practice. Consider similar amendments for clause (h).
S288.047	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Oppose	Considers freshwater action plans should be prepared in partnership with mana whenua and the community.	Require Action Plans to be prepared in partnership with mana whenua and the community consultative groups " shall implement the recommendations of the relevant whaitua committees, identifying in detail, the actions, including where relevant, justifiable and effective, additional regulation to achieve the target attribute states as well as other non-regulatory, means to support relevant environmental outcomes ".
S288.048	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity target attribute states.	Neutral	Does not disagree with the aggregated outcome reflected at the WQ monitoring site, however considers there is insufficient WQ monitoring in the wider sub-catchment to determine the primary cause of poor clarity. Therefore considers action to achieve the outcome may be mis-targeted.	Not stated
S288.049	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point	Neutral	Notes typo in clause (c)(ii).	Amend clause (c)(ii): in determining the improvement to water quality required in (ii), and...

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		source discharges			
S288.050	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Support	Not stated	Not stated
S288.051	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges	Amend	Notes clause (c) does not include temporal matters to be taken into account.	Add a subclause (vi) to account for temporal nature of any discharge.
S288.052	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Seeks clarification on what woody vegetation can be and for options to be provided.	Make provision for indigenous and exotic permanent forest, subject to controls to provide for better alternative income opportunities for farmers.
S288.053	8 Whaitua Te Whanganui-a-Tara	Policy WH.P25: Managing rural land	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		use change.			
S288.054	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Support	Not stated	Not stated
S288.055	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Support	Not stated	Not stated
S288.056	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Oppose	Considers the policy enables rules based on insufficient data, is not aligned with whaitua committee recommendations, and is not supported by Council's data. Concerned the rules are not practicable and imply write-off of larger areas and neither the efficacy of the existing regulatory framework under the NES-PF/CF, nor the gains of the proposal, have been adequately identified. Considers GWRC has acted in bad faith in relation to pre-consultation and engagement with the forestry sector.	Remove policy and reset to recognise substantive deficiencies.
S288.057	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Oppose	Considers the policy sets up a confused pathway between the definitions, policy, general earthworks rules, and forestry earthworks under forestry rules.	Clarify that the policy refers to general earthworks and does not apply to earthworks in forestry. Include new policy covering forestry earthworks and relate to the regulations of the NES-CF separation of earthworks. Objectively assess needs for stringency and utilise NES-CF as intended.
S288.058	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Oppose	Considers the 100g/m ³ standard is not related to actual sedimentation levels and is ill-suited to diffuse discharge from land. Notes the measurement method is retrospective rather than real-time. Considers the clarity rule has perverse outcomes, noting that plantation forests often have high macroinvertebrate indices.	Clarify that the policy refers to general earthworks and does not apply to earthworks in forestry.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.059	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Notes forestry continuously supplies feedstock for industry and markets and cannot be stopped. Notes earthworks are programmed to be done mainly over summer and drier periods, however the policy makes no provision, continuity, nor emergency and maintenance.	Clarify that general earthworks do not apply to forestry. Earthworks for forestry to be undertaken under NES-CF.
S288.060	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Support	Not stated	Not stated
S288.061	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	Notes no threshold is provided for sub-clause (d) and that it is unrealistic. Notes there may be "exacerbation" of flooding to a downslope property if rainfall intensity is severe enough.	Amend to include threshold or other text to recognise high intensity, rainfall events.
S288.062	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water – permitted activity.	Oppose	Considers there is confusion between the definitions and their application. Assumes the rule is intended to apply to urban situations and questions if it applies for forestry land use. Considers the 50 g/m3 threshold for Schedule F1 streams or those with high MCI establishes a perverse outcome, relative to those not on Schedule 1 and low MCI. Notes Map 77 pg 293 and schedule 1 show streams and tributaries include plantations within catchments that have been previously harvested. Notes high MCI recordings are a regular feature of plantation forest streams. Considers the rule potentially penalises productive forestry in these catchments, despite being compatible with NoF/TAS objectives. Therefore considers the rule is permissive to land	Clarify that rule applies to urban and industrial or similar circumstances. Detach from rural land use and remove potential overlap with forestry regulations. Amend to remove perverse outcomes created by rule - remove grams/m3 discharge requirements and utilise mixing protocols only in rural diffuse discharge situations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

				forestry sector and ignored the recommendations of the whitua committees.	
S288.072	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Considers a 5m minimum setback from surface water bodies from earthworks is contrary to the objectives of the plan. Notes a permissive regime applies to areas under a farm plan and considers this a corollary to the NES-PF/CF. Considers sub-clauses (g) and (h) contradict all other rules, which recognise some discharge will happen.	Align with NES-PF/CF 10m setbacks for perennial streams, set visual discharge standard recognising some discharge always likely to occur. Apply NES-PF/CF inclusive of discharge requirements to forestry, to avoid discriminatory differentiation between land uses.
S288.073	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Considers there is a lack of clarity, with potential crossover between policies and rules related to general earthworks and forestry earthworks. Notes there is no provision for emergency works in the earthworks season. Considers the proposed erosion risk method is relative and lacks meaningful accuracy and in-field applicability. Considers a quantitative connection has not been made between forestry activity and actual levels of sedimentation. Considers the need for, and benefit from, added stringency has not been evaluated. Considers the rules contravene the recommendations of the whitua committees.	Separate earthworks and align with NES-PF/CF.
S288.074	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Considers there is a lack of clarity, with potential crossover between policies and rules related to general earthworks and forestry earthworks. Notes there is no provision for emergency works in the earthworks season. Considers the proposed erosion risk method is relative and lacks meaningful accuracy and in-field applicability. Considers a quantitative connection has not been made between forestry activity and actual levels of sedimentation. Considers the need for, and benefit from, added stringency has not been evaluated. Considers the rules contravene the recommendations of the whitua committees.	Separate earthworks and align with NES-PF/CF.
S288.075	8 Whaitua Te	Rule WH.R26: Farming	Amend	Notes that unlike forestry there is no discharge limit. Notes methods focus on higher erosion land, but ignore that significant sediment generation arises	Review data and rewrite with an objective for consistency in an effects-based rule response.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	activities on a property of between 4 hectares and 20 hectares – permitted activity.		from stock pugging on gentle soils. Considers GWRC data is sparse, however gives insight to possible alignment of sedimentation with national trends, noting that streams with poor TAS included reaches with long exposure to adjacent pastoral and lifestyle farming on gentle terrain. Considers there is inconsistency between land uses and data, and that temporal matters are not taken into account. Considers contaminant generation from a farm is permanent and relative to natural levels elevated, whereas forest land use is elevated during harvesting and roading but rapidly returns to near baseline.	
S288.076	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Notes that unlike forestry there is no discharge limit. Notes methods focus on higher erosion land, but ignore that significant sediment generation arises from stock pugging on gentle soils. Considers GWRC data is sparse, however gives insight to possible alignment of sedimentation with national trends, noting that streams with poor TAS included reaches with long exposure to adjacent pastoral and lifestyle farming on gentle terrain. Considers there is inconsistency between land uses and data, and that temporal matters are not taken into account. Considers contaminant generation from a farm is permanent and relative to natural levels elevated, whereas forest land use is elevated during harvesting and roading but rapidly returns to near baseline.	Review data and rewrite with an objective for consistency in an effects-based rule response.
S288.077	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Considers there will be inadequate protection, noting farm plans provide for management options but may not achieve objectives. Considers there will be inadequate protection, noting farm plans provide for management options but may not achieve objectives. Considers there is a disparity in regulatory approach, noting setback requirements for forestry on all perennial streams with discharge	Revisit and align to effects driven approach

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				limits. Considers poor TAS can be attributed to source exposure to lowland pastoral agriculture.	
S288.078	8 Whaitua Te Whanganui-a-Tara	Rule WH.R29: Livestock access to a small river - discretionary activity.	Amend	Considers there will be inadequate protection, noting farm plans provide for management options but may not achieve objectives. Considers there will be inadequate protection, noting farm plans provide for management options but may not achieve objectives. Considers there is a disparity in regulatory approach, noting setback requirements for forestry on all perennial streams with discharge limits. Considers poor TAS can be attributed to source exposure to lowland pastoral agriculture.	Revisit and align to effects driven approach
S288.079	8 Whaitua Te Whanganui-a-Tara	Rule WH.R30: The use of land for farming activities - discretionary activity.	Support	Considers the rule provides for continuation of current activities.	Change and align with objectives of PC1. Allow continuation of activities where permitted standards can not be met, provided river TAS is already compliant. Consider rule sets for activities in TAS compliant streams; OR Adopt an effects-driven approach that is agnostic between land use.
S288.080	8 Whaitua Te Whanganui-a-Tara	Rule WH.R31: Change of rural land use - discretionary activity.	Oppose	Considers the rule contradicts objectives not only to maintain but "improve" water quality. Considers the rule could enable approval of contaminants from land uses up to or beyond TAS thresholds, with little discretion available to assess the margin, or decline in freeboard for a TAS margin. Considers there is conflict with the intent to "improve WQ", and inconsistency with rules that constrain existing activities when TAS targets are already met.	Amend to ensure consistency and neutrality between landuse activities.
S288.081	9 Te Awarua-o-Porirua Whaitua	Objective P.O1: The health of Te Awarua-o-Porirua's groundwater, rivers, lakes,	Amend	Seeks clarification about "Mauri is restored and waters are in a natural state", noting natural character is not a condition fixed in time. Notes climate change may mean natural character is not the same as current targets, which risks legally enforceable unachievable goals.	Include the caveat that natural character refers to a waterbodies state in response to a variety of input conditions that are managed to achieve a level of naturalness.

**Proposed Change 1 to the Natural Resources Plan –

		of coastal water quality, ecosystems and habitats in Pūatahanui Inlet, Onepoto Arm and the open coastal areas of Te Awarua-o-Porirua is maintained or improved to achieve the coastal water objectives set out in Table 9.1.			
S288.084	9 Te Awarua-o-Porirua Whaitua	Objective P.O4: The extent, condition, and connectivity of habitats of nationally threatened freshwater species are	Support	Not stated	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		increased, and the long-term population numbers of these species and the area over which they occur are increased, improving their threat classification status.			
S288.085	9 Te Awarua-o-Porirua Whaitua	Objective P.O6: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Oppose	Considers the requirement for attribute improvement in all river reaches if TAS is not met in Prt FW management unit monitoring sites does not reflect good management. Considers a failure to meet TAS at a part FMU monitoring site should require identification of the problem source and focus on raising TAS performance in that area. Notes TAS in some sub-catchments may already be met and are not practicably able to be improved.	Adjust to reflect good management.
S288.086	9 Te Awarua-o-Porirua Whaitua	Policy P.P1: Improvement of aquatic ecosystem health.	Amend	Regarding (d), considers the term 'land use' is more associated with rural or primary production land uses. Seeks the inclusion of urban land use as it is a major source of contaminants.	Clarify to include urban land use.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.087	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Regarding sub-clause (f), notes the specified activities are already actively managed. Suggests similar amendments can be applied for clause (h), noting farm plans themselves are not actions that improve water quality, but are a means to describe good practice, regulations and actions to be applied to a site.	Amend clause (f) to reflect management of specified activities in accordance with established regulatory frameworks and good practice. Consider similar amendments for clause (h).
S288.088	9 Te Awarua-o-Porirua Whaitua	Policy P.P3: Freshwater Action Plans role in the health and wellbeing of waterways .	Oppose	Considers freshwater action plans should be prepared in partnership with mana whenua and the community.	Amend Policy P.3 as follows: Require Action Plans to be prepared in partnership with mana whenua and the community consultative groups shall implement the recommendations of the relevant whaitua committees, identifying in detail, the actions, including where relevant, justifiable and effective, additional regulation to achieve the target attribute states as well as other non-regulatory, means to support relevant environmental outcomes.
S288.089	9 Te Awarua-o-Porirua Whaitua	Policy P.P4: Contaminant load reductions .	Amend	Not stated	Clarify if land use includes urban land use.
S288.090	9 Te Awarua-o-Porirua Whaitua	Policy P.P5: Localised adverse effects of point source discharges .	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

	o-Porirua Whaitua	Stormwater contaminant offsetting for new greenfield development.		to apply to urban situations and questions if it applies for forestry land use.	potential overlap with forestry regulations.
S288.096	9 Te Awarua- o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Not stated	Amend to provide alternatives. Clarify option for permanent woody vegetation to include exotic tree species, with conditions to provide for alternate economic returns from permanent species.
S288.097	9 Te Awarua- o-Porirua Whaitua	Policy P.P24: Managing rural land use change.	Support	Not stated	Not stated
S288.098	9 Te Awarua- o-Porirua Whaitua	Policy P.P25: Promoting stream shading.	Support	Not stated	Not stated
S288.099	9 Te Awarua- o-Porirua Whaitua	Policy P.P26: Achieving reductions	Oppose	Considers the policy enables rules based on insufficient data, is not aligned with whaitua committee recommendations, and is not supported by Council's data. Considers the rules are not	Remove policy and reset to recognise substantive deficiencies.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		in sediment discharges from plantation forestry.		practicable and imply write-off of larger areas. Concerned that neither the efficacy of the existing regulatory framework under the NES-PF/CF, nor the gains of the proposal, have been adequately identified. Considers GWRC has acted in bad faith in relation to pre-consultation and engagement with the forestry sector.	
S288.100	9 Te Awarua-o-Porirua Whaitua	Policy P.P27: Management of earthworks sites.	Oppose	Considers there is confusion between the definitions, policy, general earthworks rules, and forestry earthworks under forestry rules.	Clarify that the policy refers to general earthworks and does not apply to earthworks in forestry. Include new policy covering forestry earthworks and relate to the regulations of the NES-CF separation of earthworks. Objectively assess needs for stringency and utilise NES-CF as intended.
S288.101	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Oppose	Considers the 100g/m ³ standard is not related to actual sedimentation levels and is ill-suited to diffuse discharge from land. Notes the measurement method is retrospective rather than real-time. Considers the clarity rule has perverse outcomes, noting that plantation forests often have high macroinvertebrate indices.	Clarify that the policy refers to general earthworks and does not apply to earthworks in forestry.
S288.102	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Notes forestry continuously supplies feedstock for industry and markets and cannot be stopped. Notes earthworks are programmed to be done mainly over summer and drier periods, however the policy makes no provision, continuity, nor emergency and maintenance.	Clarify that general earthworks do not apply to forestry. Earthworks for forestry to be undertaken under NES-CF.
S288.103	9 Te Awarua-o-Porirua Whaitua	Rule P.R1: Point source discharges of specific contaminants - prohibited activity.	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.104	9 Te Awarua-o-Porirua Whaitua	Rule P.R2: Stormwater to land - permitted activity.	Amend	Notes no threshold is provided for sub-clause (d) and that it is unrealistic. Notes there may be "exacerbation" of flooding to a downslope property is rainfall intensity is severe enough.	Amend to include threshold or other text to recognise high intensity, rainfall events.
S288.105	9 Te Awarua-o-Porirua Whaitua	Rule P.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Oppose	Considers there is confusion between the definitions and their application. Assumes the rules is intended to apply to urban situations and questions if it applies for forestry land use. Considers the 50 g/m3 threshold for Schedule F1 streams or those with high MCI establishes a perverse outcome, relative to those not on Schedule 1 and low MCI. Notes Map 77 pg 293 and schedule 1 show streams and tributaries that include plantations within catchments that have been previously harvested. Notes high MCI recordings are a regular feature of plantation forest streams. Considers the rule potentially penalises productive forestry in these catchments, despite being compatible with NoF/TAS objectives. Considers the rule is permissive to land use in catchments already below standard, and is contrary to policy objectives.	Clarify that rule applies to urban and industrial or similar circumstances. Detach from rural land use and remove potential overlap with forestry regulations. Amend to remove perverse outcomes created by rule - remove grams/m3 discharge requirements and utilise mixing protocols only in rural diffuse discharge situations.
S288.106	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity. 		discretionary activity.		forest Accord. Considers the rule creates unnecessary overlap, cost and confusion.	Vegetation clearance for afforestation remains controlled by Council.
S288.113	9 Te Awarua-o-Porirua Whaitua	Rule P.R19: Plantation forestry - controlled activity.	Oppose	Considers the rules subvert the intent of the NES-PF/CF and are not supported by GWRC data. Considers efficacy of the existing regulatory framework under the NES-PC/CF has not been adequately identified in the s32 analysis, nor the gains under the proposal. Considers costs to forest owners has been significantly underestimated. Considers GWRC has acted in bad faith in relation to pre-consultation and engagement with the forestry sector and ignored the recommendations of the whaitua committees.	Remove rule and align requirement with NES-CF 2023.
S288.114	9 Te Awarua-o-Porirua Whaitua	Rule P.R20: Plantation forestry - discretionary activity.	Oppose	Considers the rules subvert the intent of the NES-PF/CF, are not supported by GWRC data, and promulgate uncertainty, delay and cost unquantified benefit. Notes there may be removal of alternate farm land use income opportunities for afforesting land to be taken out of farming. Considers efficacy of the existing regulatory framework under the NES-PC/CF has not been adequately identified in the s32 analysis, nor the gains under the proposal. Considers costs to forest owners has been significantly underestimated. Considers GWRC has acted in bad faith in relation to pre-consultation and engagement with the forestry sector and ignored the recommendations of the whaitua committees.	Remove rule and align requirement with NES-CF 2023.
S288.115	9 Te Awarua-o-Porirua Whaitua	Rule P.R21: Plantation Forestry on highest erosion risk land - prohibited activity.	Oppose	Considers the rules subvert the intent of the NES-PF/CF and are not supported by GWRC data. Considers efficacy of the existing regulatory framework under the NES-PC/CF has not been adequately identified in the s32 analysis, nor the gains under the proposal. Considers costs to forest owners has been significantly underestimated. Considers GWRC has acted in bad faith in relation to pre-consultation and engagement with the	Remove rule and align requirement with NES-CF 2023.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				forestry sector and ignored the recommendations of the whitua committees.	
S288.116	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Considers a 5m minimum setback from surface water bodies from earthworks is contrary to the objectives of the plan. Notes a permissive regime applies to areas under a farm plan and considers this a corollary to the NES-PF/CF. Considers clauses (g) and (h) contradict all other rules, which recognise some discharge will happen.	Align with NES-PF/CF 10m setbacks for perennial streams, set visual discharge standard recognising some discharge always likely to occur. Apply NES-PF/CF inclusive of discharge requirements to forestry, to avoid discriminatory differentiation between land uses.
S288.117	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Oppose	Considers there is a lack of clarity, with potential crossover between policies and rules related to general earthworks and forestry earthworks. Notes there is no provision for emergency works in the earthworks season. Considers the proposed erosion risk method is relative and lacks meaningful accuracy and in-field applicability. Considers a quantitative connection has not been made between forestry activity and actual levels of sedimentation. Considers the need for, and benefit from, added stringency has not been evaluated. Considers the rules contravene the recommendations of the whitua committees.	Separate earthworks and align with NES-PF/CF.
S288.118	9 Te Awarua-o-Porirua Whaitua	Rule P.R25: Farming activities on properties of between 4 hectares and 20 hectares - permitted activity.	Oppose	Notes there is no discharge limit as there is for forestry. Notes methods focus on higher erosion land, but ignore that significant sediment generation arises from stock pugging on gentle soils. Considers GWRC data is sparse, however gives insight to possible alignment of sedimentation with national trends, noting that streams with poor TAS included reaches with long exposure to adjacent pastoral and lifestyle farming on gentle terrain. Considers there is inconsistency between land uses and data, and that temporal matters are not taken into account. Considers contaminant generation from a farm is permanent and relative to natural levels elevated, whereas forest land use is elevated during harvesting and roading but rapidly returns to near baseline.	Review data and rewrite with an objective for consistency in an effects-based rule response.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S288.119	9 Te Awarua-o-Porirua Whaitua	Rule P.R26: Farming activities on 20 hectares or more of land - permitted activity.	Oppose	Notes there is no discharge limit as there is for forestry. Notes methods focus on higher erosion land, but ignore that significant sediment generation arises from stock pugging on gentle soils. Considers GWRC data is sparse, however gives insight to possible alignment of sedimentation with national trends, noting that streams with poor TAS included reaches with long exposure to adjacent pastoral and lifestyle farming on gentle terrain. Considers there is inconsistency between land uses and data, and that temporal matters are not taken into account. Considers contaminant generation from a farm is permanent and relative to natural levels elevated, whereas forest land use is elevated during harvesting and roading but rapidly returns to near baseline.	Review data and rewrite with an objective for consistency in an effects-based rule response.
S288.120	9 Te Awarua-o-Porirua Whaitua	Rule P.R28: Change of rural land use - discretionary activity.	Oppose	Considers the rule contradicts objectives not only to maintain but "improve" water quality. Considers the rule could enable approval of contaminants from land uses up to or beyond TAS thresholds, with little discretion available to assess the margin, or decline in freeboard for a TAS margin. Considers there is conflict with the intent to "improve WQ", and inconsistency with rules that constrain existing activities when TAS targets are already met.	Amend to ensure consistency and neutrality between landuse activities.
S288.121	12 Schedules	Schedule 33: Vegetation Clearance Erosion and Sediment Management Plan.	Oppose	Not stated	Separate out non-plantation vegetation clearance associated with plantation forest activities. Remove requirement and align with NES-CF for non-plantation vegetation clearance.
S288.122	12 Schedules	Schedule 34: Plantation Forestry	Oppose	Considers there is overlap with NES-CF, which creates confusion and adds little value.	Remove and align and incorporate to NES-CF

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S41.001	2 Interpretation	Earthworks	Amend	Supports the use of the National Planning Standards definition in principle but seeks exemptions for infrastructure from the Operative Natural Resources Plan definition are carried over into the relevant rules.	Retain definition as notified and amend relevant rules to exempt infrastructure.
S41.002	8 Whaitua Te Whanganui-a-Tara	Rule WH.R31: Change of rural land use - discretionary activity.	Oppose	This policy is linked to a rule which makes earthworks between June and September a non-complying activity. Telecommunications works are carried out year-round. Considers having to apply for consents to undertake these activities in this period will add significant costs and delays in the provision of telecommunication facilities. Concerned adverse weather in summer/autumn may result in significant lost time to safely undertake earthworks, and the winter period may be needed for projects to	Delete policy: Policy WH.P31: Winter shut down of earthworks Earthworks over 3,000m² in area shall: (a) be shut down from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the Greater Wellington Regional Council Erosion and Sediment Control Guidelines

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				catch up on progress and stabilise the land. Considers any winter earthworks are dealt with through conditions of consent.	for Land Disturbing Activities in the Wellington Region (2024).
S41.003	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	Seeks an exemption from this rule for telecommunications facilities as it would be impractical in most situations to provide any form of hydrological controls around new or upgraded telecommunications facilities. Concern that in most cases there would be no room to install hydrological controls for telecommunication facilities within the road reserve and where leasehold agreements are arranged to establish facilities on private properties, facilities are often placed near the boundary which limits the ability to choose a location within a property where stormwater controls could be put in place. Considers increased footprint required would increase the costs of leases and affect the quantity and location of the site used for the facility and where hydrological controls can be provided the costs of compliance with this rule would add significantly to the provision of telecommunications infrastructure.	Amend rule as follows: Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment activities of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing or new local authority stormwater network, that is not a high risk industrial or trade premise or unplanned greenfield development, is a permitted activity, provided the following conditions are met: (...) Note This rule excludes new and upgraded telecommunications facilities. Where a property connects to a local authority stormwater network, additional connection requirements and authorisations may be required by the network utility operator. For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to Rule WH.R11.
S41.004	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Supports in principle the earthworks definition aligning with the National Planning Standards but notes this removes existing exemptions for telco infrastructure. States that telecommunication earthworks can easily exceed 3000sqm in 12 months due to their linear nature, but that the telco industry follows industry standard best practice for earthworks and these earthworks are low impact. Considers these activities should be exempt to	Amend rule as follows: Rule WH.R23: Earthworks - permitted activity Earthworks is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				itself.	
S285.003	General comments	General comments - earthworks	Not Stated	Notes the region is currently experiencing a major shortage of available cleanfill disposal sites, with a single significant site left in Wellington near the Southern Landfill, and this is escalating project costs. Appreciates sediment control is an important factor when planning land use for cleanfill sites.	GWRC provide clarity about appropriate locations and conditions for cleanfill sites
S285.004	2 Interpretation	Containment standard	Support	Not stated	Retain as drafted, or ensure that any changes preserve the approach of: 1) referring to each discharge location, rather than the whole network, and 2) assessing compliance by reference to average annual weather conditions (as simulated by a computer model) rather than by reference to the actual number of wet weather overflow events in a given year.
S285.005	2 Interpretation	Dry weather discharges	Amend	Not stated	Revise definition as follows: Constructed or uncontrolled discharges of wastewater from a wastewater network or stormwater network that are not attributable to wet occur during dry weather, often generally as a result of pipe blockage, pipe breakage, cross-connections in the publicly-owned network or mechanical or power failure, in a network during periods of dry weather.
S285.006	2 Interpretation	Earthworks	Amend	Considers the definition needs refinement as it will require considerable resource from industry to understand and implement, may escalate project costs, and result in worse outcomes and impact the ability for transport and water infrastructure networks to be repaired or maintained efficiently Considers the new definition for Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua is not needed, as it applies the term too broadly. Considers the addition of 'to a cleanfill area' to 2.2 (i) is problematic as there are constraints around sites in the region at the moment and the availability of cleanfill sites needs to be taken into account as this could hamper the ability to deliver	Reinstate NRP definition of earthworks. Remove 'to a cleanfill area' from the point in definition for 'all other whaitua'.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				infrastructure projects. Notes the definition may result in consent applications being required for minor pipe or road repairs.	
S285.007	2 Interpretation	Existing wastewater discharge	Support	Not stated	Not stated
S285.008	2 Interpretation	Impervious surfaces	Amend	Not stated	Amend definition as follows: Replace the reference to "stormwater" with 'rainfall', 'water', 'precipitation', or similar. Review and refine the list of exclusions in light of their implications for the rules. Refer to aggregate rather than metal. Remove duplicate references to 'porous or permeable paving'. Reconsider the reference to "reuse" which should be for 'non-potable purposes' to align with RPS language rather than 'grey water'. Reconsider the final two bullet points which have different approaches to permanent plumbing and use different terms for the same outcome (non-potable water use).
S285.009	2 Interpretation	Primary contact sites	Amend	Considers the definition adds unnecessary complication by separating these from the coastal recreation sites.	Combine the primary contact sites with the Schedule H recreation sites.
S285.010	2 Interpretation	Stormwater treatment system	Amend	Considers clarity is provided by deleting 'green infrastructure' which has no official defined meaning, and referring to 'contamination in stormwater' rather than stormwater contaminants.	Delete reference to 'green infrastructure'. Refer to 'contamination in stormwater', rather than 'stormwater contaminants.'
S285.011	2 Interpretation	Wet weather overflows	Amend	Generally supports definition but suggests either the definition or the associated rules should distinguish between private and public networks.	Amend this definition or associated rules to distinguish between private and public networks.
S285.012	3 Objectives	Objective O2	Support	Supports Wellington Water's submission that this should be retained as these benefits should be recognised regardless of the location	Retain the application of O2 in all locations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S285.013	5.4 Beds of lakes and rivers	Beds of lakes and rivers general conditions.	Amend	Considers urgent works may not be able to wait for an ecologists assessment and clause (n) may lead to poor environmental outcomes.	Provide more certainty to plan users in general condition (n) so that a third party is not required to assess when named birds are identified as nesting, roosting and foraging, at the work site.
S285.014	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Amend	Notes that inclusion of 'pipeline' excludes 'pipes' from this Rule as they have different dictionary definitions. Considers that pipes should be specifically mentioned.	Refer to both pipes and pipelines.
S285.015	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Amend	Notes the reference to Wellington Water Limited may not be appropriate in the future (or in all locations) and should be updated to ensure it remains relevant. Considers a range of options should be provided for hydrological controls and confirmation should be provided on the state of the environment monitoring and modelling that Greater Wellington will be undertaking.	Retain method with amendments. The reference to Wellington Water Limited should be removed and replaced with 'relevant water utility operator' or 'territorial authorities' 'water controlling authority' or similar. Remove reference to incentivising and research and development by other parties. Provide further options than tanks for hydrological controls.
S285.016	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	Suspended fine sediment/deposited fine sediment Notes there is uncertainty regarding the modelled correlation between sediment loads and visual clarity and SedNet is a national scale model which has had to be adjusted to the scale of the target TAS locations. Considers increased granularity may lead to higher levels of uncertainty. Furthermore, sediment loads, visual clarity and deposited sediment are influenced by factors within catchments outside of WWL's control including human land uses and activities and natural factors.	Visual clarity and deposited sediment need to be set taking into consideration all contributing sediment sources, and the following points also need to be addressed: 1. How sediment load reductions will be measured in the future 2. How would proportionate contribution to sediment be measured and any reduction in this contribution be measured 3. How much time would the testing take, and who would a 'suitable person' be to conduct the testing? If we do not currently have personnel capacity to conduct this testing, is it wise to write it into the Plan?
S285.017	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of	Support	Not stated	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		earthworks.			
S285.018	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Oppose	Notes test methodologies should be appropriate to how monitoring occurs on site and the industry uses turbidity as a measure for earthworks consents, whereas PC1 specifies a measure of total suspended solids. Concern that this requires a lab test which will take 1-2 weeks to report a result which is arbitrary because it is based on a point in time, and suggests there is not enough lab testing capacity to conduct testing. Notes the impact of the type of material being worked and their relative exceedance of the 100g/m3 threshold. Considers it is unclear who a 'suitably qualified person' for monitoring discharge would be. Suggests the qualification needs to be achievable by contractors due to project costs and delays.	Amend to either specify which sort of test is used and leave this to implementation guidance, or refer to the correct on-site test method (NTU).
S285.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Seeks clarification on whether this clause stops all jobs in winter. Considers a 'hard shutdown' over winter will render civil construction and earthmoving companies unable to retain staff and increase project costs significantly. Considers the plan change does not take into account differences in material worked or terrain and that some winter works must be allowed via resource consents or some other avenue, if the site meets certain criteria. Notes some jobs (sand jobs) have much less sediment and runoff in rainfall and winter is actually a better time for these jobs to run, as there is less dust.	Delete policy WH.P31 If amended, ensure sufficient and appropriate exemptions exist to provide some ability for winter earthworks in situations where potential sediment can be well managed and controlled. At a minimum, a provision should be added for 'Regionally significant infrastructure'
S285.020	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial	Amend	Considers that (f) and (g) should not be occurring even if they are via the stormwater network and that it is the landowners responsibility to resolve.	Amend Rule as follows: ...and where the discharge is not via an existing local authority stormwater network the discharge shall also not:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		or trade premise - permitted activity.			
S285.021	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	Considers clause (c) is too vague as it does not specify what the hydrological controls have to achieve. Considers that (f) and (g) should not be occurring even if they are via the stormwater network and that it is the landowners responsibility to resolve.	Greater specificity in clause (c), including a requirement to retain a specific depth of rainfall. Delete the following clause: and where the discharge is not via an existing local authority stormwater network the discharge shall also not:
S285.022	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Support	Supports good sediment control, but suggests engagement with contractors responsible for vegetation clearance should be undertaken by GWRC to clarify their responsibilities under the new plan. GWRC should work with industry bodies to compose and circulate good information on how to prepare sediment control plans.	Not stated
S285.023	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Not Stated	Supports good sediment control, but suggests engagement with contractors responsible for vegetation clearance should be undertaken by GWRC to clarify their responsibilities under the new plan. GWRC should work with industry bodies to compose and circulate good information on how to prepare sediment control plans.	Not stated
S285.024	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Notes that many earthworks activities undertaken by contractors working for local authority transport teams and Waka Kotahi have significant public benefits would be unable to met the permitted activity conditions of proposed Rule WH.R23, inclusive of minor repairs and maintenance of three	Amend Rule WH.R23 to reinstate the exemptions for certain earthworks activities as exist for 'other Whaitua', including for the thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and for the construction, repair, upgrade or maintenance of pipelines. Any consequential amendments, to other relevant

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				waters infrastructure. Notes that a burst pipe may require resource consent as a restricted discretionary activity under Rule WH.R24 and this could lead to hundreds of resource consent applications per annum for minor earthworks activities. Concerns about capacity to perform this work.	provisions, which are in general accordance with this request.
S285.025	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Strongly opposes and considers the shutdown of earthworks between 1 June and 30 September is inappropriate as works may be able to be managed during this period with no adverse effects. Notes test methodologies should be appropriate to how monitoring occurs on site and the industry uses turbidity as a measure for earthworks consents, whereas PC1 specifies a measure of total suspended solids. Concern that this requires a lab test which will take 1-2 weeks to report a result which is arbitrary because it is based on a point in time, and suggests there is not enough lab testing capacity to conduct testing. Notes the impact of the type of material being worked and their relative exceedance of the 100g/m ³ threshold. Considers it is unclear who a 'suitably qualified person' for monitoring discharge would be. Suggests the qualification needs to be achievable by contractors due to project costs and delays.	Amend policy WH.R24 (b) If amended, ensure sufficient and appropriate exemptions exist to provide some ability for winter earthworks in situations where potential sediment can be well managed and controlled. At a minimum, a provision should be added for 'Regionally significant infrastructure'. Amend to either specify which sort of test is used and leave this to implementation guidance, or refer to the correct on-site test method (NTU).
S285.026	8 Whaitua Te Whanganui-a-Tara	Rule WH.R33: Take and use of water in the Whaitua Te Whanganui-a-Tara - restricted	Amend	Considers amendments required to better allow for water take in relation to dust control, emergency works and other civil construction activities.	Amend to consider use of standpipes, water use on infrastructure projects and emergency water take

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.			
S285.027	8 Whaitua Te Whanganui-a-Tara	Rule WH.R34: Take and use of water in the Whaitua Te Whanganui-a-Tara - discretionary activity.	Not Stated	Considers amendments required to better allow for water take in relation to dust control, emergency works and other civil construction activities.	Amend to consider use of standpipes, water use on infrastructure projects and emergency water take
S285.028	8 Whaitua Te Whanganui-a-Tara	Rule WH.R35: Take and use of water from outstanding rivers or lakes - non-complying activity.	Not Stated	Considers amendments required to better allow for water take in relation to dust control, emergency works and other civil construction activities.	Amend to consider use of standpipes, water use on infrastructure projects and emergency water take
S285.029	8 Whaitua Te Whanganui-a-Tara	Rule WH.R36: Take and use of water exceeding minimum flows or core allocation - prohibited activity.	Not Stated	Considers amendments required to better allow for water take in relation to dust control, emergency works and other civil construction activities.	Amend to consider use of standpipes, water use on infrastructure projects and emergency water take

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S285.030	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Not Stated	<p>Strongly opposes and considers the shutdown of earthworks between 1 June and 30 September is inappropriate as works may be able to be managed during this period with no adverse effects. Notes test methodologies should be appropriate to how monitoring occurs on site and the industry uses turbidity as a measure for earthworks consents, whereas PC1 specifies a measure of total suspended solids.</p> <p>Concern that this requires a lab test which will take 1-2 weeks to report a result which is arbitrary because it is based on a point in time, and suggests there is not enough lab testing capacity to conduct testing. Notes the impact of the type of material being worked and their relative exceedance of the 100g/m³ threshold.</p> <p>Considers it is unclear who a 'suitably qualified person' for monitoring discharge would be. Suggests the qualification needs to be achievable by contractors due to project costs and delays.</p>	Amend to either specify which sort of test is used and leave this to implementation guidance, or refer to the correct on-site test method (NTU).
S285.031	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Amend	<p>Considers a hard shutdown of earthworks between 1 June and 30 September is inappropriate as many works may be able to be managed during this period with no adverse effects.</p>	<p>Amend policy P.P29 (a)</p> <p>If amended, ensure sufficient and appropriate exemptions exist to provide some ability for winter earthworks in situations where potential sediment can be well managed and controlled.</p> <p>At a minimum, a provision should be added for 'Regionally significant infrastructure'.</p>
S285.032	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Not Stated	<p>Notes that many earthworks activities undertaken by contractors working for local authority transport teams and Waka Kotahi have significant public benefits but would be unable to meet the permitted activity conditions of proposed Rule WH.R23, inclusive of minor repairs and maintenance of three waters infrastructure.</p> <p>Notes that a burst pipe may require resource consent as a restricted discretionary activity under Rule WH.R24 and this could lead to hundreds of resource consent applications per annum for minor</p>	<p>Amend the definition of earthworks that governs Rule P.R22, to reinstate the exemptions for certain earthworks activities as exist for 'other Whaitua', including for the thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and for the construction, repair, upgrade or maintenance of pipelines.</p> <p>Any consequential amendments, to other relevant provisions, which are in general accordance with this request.</p>

S277 Craig Innes

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S277.001	General comments	General comments - overall	Oppose	Considers the plan change is inaccessible, difficult to read, and the maps are unclear. Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.	Not stated.
S277.002	General comments	General comments - maps	Oppose	Concerned the map system used in Change 1 is not fit for purpose, and streams that have been individually listed in the schedule were merged together in the GIS data. Considers identifying streams by coordinates is an inappropriate level of identification, and each stream should have been	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>shown on a map and identified with reference to features that the reader could identify.</p> <p>Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.</p>	
S277.003	General comments	General comments - water bodies	Oppose	The submitter seeks clarity about whether the stream at the rear of their property is listed in the schedule and what wildlife has been identified for this stream. Notes the stream is subject to multiple water control features associated with urban development. Requests that GWRC note that there is no natural passage for fish on the stream.	Not stated.
S277.004	General comments	General comments - water bodies	Oppose	Objects to the description of Wainuiomata-iti Stream (Wainuiomata Stream). Considers the waterway needs to be described by a proper survey of the river. Notes the waterway appears to be affected by bacterial life and eels are the only species that appear to survive.	Not stated.
S277.005	General comments	General comments - rural	Oppose	Objects to the stock number limitation as not appropriate for a rural area. Considers the limitations on stock do not seem to take adequate account of the differences in the effect on waterways of different stock types.	Not stated.
S277.006	General comments	General comments - overall	Oppose	Concerned the effects of pest species on publicly owned land have not been taken into account sufficiently. Considers that GWRC, DOC and HCC need to undertake more pest control on public land and that private landowners should not be restricted because of the effects of pest animals on poorly managed public land.	Not stated.
S277.007	General comments	General comments - water bodies	Oppose	Seeks an urgent investigation of the extent of the wetland at the end of the Moores Valley Road. Notes they understand extensive areas of Lot 60 DP 354855 is wetland.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S277.008	General comments	General comments - consultation	Oppose	Notes communication from GWRC on PC1 has been poor. Objects to the short period for submissions and the closing date for submissions being so close to Christmas.	Not stated.

S219 Cuttriss Consultants Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S219.001	General comments	General comments - definitions	Not Stated	<p>Considers that without a definition, there may be uncertainty about what constitutes a greenfield development in comparison to an infill/brownfield development.</p> <p>Considers a definition of 'greenfield' development will assist in providing certainty regarding the application of new rules.</p> <p>Considers the proposed definition of 'greenfield' development aligns with the definition of an urban environmental allotment under section 76(4C) of the RMA. Suggests this definition will not hinder the ability of large lots to accommodate the establishment of up to 2 dwellings, which is permitted by most District Plans in the region.</p>	<p>Amend as follows: Add definition of greenfield development: Greenfield Development: The use of land that is predominately vacant with a site area of 4,000m² or greater, where the proposal will result in the development of 3 or more lots or dwellings for residential purposes regardless of staging.</p>
S219.002	General comments	General comments - overall	Oppose	<p>Supports initiatives to improve the quality of freshwater and the state of freshwater and coastal environments.</p> <p>Opposes PC1 in its current form and requests it be withdrawn to allow for genuine consultation to occur, consideration of matters raised through this submission process, and consideration of the new direction from the central Government.</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules</p> <p>Considers PC1 will have significant financial impacts particularly on pre-committed development projects.</p> <p>Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules.</p>	
S219.003	General comments	General comments - urban development	Oppose	<p>Considers PC1 potentially conflicts with the intended outcomes of the NPS-UD to provide for well-functioning urban environments, including both through infill, and greenfield developments. Notes Policy 6 requires planning decisions that affect urban environments to consider the benefits of urban development and the contributions that development makes to provide or realise development capacity, and this has not been sufficiently considered in PC1 as economic impacts have not been assessed.</p>	Withdraw PC1
S219.004	General comments	General comments - consultation	Oppose	<p>Considers adequate consultation was not carried out with the development community and is concerned the draft version was not sent to the development community despite Subpart 1 of the NPS-FM requiring regional councils to engage with communities and tangata whenua.</p> <p>Considers that given the impact and extent of the proposed changes, the publication of a draft plan and consultation with the development community would minimise potential appeals and aid towards a</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				more workable and functioning Natural Resources Plan.	
S219.005	General comments	General comments - consultation	Not Stated	<p>Considers GWRC should wait to see what changes to the NPS-FM are proposed by the new government coalition to ensure PC1 is in alignment.</p> <p>Considers PC1 was rushed as the plan does not need to be notified until 31st December 2024.</p> <p>Considers the imposition of new rules with immediate legal effect is inconsistent with subpart 1 of the NPS-FM as there is still a significant amount of time before the plan change has to be notified.</p>	Withdraw PC1
S219.006	2 Interpretation	Hydrological control	Amend	<p>Suggests the hydrological control definition should be expanded to include reference to the measures proposed to manage the flows and volumes and an acceptable solution that is easily and commonly able to be implemented.</p> <p>Considers the current definition does not provide certainty regarding the rate or degree to which hydrological controls need to be implemented on-site and . whilst there is mention throughout PC1 on retention, there is no definition as to an acceptable volume of water that needs to be provided for.</p> <p>Considers permitted activity standards (and the supporting definitions) should be clear and easy to understand without any ambiguity.</p> <p>References Table E10.6.3.1.1 of the Auckland Unitary Plan which contains hydrological controls. Notes a 5mm runoff depth has been used in the decision sought but recommends GWRC complete modelling to determine the runoff depth for each catchment as sensitivity to volume changes will vary between catchments. Suggests technical standards</p>	<p>Request the following to the definition be added :</p> <p>Management measures may include:</p> <p>a) Rapid Infiltration devices such as soak pits; b) Permeable paving; or c) Rainwater retention tanks which:</p> <p>i) are plumbed into the toilet and/or an outdoor tap or taps; and ii) where connected to toilets, are capable of being topped up by potable water supply to a maximum volume of 100L.</p> <p>Where these measures provide a minimum retention volume of 5mm runoff depth over the impervious area which hydrology controls are required; and</p> <p>Provide detention (temporary storage) for the difference between the predevelopment and post-development runoff volumes from the 95th percentile, 24 hour rainfall event minus the 5 mm retention volume or any greater retention volume that is achieved, over the impervious area for which hydrology mitigation is required (unless further detention or infiltration measures are utilised downstream).</p> <p>Note:</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				could also be referenced.	Compliance with the definition can be demonstrated by installing a rainwater tank in accordance with Approved Solution #1 of Wellington Water's Managing Stormwater Runoff Version 4 June 2023
S219.007	2 Interpretation	Redevelopment	Amend	<p>Considers the definition should exclude minor alterations and additions to existing buildings to provide for the small redevelopment of existing sites as a permitted activity in associated rules.</p> <p>Notes the suggested 30m² amendment aligns with recent changes to the Building Regulations for sheds to avoid consenting requirements.</p>	<p>Amend definition and make any other consequential amendments necessary to give effect to this submission point, to provide for small scale alterations and additions to existing buildings:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: minor-maintenance or repairs to roads, carparking areas, driveways and paving installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing activities that only involve the re-roofing of existing buildings</p> <p>New buildings or alterations and additions to existing buildings of less than 30m²</p>
S219.008	2 Interpretation	Unplanned greenfield development	Oppose	<p>Opposes the proposed prohibited activity rules.</p> <p>Considers the current provisions would make rezoning more costly, and take longer as they would require a plan change to a District Plan and the Natural Resource Plan.</p> <p>Considers that in some instances resource consent is more appropriate than a plan change. For example, when the size of the site or development is not such that a plan change is economically viable, or the effects are discrete and localised making a resource consent process more appropriate.</p> <p>Considers other proposed rules within PC1 that</p>	<p>Requests the deletion of this definition and all subsequent references to unplanned greenfield development. Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) through a District Plan change to enable the development.</p> <p>Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p> <p>Amend definition to align with zones under a District Plan and avoid a plan change to both District and Regional Plans:</p> <p>Should the above relief not be obtained, submitter seeks the following revision:</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				apply greenfield development adequately address effects on water quality effects without needing to prohibit development.	Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 not zoned as urban within a District Plan , which also require an underlying zone change (from rural/nonurban/open space to urban) through a District Plan change to enable the development. Note: Unplanned greenfield areas are identified on maps 86, 87, 88 and 89 those areas and include those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023. And consequential amendments to other references or policies as needed to align with the above amendment.
S219.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes prohibited policy and rules. Concerned prohibiting activities can lead to perverse outcomes (experienced with the NES-FW) as there is no consenting pathway to consider proposals that have a net positive impact on the environment, including freshwater and coastal systems.	Amend policy to remove reference to prohibiting unplanned greenfield development. (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants.
S219.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers there will be instances where it is not practicable to achieve hydrological controls i.e. when retention is not possible and there are low infiltration rates, more water will be discharged to a water network, even though the peak flows are being contained. Considers source control measures should be included in this policy as they are a way of reducing copper and zinc loads.	Amend policy wording to remove (b) and replace (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system (b) Source control techniques that result in copper and zinc load reductions equal to or greater than what would be achieved through on-site or communal stormwater treatment systems or devices designed in accordance with (a).
S219.011	8 Whaitua Te	Policy WH.P16: Stormwater	Oppose	Opposes use of the term "avoid". Opposes the requirement to seek two separate plan changes if land is to be rezoned.	Request policy is deleted. Policy WH.P16: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>councils.</p> <p>Concerned the current timing of the payment (when consent is given effect to) will add to upfront development costs, particularly for large staged development, putting many projects at risk as many developers rely on pre-sales to obtain funding for works.</p> <p>Considers provisions should be made for circumstances where residual contaminants are being treated on-site i.e. where using a treatment device further reduces contaminants beyond the assumed residual contaminants or where it treats contaminants off-site, such that the net contamination load is reduced following the development i.e. if the development treats flow from upstream.</p>	<p>Note a reduced contribution will be applied if the post-development residual contaminant load is less than 15%, or where treatment contributes towards a reduction in off-site contaminants.</p>
S219.034	12 Schedule s	D Calculatio n of level of contributio n	Amend	<p>Notes that Schedule 28 states the target load reduction factor for bioretention is 90%, however the financial contribution is calculated based on treating 15% of remaining contaminant loading. Concerned there has not been an Economic Impact Assessment completed to inform these numbers and if PC1 is requiring treatment to 90%, then any financial contribution should be reduced proportionately i.e. 1/3.</p>	<p>Amend the Part D financial contribution as follows: Whaitua Te Whanganui-a-Tara \$4,240 2,827 Te Awarua-o-Porirua Whaitua \$4,599 3,066 (Noting the submission point above, whereby we seek to remove charges based on EHU and therefore this table should be deleted in entirety)</p> <p>Whaitua Te Whanganui-a-Tara \$858 572 \$360 240 Te Awarua-o-Porirua Whaitua \$858 572 \$360 240</p> <p>Furthermore, these numbers should be assessed following a peer reviewed Economic Impact Assessment.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S058 David and Carolyn Gratton

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S58.001	General comments	General comments - overall	Not Stated	Supports the submissions made by the New Zealand Farm Forestry Association and the Wellington Branch of the New Zealand Farm Forestry Association.	Not stated
S58.002	General comments	General comments - economic cost/impact	Not Stated	Believes PC1 will make it difficult to support family economic well-being or make reasonable use of the land citing section 85 of the RMA.	Clarify requirements imposed on land adjacent to high/highest risk land (pasture) or remove provisions from PC1.
S58.003	General comments	General comments - economic cost/impact	Amend	Concerned about timing and costs of preparing erosion plans. Wants to see MPI erosion susceptibility tool used. Considers the mapping used in PC1 is not suitable for determining erosion prone land.	Retain the NES-CF and exempt forestry blocks of less than 100ha from the PC1 controlled activity requirements.
S58.004	General comments	General comments – plantation forestry	Amend	Believes the NES-CF has tighter controls than the NES-PF and should be given time to bed in before controls which go beyond the NES-CF are imposed. The additional requirement to provide an erosion and sediment control plan early in the soil disturbance process is unrealistic and unreasonable.	Retain the NES-CF and exempt forestry blocks of less than 100ha from the PC1 controlled activity requirements.
S58.005	General comments	General comments - economic cost/impact	Oppose	Believes small farms of less than 10ha should be exempt from PC1 provisions and the need to provide erosion management plans. If required, management plans should be simple to avoid consultants needing to be hired. Suggests lack of clarity on requirements for land that is not high/highest erosion risk.	Exempt small farms of less than 10ha from regulations requiring farm management/erosion risk management requirements to be prepared by farm consultants. Clarify requirements imposed on land adjacent to high/highest risk land (pasture) or remove provisions from PC1.
S58.006	6 Other methods	Method M42: Small farm property	Oppose	Concerns with the additional cost of small farm registration	Remove requirement for small farm registration

		registratio n within Whaitua Te Whanganu i-a-Tara and Te Awarua-o- Porirua Whaitua.			

S234 David and Pauline Innes

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S234.001	General comment s	General comments - overall	Oppose	<p>Considers the plan change is inaccessible, difficult to read, and the maps are unclear.</p> <p>Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.</p>	Not stated
S234.002	General comment s	General comments - maps	Oppose	<p>Concerned the map system used in Change 1 is not fit for purpose, and streams that have been individually listed in the schedule were merged together in the GIS data. Considers identifying streams by coordinates is an inappropriate level of identification, and each stream should have been shown on a map and identified with reference to features that the reader could identify.</p> <p>Considers the document is difficult to read and is not fit for purpose. Concerned the connections between the policies and the geographic areas are inadequate.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S234.004	General comments	General comments - water bodies	Oppose	The submitter seeks clarity about whether the stream at the rear of their property is listed in the schedule and what wildlife has been identified for this stream. Notes the stream is subject to multiple water control features associated with urban development. Requests that GWRC note that there is no natural passage for fish on the stream.	Not stated
S234.005	General comments	General comments - water bodies	Oppose	Objects to the description of Wainuiomata-iti Stream (Wainuiomata Stream). Considers the waterway needs to be described by a proper survey of the river. Notes the waterway appears to be affected by bacterial life and eels are the only species that appear to survive.	Not stated
S234.006	General comments	General comments - rural	Oppose	Objects to the stock number limitation as not appropriate for a rural area. Considers the limitations on stock do not seem to take adequate account of the differences in the effect on waterways of different stock types.	Not stated
S234.007	General comments	General comments - overall	Oppose	Concerned the effects of pest species on publicly owned land have not been taken into account sufficiently. Considers that GWRC, DOC and HCC need to undertake more pest control on public land and that private landowners should not be restricted because of the effects of pest animals on poorly managed public land.	Not stated
S234.008	General comments	General comments - water bodies	Oppose	Seeks an urgent investigation of the extent of the wetland at the end of the Moores Valley Road. Notes they understand extensive areas of Lot 60 DP 354855 is wetland.	Not stated
S234.009	General comments	General comments - overall	Oppose	Objects to the set levels of copper and zinc contamination.	Not stated
S234.010	General comments	General comments - consultation	Oppose	Notes communication from GWRC on PC1 has been poor. Objects to the short period for submissions and the closing date for submissions being so close to Christmas.	Not stated

S190.006	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Amend	<p>Supports the management of increased risk during high rainfall, however considers that the length of the proposed winter period is too onerous for the number of activities that require earthworks, particularly given that the definition of earthworks includes a broader range of activities. Notes that currently, earthworks are successfully completed during the winter works period with appropriate management of risk from increased rainfall, with the relevant risk factors taken into account by GWRC for each site. Considers a blanket activity status for</p>	<p>Earthworks over 3,000m² in area shall:</p> <p>(a) be shut down limited from 1st June to 30th September each year, with a risk-based approach taken to the permitting of earthworks activities during this period, and</p> <p>(b) prior to shut down 1st June, areas to be shut down shall be stabilised against erosion and have sediment controls in place using good management practices in accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021).</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				all winter earthworks removes the ability for GWRC to consider factors such as the compliance history of a consent holder, and that consent holders with inadequate performance could be more likely to be authorised to undertake winter works than under the current winter works application regime. Noted under the operative definition of earthworks, that lower risk activities could be completed during the winter works period, such as trenching for infrastructure and services. Expressed concern that such activities will require resource consent, therefore being onerous on contractors and lengthen project durations, without achieving an appropriate reduction in environmental risk.	
S190.007	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	States the discharge of sediment from earthworks is unavoidable even with the use of sediment controls. Cites the technical reports for PC1, which reference studies specifying that the sediment removal of all devices are less than 100%, and that sediment discharge occurs even the earthworks catchment is stabilised. Therefore, the submitter's interpretation of the rule is that all earthworks, regardless of size and treatment, will not comply and will therefore require resource consent. States that lower rates of sediment discharge continue to occur even from areas stabilised permanently with grass cover. States all of the sediment controls under Section F1.0 of GWRC's Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021) have a sediment removal efficiency of less than 100%, citing the technical reports referenced in PC1.	(iv) There is no discharge of runoff sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, that is not treated by erosion and sediment control measures, and (v) Erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.
S190.008	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted	Amend	Considers the proposed TSS limit of 100g/m ³ is not based on scientific evidence, and is a significant reduction from the existing threshold of 170 NTU. Concerned technical publications for PC1 do not refer to the TSS standard of 100g/m ³ and questions how this standard was decided and whether it is	(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m ³ , except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m ³ , the discharge shall

		discretionary activity.		<p>scientifically linked to the target attribute states. States that GWRC and the earthworks industry have largely moved from TSS for compliance measurements to NTU. Considers that NTU is a more effective and quicker measurement for compliance than TSS. Questions why it is deemed acceptable that the upstream and down stream comparison when TSS exceeds 100g/m3 can be made using visual clarity (aka turbidity in NTU), when the preceding measurements in the policy are prescribed in TSS.</p> <p>Supports the management of increased risk during high rainfall, however considers that the length of the proposed winter period is too onerous for the number of activities that require earthworks, particularly given that the definition of earthworks includes a broader range of activities. Notes earthworks are currently successfully completed during the winter works period with appropriate management of risk from increased rainfall, with the relevant risk factors taken into account by GWRC for each site.</p> <p>Considers a blanket activity status for all winter earthworks removes the ability for GWRC to consider factors such as the compliance history of a consent holder, and consent holders with inadequate performance could be more likely to be authorised to undertake winter works than under the current regime. Notes under the operative definition of earthworks, lower risk activities could be completed during the winter works period, such as trenching for infrastructure and services. Concerned such activities will require resource consent, therefore being onerous on contractors and lengthening project durations, without achieving an appropriate reduction in environmental risk.</p>	<p>not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than:</p> <p>(i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F4 (rivers/lakes), or</p> <p>(ii) 30% in any other river, and The proposed total suspended solids limit is re-evaluated and re-drafted.</p> <p>Provision is made for proxy field measurements, such as NTU (nephelometric turbidity units), can be utilised to substitute for total suspended solids</p> <p>(b) earthworks shall not occur between 1st June and 30th September in any year.</p> <p>The submitter requests that earthworks activities during the winter period is inserted as a matter of discretion under this rule:</p> <p>(a) Earthworks over 3000m2 shall be limited from 1st June to 30th September each year, with a risk-based approach taken to the permitting of earthworks activities during this period, and</p> <p>(b) prior to 1st June, areas to be shut down shall be stabilised against erosion and have sediment controls in place using good management practices in accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021)</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S030 Dean Spicer

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S30.001	General comments	General comments - consultation	Not Stated	Considers GWRC failed to adequately consult affected landowners. Considers GWRC failed to consider proposed UHCC plan Change 50 rural 'PC50'.	Withdraw PC1 and conduct appropriate consultation and engagement.
S30.002	General comments	General comments - overall	Not Stated	Considers PC1 is inconsistent with UHCC PC50, highlighting lack of due process of PC1.	Withdraw PC1 and conduct appropriate consultation and engagement.
S30.003	General comments	General comments - economic cost/impact	Not Stated	Concerned environmental and cultural benefits have not been quantified through an economic impact assessment and the process has been rushed and poorly developed. Considers council may have breached duties under Te Tiriti o Waitangi. Challenges the credibility of the plan change.	GWRC withdraw current PC1 and undertake economic, social and cultural impact assessment that is publicly disclosed, and use it to inform revised plan change.
S30.004	General comments	General comments - overall	Not Stated	Considers PC1 contains drafting errors and fails to define key terms. Considers stakeholders have been prevented from understanding what is proposed which has impacted their ability to make well informed submissions.	PC1 redrafted correctly and resubmitted for consultation.
S30.005	2 Interpretation	Unplanned greenfield development	Amend	Considers new unplanned greenfield developments should not be prohibited as prohibition fails to consider the merits of development individually. Highlights emergence of new infrastructure which will reduce environmental impact from new developments. Considers GWRC should consider greenfield developments individually based on impacts and proposed mitigants. Strongly objects to prohibited activity status and seeks this be reviewed and amended to appropriately reflect the outcome of UHCC Plan Change 50.	Remove prohibited activity status and allow applications for new unplanned greenfield developments.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S005 Diane Strugnell

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S5.001	3 Objectives	Objective O19: Biodiversity, aquatic ecosystem health and mahinga kai in fresh water bodies and the coastal marine area are safeguarded.	Amend	Concerned that without clear support, both advisory and financial, encouragement is required. Cites that Te Awarua-o-Porirua Whaitua committee suggested there were greater benefits to "carrots rather than sticks".	Amend: (c) restoration of aquatic ecosystem health and mahinga kai is encouraged with appropriate support from central and regional government.
S5.002	6 Other methods	Method M36: Freshwater Action Plan programme.	Not Stated	Considers it is important that requirement is retained for GWRC to develop Freshwater Action Plans that are informed by engagement with rural landowners as significant stakeholders. Concerned the plan has been developed through modelling rather than based on actual data. Considers data collection should be at a smaller subcatchment scale or, in the case of larger farms, at an individual farm scale.	Retain as notified.
S5.003	6 Other methods	Method M40: Fish passage action plan programme for Whaitua Te Whanganu i-a-Tara	Not Stated	Concerned there are inaccuracies regarding fish passage information within Te Awarua-o-Porirua whaitua, based on the NIWA's Fish passage Assessment Tool. Considers the inaccuracies need to be identified and recorded accurately to achieve successful programmes for fish passage remediation.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and Te Awarua-o-Porirua Whaitua.			
S5.004	6 Other methods	Method M41: Identifying and responding to degradation in freshwater bodies within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Not Stated	Considers work should be undertaken at subcatchment level to address degradation of freshwater bodies to obtain accurate data and implement actions targeting specific causes of degradation.	Amend: Wellington Regional Council will identify degradation of freshwater bodies within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua at a sub-catchment scale based on accurate data using recognised assessment tools . This programme will, at least once every five years, publish information identifying degrading trends for waterbodies. Any such analysis may be part of a plan effectiveness or action plan review or part of any other process.
S5.005	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Not Stated	Considers any programmes implemented need to support rural landowners in various ways as identified. Concerned that the direct benefits associated with actions specified within the plan change are predominantly benefit for others where the cost are largely borne by the landowner. Considers the provision of appropriate support helps to redress this imbalance.	Retain as notified.
S5.006	9 Te Awarua-o-Porirua Whaitua	Objective P.O2: Te Awarua-o-Porirua's groundwater, rivers,	Amend	Agrees large sediment loads have entered the harbour, associated with human activity and natural events. Considers "a more natural level" needs either a different definition or way to quantify the meaning.	Amend to better define what is meant by "a more natural level".

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		lakes and natural wetlands, and their margins are on a trajectory of measurable improvement towards wai ora.			
S5.007	9 Te Awarua-o-Porirua Whaitua	Policy P.P20: Managing diffuse discharges of nutrients and Escherichi a coli from farming activities.	Oppose	Considers it is unclear how these attributes will be measured at a individual property level and how woody vegetation on high erosion risk land will change these. Notes across FMUs, many attribute states are within natural occurring limits.	Delete or amend the policy to reflect the attribute states and the actions that will retain or improve these states.
S5.008	9 Te Awarua-o-Porirua Whaitua	Policy P.P21: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Amend	Considers the NRP provides a definition of good management practice. Considers the "phased out" statement is unnecessary because adoption of good practices will replace "poor management practices".	Amend: (ii) the nitrogen discharge risk is minimised by the adoption of good management practices, and by the phasing out of any poor management practices, and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S5.009	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Concerned erosion risk is thought to be associated with landslides rather than more subtle sediment loss.	Amend: Achieving reductions in sediment discharges from farming activities on land with high sediment loss risk of erosion
S5.010	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Considers the mapping needs to be accurate at farm scale to identify areas of high risk for sediment loss. Suggests the methods chosen to address sediment loss need to be suited to individual farms. Considers alternative methods need to be available and supported. Considers the effectiveness in reducing sediment loss should be linked to reaching attribute states instead of specific time frames. Considers rectifying the degradation of should involve measurable outcomes in freshwater health rather than a timeline to one treatment method that may not deliver.	Amend: Reduce discharges of sediment from farming activities on high and highest erosion risk land by: (a) identifying highest erosion risk land (pasture) and high erosion risk land (pasture) used for pastoral farming, and (b) requiring that farm environment plans prepared for farms with highest erosion risk land (pasture) and/or highest erosion risk land (pasture) include an erosion risk treatment plan, and (c) ensuring erosion risk treatment plans: (i) deliver permanent woody vegetation cover on at least 50% of any highest erosion risk land (pasture) that is in pasture on a farm within 40 years, and appropriate treatment for the highest erosion risk land (pasture) that is in pasture on the farm, and (ii) identify and respond to risks of sediment loss on high erosion risk land (pasture) associated with grazing livestock, earthworks or vegetation clearance, by using effective erosion control treatment by 30 June 2040, and (d) Wellington Regional Council providing support to landowners to implement erosion risk treatment plans.
S5.011	9 Te Awarua-o-Porirua Whaitua	Policy P.P24: Managing rural land	Amend	Questions whether subdivision into small blocks is a land use change. Notes the S32 report states the tendency for higher stocking rates on smaller blocks and questions if this will become a perverse outcome.	Amend to consider if there are "perverse outcomes" when managing rural land use change.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		use change.			
S5.012	9 Te Awarua-o-Porirua Whaitua	Rule P.R26: Farming activities on 20 hectares or more of land - permitted activity.	Not Stated	Considers the small number of farms within the Whaitua contribute diversity, landscape and amenity values to Wellington area. Considers it important that farming in the whaitua has continued support.	Retain as notified.
S5.013	12 Schedules	B Freshwater Action Plan requirements.	Not Stated	Considers plans should: <ul style="list-style-type: none"> - support the inclusion of non-regulatory actions, - follow and promote best practice in planning and implementation, - include as determined in partnership with mana whenua, preparation at different scales (e.g. part Freshwater Management Units, whole Freshwater Management Units or smaller subcatchments) at the scale most useful to implementing actions and meeting the needs of mana whenua and the affected community, - ground-truth the state and trends of attributes, as appropriate, to identify and prioritise necessary actions, - recognise the value and necessity of integrated management planning and delivery. 	Retain as notified.
S5.014	12 Schedules	B3 Necessary actions.	Not Stated	Considers private land owners should be given planning, financial and logistical support, to achieve objectives successful implementation of the plan change.	Retain as notified.
S5.015	12 Schedules	D Freshwater Action Plans in Te Awarua-o-	Support	Supports (3), (4), (5a).	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Porirua Whaitua			
S5.016	12 Schedule s	Schedule 36: Additional requireme nts for Farm Environme nt Plans in Whaitua Te Whanganu i-a-Tara and Te Awarua-o- Porirua Whaitua.	Amend	<p>Concerned Table D1 does not provide same variation in method for addressing sediment loss. Considers various risk factors are not taken into account by the single solution and may be better addressed through other methods.</p> <p>Considers there are other issues to be considered when looking at how sediment loss might be managed including reliability of mapping, practicalities of addressing highest erosion risk land areas, inclusion of land of lesser risk due to fencing, establishing outcomes wanted and whether one rule solution will meet the outcomes or lead to perverse outcomes, are issues related to managing sediment loss which need to considered.</p>	<p>Amend: In addition to the management objectives described in Part B of Schedule Z, the farm environment plan must demonstrate that the appropriate and practicable erosion control treatment measures are adopted to address the identified sediment loss risks will result in the revegetation of highest erosion risk land (pasture), and treatment to address erosion risks on other land including high erosion risk land (pasture), with at least 50% of highest erosion risk land (pasture), being revegetated by 30 December 2033, and the remaining highest risk erosion land (pasture) being revegetated by 30 December 2040, unless this is not reasonably practicable, and a certifier certifies that alternative erosion control treatment over the balance of the property will result in the same a level of soil loss avoidance and that these are measurable at a farm-scale and consistent with achieving the target attribute states for the part FMU.</p>
S5.017	12 Schedule s	E Erosion Risk Treatment Plan.	Amend	<p>Considers the flexibility in solutions should be equal for both high and highest erosion risk land. Considers the difference should be higher level outcomes expected to meet attribute states within the treatment measures implemented and/or implementation of more measures to meet expected outcomes.</p>	<p>Amend: Remove Section 1) A programme to ensure that 50% of the total area of any highest erosion risk land (pasture) on the property is in permanent woody vegetation within 10 years of the farm environment plan being certified, where permanent woody vegetation: (a) can reasonably be expected to reach canopy cover of at least 80% per hectare within 10 years of being established, and (b) is not plantation forestry, and (c) subject to meeting (a) and (b) above, may include appropriate planted species or species that may naturally regenerate.</p> <p>2. A programme of mitigations to ensure that the management of sediment loss from highest and high erosion risk land (pasture) meets the following management goals.</p> <p>3. A programme of mitigations to ensure that the management of sediment loss from highest and high</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>erosion risk land (pasture) meets the following management goals:</p> <p>(a) Goal 1 - The effects of stock grazing on sediment loss are minimised by managing grazing density and stock types/weights (particularly during winter months) to reflect the increased risk on highest and high erosion risk land (pasture).</p> <p>(b) Goal 2 - The risk of sediment loss from critical source areas is minimised through identification of these areas, management of vegetation in and around these areas, stock grazing practices, and location and use of farm infrastructure.</p> <p>(c) Goal 3 - Land has appropriate soil conservation treatment to provide effective erosion control.</p> <p>(d) Goal 4 - The risk of sediment loss as a result of any earthworks permitted by the regional plan is minimised, including by compliance with Rules WH.R22/P.R20.</p> <p>(e) Goal 5 - The risk of sediment loss as a result of any vegetation clearance is not increased from associated land surface disturbance, and appropriate vegetation is established on the area as soon as practicable following any vegetation clearance.</p> <p>4. A description of how the benefits of erosion control treatments will be maintained over time including by: (a) Restricting stock access to ensure effective establishment and protection of the woody vegetation required by 1 above or other mitigations implemented in accordance with 2 above, and (b) Implementing an animal and/or plant pest management programme.</p>
S5.018	13 Maps	Map 90: Highest and high erosion risk land (Pasture) - Te	Oppose	Concerned the map doesn't take into account other sediment transport risk factors. Thinks the info in the map doesn't provide any meaningful relationship to actions to address sediment loss on highest erosion risk land.	Delete the map.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Awarua-o-Porirua.			

S102 Donald Love

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S102.001	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Oppose	Considers only a small % of sediment is from highest erosion risk land (pasture) and is dwarfed by other sources. Suggests replacing pasture at low stocking rates with woody vegetation would not have a net negative outcome of sediment discharge.	Remove the mandatory requirement for 50% of permanent woody vegetation.
S102.002	9 Te Awarua-o-Porirua Whaitua	Policy P.P26: Achieving reductions in sediment discharges from plantation forestry.	Amend	Considers risks should be assessed as the impacts of another rotation on tracked and managed land could be worse than other options.	Seeks that there be no new forestry on highest erosion land but additional rotations of existing forestry should be considered on impacts.
S102.003	9 Te Awarua-o-Porirua Whaitua	Rule P.R26: Farming activities on 20 hectares	Amend	Concerned there is no definition of a "farm environment plan certifier" within the plan and that its not a commonly used NZ national role. Cites the GWRC process and acknowledges a number of people are certified. Suggests process could be	Seeks a change in Schedule 36 (b) to remove the woody vegetation requirement.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		or more of land - permitted activity.		costly and excessive for the scale of operation in this area.	
S102.004	12 Schedules	B Management objectives	Amend	Concerned any attempt to modify highly exposed land may have a net negative impact, particularly in shallow soils.	(b) define "land in a natural state". (d) make revegetation optional.
S102.005	12 Schedules	B Management objectives	Amend	Notes there is a perception that forestry has been a significant contributor to sediment discharge. Concerned that good management practices have not been well defined or monitored.	Retain B1.
S102.006	12 Schedules	Schedule 36: Additional requirements for Farm Environment Plans in Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Notes woody vegetation experiencing high winds can cause major soil disturbance and sediment release and that partially disturbed or rotted tree roots can initiate landslide on steep land.	Delete provision unless science supporting claim that erosion is worse without woody vegetation can be provided.
S102.007	12 Schedules	Schedule 36: Additional requirements for Farm Environment Plans in Whaitua Te	Oppose	Considers it is not clear that replacing lightly stocked grassland with woody vegetation would achieve a net reduction in sediment.	Remove 50% total area in woody vegetation requirement or make it optional.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.			
S102.008	12 Schedules	Table D1. Financial contribution calculations for residential greenfield development	Amend	Suggests the plan should make it clear that responsibility for wild animals involves multiple agencies including GWRC.	Make clear that implementing control of pest plants and animals is also a requirement for GWRC.
S102.009	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Not Stated	Supports promoting updates of good management practice but suggests there is confusion about the boundary between good and bad management practice. Notes the GWRC Erosion and Sediment Control Guidelines guide is more related to discharge in relation to earthworks.	Retain C.

S037 Donald Skerman

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S37.001	2 Interpretation	Unplanned greenfield development	Support	Supports additional housing through infill of existing urban areas to better capitalise on existing infrastructure, reduce transport emissions and contamination of water resources.	Supports the prohibition of unplanned greenfield development, the requirement to treat 85% of stormwater on urban development sites, and the mandatory financial fee for greenfield developments.
S37.002	5.5 Water allocation rules	Rule R133: Gravel extraction for flood	Support	Disturbances to the riverbed should be minimised to reduce sediment, and work should be limited around periods where recreational use is most likely. The public should be notified when water is unsuitable for swimming due to these activities.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		protection purposes or erosion mitigation inside sites of significance - discretionary activity.			
S37.003	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Support	Considers additional housing unnecessary on this land to meet demand. Any development should be subject to an assessment of environmental issues, including carbon emissions, distance to public transport and elevation.	No decision requested but supports land that has been described as the "Southern Growth Area" by Upper Hutt City Council being included in the "Unplanned greenfield areas" colouring on the map
S37.004	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Oppose	Upper Hutt City Council is in the process of changing the zoning of this land to Natural Open Space (Plan change 49 Variation 1)	Seeks the deletion The section to the North of the paper road extending from Kiln St known as Pt. Sec 82 or Silverstream Spur should be removed from the "Planned/existing urban areas"

S003 Dougal Morrison

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S3.001	General comments	General comments - overall	Not Stated	Considers there is no justification for bringing in changes to control forestry use beyond the NES' for Commercial Forestry.	Not stated.
S3.002	General comments	General comments - current legislation	Not Stated	Considers any reference to NES' for Plantation Forestry should be removed and replaced with NES' for Commercial Forestry (NES-CF).	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S3.003	General comments	General comments - current legislation	Not Stated	Considers the NES-CF should be allowed to bed in before significant changes are made to the NRP	Not stated.
S3.004	General comments	General comments - overall	Not Stated	Changes go beyond the recommendations of the relevant Whaitua.	Not stated.
S3.005	General comments	General comments - water quality improvements	Not Stated	Considers GWRC has not provided scientific evidence that forests have caused significant degradation of freshwater quality in the Te Awarua-o-Porirua and Whanganui-a-tara catchments.	Not stated.
S3.006	General comments	General comments - rural	Not Stated	Considers the proposed erosion classification is unhelpful. Concerned the classification does not express the absolute risk, but rather the risk relative to all other agricultural land. Considers it better to use the ESC classification in the NES-CF.	Not stated.
S3.007	General comments	General comments - overall	Not Stated	Considers extra resources should be provided to a monitoring team, as per the Te Awarua-o-Porirua and Te Whanganui-a-tara Whaitua recommendations.	Not stated.
S3.008	General comments	General comments - overall	Not Stated	Concerned the Section 32 analysis doesn't justify the changes to forestry management rules.	Not stated.
S3.009	General comments	General comments - economic cost/impact	Not Stated	Considers the proposed changes will significantly impact forest investment in the Wellington Region and reduce the benefits from carbon sequestration.	Not stated.
S3.010	General comments	General comments – plantation forestry	Not Stated	Concerned this will result in unmanaged forests and associated problems.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S3.011	General comments	General comments - overall	Not Stated	Considers rules need to be appropriate to the type of forest being managed. Considers commercial forests using a continuous forest cover approach should be a permitted activity.	Not stated.
S3.012	General comments	General comments - overall	Not Stated	Considers GWRC has not provided scientific evidence that forests have caused any significant degradation of freshwater quality. States GWRC's objectives are broad and it will be difficult to determine whether new regulations for forestry will have a positive effect on water quality. Feels GWRC presents a biased view of the role of forestry in the Section 32 report Considers there is no evidence that more stringent NES-CF will not achieve GWRC's water quality objectives and there is no reason to bring in greater controls than those in the NES-CF.	Not stated.
S3.013	General comments	General comments - overall	Not Stated	References recommendations from Te Awarua-o-Porirua WIP and Te Whanganui-a-Tara WIPs and considers these recommendations have not been followed and more complex and expensive regulations are now proposed.	Not stated.
S3.014	General comments	General comments - current legislation	Not Stated	References Section 5 and Section 85 of the RMA. Concerned the proposed plan will make it impossible for forestry owners to provide for their economic well-being or to make reasonable use of their land. Concerned that forestry owners will not be able to generate income post-harvest but costs, such as rates or maintenance costs for fences will continue. Concerned that forests will not be able to be harvested due to the conditions in the rules. Considers it is unlikely that the maximum sediment level of 100 gr/m3 will be able to be met. Considers that additional costs for planning, documentation,	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				experts and consent fees may make it impossible to economically harvest a forest.	
S3.015	General comments	General comments – plantation forestry	Amend	Concerned if highly erodible land is unable to be re-planted post-harvest, the land will revert to unmanaged forests. Concerned this will create problems of trees falling into streams or causing shading of streams.	Seeks that: Replanting be a permitted activity subject to the permitted activity conditions in the NESCF The recommendations from Te Awarua-o-Porirua WIP (Recommendations 54 and 55), and the recommendation from Te Whanganui-a-Tara WIP (Recommendation 37) be adopted by Greater Wellington. Greater resources are provided to monitor harvesting activities.
S3.016	9 Te Awarua-o-Porirua Whaitua	Rule P.R19: Plantation forestry - controlled activity.	Oppose	Concerned if highly erodible land is unable to be re-planted post-harvest it will result in unmanaged forests and associated problems.	Delete Rule P.R19.
S3.017	9 Te Awarua-o-Porirua Whaitua	Rule P.R20: Plantation forestry - discretionary activity.	Oppose	Concerned if highly erodible land is unable to be re-planted post-harvest it will result in unmanaged forests and associated problems.	Delete Rule P.R20.
S3.018	9 Te Awarua-o-Porirua Whaitua	Rule P.R21: Plantation Forestry on highest erosion risk land - prohibited activity.	Oppose	Concerned if highly erodible land is unable to be re-planted post-harvest it will result in unmanaged forests and associated problems.	Delete Rule P.R21.
S3.019	General comments	General comments - overall	Not Stated	Supports the New Zealand Farm Forestry Association Inc, and the Wellington Branch of the New Zealand Farm Forestry Associations' submissions.	Not stated.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S39.001	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Oppose	Concerned about animal welfare if livestock cannot access streams for drinking water. Refer to comments against Policy WH.P26.	Delete provision.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S39.002	General comments	General comments - overall	Not Stated	<p>Suggests GWRC take an approach of partnership and consulting with the community to achieve water quality outcomes.</p> <p>Concerned GWRC's community engagement for PC1 was lacking, with a GWRC presentation organised less than three weeks before submissions closed.</p> <p>Questions why affected parties did not have direct mail contact from GWRC regarding PC1 and why there was no formal agreement from the community board.</p> <p>Concerned PC1 information on GWRC website was not easily accessible and in relevant form.</p> <p>Considers GWRC 90-minute workshop was insufficient to provide information required for community to make informed decisions.</p> <p>Considers the timing of the consultation was unworkable as it was several weeks before Christmas and during a very busy farming season.</p>	Not stated.
S39.003	General comments	General comments - consultation	Not Stated	<p>Objects the lack of direct consultation with landowners and the community board and the short time frame for submissions.</p>	Not stated.
S39.004	General comments	General comments - freshwater	Not Stated	<p>Concerned the focus on sediment and erosion is based on data from a single monitoring station and the use of broad-brush modelling to identify potential erosion sources.</p> <p>Concerned the monitoring data used to determine the levels and sources of e-coli across the multiple catchments is based on extrapolation from data from one monitoring site</p> <p>Considers there needs to be more fine scale and regular water quality studies and potentially monitoring at the scale of each farm.</p>	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S39.005	General comments	General comments - current legislation	Not Stated	<p>Considers the transition time should be determined by the implementation of the new freshwater regulations by central government. Concerned GWRC is acting prematurely and duplicating the process, adding costs for landowners and GWRC as well as reducing the available time to understand the problems that are trying to be solved.</p> <p>Considers plan change is a blunt instrument attempting to compensate for the lack of 'actual' local water quality information by proposing broad rules across multiple catchments rather than targeting usable and effective interventions for the best outcomes.</p> <p>Concerned wide-ranging proposed regulatory implications will create additional financial and time costs on community and there is a strong risk of not achieving the outcomes efficiently or effectively. Concerned under PC1 proposal, many people will be non-compliant within a short timeframe and face prosecution.</p> <p>Considers the proposed time to transition between current land use and implementing the proposed changes is unrealistically short and does not account for significant financial implications and requires potentially unneeded changes in our farm system and in land use.</p> <p>Considers solutions are best achieved on-farm by individual properties rather than through a wider approach based on the current whaitua or "Freshwater Management Unit".</p> <p>Considers many of small streams cross property boundaries and therefore must be implemented and monitored at an appropriate scale.</p> <p>Concerned of potential for perverse outcomes as these measures impose more cost and reduce the ability of farmers to operate economically.</p>	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S39.006	General comments	General comments - overall	Not Stated	Considers the perceived problems are not clearly articulated or supported and that solutions are best achieved by bespoke on-farm and by individual property solutions Concerned that small streams cross multiple property boundaries, suggesting that a better approach for implementing and monitoring is required.	Not stated.
S39.007	General comments	General comments - overall	Not Stated	Concerned of required financial and time costs for implementing the proposed changes and the significant impact on the viability of their enterprise. Concerned many people will be non-compliant with the proposed changes in a short timeframe and will therefore face prosecution. Concerned the proposed time to transition between current land use and implementing the proposed changes is unrealistic and does not account for significant financial implications, required changes in the farm systems and potential changes in land use. Considers PC1 measures assume worst-case scenario in water quality and do not account for any historical improvements carried out. Considers cost of implementing proposed changes will significantly affect farming enterprise, assuming requirement of farm plan and 'expert' verification will be high financially and in time allocated. Concerned PCI does not allow flexibility to prioritise or progressively stage work over time.	Not stated.
S39.008	General comments	General comments - current legislation	Not Stated	Delete as referenced in SP4.	Not stated.
S39.009	General comments	General comments - water quality	Not Stated	Concerned there has been insufficient information provided to identify problems or problem locations with water quality which impacts the ability to effectively target any remediation or work to improve this.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		improvements		<p>Notes personal changes made to reduce sedimentation and potential deposition of biological pollution in small streams.</p> <p>Concerned the wider sources of contaminants (both by activity and by location) across Mākara and Ohariu is highly speculative as there is only one water quality monitoring site</p> <p>Considers there was little acknowledgement of the majoring flood events, remedial and construction programme carried out in Takarau George and house under construction that have consequent potential for erosion and increased sedimentation.</p>	
S39.010	General comments	General comments - maps	Not Stated	Questions the accuracy of mapping for PC1 mapping which does not correspond to submitters experience. Concerned with accuracy of soil type analysis, and suggests modelling is not fit for purpose.	Not stated.
S39.011	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Would like compensation added to financial support available if large-scale land retirement progresses.	Prioritise financial options prior to implementing new rules.
S39.012	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	<p>Lack of data has led to assumptions and modelling which are not fit for purpose which makes it difficult to understand water quality and work out what solutions are needed.</p> <p>Considers wider contaminant sources across Makara and Ohariu are speculative and there is little acknowledgement of flooding and associated construction and remedial works along Takarau Gorge or the increasing number of houses being</p>	Increase GWRC support for additional water quality monitoring in Mākara and Ohariu, including community-led monitoring.

				built and the potential for erosion and increases in sedimentation from these activities.	
S39.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Concern that the source of high e-coli levels in Makara Stream is unknown and that sources need to be understood in order for them to be addressed. Notes some parts of the catchment and stream outside of the catchment will not have an e-coli issue.	Add: Identification of sources of e-coli specific to individual catchments.
S39.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Feels this leads to inconsistency across WH.P22 and WH.P23. Thinks work to reduce e-coli levels should be targeted where e-coli is shown to be an issue and that there is no sufficient monitoring data to determine levels and sources of e-coli across multiple catchments. Concerned with the reliance of one monitoring site across the Makara and Ohariu catchments given differences in catchments/sub-catchments and would like to see local water quality studies and option for landowner farm-scale monitoring.	Add: Incorporate e-coli reduction in catchment context and farm plans, based on monitored data.
S39.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high	Amend	Concerned about costs and timeframes for revegetation, noting that removal of vegetation occurred over generations yet revegetation is required within short timeframe. Cites own experience with trials and concern fencing and retirement of land will be only tools available given challenges with revegetation projects in this area due to conditions (high winds). Considers about the accuracy of the modelled scenarios and that it might not include accurate	a.) Identify sediment sources by farm-scale assessment of sediment sources rather than erosion-risk mapping in PC1. Refocus on identifying "sediment sources" rather than erosion risk land/pasture. b.) Refocus from "erosion risk" to "sediment management." c.) Remove revegetation and instead rely on bespoke actions and timeframes identified through farm-scale assessment, including via the audited Freshwater Farm Plans.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		risk of erosion.		<p>analysis of soil types, and considers the modelling is coarse and not fit for purpose in Mākara/Ohariu.</p> <p>Concerned this policy includes generic assumptions on the source of sediment because it focuses on hill country erosion as a source and not streambank erosion in high flow events.</p> <p>Supports revegetation in vulnerable areas to reduce flood flows but is concerned that areas forced into retirement will be larger than the red areas mapped due to the need to aggregate areas and locate sensible fencelines.</p> <p>Suggests GWRC should allow for a more accurate assessment of risk by using individual farm assessments to assess sediment sources.</p>	
S39.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Considers sediment sources are broader than erosion on hillsides. Considers this helps to acknowledge other existing sediment management techniques.	Refocus from "erosion risk" to "sediment management".
S39.017	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment	Oppose	<p>Concerned about the costs and timeframes for revegetation and the requirement to retire land. Considers the removal of vegetation occurred over generations yet revegetation is now required within short timeframes.</p> <p>Notes woody vegetation" will likely need to be</p>	Remove this blanket approach and instead rely on the bespoke actions and timeframes that will be identified through farm-scale assessment, including via the audited Freshwater Farm Plans.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges from farming activities on land with high risk of erosion.		<p>natural reversion since using poplars and willows (alongside grazing) is unlikely to be successful on these steepest areas given the high-wind nature of our landscape Therefore fencing and retirement will be the only tool available.</p> <p>Considers the areas has unique challenges due to high winds and native planting will not be available on this scale.</p> <p>Concerned the provisions' requirement to maintain woody vegetation is unviable due to large-scale land retirement and reduced farm income because of the reduction in productive land and high fencing costs.</p> <p>Concerned of revegetation projects alongside Meridian's wind farms because afforestation needs to be designed to not impede wind flow.</p>	
S39.018	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Amend	<p>Policy needs to be consistent with associated rule regarding reduced access not restricted access.</p> <p>Supports revegetating streams but notes costs and practicalities of fencing some areas.</p> <p>Wants to see farm scale analysis rather than blanket restrictions.</p> <p>Concerned about animal welfare if livestock cannot access streams for drinking water.</p>	<p>Replace "restrict" with "reduce".</p> <p>Amend policy wording to match heading about river size.</p>
S39.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Support	<p>Concerned about doubling up on farm plan requirements when existing processes already in place under national regulation.</p> <p>Supports riparian planting for shade. Notes local community has begun planting which helps streambank stabilisation.</p>	<p>Ensure details of this rule are consistent with the content and timing for Freshwater Farm Plans.</p>
S39.020	8 Whaitua Te	Rule WH.R27: Farming	Amend	<p>Concerned of doubling up on farm plan work due to the existing process under the national regulation.</p>	<p>Ensure that the details of this rule are consistent with the content and timing for Freshwater Farm Plans</p>

	Whanganui-a-Tara	activities on 20 hectares or more of land - permitted activity.			
S39.022	8 Whaitua Te Whanganui-a-Tara	Rule WH.R29: Livestock access to a small river - discretionary activity.	Oppose	Concerned about animal welfare if livestock cannot access streams for drinking water. Refer to comments against Policy WH.P26.	Delete provision.

S207 Firth Industries Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S207.001	General comments	General comments - definitions	Amend	Concern with no definition for 'aquatic offset'. NRP defines 'biodiversity offset' and also defines 'offset'. Without an 'aquatic offset' definition, there is a risk the 'biodiversity offset' definition is inappropriately applied when considering 'offsetting' for an activity with more than minor effects on fresh water. Omitting the definition is inconsistent with the NPSFM (which has a definition). Understand that consequential amendments may be required to objectives, policies, and rules to reference this term.	<p>Insert new definition of "aquatic offset" as follows:Aquatic offset</p> <p>Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below):</p> <p>means a measurable conservation outcome resulting from actions that are intended to:</p> <p>(a) redress any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, and remediation, measures have been sequentially applied; and</p> <p>(b) achieve no net loss, and preferably a net gain, in the extent and values of the wetland or river, where:</p> <p>(i) no net loss means that the measurable positive effects of actions match any loss of extent or values</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					over space and time, taking into account the type and location of the wetland or river; and (ii) net gain means that the measurable positive effects of actions exceed the point of no net loss
S207.002	General comments	General comments - definitions	Amend	Concern with no definition for 'aquatic compensation'. NRP defines 'biodiversity compensation'. Without an 'aquatic compensation' definition, there is a risk the 'biodiversity compensation' definition is inappropriately applied when considering offsetting for an activity with more than minor effects on fresh water. Omitting the definition is inconsistent with the NPSFM (which has a definition). Understand that consequential amendments may be required to objectives, policies, and rules to reference this term.	Insert new definition of "aquatic compensation" as follows: Aquatic compensation Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a conservation outcome resulting from actions that are intended to compensate for any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, remediation, and aquatic offset measures have been sequentially applied
S207.003	General comments	General comments - stormwater management	Amend	Concerns some Firths operations are defined as "high risk industrial or trade premises". Recognise potential effects with hazardous substances must be managed, but seek amendments to "high risk industrial or trade premises" provisions to ensure they are clear, reasonable, practicable, and focussed on potential effects.	Requests a permitted/controlled activity pathway for new/redeveloped impervious surfaces at high risk industrial or trade premises, subject to appropriate conditions.
S207.004	General comments	General comments - unplanned greenfield development	Amend	Inappropriate for all development in "unplanned greenfield development areas" to be prohibited activities due to insufficient evidence to substantiate that 'all' development will have significant adverse effects. Although existing Firth sites are located within planned greenfield developed areas, concerns that future operations may be not be limited to existing sites. Considers that measures set out in the remaining stormwater discharge and impervious surface rules (as amended by the relief sought by Firth) are	Seek greater clarity on the scope of provisions for unplanned greenfield development, by incorporating a 'greenfield development' definition and a discretionary activity consenting pathway for development in "unplanned greenfield development areas".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				incorporated into new development, development can occur when effects are suitably managed.	
S207.005	2 Interpretation	High risk industrial or trade premise	Amend	<p>Opposes list of activities which 'could' be high risk industrial or trade premises. Includes various activities which could be managed so that hazardous substances are not exposed to rain (and therefore would not fall within the definition), including bullet point two "commercial cement, concrete or lime manufacturing or storage" which would capture several of Firth's sites. Concerns with the lack of evidence provided that the activities listed are, by default, high risk industrial or trade premises, and as drafted the list is unhelpful to plan readers because it implies that those activities are predetermined as meeting the definition.</p> <p>Considers 'contaminant' is too broad to include in definition as it could include any substance (as per RMA) not just stormwater. All industrial and trade premises could fall under this definition regardless of whether they involve storing, generating, or using hazardous substances. Scope of activities covered by definition is unclear and reference to 'contaminant' should be removed in order to focus on hazardous substance management.</p>	<p>Amend definition as follows:</p> <p>High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include: -boat construction and maintenance -commercial cement, concrete or lime manufacturing or storage -chemical manufacture, formulation or bulk storage, recovery, processing or recycling -fertiliser manufacture or bulk storage -storage of hazardous wastes including waste dumps or dam tailings associated with mining activities -petroleum or petrochemical industries including a petroleum depot, terminal blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, -scrap yards including automotive dismantling, wrecking or scrap metal yards -wood treatment or preservation, or bulk storage of treated timber -mineral extraction, refining and reprocessing, storage, and use -explosives and ordnance production, storage, and use -electronics including the commercial manufacturing, reconditioning, or recycling of computers, televisions, and other electronic devices -waste recycling, treatment, and disposal -engineering workshops with metal fabrication, or electroplaters -power stations, substations, or switchyards.</p>
S207.006	2 Interpretation	Redevelopment	Amend	Oppose reference to 'minor' as it is subjective and uncertain	<p>Amend the definition as follows:</p> <p>Redevelopment</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e brownfield development, upgrades to existing roads etc.) in relation to stormwater effects, this includes is the replacement, reconstruction or addition (new) of impervious surfaces.</p> <p>Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing -activities that only involve the re-roofing of existing buildings.</p>
S207.007	2 Interpretation	Unplanned greenfield development	Oppose	<p>Scope of policies and rules for "unplanned greenfield development" is unclear as "greenfield development" is undefined. "Greenfield development" is used in proposed stormwater provisions, including a proposed prohibited activity through WH.R13 and P.R12. As per the Section 32 report, it is understood that "greenfield development" is focused on urban development but without a definition, all activities could fall under the term. Requests a definition that reflects the 'greenfield' definition in the Auckland Unitary Plan. Urban development should also be defined using the RPS definition which would support integration between the RPS and the NRP.</p>	<p>Amend the definition of "unplanned greenfield development" as follows:</p> <p>Unplanned greenfield development Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p> <p>Provide a definition of "greenfield development" as follows: Greenfield development Means any urban development undertaken within a site or sites has not been previously used for urban land use.</p> <p>As a consequential amendment, provide a definition of "urban development" to match the Regional Policy Statement definition as follows:</p>

Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>Urban development</p> <p>Urban development is subdivision, use and development that is characterised by its planned reliance on reticulated services (such as water supply and drainage) by its generation of traffic, and would include activities (such as manufacturing), which are usually provided for in urban areas. It also typically has lots sizes of less than 3000 square metres.</p>
S207.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Seek amendments to clause (a).</p> <p>Clause (a) prescribes the activity status rather than addressing adverse effects which is inappropriate for a policy. Reference to prohibiting unplanned greenfield development should be removed, in favour of focussing on minimising effects.</p> <p>Amendment to the policy is necessary to ensure that it is consistent with the effects management hierarchy set out in the NPS-FM. Aquatic offsetting is only necessary where effects are more than minor, and resource consent applicants should be encouraged to minimise residual adverse effects so that they are no more than minor (in which case aquatic offsetting is not required). If aquatic offsetting or compensation is required, financial contributions as proposed by PC1 should be available as a discretionary option for achieving offsetting, not a mandatory requirement. If an alternative effective method of aquatic offsetting or compensation as part of their proposal in accordance with Appendix 6 of the NPS-FM can be provided, financial contributions (on top of this) should not be required.</p>	<p>Amend policy WH.P2 as follows:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives</p> <p>Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the discharge of stormwater contaminants from greenfield development, and where residual adverse effects from the discharge of stormwater contaminants are more than minor, requiring aquatic offsetting or aquatic compensation (which may include financial contributions) as an aquatic offset to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry,</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S207.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	<p>Seek removal of reference to contaminants in favour of focus on hazardous substances. It is impracticable to avoid contaminants being entrained in stormwater which is acknowledged in the section 32 report and policy WH.P15, which recognises there are acceptable levels of residual stormwater contaminants associated with development.</p> <p>Management of stormwater contaminants generally is provided for under policies WH.P10 and WH.P14, which will also apply to high risk industrial or trade premises. The policy can only regulate discharges where they enter "water" in accordance with section 15 of the RMA - refer to RMA water definition. The policy and rules imply "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. The rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but cannot manage effects at the point of discharge into the network. Therefore the reference to "via an existing local authority stormwater network" must be removed from the policy. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the policy and rules are not ultra vires.</p>	<p>Amend policy WH.P11 as follows:</p> <p>Policy WH.P11: Discharges of contaminants hazardous substances in stormwater from high risk industrial or trade premises</p> <p>The discharge of stormwater to water, including discharges via the stormwater network, from a high risk industrial or trade premise shall be managed by:</p> <p>(a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and</p> <p>(b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and</p> <p>(c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and</p> <p>(d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.</p>
S207.010	8 Whaitua Te	Policy WH.P14: Stormwater	Amend	Seek amendments to policy in line with submission on "unplanned greenfield development" definition - defining "greenfield development"	<p>Amend policy WH.P14 as follows:</p> <p>Policy WH.P14: Stormwater discharges from new and</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	r discharges from new and redeveloped impervious surfaces.			<p>redeveloped impervious surfaces</p> <p>The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas reduced to the extent practicable, upon redevelopment, through implementing:</p> <p>(a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to:</p> <p>(i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and</p> <p>(ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and</p> <p>(b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system.</p>
S207.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>The financial contribution requirement is inconsistent with NPS-FM and limits ability to implement the effects management hierarchy. Aquatic offsetting or aquatic compensation are required where effects are more than minor. Effects are expected and appropriate where effects are no more than minor. Clause implies financial contributions are only form of offsetting provided. Appendix 6 of the NPS-FM sets out principles that are to be applied when identifying an appropriate aquatic offset and it would be contrary to the NPS-FM to not allow for consideration against those principles. Seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation to be undertaken.</p> <p>The policy can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. The policy and rules imply "an existing or new stormwater network" is a fresh water receiving</p>	<p>Amend policy WH.P15 as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting or compensation for new greenfield development The Where there are more than minor residual adverse effects of residual (post-treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via from an existing or new stormwater network, those effects must be managed by way of an aquatic offset or aquatic compensation, including through the following:</p> <p>(a) are to be provide an aquatic offset by way of a financial contribution in accordance with Schedule 30 (financial contribution), or (b) provide an aquatic offset in accordance with the principles for aquatic offsetting in Appendix 6 of the NPS-FM, and</p> <p>(c) where more than minor residual adverse effects</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. Therefore the reference to "via an existing local authority stormwater network" must be removed from the policy. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the policy and rules are not ultra vires.</p> <p>Amendments also account for defined term of "greenfield development" as per submission on the definition of "unplanned greenfield development".</p>	cannot be offset, aquatic compensation must be provided in accordance with the principles for aquatic compensation in Appendix 7 of the NPS-FM.
S207.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Oppose policy entirely. Lack of evidence in Section 32 report to justify direction and suggest all new stormwater discharges from unplanned greenfield development will cause significant effects. Inappropriately targets land use without considering if land use will have significant adverse effects.</p>	Delete policy.
S207.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Amend	<p>The rule can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. Implies "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. The rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but cannot manage effects at the point of discharge into the network. Therefore the reference to "via an existing local authority stormwater network" must be removed from the policy. If reference to the stormwater network is to be retained, this must be</p>	<p>Amend rule WH.R1 as follows:</p> <p>Rule WH.R1: Point source discharges of specific contaminants - prohibited activity</p> <p>The point source discharge of:</p> <p>(a) chemical cleaning products including vehicle cleaning products, detergents, bleach and disinfectant, or (b) paint and other substances used for the purpose of protecting surfaces (including stain and paint wash), or (c) solvents including paint stripper, or (d) liquid fuels, including diesel, petrol, oil, grease, except where these have been treated by an interceptor system to</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				clarified as being "from" the stormwater network (rather than "via") to ensure that the rule is not ultra vires.	collect hazardous contaminants and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, or (e) radiator coolant, or (f) cooking oil, or (g) cement wash, cement slurry and concrete cutting waste, or (h) drill cooling water into water or onto or into land, including via a stormwater network, where it may enter a surface water body or coastal water is a prohibited activity.
S207.014	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Amend	<p>Consider there will be no difference in effects associated with stormwater discharge from existing or new high risk industrial or trade premises and both should be provided for.</p> <p>Condition (d) should be amended to remove reference to 'contaminants' and focus on hazardous substances as 'contaminants' is too broad and are managed under the remainder of the conditions.</p> <p>The rule can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. Rule implies "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. The rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but cannot manage effects at the point of discharge into the network. Therefore the reference to "via an existing local authority stormwater network" must be removed from the rule. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the rule is not ultra vires.</p>	<p>Amend rule WH.R4 as follows:</p> <p>Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity</p> <p>The discharge of stormwater from an existing high risk industrial or trade premise, that is not a port or airport, into water, or onto or into land where it may enter water, including via an existing local authority stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(a) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and (b) the discharge does not contain wastewater, and (c) if the discharge is to land where it may enter groundwater, (i) the discharge cannot cause or exacerbate the flooding of any other property, and (ii) the discharge is not located within 20m of a bore used for water abstraction for potable supply or stock water, and (d) any contaminants stored or used on site, or hazardous substances stored or used on site, cannot be entrained in stormwater and enter a surface water body or coastal water, including via the stormwater network, or (i) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>The note at the end of the rule should be deleted as part of giving effect to the relief sought by submitter in relation to the rules for new or redeveloped impervious surfaces for high risk industrial or trade premises.</p>	<p>(ii) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, and (e) if the discharge is into a surface water body, coastal water or via an existing local authority stormwater network, the concentration of total suspended solids in the discharge shall not exceed: (i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m³ where the discharge enters any other water, and where the discharge is not via from an existing local authority stormwater network the discharge shall also not: (f) cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and (g) give rise to the following effects beyond the zone of reasonable mixing: (i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (ii) any conspicuous change in the colour, or (iii) a decrease in water clarity of more than 1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or 2. 30% in any other river, or (iv) any emission of objectionable odour, or (v) the freshwater is unsuitable for consumption by farm animals, or (vi) any significant adverse effects on aquatic life. Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to WH.R11.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S207.015	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	<p>New or redeveloped impervious surfaces for high risk industrial or trade premises should be provided for in this rule. This ensures high risk industrial and trade premises are not disincentivised from reconditioning or replacing impervious surfaces. Effects associated with hazardous substances at high-risk industrial or trade premises can be managed through solutions such as containment or interception and conditions under (d) of rule WH.R4 are appropriate for this purpose.</p> <p>The fixed baseline in condition (a) would be unworkable for redevelopment, as it could result in future redevelopment of the same impervious surface becoming a controlled or discretionary activity by default, even where the surface is less than 1,000m2. A 12-month time period, similar to that used for earthworks, would be more appropriate on the basis that it provides greater certainty and enforceability.</p> <p>The rule can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. The rule implies "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. Therefore the reference to "via an existing local authority stormwater network" must be removed. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the rule is not ultra vires.</p> <p>Inappropriate to require hydrological control for redevelopment of existing impervious surfaces under condition (c), on the basis that redevelopment of existing surfaces would not have any adverse</p>	<p>Amend rule WH.R5 as follows:</p> <p>Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity</p> <p>The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment activities of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through from an existing or new local authority stormwater network, that is not a high risk industrial or trade premise or unplanned greenfield development, is a permitted activity, provided the following conditions are met:</p> <p>(a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m2 (baseline property existing impervious area as at 30 October 2023) per property in any consecutive 12-month period and</p> <p>(b) all new building materials associated with the development shall not include exposed zinc (including galvanised steel) or copper roof, cladding and spouting materials, and</p> <p>(c) the proposal provides hydrological control measures (for example rain tanks) onsite or offsite, where discharges will enter a surface water body (including via from an existing local authority stormwater network):</p> <p>(i) for all impervious areas impervious surfaces associated with a greenfield development, or</p> <p>(ii) for all redeveloped and new impervious areas impervious surfaces involving greater than 30m2 of impervious area of a associated with redevelopment (of an existing urbanised property), and</p> <p>(d) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(e) the discharge does not contain wastewater, and</p> <p>(f) the concentration of total suspended solids in the</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				part of giving effect to the relief sought by submitter in relation to the rules for new or redeveloped impervious surfaces for high risk industrial or trade premises..	<p>stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, and</p> <p>(e) if the discharge is into a surface water body, coastal water or via an existing local authority stormwater network, the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or</p> <p>(ii) 100g/m³ where the discharge enters any other water, and where the discharge is not via from an existing local authority stormwater network the discharge shall also not:</p> <p>(f) cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and</p> <p>(g) give rise to the following effects beyond the zone of reasonable mixing:</p> <p>(i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or</p> <p>(ii) any conspicuous change in the colour, or</p> <p>(iii) a decrease in water clarity of more than</p> <p>1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>2. 30% in any other river, or</p> <p>(iv) any emission of objectionable odour, or</p> <p>(v) the freshwater is unsuitable for consumption by farm animals, or</p> <p>(vi) any significant adverse effects on aquatic life.Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to P.R10.</p>
S207.027	9 Te Awarua-	Rule P.R5: Stormwater from new	Amend	New or redeveloped impervious surfaces for high risk industrial or trade premises should be provided for in this rule. This ensures high risk industrial and	<p>Amend rule P.R5 as follows:</p> <p>Rule P.R5: Stormwater from new and redeveloped</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	and redevelop ed impervious surfaces - permitted activity.		<p>trade premises are not disincentivised from reconditioning or replacing impervious surfaces. Effects associated with hazardous substances at high-risk industrial or trade premises can be managed through solutions such as containment or interception and conditions under (d) of rule WH.R4 are appropriate for this purpose.</p> <p>The fixed baseline in condition (a) would be unworkable for redevelopment, as it could result in future redevelopment of the same impervious surface becoming a controlled or discretionary activity by default, even where the surface is less than 1,000m². A 12-month time period, similar to that used for earthworks, would be more appropriate on the basis that it provides greater certainty and enforceability.</p> <p>The rule can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. The rule implies "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. Therefore the reference to "via an existing local authority stormwater network" must be removed. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the rule is not ultra vires.</p> <p>Inappropriate to require hydrological control for redevelopment of existing impervious surfaces under condition (c), on the basis that redevelopment of existing surfaces would not have any adverse effects on the flow of stormwater, when compared to the existing environment.</p>	<p>impervious surfaces - permitted activity</p> <p>The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment activities of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through from an existing or new local authority stormwater network, that is not a high-risk industrial or trade premise or unplanned greenfield development, is a permitted activity, provided the following conditions are met:</p> <p>(a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m² (baseline property existing impervious area as at 30 October 2023) per property in any consecutive 12-month period and</p> <p>(b) all new building materials associated with the development shall not include exposed zinc (including galvanised steel) or copper roof, cladding and spouting materials and</p> <p>(c) the proposal provides hydrological control measures (for example rain tanks) onsite or offsite, where discharges will enter a surface water body (including via from an existing local authority stormwater network):</p> <p>(i) for all impervious areas impervious surfaces associated with a greenfield development, or</p> <p>(ii) for all redeveloped and new impervious areas impervious surfaces involving greater than 30m² of impervious area of a associated with redevelopment (of an existing urbanised property), and</p> <p>(d) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(e) the discharge does not contain wastewater, and</p> <p>(f) the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies),</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>For clarity, references to "impervious areas", which is not defined, should be replaced with references to "impervious surfaces", which is defined.</p>	<p>Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m3 where the discharge enters any other water, and where the discharge is not via from an existing or new local authority stormwater network: (g) the discharge shall not cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and (h) the discharge shall not give rise to the following effects beyond the zone of reasonable mixing: (i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (ii) any conspicuous change in the colour, or (iii) a decrease in water clarity of more than 1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or 2. 30% in any other river, or (iv) any emission of objectionable odour, or (v) the freshwater is unsuitable for consumption by farm animals, or (vi) any significant adverse effects on aquatic life. and where the new or redeveloped impervious surface is for a high risk industrial or trade premise: (i) any hazardous substances stored or used on site cannot be entrained in stormwater and enter a surface water body or coastal water, including via the stormwater network, or (i) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or (ii) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons. Note Where a property connects to a local authority stormwater</p>

S207.030	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-	Amend	The rule can only regulate discharges where they enter "water" in accordance with section 15 of the RMA. The rule implies "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. Therefore the reference to "via an existing local authority stormwater network" must be removed. If reference to the stormwater network is to be	<p>Amend rule P.R10 as follows:</p> <p>Rule P.R10: Stormwater from new and redeveloped impervious surfaces - discretionary activity</p> <p>The use of land for the creation of new or redevelopment of existing impervious surfaces (including greenfield development and redevelopment of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.		<p>retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the rule is not ultra vires.</p> <p>Mandatory financial contributions are not consistent with NPS-FM for the purpose of aquatic offsetting, on the basis that the effects management hierarchy in the NPS-FM only requires offsetting in circumstances where effects are more than minor. Where residual adverse effects are more than minor, applicants should have the opportunity to propose aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the NPS-FM. It is inappropriate to require financial contributions as a condition, and instead, a case by case consideration with reference to the requirements of policy WH.P15 is sought.</p>	<p>body or coastal water, including via from an existing local authority stormwater network, that is not permitted by Rule P.R5, or a controlled activity under Rule P.R6 or Rule P.R7, or prohibited under P.R12 is a discretionary activity provided the following conditions are is met:</p> <p>(a) the resource consent application includes a Stormwater Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and</p> <p>(b) if the proposal is for greenfield development, a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).</p>
S207.031	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Amend	<p>Inappropriate for all development in "unplanned greenfield development areas" to be prohibited activities due to insufficient evidence to substantiate that 'all' development will have significant adverse effects. If the measures set out in the remaining stormwater discharge and impervious surface rules (as amended by the relief sought by Firth) are incorporated into new development, it can be undertaken in a manner that appropriately avoids, remedies, or mitigates the adverse effects. A consenting pathway for development and a discretionary activity status is more appropriate than a prohibited activity.</p> <p>The approach promoted by the Council is unlikely to be workable, on the basis that the RMA does not provide for concurrent or coordinated consideration of separate changes to regional and district plans.</p> <p>The rule can only regulate discharges where they enter "water" in accordance with section 15 of the</p>	<p>Amend rule P.R12 as follows:</p> <p>Rule P.R12: Stormwater discharges from new unplanned greenfield development - prohibited discretionary activity</p> <p>The use of land and the associated discharge of stormwater from impervious surfaces from unplanned greenfield development direct into water, or onto or into land where it may enter a surface water body or coastal water, including through from an existing or proposed stormwater network, is a prohibited discretionary activity. Note Any unplanned greenfield development proposals will require a plan change to the relevant map (Map 86, 87, 88 or 89) to allow consideration of the suitability of the site and receiving catchment(s) for accommodating the water quality requirements of the National Policy Statement for Freshwater Management 2020, and the relevant freshwater and coastal water quality objectives of this Plan. Any plan change process should be considered concurrent with any associated change to the relevant district plan, to support integrated planning and assessment.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				RMA. The rule implies "an existing or new stormwater network" is a fresh water receiving environment. Stormwater networks are piped and water within a stormwater network is not considered 'water' or subject to Regional Council's jurisdiction. Therefore the reference to "via an existing local authority stormwater network" must be removed. If reference to the stormwater network is to be retained, this must be clarified as being "from" the stormwater network (rather than "via") to ensure that the rule is not ultra vires.	

S261 Forest & Bird

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.001	General comments	General comments - definitions	Not Stated	Considers amendments are required for some definitions which set out limits or define key terms inappropriately. Notes many definitions cross-reference to definitions in other legislation, and seeks that the text is set out instead for ease of use.	Amend definitions which cross-reference to other legislation to the actual text for those definitions.
S261.002	General comments	General comments - target attribute states	Not Stated	Considers Target Attribute State targets too high in some part FMUs and seeks they are lowered. Notes the numeric target for the Taupo part FMU appears to be above the modelled baseline and considers this impermissible as targets must be at or below the baseline. Considers Target Attribute States should be introduced for "habitat" and "natural form and character" which activities must seek to achieve, and which should be included as targets for Habitat Quality Index / Natural Character Index scores, and/or physical properties to achieve for the river, and that this would be consistent with Policy 30. Considers activities should then be required to undertake activities which maintains habitat quality in accordance with the target attribute states.	Include Target Attribute States for 'habitat' and 'natural form and character' and include as targets for Habitat Quality Index / Natural Character Index scores, and/or physical properties to achieve for the river.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.003	General comments	General comments - target attribute states	Not Stated	Notes the NPSM require target states to be set at intervals of no longer than 10 years, and therefore interim target states need to be set out in the plan, or a shorter timeframe is set of no later than 2033. Considers targets must reflect the state that achieves the long-term vision.	Provide interim timeframes for target attribute states
S261.004	General comments	General comments - water bodies	Not Stated	Considers it unclear the identified values for each FMU, and that they should be identified, with at least one environmental outcome for each value. Notes the environmental outcomes objectives appear to be combined, but it is not clear which outcome relates to which value.	Identify the values for each FMU and provide at least one environmental outcome for each value
S261.005	General comments	General comments - water bodies	Not Stated	Concerned the flow provision do not comply with the NPSFM. Considers environmental flows and levels need to be rules, as do take limits, to enable review of existing consents to bring them in line with new flows and limits. Notes the rules allow taking water below minimum flows, providing for overallocation and considers this contrary to the NPSM. Considers takes below minimum flows and in exceedance of allocation limits should be prohibited. Concerned with the s32 approach to provide flow/allocation provisions for Te Whanganui a Tara "in a later plan change", due to lack of clarity on when it will occur. Considers interim limits need to be set to ensure life supporting capacity requirements for indigenous species are safeguarded. Concerned that take limits/allocation limits may not achieve environmental outcomes.	Amend so environmental flows and levels, and take limits, are rules.
S261.006	General comments	General comments - water quality improvements	Not Stated	Seeks Te Mana o te Wai is effected in the plan, to protect ecosystem health, community health, and the health of people.	Give effect to Te Mana o te Wai throughout the plan
S261.007	General comments	General comments	Not Stated	Considers Schedule 27 A2 and A3 must address all Appendix 2B attributes for all part FMUs. Considers it important to include natural form and character	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		- water bodies		and habitat. Considers if target attribute states are already achieved, the action plan should set out how they will be maintained, which should be reflected in B1(6) and B2, which themselves should be amended to reflect actions to maintain. Considers the schedule should specify that action plans will set out how target attribute states will be achieved within the relevant timeframe, and should be reflected in A1 and B2(1)(b). Notes B3(1) is missing DIN, and that the actions should be broader and which relate to nitrate and DIN. Considers action plans need to integrate with action plans required under 3.25 to return rivers to natural hard bottom states.	
S261.008	General comments	General comments - overall	Not Stated	Notes the current provision for a "recognised nitrogen risk assessment tool" allows a tool to be used to fulfil the policies in the plan by a process outside Schedule 1, enabling council to approve any tool provided it is "quantitative" and assesses risk of nitrogen discharge. Questions the lawfulness of delegation, as no other criteria or processes are provided for approval. Considers it critical that tools account for biophysical factors and relate to the actual discharge or environmental effects of the discharge. Considers any "recognised nitrogen risk assessment tool" must be subject to wider public scrutiny before being included in the plan.	Consult on any recognised nitrogen risk assessment tool before including in the plan
S261.009	General comments	General comments - stormwater management	Not Stated	Considers financial contributions are more akin to environmental compensation than offsetting. Considers the proposed approach is to be done at an aggregated level, instead of by the consent holder at the project level. Notes the policies in PC1 only require minimisation prior to compensation, rather than NPSFM requirement for avoidance, then minimisation, then offsetting before considering compensation, and is therefore inconsistent with the NPSFM. Notes Schedule 30 suggests that s108 only allows financial contribution for the purpose of	References to offset and compensation must be consistent with the framework in the NPSM.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				offsetting, however considers financial contributions can be for any purposes specified in the plan. Considers references to offset and compensation must be consistent with the framework in the NPSM. Notes NCZPS will prevail in the coastal environment.	
S261.010	General comments	General comments - overall	Not Stated	Considers PC1 essentially provides for farming as a permitted activity provided there is a farm plan. Notes the requirements for farm plans may be confusing for plan users due to being spread across PC1 Schedule 36 and the existing NRP and suggests this could be improved. Notes additional regulation can be imposed beyond farm plans. Considers it critical to regulate land use to manage cumulative effects, noting existing challenges with contaminants in the Porirua whaitua. Considers Council should be able to decline resource consent for farming activity where it is not confident the effects will be appropriately managed by a farm plan, and that a stronger activity status is required. Considers permitted activity status is only appropriate if oversight is not needed on the content of farm plans, and when they can be written by farm advisers where there is certainty the adverse effects of farms will result in the desired environmental outcome. Concerned this may not be possible in the Porirua Whaitua.	Consider improvements for distribution of requirements for farm plans in PC1 provisions. Amend to provide a stronger activity for farming activities to allow Council to decline resource consent for farming activity where it is not confident the effects will be appropriately managed by a farm plan.
S261.011	General comments	General comments - water bodies	Not Stated	Considers farm plan 'critical source area' management and small stream stock exclusion provisions need to be strengthened as to protect ephemeral water courses.	Strengthen farm plan 'critical source area' management and small stream stock exclusion provisions to protect ephemeral water courses.
S261.012	2 Interpretation	Afforestation	Oppose	Seeks full text is referenced to assist plan users.	Include full text of definition. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.013	2 Interpretation	Annual stocking rate	Support	Supports giving effect to NPS-FM provisions.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.014	2 Interpretation	Earthworks	Not Stated	Seeks full text is referenced to assist plan users.	Include full text of definition of earthworks (from the NES). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.015	2 Interpretation	Environmental outcomes	Amend	Considers additional objectives are required to meet NPSFM requirements. Seeks objectives WH.O6, WH.O7, WH.O8, P.O5 and P.O6 are included within the definition, which relate to groundwater levels and integrity and the compulsory value of contact recreation. Considers further objectives may be necessary.	Include reference to objectives WH.O6, WH.O7 and WH.O8 and P.O5 and P.O6, and any others required to meet NPSFM requirements. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.016	2 Interpretation	Harvesting	Amend	Seeks full text is referenced to assist plan users.	Include full text of definition. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.017	2 Interpretation	Intensive grazing	Amend	Seeks for the meaning set out in Regulation 4 of the Resource Management (Stock Exclusion) Regulations 2020 be set out in full for ease of use, consistent with PC1's treatment of the definition of "threatened species".	Amend as follows: Has the same meaning as set out in Regulation 3 4 of the Resource Management (Stock Exclusion) Regulations 2020: Meaning: (a) break feeding; or (b) grazing on annual forage crops; or (c) grazing on pasture that has been irrigated with water in the previous 12 months Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.018	2 Interpretation	Nationally threatened freshwater species	Amend	Notes the NPSFM refers to "threatened species" rather than "threatened freshwater species", and that some species that rely on freshwater for part of their life cycle will not constitute "freshwater species".	Amend to " nationally threatened species " or " threatened species " Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.019	2 Interpretation	Nitrogen discharge risk	Oppose	Considers there must be consideration of biophysical factors influencing nitrogen loss, and the sensitivity of the receiving environment to that nitrogen loss.	Amend as follows: The quantitative assessment of nitrogen loss risk as determined using a recognised risk assessment tool that addresses biophysical factors influencing nitrogen loss, and the sensitivity of the receiving environment to that nitrogen loss. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.020	2 Interpretation	Recognised Nitrogen Risk Assessment Tool	Oppose	Notes contention with the efficacy of nitrogen risk assessment tools. Considers there a gap from the lack of reference to a widely acceptable tool. Considers it inappropriate to delegate councils the ability to approve a tool, noting that a plan change will be required to include such a tool.	Amend as follows: The tool that provides a quantitative assessment of risk of diffuse nitrogen discharge from rural land that has been included in the plan using a plan change or variation has been approved for use as a recognised risk assessment tool by the Wellington Regional Council. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.021	2 Interpretation	Replanting	Not Stated	Seeks full text is referenced to assist plan users.	Include full text of definition. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.022	2 Interpretation	Sacrifice paddocks	Not Stated	Seeks for the meaning set out in Regulation 3 of the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 be set out in full for ease of use, consistent with PC1's treatment of the definition of "threatened species".	Amend as follows: means an area on which-- (a) cattle are repeatedly, but temporarily, contained (typically during extended periods of wet weather); and (b) the resulting damage caused to the soil by pugging is so severe as to require resowing with pasture species Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.023	2 Interpretation	Stocking rate	Support	Supports giving effect to NPS-FM provisions.	Retain as notified
S261.024	2 Interpretation	Stock unit	Support	Supports giving effect to NPS-FM provisions.	Retain as notified
S261.025	2 Interpretation	Vegetation clearance (for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20)	Amend	Seeks full text is referenced to assist plan users.	Set text of definition for "vegetation clearance" in full. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.026	2 Interpretation	Winter Stocking rate	Support	Supports giving effect to NPS-FM provisions.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.027	3 Objectives	Objective O19: Biodiversity, aquatic ecosystem health and mahinga kai in fresh water bodies and the coastal marine area are safeguarded.	Amend	Considers water quality parameters in Table 3.4 remain relevant to the Whaitua, which have not been carried over to the new target tables.	Carry parameters through to new tables for the whaitua. Refer relief sought for table 3.4 and the new table on water quality in the new Whaitua chapters. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.028	3 Objectives	Table 3.4 Rivers and Streams.	Oppose	Considers water quality parameters in Table 3.4 remain relevant to the Whaitua, which have not been carried over to the new target tables.	Retain the application of nuisance macrophytes, periphyton cover, toxicants, and mahinga kai targets to the new whaitua chapters. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.029	3 Objectives	Table 3.6 Groundwater.	Oppose	Considers the table remains relevant to the Whaitua and that no replacement targets are provided.	Retain the application of table 3.6 to the Whaitua. Amend to include nitrate-nitrogen target of < 1.0 mg/L. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.030	3 Objectives	Table 3.7 Natural wetlands.	Amend	Considers the table remains relevant to the Whaitua and that no replacement targets are provided. Seeks amendment to provide clearer target states using the wetland condition index.	Retain the application of table 3.7 to the Whaitua. Add the wetland condition index as a measure of wetland ecosystem health and set a target of 10. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.031	3 Objectives	Table 3.8 Coastal waters.	Amend	Considers key Table 3.8 parameters remain relevant to the Whaitua and have not been carried over to the new target tables. Seeks these are retained to give effect to the NPSFM and NZCPS.	Retain the application of attributes which are in this table but not in the new table 8.1 and 9.1 (or carry them through to the new tables). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.032	4 Policies	Policy P78: Managing	Not Stated	Seeks the note is included fully within the policy to give effect to the NPSFM.	Delete the word "note" Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		point source discharges for aquatic ecosystem health and mahinga kai.			
S261.033	5.1 Air quality rules	General conditions for the discharge of agrichemicals.	Support	Supports consistency with the NZCPS and NPSFM.	Retain as proposed.
S261.034	5.4 Beds of lakes and rivers	Beds of lakes and rivers general conditions.	Support	Supports greater clarity.	Retain as proposed.
S261.035	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Amend	Supports the exclusion of "erosion protection structures", however, notes the provision for "debris arrestor structures" and "structures associated with vegetative edge protection" up to 10m2 can alter the natural character and habitat of rivers. Considers this frustrates the ability to achieve outcomes of NPSFM Policy 7 and 9; and NRP Policy 30.	Remove permitted status for "debris arrestor structures" and "structures associated with vegetative edge protection" to ensure these activities are managed in a way that maintains and restores physical habitat in riverbeds and natural form and character. Introduce a condition of the rule (in the general conditions) that requires compliance with Target Attribute States. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.036	5.4 Beds of lakes and rivers	Rule R132: Minor sand and gravel extraction - permitted activity.	Amend	Notes compliance with target attribute states is required to give effect to NPSFM Policy 7 and 9; the requirement to manage water bodies to achieve all five components of ecosystem health; and NRP Policy 30.	Amend general conditions in accordance with relief sought for Rule R128. Include target states for habitat and natural form and character. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.037	5.4 Beds of lakes and rivers	Rule R133: Gravel extraction for flood protection purposes or erosion mitigation inside sites of significance - discretionary activity.	Amend	Considers the discretion provided by the rule should be provided to other water bodies, particularly Outstanding Waterbodies, to ensure consistency with NPSFM Policy 7 and 9; and NRP Policy 30.	<p>Include Schedule A1, A2, and A3 in R133 as areas where excavation, deposition, or disturbance are discretionary activities.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.038	5.4 Beds of lakes and rivers	Rule R145: All other uses of river and lake beds - discretionary activity.	Amend	Considers prohibited activity status provides most certainty to achieve the policy direction of the NPSFM and RMA, including protection of fish passage.	<p>Remove the word "note".</p> <p>Make placement of passive gates prohibited (i.e., strengthen rule beyond NES minimum).</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.039	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river - permitted activity.	Oppose	Considers the rule enables an established diversion to continue indefinitely, regardless of size or effects. Considers such diversion should be subject to assessments and consenting to manage effects on natural form, character and health; ecosystem health; and Te Mana o te Wai. Considers permitted activity status inappropriate and that greater scope is required to manage potential ongoing effects.	<p>Make a discretionary activity.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.040	6 Other methods	Method M36: Freshwater Action Plan programme.	Support	Supports consistency with NPSFM.	<p>Retain as proposed.</p> <p>Note relief sought for Schedule 27 A2.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.041	6 Other methods	Method M37: Freshwater Action Plan for the Parangarau Lakes.	Support	Supports consistency with NPSFM.	Retain as proposed.
S261.042	6 Other methods	Method M38: Freshwater Action Plan for the Rangituhi catchment .	Support	Supports consistency with NPSFM.	Retain as proposed.
S261.043	6 Other methods	Method 39: Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Support	Supports consistency with NPSFM, particularly Policies 7 and 9; and consistency with NRP Policy 30	Retain as proposed. Note relief sought for Schedule 27 A2.
S261.044	6 Other methods	Method M40: Fish	Amend	Considers prioritisation of areas for restoration of fish passage should be based on both species	Amend clause (b):

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		passage action plan programme for Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.		presents in the catchment, as well as the area and quality of the habitat that would become available, noting that providing access for valuable species to poor habitat may be less effective than restoring access to higher quality habitat elsewhere.	(b) prioritising remediation of fish passage (if appropriate to protect species) in locations highly valued for their indigenous fish and mahinga kai species in places where this would provide access to high quality habitat or large areas of habitat Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.045	6 Other methods	Method M41: Identifying and responding to degradation in freshwater bodies within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Support	Supports consistency with NPSFM.	Retain as proposed.
S261.046	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Amend	Notes the RMA definition of "waterbody" does not capture estuaries or harbours. Considers reference to wetlands necessary to give effect to Policy 6 and section 3.22 of the NPSFM. Considers the method insufficient to manage pollution from the public and the potential to strengthen bylaws related to urban pollution.	Amend as follows: Include direction to investigate regulating / requiring water sensitive design, rather than just providing 'education' on it, if not otherwise included in PC1. Amend chapeau: Wellington Regional Council will undertake programme(s) to

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>support the health of waterbodies and coastal water, including rivers and streams, wetlands, estuaries and harbours, impacted by urban activities, including to:</p> <p>Include in M43 (a) that GWRC will investigate how it can strengthen stormwater, waste, and trade waste bylaws to reduce pollution, including from car washing on driveways and streets.</p> <p>Include in M43 (b) (i) that education materials will also be targeted at the public to cover activities like washing cars on driveways and on the street, pool water discharges, etc.</p> <p>Amend (b)(ii): investigate options to reduce the hydrological impacts on freshwater bodies and coastal water of stormwater capture...</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.047	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Notes the RMA definition of "waterbody" does not capture estuaries or harbours. Considers reference to wetlands necessary to give effect to Policy 6 and section 3.22 of the NPSFM.	<p>Amend as follows: Wellington Regional Council, working with primary sector organisations, will undertake a programme(s) to support the health of waterbodies and coastal water, including rivers, streams, wetlands, estuaries and harbours, impacted by rural activities, including to:</p> <p>Add new clause:(e) investigate options, including financial support and rates relief options, education, advice, and provision of plants, to encourage and enable wetland restoration</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.048	6 Other methods	Method M45: Funding of	Support	Considers funding and investment are required to meet outcomes.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		wastewater and stormwater network upgrades			
S261.049	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Amend	Considers the explanation of the wai ora state should form part of the objective, rather than being a note which can be argued to have no legal effect. Considers 2100 too far away to achieve wai ora, highlighting biodiversity loss and climate change as current threats. Suggests that different target timeframes could be provided for part FMUs, per the level of degradation in each catchment. Notes some places may already be in a wai ora state.	Amend as follows: The health of all freshwater bodies, ephemeral watercourses , and the coastal marine area... Delete the word "note". Retain the balance of the objective. Amend the target timeframe to be 2050, or to provide part-FMU / catchment specific timeframes that account for the relative ease/difficulty of achieving targets in different catchments. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.050	8 Whaitua Te Whanganui-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers and natural wetlands	Amend	Considers 2040 too far away to achieve "maintained" water quality, noting the intent of the Essential Freshwater program to halt freshwater degradation and "start making immediate improvements so water quality improves within five years". Notes biodiversity loss and climate change as current threats. Seeks reference to ephemeral watercourses, as they can support high ecological values.	Amend as follows: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers, ephemeral watercourses , and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora, such that by 2030 2040 : Include reference to natural form and character in clause (a) and refer to ecosystem health i.e.: "(a) water quality, habitats, natural form and character ... are at a level where the state of aquatic life ecosystem health is meaningfully improved..."

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and their margins are on a trajectory of measurable improvement towards wai ora.			Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.051	8 Whaitua Te Whanganui-a-Tara	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.	Oppose	Considers timeframe too far away to ensure coastal values in Te Whanganui-a-Tara are not compromised.	Amend timeframe for achievement to 2030. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.052	8 Whaitua Te Whanganui-a-Tara	Table 8.1 Coastal water objectives.	Oppose	Considers key coastal water quality parameters are missing. Considers more stringent timeframes are required.	Include a parameter for Turbidity:(Unit: NTU; Statistic: Turbidity must be maintained at or below the current annual median or at or below pre-existing levels, whichever is lesser; Te Whanganui-a-Tara Harbour and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>estuaries, Makara Estuary, Wainuiomata Estuary: <6.9; Wai Tai: No discernible change)</p> <p>Add further parameters (for example lead, dissolved oxygen, temperature, pH, secchi depth, chlorophyll-a, total phosphorous, total nitrogen, nitrite-nitrate nitrogen, ammoniacal nitrogen, and faecal coliforms) to ensure narrative objectives in Table 3.8 of the Operative Plan are met.</p> <p>Amend Wai Tai unit for Enterococci: <200 <40</p> <p>Add interim timeframes as per NPSFM 3.11.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.053	8 Whaitua Te Whanganui-a-Tara	Objective WH.04: The extent, condition, and connectivity of habitats of nationally threatened freshwater species are increased and the long-term population numbers of these species and the	Oppose	Notes the NPSFM refers to "threatened species" rather than "threatened freshwater species", and that some species that rely on freshwater for part of their life cycle will not constitute "freshwater species". Notes amendment is also needed to definition. Seeks to avoid conflation between freshwater species habitat and threatened species direction from the NPSFM.	<p>Amend as follows: The extent, condition, and connectivity of habitats of nationally threatened freshwater species are increased, and the long-term population numbers of these species and the area over which they occur are increased, improving their threat classification status.</p> <p>Retain balance of policy to provide direction for protection and monitoring of habitat.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		area over which they occur are increased, improving their threat classification status.			
S261.054	8 Whaitua Te Whanganui-a-Tara	Objective WH.05: By 2040 the health and wellbeing of the Parangarau Lakes and associated natural wetlands are on a trajectory of improvement towards wai ora.	Amend	Considers timeframe too far away to ensure coastal values are not compromised.	Amend timeframe for achievement to 2030. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.055	8 Whaitua Te Whanganui-a-Tara	Table 8.2 Target attribute states for lakes.	Oppose	Notes Table 8.2 does not carry through measures of lake ecosystem health from Table 3.5 of the NRP. Considers interim states should be set out for 2033 at the latest, in accordance with the NPSFM.	Amend Table 8.2 to include the attributes from Table 3.5 which previously applied but have not been carried over. Amend the timeframe for achievement of states to 2030, and/or set out interim target states if the timeframe remains 2040. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

**Proposed Change 1 to the Natural Resources Plan –

S261.056	8 Whaitua Te Whanganui-a-Tara	Objective WH.06: Groundwater flows and levels, and water quality, are maintained.	Support	Supports giving effect to the NPSFM.	Retain as proposed
S261.057	8 Whaitua Te Whanganui-a-Tara	Objective WH.07: The physical integrity of aquitards is protected so that confined aquifer pressures are maintained.	Support	Supports giving effect to the NPSFM.	Retain as proposed
S261.058	8 Whaitua Te Whanganui-a-Tara	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and	Amend	Considers 2040 too far away to achieve "at least maintained" water quality, noting the intent of the Essential Freshwater program to halt freshwater degradation and "start making immediate improvements so water quality improves within five years".	Shorten timeframe to 2030 Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Wainuiomata River are suitable for primary contact.			
S261.059	8 Whaitua Te Whanganui-a-Tara	Table 8.3 Primary contact site objectives in rivers.	Not Stated	Considers interim states should be set out for 2033 at the latest, in accordance with the NPSFM.	Set targets for 2030 and outline date from which maintenance will be continued. If date remains 2040, set out interim states at no longer than 10-year intervals. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.060	8 Whaitua Te Whanganui-a-Tara	Objective WH.O9: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Considers natural form and character a key value of rivers and streams in Te Whanganui-a-Tara area and is directed as a potential value in the NPSFM. Considers protection of natural form and character is required to protect habitat.	Amend as follows: Water quality, habitats, natural form and character , water quantity and ecological processes... Amend Table WH.O9 to include physical habitat and natural form and character attributes. Retain balance of objective. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.061	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Amend	Considers it is unclear what river types are covered by each part FMU. Considers periphyton targets should be no higher than 120 mg. Considers nitrate toxicity irrelevant to ecology. Considers there are more ecologically sound values for DIN targets. Considers it unclear how fish community health will be determined and how it is different to IBI. Considers MCI targets should be higher to protect ecosystem health. Considers attributes are missing to set out and monitor habitat and natural form and character, as directed by the NPSFM and NRP,	State river type and class for each of the part FMUs. Set a minimum target state for periphyton biomass for all part FMUs at NPSFM band of 120 mg chl-a (and retain higher targets where included). Amend nitrate toxicity target to be NPSFM 'A' band for all part FMUs. Retain DIN target states where they are set below 0.3 mg/L. Amend others to be 0.3 mg/L (median) for good rivers (type

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				noting that sediment is not a sufficient measure of physical habitat alone. Considers interim timeframes of less than 10 years are required where long-term timeframes are set out. Considers groundwater targets are needed. Notes macrophyte targets are missing.	<p>1 and 4) 0.6 for medium rivers (type 2 and 3) and 1.0 for poor rivers (type 5 & 6). Minimum DIN target no higher than 1.0.</p> <p>Define fish community health, as determined by experts.</p> <p>Set higher targets for MCI attributes</p> <p>Retain 'nuisance macrophytes', 'periphyton cover', mahinga kai, and toxicants attributes from table 3.4</p> <p>Retain groundwater attributes from table 3.6</p> <p>Amend table (or add another table) to include target attribute states for habitat and natural form and character using the Habitat Quality / Natural Character Index.</p> <p>Minimum targets which set out a target of maintenance of habitat quality / natural character (e.g., minimum ratio of current: reference condition of 1.0).</p> <p>Amend target timeframe to 2030 and outline date from which maintenance will be continued as per NPSFM 3.11. If date remains 2040, set out interim states at no longer than 10-year intervals.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.062	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Seeks explicit provision for natural form and character. Seeks inclusion of direction that "enhancement" of flows should be through limits and natural means, rather than "stream augmentation" or managed aquifer recharge.	<p>Amend (b) to read "restoring habitats and natural form and character"</p> <p>Amend (c) to include "by setting limits and reducing allocation volumes in over-allocated catchments, and by restoring natural form and character to promote natural aquifer recharge"</p> <p>Retain balance of policy.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.063	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Supports prohibition of unplanned greenfield development, however opposes clause (a). Considers financial contributions as compensatory measures for stormwater contamination contrary to RMA s107, the NZCPS, and the effects management hierarchy under the NPSM. Considers financial contributions are not an "offset". Considers livestock should be excluded from ephemeral watercourses, estuaries and wetlands, as they have high ecological value. Considers additional direction is required to give clear scope for managing rural land uses.	<p>Amend (a): prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants so that adverse effects are avoided and requiring financial contributions as to offset adverse effects from residual stormwater contaminants</p> <p>Amend clause (e) so that it refers to ephemeral watercourses, wetlands and estuaries.</p> <p>Add clause: (i) land use intensification that individually or cumulatively may lead to a decline in water quality is prohibited</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.064	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Support	Supports meeting NPSFM direction	Retain as notified.
S261.065	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity target	Support	Supports meeting NPSFM direction	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		attribute states.			
S261.066	8 Whaitua Te Whanganui-a-Tara	Table 8.5: Sediment load reductions required to achieve the visual clarity target attribute states.	Amend	Notes the NPSM requires interim timeframes for Target Attribute States of no more than 10 years.	Shorten timeframes to 2030 or provide interim goals Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.067	8 Whaitua Te Whanganui-a-Tara	Policy WH.P5: Localised adverse effects of point source discharge.	Oppose	Considers the policy too narrow, noting it repeats matters from RMA s70, which is not limited to point sources discharges. Seeks the policy is broadened to capture all discharges.	Policy WH.P5: Localised adverse effects of point source discharge The localised adverse effects of point source discharges to freshwater and coastal water beyond the zone of reasonable mixing are avoided or minimised, including by avoiding: Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.068	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point source discharges.	Support	Supports giving effect to NPSFM by improving discharge management.	Retain as notified.
S261.069	8 Whaitua Te Whanganui-a-Tara	Policy WH.P7: Discharges to groundwater.	Amend	Supports protection and restoration of groundwater to support ecosystem health and drinking water values.	Retain and support policy with an objective with target attribute states for groundwater quality, including a target of < 1.0 mg/L nitrate-nitrogen for groundwater to protect human and ecosystem health. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.070	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Seeks for referenced discharges to be broadened to include anything at a concentration that may kill fish.	Add clauses: (e) rubbish (f) agrichemicals, fertilisers, persistent chemicals (g) any other material that may kill fish Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.071	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Seeks additional toxicants are referred to protect ecosystem health, noting they are already in Table 3.4 and should be carried through.	Amend to widen reference to include other toxicants, as per the NRP Table 3.4 (ANZG (2018) Default Guideline Values). i.e.: "...managed so that the baseline water quality state for toxicants, including copper and zinc, is maintained, or improved where degraded, including in the relevant..." Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.072	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Supports achievement of ecosystem health	Retain as notified.
S261.073	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial	Amend	Considers higher levels of control are required where stormwater is coming from a high risk location	Require resource consent for discharges of stormwater from high risk areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		or trade premises.			
S261.074	8 Whaitua Te Whanganui-a-Tara	Policy WH.P12: Managing stormwater from a port or airport.	Amend	Considers higher levels of control are required where stormwater is coming from a high risk location	Require resource consent for discharges of stormwater from high risk areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.075	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers reducing adverse effects to "the extent practicable" enables cost considerations to be factored into decision-makers, which often avoid more environmentally responsible approaches. Considers reference to "where possible" is required.	Amend as follows: The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas reduced to the extent possible practicable . Insert direction requiring water sensitive design for new and redeveloped areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.076	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Considers higher order direction, including the NZCPS and NPSM, do not provide for offsetting and compensation as expressed in the policy. Considers financial contributions are compensation and not an offset.	Amend to require adverse effects of residual stormwater contaminants to be "avoided, remedied, or mitigated" . Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.077	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned	Support	Considers the policy direction reflects the NZCPS and NPSFM.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		greenfield development.			
S261.078	8 Whaitua Te Whanganui-a-Tara	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Support	Considers the policy direction reflects the NPSFM.	Retain but changes to timeframe may be required to ensure there and interim timeframes consistent with NPSFM direction in s3.11. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.079	8 Whaitua Te Whanganui-a-Tara	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Support	Considers the policy direction reflects the NPSFM.	Retain as notified.
S261.080	8 Whaitua Te Whanganui-a-Tara	Policy WH.P19: Managing wastewater network catchment discharges.	Amend	Considers stronger policy is needed to give effect to NPSFM.	Amend clause (c) as follows: " eliminate dry weather discharges by progressively reducing the frequency and/or volume of dry weather discharges or the..." Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.081	8 Whaitua Te Whanganui-a-Tara	Policy WH.P20: Managing existing wastewater treatment	Amend	Considers the policy only comments on maintaining or improving discharge quality where targets are already met.	Include explicit point about reducing e coli loads where target states are currently not met. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		plant discharges			
S261.082	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichi a coli from farming activities.	Amend	Considers ephemeral watercourses and estuaries should be referred in clause (d), as they can support high ecological values.	Amend as follows: "(d) excluding stock from water bodies, ephemeral watercourses, and the coastal marine area as a limit on land use," Retain balance of policy. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.083	8 Whaitua Te Whanganui-a-Tara	Policy WH.P22: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Oppose	Considers the policy only directs reduction of discharges on large properties and horticultural properties, which risks not capturing discharges that cumulatively are significant. Notes the efficacy of the policy is contingent on an adequate nitrogen risk assessment tool, and this will be unlawfully delegated to Council to approve per its definition. Supports the remaining policy direction.	Amend to provide council scope to require reductions in discharges from smaller land parcels. See relief sought for definition of "recognised nitrogen risk assessment tool". Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.084	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land	Support	Supports providing a mechanism to reduce sediment loads, therefore protecting rivers and receiving environments from the adverse effects of sediment.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		with high risk of erosion.			
S261.085	8 Whaitua Te Whanganui-a-Tara	Policy WH.P24: Phasing of farm environment plans.	Amend	Considers deposited sediment is also an important measure of sediment movement through catchments, and of ecological consequence for native species.	Amend to include deposited sediment: "prioritises those part Freshwater Management Units where Table 8.4 shows that suspended fine sediment or deposited fine sediment has a baseline state of D and/or where dissolved inorganic nitrogen is shown as being in need of improvement" Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.086	8 Whaitua Te Whanganui-a-Tara	Policy WH.P25: Managing rural land use change.	Support	Supports giving effect to NPSFM	Retain as notified.
S261.087	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Support	Supports additional direction to ensure water quality outcomes are met, however considers it should be more specific and applied more widely to manage e coli and sediment in all FMUs and part FMUs.	Include detail in the policy on where stock should be restricted from and by how much (e.g., 5m setback), and the frequency. Extend application of policy to all FMUs and part FMUs. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.088	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Amend	Considers stream shade restoration can improve water quality and habitat beyond meeting periphyton targets e.g. temperature, food provision and leaf litter provision. Considers stronger direction on stream shading is justified.	Amend as follows: Contribute to the achievement of aquatic ecosystem health by promoting requiring the progressive shading of streams where nutrient reductions alone will be insufficient to achieve periphyton target attribute states. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.089	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions	Amend	Considers retirement of high risk land is required to achieve water quality outcomes. Considers larger setbacks are required and limits on the area of exposed soil are also required.	Include direction that large setbacks are required in areas of plantation forestry and include a cap on the area logged in one harvest (or direct selective harvesting where not all trees are taken out).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		in sediment discharges from plantation forestry.			Retain (c). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.090	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Amend	Considers setback distances from waterways (of 10m or more) are an effective method of ensuring fine sediment particles from earthworks are removed.	Add new clause: (x) requiring setback distances, of no less than 10 metres, from surface water bodies, ephemeral watercourses, and the coastal marine area. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.091	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Amend	Considers controls on deposited sediment are also required	Amend to include new clause: (e) the discharge shall not, after the zone of reasonable mixing, result in: (i) a change in deposited sediment cover of more than 20%, or (ii) an increase in deposited sediment to be more than 20% of the bed Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.092	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Support	Supports reduction of sediment degrading ecosystems.	Retain as notified
S261.093	8 Whaitua Te Whanganui-a-Tara	Policy WH.P32: Minimum flows and minimum water levels in Whaitua Te	Support	Considers 90% of MALF is consistent with proposed NES on Ecological Flows and Water Levels.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Whanganu i-a-Tara.			
S261.094	8 Whaitua Te Whanganui-a-Tara	Policy WH.P33: Core allocation in Whaitua Te Whanganu i-a-Tara.	Oppose	Notes the NRP states over-allocation will be considered through the Whaitua Implementation Programme, but the policy direction is not amended accordingly. Considers flow and allocation limits for Whaitua Te Whanganui-a-Tara do not give effect to the NPSM or the purpose of the Act. Considers interim limits need to be set to ensure life supporting capacity requirements for indigenous species are safeguarded.	Amend and include further provisions to direct phase out of over-allocation, set interim flow and allocation limits that give effect to NPSFM Policy 11, and safeguard the life-supporting capacity requirements of indigenous species that rely on water, pending any separate plan change. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.095	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Support	Supports meeting NPSFM direction and water quality outcomes	Retain as proposed
S261.096	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Neutral	Not stated	Retain as notified
S261.097	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water -	Support	Supports giving effect to NPSFM and RMA	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.			
S261.098	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Support	Not stated	Retain as notified
S261.099	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Oppose	Considers greater Council oversight is required for elements of the rule, noting clause (h) is not sufficiently certain and enforceable for a permitted activity. Considers higher activity status and adding clearer and enforceable standards are required to ensure compliance with RMA s70, and that cumulative significant adverse effects do not arise. Considers WSUD should be required at minimum.	<p>Reclassify as a controlled activity.</p> <p>Include enforceable alternative standards.</p> <p>Distinguish between discharges that would not have significant adverse effects on aquatic life and those having such effects that then require consent under a higher activity classification.</p> <p>Require "water sensitive urban design" as a condition of consent, including rainwater storage tanks at a property level (which are accessible to provide water for gardening and emergency water supply) and stormwater treatment via wetlands, swales, and rainwater gardens.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.100	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces -	Oppose	Considers controlled activity status inappropriate, particularly as the rule has effect in the coastal environment where the NZCPS applies. Considers inability to refuse consent may not give effect to NZCPS directions and RMA s107(1) and considers higher activity status is required. Seeks deletion of clause (c) as it is inconsistent with the effects management hierarchy.	<p>Reclassify as a discretionary activity.</p> <p>Delete clause (c).</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		controlled activity.			
S261.101	8 Whaitua Te Whanganui-a-Tara	Rule WH.R8: Stormwater from a port or airport - restricted discretionary activity.	Oppose	Considers discharges may have adverse effects beyond aquatic ecosystem health and mahinga kai, including recreational use of the CMA.	Reclassify as a discretionary activity rule or add a new matter of discretion " adverse effects on the environment ". Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.102	8 Whaitua Te Whanganui-a-Tara	Rule WH.R9: Stormwater from a local authority or state highway network-restricted discretionary activity.	Oppose	Considers the rule does not allow all effects to be considered.	Reclassify as a discretionary activity rule. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.103	8 Whaitua Te Whanganui-a-Tara	Rule WH.R10: Stormwater from new state highways-discretionary activity.	Amend	Considers clause (c) does not reflect the effects management hierarchy.	Delete clause (c) Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.104	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped	Amend	Considers clause (b) does not reflect the effects management hierarchy.	Delete clause (b). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		impervious surfaces - discretionary activity.			
S261.105	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Support	Supports consistency with the purpose of the RMA, in conjunction with relief sought by the submitter.	Retain as notified
S261.106	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Support	Supports meeting the purpose of the RMA.	Retain as notified
S261.107	8 Whaitua Te Whanganui-a-Tara	Rule WH.R14: Wastewater network catchment discharges - restricted discretionary activity.	Amend	Considers discretionary activity status ensure unforeseen matters can be considered.	Reclassify as a discretionary activity. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.108	8 Whaitua Te Whanganui-a-Tara	Rule WH.R15: Existing wastewater discharges	Support	Supports consistency with the purpose of the RMA.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		from a treatment plant - discretionary activity.			
S261.109	8 Whaitua Te Whanganui-a-Tara	Rule WH.R16: All other discharges of wastewater - non-complying activity.	Support	Supports consistency with the purpose of the RMA.	Retain as notified
S261.110	8 Whaitua Te Whanganui-a-Tara	Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.	Oppose	Considers the removal of pest plants may still cause sediments to be released and certain pest plants may still be habitat for indigenous species. Considers additional standards are required. Considers mitigation plans are insufficient on their own; therefore seeks a minimum setback from water bodies, coastal marine area, and ephemeral watercourses, as well as a size threshold for vegetation clearance.	<p>Amend as follows: Include additional standards:(x) the vegetation clearance is not undertaken within, or within 10 metre setback from, a surface water body, ephemeral watercourse, or the coastal marine area (x) vegetation clearance does not exceed 200m2 per property in any consecutive 12-month period</p> <p>Delete clause (a)(ii). In the alternative, should pest plants be referred to, create a definition of pest plants as those plants listed in the GWRC pest management plan. Introduce a requirement for pest plant removal to not exceed a given area per year - i.e. specify the 200m2 threshold, at which point WH.R18 applies.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.111	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land -	Oppose	Considers the inability to refuse consent may mean policy direction under the NPSFM or NZCPS will not be achieved. Considers higher activity status is required.	<p>Reclassify Rule WH.R18 as a discretionary activity;</p> <p>or</p> <p>Reclassify as a restricted discretionary activity and include "adverse effects on the environment" as a matter of discretion.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		controlled activity.			Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.112	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Support	Supports consistency with the purpose of the RMA, in conjunction with relief sought by the submitter.	Retain as notified
S261.113	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Amend	Considers the inability to refuse consent may mean policy direction under the NPSFM or NZCPS will not be achieved. Considers higher activity status is required.	Reclassify as a discretionary activity. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.114	8 Whaitua Te Whanganui-a-Tara	Rule WH.R21: Plantation forestry - discretionary activity.	Support	Supports management of sediment from activity	Retain as notified
S261.115	8 Whaitua Te Whanganui-a-Tara	Rule WH.R22: Plantation forestry on highest erosion risk land - prohibited activity.	Support	Supports consistency with the purpose of the RMA.	Retain as notified
S261.116	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Oppose	Considers a 5m setback is insufficient to protect ecosystems and maintain water quality. Considers ephemeral watercourses should be referred to as they have ecological value and can reduce contaminant loads when protected.	Amend as follows: (d) the earthworks shall not occur within, or within a 10-5m setback from, of a surface water body, ephemeral watercourse , or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>enter a surface water body, ephemeral watercourse, or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, ephemeral watercourse, the coastal marine area, or onto land that may enter a surface water body, ephemeral watercourse or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body, ephemeral watercourse, or the coastal marine area, including via a stormwater network.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.117	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Considers the matters of discretion are not wide enough to ensure all adverse effects on all important ecological values are addressed.	<p>Reclassify as a discretionary activity rule.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.118	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Support	Supports consistency with the purpose of the RMA, in conjunction with relief sought by the submitter.	Retain as notified
S261.119	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares	Amend	Considers information on land use pressures is critical to ensure appropriate management of inputs, setting limits on resource use, and assessing effectiveness of the plan.	<p>Amend to include "(e2) annual nitrogen fertiliser use, the annual stocking rate, and the winter stocking rate is provided to Wellington Regional Council annually"</p> <p>Retain balance of rule.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and 20 hectares - permitted activity.			
S261.120	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Considers information on farm inputs is required to ensure council has information on pressures in the catchment	Amend rule to require the reporting of N fertiliser and stocking rate regularly. Include additional conditions that will ensure drinking water, etc. is protected, should relief sought for Schedule 36 not be granted. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.121	8 Whaitua Te Whanganui-a-Tara	Table 8.6: Phase-in of farm environment plans for part Freshwater Management Units.	Support	Supports meeting NPSFM outcomes and limiting delay in implementation.	Retain as notified
S261.122	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Support	Supports meeting NPSFM outcomes, including limiting sediment and E. coli pollution.	Retain as notified
S261.123	8 Whaitua Te Whanganui-a-Tara	Rule WH.R29: Livestock access to a small river -	Support	Supports meeting NPSFM outcomes, including limiting sediment and E. coli pollution.	Retain as notified

		discretionary activity.			
S261.124	8 Whaitua Te Whanganui-a-Tara	Rule WH.R30: The use of land for farming activities - discretionary activity.	Support	Supports giving effect to NPSFM and RMA	Retain as notified
S261.125	8 Whaitua Te Whanganui-a-Tara	Rule WH.R31: Change of rural land use - discretionary activity.	Oppose	Considers a change of land use could lead to increase in contaminants, which is contrary to plan policies. Considers this may lead to decline in water quality, contrary to NPSM direction for over-allocation.	Reclassify as a non-complying activity. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.126	8 Whaitua Te Whanganui-a-Tara	Rule WH.R32: Farming activities - non-complying activity.	Support	Supports meeting NPSFM outcomes	Retain as notified
S261.127	8 Whaitua Te Whanganui-a-Tara	Rule WH.R33: Take and use of water in the Whaitua Te Whanganui-a-Tara - restricted discretionary activity.	Oppose	Considers the matters of discretion are not wide enough to ensure all adverse effects on ecological and geomorphological values are addressed i.e. indigenous fish migration and emulating natural flow regimes to allow flushing of weeds and sediments. Further considers they are inconsistent with the NPSFM direction to phase-out overallocation. Seeks amendment of the rule framework for flows and allocation to ensure further over-allocation and ecosystem degradation occurs, pending a future plan change.	Reclassify as a discretionary activity. Delete the exceptions to take below minimum flow in (a), delete (b) and delete (d). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.128	8 Whaitua Te Whanganui-a-Tara	Rule WH.R34: Take and use of water in the Whaitua Te Whanganui-a-Tara - discretionary activity.	Oppose	Considers the rule framework does not give effect to the NPSFM and does not ensure the life-supporting capacity requirements of indigenous species will be met.	Delete Rule WH.R34 so that any takes below minimum flow or in exceedance of an allocation limit defaults to prohibited status. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.129	8 Whaitua Te Whanganui-a-Tara	Rule WH.R35: Take and use of water from outstanding rivers or lakes - non-complying activity.	Support	Supports in part, provided flows and allocation limits are developed to ensure values of outstanding water bodies are protected	Retain as notified
S261.130	8 Whaitua Te Whanganui-a-Tara	Rule WH.R36: Take and use of water exceeding minimum flows or core allocation - prohibited activity.	Support	Considers defined takes below minimum flow and in exceedance of an allocation limit do not achieve direction in the NPSFM and RPS, and do not safeguard the life-supporting capacity requirements for indigenous species and should be prohibited.	Amend as follows: The take and use of water from a river (including tributaries) or groundwater in Te Whanganui-a-Tara in Tables 8.8 and 8.9, that does not meet (a) or (b) of Rule WH.R33 that is not provided for in Rules WH.33, R155, R156, R159, R160, or P.R30 is a prohibited activity. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.131	8 Whaitua Te	Table 8.7: Minimum flows for	Oppose	Notes the NRP states over-allocation will be considered through the Whaitua Implementation Programme, yet the policy direction is not amended	Include limits to ensure aquatic ecosystem values are safeguarded.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

	Whanganui-a-Tara	rivers in the Whaitua Te Whanganui-a-Tara.		accordingly. Considers flow and allocation limits for Whaitua Te Whanganui-a-Tara do not give effect to the NPSM or the purpose of the Act. Considers interim limits need to be set to ensure life supporting capacity requirements for indigenous species are safeguarded.	Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.132	8 Whaitua Te Whanganui-a-Tara	Table 8.8: Surface water allocation amounts for rivers and Category A groundwater and Category B groundwater in the Te Awa Kairangi/Hutt River, Wainuiomata River and Ōrongorongo River catchments.	Oppose	Notes the NRP states over-allocation will be considered through the Whaitua Implementation Programme, yet the policy direction is not amended accordingly. Considers flow and allocation limits for Whaitua Te Whanganui-a-Tara do not give effect to the NPSM or the purpose of the Act. Considers interim limits need to be set to ensure life supporting capacity requirements for indigenous species are safeguarded.	<p>Include limits to ensure aquatic ecosystem values are safeguarded.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.133	9 Te Awarua-o-Porirua Whaitua	Objective P.O1: The health of Te Awarua-o-Porirua's groundwat	Amend	Considers the explanation of the wai ora state should form part of the objective, rather than being a note. Considers ephemeral watercourses hold ecological values and should be referred to in the chapeau. Considers 2100 too far away to achieve wai ora, highlighting biodiversity loss and climate change as current threats. Suggests that different	<p>Include reference to ephemeral watercourses.</p> <p>Delete the word "note".</p> <p>Amend the target timeframe to be 2050 (rather than 2100), or provide part-FMU / catchment specific timeframes that account for the relative ease/difficulty of achieving targets in</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		er, rivers, lakes, natural wetlands, estuaries, harbours and coastal marine area is progressively improved and is wai ora by 2100.		target timeframes could be provided for part FMUs, per the level of degradation in each catchment. Notes some places may already be in a wai ora state. Considers riffle, run, pool sequences is clearer to refer to than "ripples".	different catchments. Amend "Rivers flow naturally, with ripples natural riffle, run, and pool habitat and the river beds are stony" Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.134	9 Te Awarua-o-Porirua Whaitua	Objective P.O2: Te Awarua-o-Porirua's groundwater, rivers, lakes and natural wetlands, and their margins are on a trajectory of measurable improvement towards wai ora.	Amend	Considers amendment is required to give effect to the NPSFM and RMA.	Amend chapeau: The health of Te Awarua-o-Porirua's groundwater, rivers, lakes, ephemeral watercourses , and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora, such that by 2030-2040 Include reference to natural form and character in clause (a) and refer to ecosystem health i.e.: "(a) water quality, habitats, natural form and character... are at a level where the state of aquatic life ecosystem health is meaningfully improved..." Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.135	9 Te Awarua-o-Porirua Whaitua	Objective P.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Pāuatahanui Inlet, Onepoto Arm and the open coastal areas of Te Awarua-o-Porirua is maintained or improved to achieve the coastal water objectives set out in Table 9.1.	Amend	Considers policy direction in higher order documents is achieved, however seeks shorter timeframes.	Amend timeframe to 2030. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.136	9 Te Awarua-o-Porirua Whaitua	Table 9.1: Coastal water objectives.	Oppose	Seeks further parameters and more stringent timeframes	Include a parameter for Turbidity: (Unit: NTU; Statistic: Turbidity must be maintained at or below the current annual median or at or below pre-existing levels, whichever is lesser; Onepoto Arm: <10.8, Pauatahanui Inlet: <6.9; Open Coast: No discernible change). Add further parameters (for lead, dissolved oxygen, temperature, pH, secchi depth, chlorophyll-a, total phosphorous, total nitrogen, nitrite-nitrate nitrogen, ammoniacal nitrogen, and faecal coliforms) to ensure

		classification status.			
S261.138	9 Te Awarua-o-Porirua Whaitua	Objective P.05: Groundwater flows and levels, and water quality, are maintained.	Support	Supports giving effect to the NPSFM.	Retain as proposed
S261.139	9 Te Awarua-o-Porirua Whaitua	Objective P.06: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Considers greater provision for natural form and character is required to give effect to NPSFM and RMA	Amend as follows: "water quality, habitats, natural form and character , and..." Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.140	9 Te Awarua-o-Porirua Whaitua	Table 9.2: Target attribute states for rivers.	Amend	Considers it is unclear what river types are covered by each part FMU. Considers periphyton targets should be no higher than 120 mg. Considers nitrate toxicity irrelevant to ecology. Considers there are more ecologically sound values for DIN targets. Considers it unclear how fish community health will be determined and how it is different to IBI. Considers MCI targets should be higher to protect ecosystem health. Considers attributes are missing to set out and monitor habitat and natural form and character, as directed by the NPSFM and NRP,	State river type and class for each of the part FMUs. Set a minimum target state for periphyton biomass for all part FMUs at NPSFM band of 120 mg chl-a (and retain higher targets where included). Amend nitrate toxicity target to be NPSFM 'A' band for all part FMUs. Retain DIN target states where they are set below 0.3 mg/L. Amend others to be 0.3 mg/L (median) for good rivers (type

					Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.142	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Supports prohibition of unplanned greenfield development, however opposes clause (a). Considers financial contributions as compensatory measures for stormwater contamination contrary to RMA s107, the NZCPS, and the effects management hierarchy under the NPSM. Considers financial contributions are not an "offset". Considers livestock should be excluded from ephemeral watercourses, estuaries and wetlands, as they have high ecological value. Considers additional direction is required to give clear scope for managing rural land uses.	<p>Amend (a): prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants so that adverse effects are avoided and requiring financial contributions as to offset adverse effects from residual stormwater contaminants</p> <p>Amend clause (e) so that it refers to ephemeral watercourses, wetlands and estuaries.</p> <p>Add clause: (i) land use intensification that individually or cumulatively may lead to a decline in water quality is prohibited</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.143	9 Te Awarua-o-Porirua Whaitua	Policy P.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Support	Supports meeting NPSFM direction	Retain as notified
S261.144	9 Te Awarua-o-Porirua Whaitua	Policy P.P4: Contaminant load reductions	Amend	Considers interim targets or a shorter timeframe is required.	<p>Set targets for 2030. If date remains 2040, set out interim states at no longer than 10-year intervals.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.145	9 Te Awarua-o-Porirua Whaitua	Table 9.3: Harbour arm catchment contaminant load reductions	Amend	Considers interim targets or a shorter timeframe is required.	Set targets for 2030. If date remains 2040, set out interim states at no longer than 10-year intervals. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.146	9 Te Awarua-o-Porirua Whaitua	Table 9.4: Part Freshwater Management Unit sediment load reductions required to achieve the visual clarity target attribute state.	Amend	Considers timeframe is required	Include a timeframe Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.147	9 Te Awarua-o-Porirua Whaitua	Policy P.P5: Localised adverse effects of point source discharges	Amend	Considers the policy too narrow, noting it repeats matters from RMA s70, which is not limited to point sources discharges. Seeks the policy is broadened to capture all discharges.	Amend as follows: Policy P.P5: Localised adverse effects of point source discharges The localised adverse effects of point source discharges to freshwater and coastal water beyond the zone of reasonable mixing are avoided or minimised, including by avoiding: Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.148	9 Te Awarua-o-Porirua Whaitua	Policy P.P6: Point source	Support	Supports giving effect to NPSFM by improving discharge management.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges			
S261.149	9 Te Awarua-o-Porirua Whaitua	Policy P.P7 Discharges to groundwater.	Support	Supports giving effect to NPSM	Retain and support policy with an objective with target attribute states for groundwater quality, including a target of < 1.0 mg/L nitrate-nitrogen for groundwater to protect human and ecosystem health. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.150	9 Te Awarua-o-Porirua Whaitua	Policy P.P8 Avoiding discharges of specific products and waste.	Amend	Seeks for referenced discharges to be broadened to include anything at a concentration that may kill fish.	Add clauses: (e) rubbish (f) agrichemicals, fertilisers, persistent chemicals (g) any other material that may kill fish Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.151	9 Te Awarua-o-Porirua Whaitua	Policy P.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Seeks additional toxicants are referred to to protect ecosystem health, noting they are already in Table 3.4 and should be carried through.	Amend to widen reference to include other toxicants, as per the NRP Table 3.4 (ANZG (2018) Default Guideline Values). i.e.: "...managed so that the baseline water quality state for toxicants, including copper and zinc, is maintained, or improved where degraded, including in the relevant..." Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.152	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater discharges	Amend	Considers stronger direction is needed to give effect to NPSFM and protect water quality	Replace "where practicable" with "where possible" Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S261.153	9 Te Awarua-o-Porirua Whaitua	Policy P.P11: Discharges of a contaminant in stormwater from high risk industrial or trade premises.	Amend	Considers higher levels of control are required where stormwater is coming from a high risk location	Require resource consent for discharges of stormwater from high risk areas Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.154	9 Te Awarua-o-Porirua Whaitua	Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy.	Neutral	Not stated	Not stated
S261.155	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers reducing adverse effects to "the extent practicable" enables cost considerations to be factored into decision-makers, which often avoid more environmentally responsible approaches. Considers reference to "where possible" is required.	Amend as follows: The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas reduced to the extent possible practicable . Insert direction requiring water sensitive design for new and redeveloped areas. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.156	9 Te Awarua-	Policy P.P14: Stormwater	Amend	Considers higher order direction, including the NZCPS and NPSM, do not provide for offsetting and compensation as expressed in the policy. Considers	Amend to require adverse effects of residual stormwater contaminants to be "avoided, remedied, or mitigated" .

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	r contamina nt offsetting for new greenfield developm ent.		financial contributions are compensation and not an offset.	Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.157	9 Te Awarua- o-Porirua Whaitua	Policy P.P15: Stormwate r discharges from new unplanned greenfield developm ent.	Support	Considers the policy direction reflects the NZCPS and NPSFM.	Retain as notified
S261.158	9 Te Awarua- o-Porirua Whaitua	Policy P.P16: General wastewate r policy to achieve target attribute states and coastal water objectives.	Support	Considers the policy direction reflects the NZCPS and NPSFM.	Retain as notified
S261.159	9 Te Awarua- o-Porirua Whaitua	Policy P.P17: Progressin g works to meet Escherichi a coli target	Amend	Considers amendment is needed to maintain and improve water quality.	State "where possible" rather than "where practicable" Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		attribute states.			
S261.160	9 Te Awarua-o-Porirua Whaitua	Policy P.P18: Managing wastewater network catchment discharges	Amend	Considers stronger policy is needed to give effect to NPSFM.	Amend (c) as follows: " eliminate dry weather discharges by progressively reducing the frequency and/or volume of dry weather discharges or the..." Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.161	9 Te Awarua-o-Porirua Whaitua	Policy P.P19: Managing existing wastewater treatment plant discharges	Amend	Considers the policy only comments on maintaining or improving discharge quality where targets are already met.	Amend to include explicit point about reducing e coli loads where target states are currently not met. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.162	9 Te Awarua-o-Porirua Whaitua	Policy P.P20: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Considers ephemeral watercourses and estuaries should be referred in clause (d), as they can support high ecological values.	Amend as follows: "(4) excluding stock from water bodies, ephemeral watercourses, and the coastal marine area as a limit on land use," Retain balance of policy. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.163	9 Te Awarua-o-Porirua Whaitua	Policy P.P21: Capping, minimising and reducing diffuse	Amend	Considers the policy only directs reduction of discharges on large properties and horticultural properties, which risks not capturing discharges that cumulatively are significant. Notes the efficacy of the policy is contingent on an adequate nitrogen risk assessment tool, which is to be unlawfully	Amend to provide council scope to require reductions in discharges from smaller land parcels. See relief sought for definition of "recognised nitrogen risk assessment tool".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges of nitrogen from farming activities.		delegated to Council to approve per its definition. Supports the remaining policy direction.	Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.164	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Support	Supports providing a mechanism to reduce sediment loads, therefore protecting rivers and receiving environments from the adverse effects of sediment.	Retain as notified
S261.165	9 Te Awarua-o-Porirua Whaitua	Policy P.P23: Phasing of farm environment plans.	Amend	Considers deposited sediment is also an important measure of sediment movement through catchments, and of ecological consequence for native species.	Amend to include deposited sediment: "prioritises those part Freshwater Management Units where Table 9.2 shows that suspended fine sediment or deposited fine sediment has a baseline state of D and/or where dissolved inorganic nitrogen is shown as being in need of improvement" Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.166	9 Te Awarua-o-Porirua Whaitua	Policy P.P24: Managing rural land use change.	Support	Supports giving effect to NPSFM.	Retain as notified
S261.167	9 Te Awarua-o-Porirua Whaitua	Policy P.P25: Promoting	Amend	Considers stream shade restoration can improve water quality and habitat beyond meeting periphyton targets e.g. temperature, food provision	Amend as follows: Contribute to the achievement of aquatic ecosystem health by promoting requiring the progressive shading of streams where nutrient reductions alone will be insufficient to achieve

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		stream shading.		and leaf litter provision. Considers stronger direction on stream shading is justified.	periphyton target attribute states. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.168	9 Te Awarua-o-Porirua Whaitua	Policy P.P26: Achieving reductions in sediment discharges from plantation forestry.	Amend	Considers further direction is required to ensure effects are minimised.	Include direction that large setbacks are required in areas of plantation forestry and include a cap on the area logged in one harvest (or direct selective harvesting where not all trees are taken out). Retain (c). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.169	9 Te Awarua-o-Porirua Whaitua	Policy P.P27: Management of earthworks sites.	Amend	Considers setback distances from waterways (of 10m or more) are an effective method of ensuring fine sediment particles from earthworks are removed.	Add new clause: (x) requiring setback distances, of no less than 10 metres, from surface water bodies, ephemeral watercourses, and the coastal marine area. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.170	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	Considers controls on deposited sediment are also required.	Include new clause: (e) the discharge shall not, after the zone of reasonable mixing, result in: (i) a change in deposited sediment cover of more than 20%, or (ii) an increase in deposited sediment to be more than 20% of the bed Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.171	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Amend	Supports reduction of sediment degrading ecosystems.	Retain as notified
S261.172	9 Te Awarua-	Policy P.P30:	Support	Not stated.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	Minimum flows and minimum water levels in Te Awarua-o-Porirua Whaitua.			
S261.173	9 Te Awarua-o-Porirua Whaitua	Policy P.P31: Water takes at minimum flows and minimum water levels.	Oppose	Considers the policy is contrary to the NPSM, particularly to avoid overallocation.	Delete exceptions to Policy P.P31. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.174	9 Te Awarua-o-Porirua Whaitua	Policy P.P32: Allocation in the Te Awarua-o-Porirua Whaitua.	Support	Not stated.	Not stated
S261.175	9 Te Awarua-o-Porirua Whaitua	Rule P.R1: Point source discharges of specific contaminants - prohibited activity.	Support	Supports meeting NPSFM direction and water quality outcomes.	Retain as proposed
S261.176	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and	Oppose	Considers greater Council oversight is required for elements of the rule, noting clause (h) is not sufficiently certain and enforceable for a permitted activity. Considers higher activity status and adding	Reclassify Rule P.R5 as a controlled activity and include alternative standards that are enforceable and distinguish between discharges that would not have significant adverse effects on aquatic life and those having such effects that

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		redeveloped impervious surfaces - permitted activity.		clearer and enforceable standards are required to ensure compliance with RMA s70, and that cumulative significant adverse effects do not arise. Considers WSUD should be required at minimum.	then require consent under a higher activity classification. Explicitly require 'water sensitive urban design' as a condition of consent (as per P.R6), including rainwater storage tanks at a property level (which are accessible to provide water for gardening and emergency water supply) and stormwater treatment via wetlands, swales, and rainwater gardens. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.177	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Oppose	Considers controlled activity status inappropriate, particularly as the rule has effect in the coastal environment where the NZCPS applies. Considers inability to refuse consent may not give effect to NZCPS directions and RMA s107(1) and considers higher activity status is required. Seeks deletion of clause (c) as it is inconsistent with the effects management hierarchy.	Reclassify as a discretionary activity. Delete clause (c). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.178	9 Te Awarua-o-Porirua Whaitua	Rule P.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas- controlled activity.	Amend	Considers more control is required to manage effects.	Amend to restricted discretionary Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.179	9 Te Awarua-o-Porirua Whaitua	Rule P.R8: Stormwater from a local authority or state highway	Oppose	Considers the rule does not allow all effects to be considered.	Reclassify as a discretionary activity rule. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		network-restricted discretionary activity.			
S261.180	9 Te Awarua-o-Porirua Whaitua	Rule P.R9: Stormwater from new state highways-discretionary activity.	Amend	Considers clause (c) does not reflect the effects management hierarchy.	Delete clause (c) Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.181	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-discretionary activity.	Amend	Considers clause (b) does not reflect the effects management hierarchy.	Delete clause (b). Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.182	9 Te Awarua-o-Porirua Whaitua	Rule P.R11: All other stormwater discharges - non-complying activity.	Support	Supports consistency with the purpose of the RMA, in conjunction with relief sought by the submitter.	Retain as notified
S261.183	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned	Support	Supports meeting the purpose of the RMA.	Retain as notified

	o-Porirua Whaitua	forestry - controlled activity.		be achieved. Considers higher activity status is required.	Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.191	9 Te Awarua- o-Porirua Whaitua	Rule P.R20: Plantation forestry - discretionary activity.	Support	Supports management of sediment issues.	Retain as notified
S261.192	9 Te Awarua- o-Porirua Whaitua	Rule P.R21: Plantation Forestry on highest erosion risk land - prohibited activity.	Support	Supports avoidance of sediment issues.	Retain as notified
S261.193	9 Te Awarua- o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Oppose	Considers a 5m setback is insufficient to protect ecosystems and maintain water quality. Considers ephemeral watercourses should be referred to as they have ecological value and can reduce contaminant loads when protected.	Amend as follows: (d) the earthworks shall not occur within, or within a 10-5m setback from, of a surface water body, ephemeral watercourse , or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body, ephemeral watercourse , or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or floculant into a surface water body, ephemeral watercourse , the coastal marine area, or onto land that may enter a surface water body, ephemeral watercourse or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body, ephemeral watercourse , or the coastal marine area, including via a

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					stormwater network. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.194	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Oppose	Considers the matters of discretion are not wide enough to ensure all adverse effects on all important ecological values are addressed.	Reclassify as a discretionary activity rule. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.195	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Support	Supports consistency with the purpose of the RMA, in conjunction with relief sought by the submitter.	Retain as notified
S261.196	9 Te Awarua-o-Porirua Whaitua	Rule P.R25: Farming activities on properties of between 4 hectares and 20 hectares - permitted activity.	Amend	Considers information on land use pressures is critical to ensure appropriate management of inputs, setting limits on resource use, and assessing effectiveness of the plan.	Amend to include " (e2) annual nitrogen fertiliser use, the annual stocking rate, and the winter stocking rate is provided to Wellington Regional Council annually " Retain balance of rule. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.197	9 Te Awarua-o-Porirua Whaitua	Rule P.R26: Farming activities on 20 hectares or more of land -	Amend	Considers information on farm inputs is required to ensure council has information on pressures in the catchment.	Amend rule to require the reporting of N fertiliser and stocking rate regularly. Include additional conditions that will ensure drinking water, etc. is protected, should relief sought for Schedule 36 not be granted. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.			
S261.198	9 Te Awarua-o-Porirua Whaitua	Table 9.5: Phase in of farm environment plans for Part Freshwater Management Units.	Support	Supports meeting NPSFM outcomes and limiting delay in implementation.	Retain as notified
S261.199	9 Te Awarua-o-Porirua Whaitua	Rule P.R27: The use of land for farming activities - discretionary activity.	Support	Supports giving effect to NPSFM and RMA	Retain as notified
S261.200	9 Te Awarua-o-Porirua Whaitua	Rule P.R28: Change of rural land use - discretionary activity.	Oppose	Considers a change of land use could lead to increase in contaminants, which is contrary to plan policies. Considers this may lead to decline in water quality, contrary to NPSM direction for over-allocation.	Reclassify as a non-complying activity. Any further consequential or alternative relief as may be necessary and appropriate to address concerns.
S261.201	9 Te Awarua-o-Porirua Whaitua	Rule P.R29: Farming activities - non-complying activity.	Support	Supports meeting NPSFM outcomes.	Retain as notified
S261.202	9 Te Awarua-o-Porirua Whaitua	Rule P.R30: Take and use of	Amend	Considers further parameters are required.	Add new clause:(x) the rate of take from a river does not exceed whichever is the lesser of: a) 10% of the instantaneous flow at the point and time of take, or

		water - permitted activity.			<p>b) An absolute limit of 2.5 l/s.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.203	9 Te Awarua-o-Porirua Whaitua	Rule P.R31: Take and use of water - restricted discretionary activity.	Oppose	Considers only prohibited activity status is appropriate for water takes below a minimum flow or water level. Considers restricted discretionary activity status is particularly problematic in light of the policies. Considers there is potential for cumulative effects from multiples takes that may not be easily detected through individual applications. Considers Council must be able to review existing consents to bring them in line with new flows and limits and that takes below minimum flow and in exceedance of an allocation needs to be assigned Prohibited status.	<p>Delete Rule P.R31.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.204	9 Te Awarua-o-Porirua Whaitua	Rule P.R32: Take and use of water - discretionary activity.	Oppose	Considers flows, levels and taken limits are a mixture of policies and rules, but should all be stated as rules.	<p>Delete Rule P.R32 and revise rule framework to enable existing consents to be brought in line with new flows and limits.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.205	9 Te Awarua-o-Porirua Whaitua	Rule P.R33: Taking and use of water that exceeds minimum flows or allocation amounts - prohibited activity.	Oppose	Considers defined takes below minimum flow and in exceedance of an allocation limit do not achieve direction in the NPSFM and RPS, and do not safeguard the life-supporting capacity requirements for indigenous species and should be prohibited.	<p>Amend as follows:</p> <p>In any catchment management unit listed in Table 9.6 the take and use of water from a river, Category A groundwater or Category B groundwater, that does not meet conditions (a) or (b) of Rule P.R31 that is not provided for in Rules R155, R156, R159, R160, or P.R30 is a prohibited activity.</p> <p>Any further consequential or alternative relief as may be necessary and appropriate to address concerns.</p>
S261.206	9 Te Awarua-	Table 9.6: Minimum flows for	Oppose	Opposes in part.	Ensure limits are adequate to safeguard aquatic ecosystems.

S111.002	General comments	General comments - overall	Oppose	Considers Rules WH.R17 to WH.R22 and Rules P.R16 to P.R21 neglect to acknowledge the precedence of the National Environmental Standards of Plantation Forestry (NESPf) and National Environmental Standards of Commercial Forestry (NESCf). NESCf recognises need for flexibility to protect sensitive local environments and notes Regional	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				and District Councils can be more stringent or more lenient but needs to be based on assessments of science and encompasses all environmental, social, and economic factors including those already in place.	
S111.003	General comments	General comments - current legislation	Oppose	<p>Considers where councils are proposing a new rule that is more stringent than the NES-PF, there is a requirement to demonstrate the more stringent rule is justified in the context of the region/district in accordance with section 32(4) of the RMA. Notes guidance is also included within the NES-PF Plan Alignment Guidance prepared by MPI.</p> <p>Notes more stringent rules under Regulation 6(1)(a) must firstly to demonstrate the NES-PF controls are not sufficient to achieve a plan objective that gives effect to the NPS-FM and then how a more stringent rule will achieve that objective in a more effective and efficient way than the NES-PF. Suggests proving a link between a proposed rule and a plan objective that gives effect to the NPS-FM is not sufficient.</p> <p>Notes section 32(4) of RMA also requires councils to demonstrate proposed rules (including rules being rolled over as part of a plan review) are justified in the context of the region/district.</p>	Not stated
S111.004	General comments	General comments - rural	Oppose	<p>Considers a lack of justification and definition for erosion prone land.</p> <p>Considers catchment management critical for positive environmental outcomes and cites supporting reports on catchment management.</p> <p>Notes in the LUC, classes six and seven are recommended for forestry as soil conservation is needed in comparison to arable cropping.</p> <p>Considers the erosion risk land maps, for pasture,</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>woody vegetation, and plantation forestry, ignore geology and other elements which provide land stability.</p> <p>States the Section 32 report part D page 110 defines erosion prone land as pre-existing slope of the land exceeding 20 degrees. Notes LUC defines slope of greater than 20 degrees as strongly rolling to hill country and as non-arable land, whereas a slope less than 20 degrees is arable and appropriate for cropping and intensive farming. Considers making afforestation or planting a prohibited activity on slope greater than 20 degrees, pastoral farming will be encouraged on land which it is not suitable for (where grass has a much shallower root profile in comparison to plantation tree species) causing further erosion and sediment discharge.</p> <p>Considers forests are often located on land steeper than 20 degrees and are a productive land use on such sites, with adverse effects regulated by NESCF.</p>	
S111.005	General comments	General comments – plantation forestry	Oppose	<p>Considers GWRC have ignored statements made by Easton, Nation and Blyth.</p> <p>Considers technical memorandum does not consider land that is replanted back into plantation forestry., the stability that plantation forestry provides by its root structures, wind protection, wildlife habitat that is not found in pastoral landscapes as well as rainfall uptake, all of which reduce erosion and landslides.</p> <p>Considers methodology used to identify landslide risk was over simplified and lacks local information. Considers geology and aspect was not accounted for. Considers the analysis and recommendations</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>unjustified.</p> <p>Expects PC1 to require sediment mitigations on identified erosion risk areas. Considers appropriate mitigation type and extent will vary depending on physical factors such as slope, aspect, site access and pest-control, and non-physical factors such as cost and landowner cooperation.</p> <p>Considers a site-specific assessment, which has same purpose as the required Harvest and Earthworks plans (schedule 4 & 6) of NESCF, provides more appropriate mitigation measures than the generalised PC1.</p> <p>Considers it unjustified to propose rules that impact land-disturbing activities if they were ignored.</p> <p>Considers intention of Easton, Nation and Blyth technical memorandum has been misused by GWRC as a forementioned, a site-specific field assessment and expert advice prevails.</p>	
S111.006	General comments	General comments - plantation forestry	Oppose	Considers NES-CF has rules and controls for total suspended solids and plantation forestry discharge and seeks justification on how rules in PC1 provide greater positive environmental outcomes.	Not stated
S111.007	General comments	General comments - overall	Oppose	Considers NES-CF has rules and controls for the winter earthworks shutdown period and already manages effects. Considers a requirement for greater stringency has not been demonstrated.	Not stated
S111.008	General comments	General comments - plantation forestry	Oppose	<p>Considers no recommendations from the Waitua committees or the forestry industry have been implemented which reflect the proposed rules for plantation forestry.</p> <p>Notes as acknowledged in the Waitua Committee reports, Regional Councils need to work with</p>	Not stated

S107 Friends of Waipāhihi Karori Stream (F.O.W.K.S.)

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S107.001	General comments	General comments - overall	Support	Supports the direction of PC1. Considers that strong implementation and enforcement of regulation is necessary to address aging infrastructure, inappropriate urban development and poor land use practices.	Not stated
S107.002	General comments	General comments - water quality improvements	Support	States that monitoring shows that water quality is poor in the Waipāhihi Karori Stream, particularly from E. coli. Considers that councils need to focus on basics, such as fixing pipes.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S107.003	General comments	General comments - target attribute states	Support	Particularly supports the following: - proposed timeframes for achieving the target attribute states. - proposed measures to reduce wet weather overflows and dry weather discharges from the wastewater system. Ideally prefers these are removed completely, however acknowledges the complexity of doing so.	Not stated
S107.004	General comments	General comments - stormwater management	Support	Supports all provisions which require development that increases impermeable surfaces to achieve neutral or lesser stormwater runoff compared to pre-development. Notes that stormwater retention is necessary to avoid flashy rainfall runoff.	Not stated
S107.005	General comments	General comments - target attribute states	Not Stated	Notes that Wellington City Council will submit that the timeframes for achieving the target attribute state be extended to 2060 but this is not supported by the submitter.	Not stated
S107.006	General comments	General comments - water quality improvements	Support	Considers the Waipāhihi Karori Stream and its community are likely to be most impacted by the timeline, though may not be a priority from a regional perspective. Concerned that they have been asking for these problems to be solved for decades; community wants to be able to safely use the stream and enjoy more abundant biodiversity.	Not stated
S107.007	General comments	General comments - target attribute states	Support	Opposes any extension of the proposed timeframe for achieving the target attribute states. Considers that the proposed timeframes would be strengthened by interim and measurable milestones (e.g. by 2030 and 2035), which would be essential should the timeframe be extended.	Not stated
S107.008	General comments	General comments - economic	Support	Considers the costs of inaction in the future outweighs the financial cost to implement PC1.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		cost/impact			
S107.009	General comments	General comments - overall	Not Stated	Considers councils need to prioritise better to focus on the basics and new sources of funding can be found with the right leadership.	Not stated
S107.010	General comments	General comments - overall	Support	Supports the Whaitua process and moves to implement the recommendations of Whaitua committee members and mana whenua.	Not stated
S107.011	6 Other methods	6.16 Freshwater Action Plan programme	Support	Supports the proposed Freshwater Action Plan programme. Seeks to be an active partner in the development of Freshwater Action Plans. Seeks more consistent and equitable resourcing for catchment groups.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S284 Friends of Waiwhetū Stream

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S284.001	General comments	General comments - water quality improvements	Support	Supports PC1 and long-term view on water quality improvement. Supports use of specific targets for 2040 and 2100.	Not stated
S284.002	General comments	General comments - water bodies	Support	Concerns surrounding severe water quality of Waiwhetū Stream. Supports targets for reduced contamination, especially for E Coli. Supports the requirement of Territorial Authorities to repair/maintain wastewater pipes and detect and remediate leaks and cross contamination at properties. Supportive of finding alternative funding options for Councils for this work.	Not stated
S284.003	6 Other methods	6.16 Freshwater Action Plan programme	Support	Supports policies of Chapter 6.16 but concerned that proposed treatments to improve water quality are already known and the plans should be progressed more quickly than the timeframe of December 2026.	Bring forward the December 2026 timeframe

S043 Fulton Hogan Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S43.001	General comments	General comments - overall	Amend	Seeks consistency in definitions and plan provisions.	Not stated
S43.002	General comments	General comments - overall	Amend	Supports the improvement of water quality and ecosystem outcomes through PC1, but concerned some parts of PC1 go too far and do not provide	Not stated

					(b) animal effluent from an animal effluent storage facility or from an area where animals are confined, or (c) untreated industrial or trade waste, or (d) untreated organic waste or leachate from storage of organic material.
S43.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Support	Considers that the avoidance of effects is not practicable, therefore seeks removal of "avoiding" adverse effects in clause (b).	Make a minor change to clause (b) to simplify the phrasing: (b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and...
S43.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Concerned the broadness of the policy will discourage investment in water quality treatment. Considers the policy does not recognise different hardstand areas differ in contaminant loading. Considers financial contributions make more sense in developed catchments.	Reconsider the stormwater contribution approach.
S43.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Support	Supports the use of good management practice. Considers that the policy provides for the implementation of appropriate controls.	Retain as notified
S43.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down	Oppose	Considers the policy is onerous, and does not recognise that winter earthworks may be feasible depending on other factors (location, soil types, slope). Seeks for greater flexibility in the policy,	Policy WH.P31: Winter shut down of earthworks Earthworks over 3,000m ² in area shall: (a) be shut down from 1st June to 30th September each year, unless they can be staged or otherwise undertaken

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		of earthworks.		provided that activities are undertaken in accordance with the GWRC Erosion and Sediment Control Standard, and are managed and monitored.	in a manner that avoids adverse effects on water quality, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021).
S43.014	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Oppose	Concerned the rule does not provide for situations where discharges of specific contaminants may be necessary due to there being no feasible alternatives, and can be treated to an acceptable level. Seeks greater flexibility in the rule to avoid perverse outcomes.	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity The point source discharge of more than incidental levels of: (a) chemical cleaning products including vehicle cleaning products and detergents unless these are biodegradable and non-ecotoxic , bleach and disinfectant, or (b) paint and other substances used for the purpose of protecting surfaces (including stain and paint wash), or (c) solvents including paint stripper, or (d) liquid fuels, including diesel, petrol, oil, grease, except where these have been treated by an interceptor system to collect hazardous contaminants and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, or (e) radiator coolant, or (f) cooking oil, or (g) cement slurry, or cement wash cement slurry and concrete cutting waste unless these have been captured and treated to achieve a pH required by the water quality standards for the receiving waterbody , or (h) drill cooling water into water or onto or into land, including via a stormwater network, where it may enter a surface water body or coastal water is a prohibited activity.
S43.015	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces -	Amend	Considers the rule does not recognise different hardstand areas differ in contaminant loading. Considers that financial contributions make more sense in developed catchments.	Delete clause (c)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		controlled activity.			
S43.016	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Oppose	Considers there are many instances where earthworks can be undertaken without adverse effects during winter months. Considers that small scale road maintenance projects would require resource consent due to being considered "earthworks", which would not be feasible to undertake during winter months or completely avoid sediment run-off. Considers the standard requiring no sediment discharge is unreasonable. Concerned with cost implications of resource consent being required for a large number of earthworks during winter months, regardless of their scale, and that environmental gains will be trivial.	Rule WH.R23: Earthworks - permitted activity Earthworks and the associated discharge of sediment and/or flocculant is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (i) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (ii) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (iii) the area of earthworks must be stabilised within six months after completion of the earthworks, and (iv) there is no discharge of sediment from earthworks and/or flocculant from areas greater than 25 m² into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (v) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.
S43.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Considers there are many instances where earthworks can be undertaken without adverse effects during winter months. Considers that small scale road maintenance projects would require resource consent due to being considered "earthworks", which would not be feasible to undertake during winter months or completely avoid sediment run-off. Considers the rule is out of step	Rule WH.R24: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met: (a) the concentration of total suspended solids in the

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				with Policy WH.P31 and is more stringent than the policy directs, noting that the rule applies to all earthworks regardless of scale. Concerned with cost implications of resource consent being required for a large number of earthworks during winter months, regardless of their scale, and that environmental gains will be trivial.	discharge from the earthworks shall not exceed 100g/m3, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m3, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) (i) earthworks with less than 3,000 m2 of disturbed area at any one time which intend to work between 1st June and 30th September in any year must prepare a site specific winter earthworks plan, which shall be provided to Greater Wellington Regional Council as part of this application for resource consent; (ii) earthworks which exceed 3,000 m2 of disturbed area at any one time shall not occur between 1st June and 30th September in any year.
S43.018	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Considers there are many instances where earthworks can be undertaken without adverse effects during winter months. Considers that small scale road maintenance projects would require resource consent due to being considered "earthworks", which would not be feasible to undertake during winter months or completely avoid sediment run-off. Considers the rule out of step with Policy WH.P31 and is more stringent than the policy directs. Concerned with cost implications of resource consent being required for a large number of earthworks during winter months, regardless of their scale, and that environmental gains will be trivial. Considers the non-complying activity status too restrictive given the number of activities that would be captured under Rule WH.R25.	Alter Rules WH.R23, WH.R24 and WH.R25 to provide for low level activities, rather than requiring a non-complying activity status consent for all earthworks between 1 June and 30 September where any run-off occurs. This could be provided alongside additional oversight and control of erosion and sediment control plans by Council so that Council has additional certainty over the measures and mitigation proposed.
S43.019	9 Te Awarua-	Objective P.O2: Te Awarua-o-	Support	Supports the improvement of water quality by 2040, however suggests clause (b) could be clearer.	[...] (b) erosion processes, including bank stability, are improved to significantly reduce the sedimentation rate in the harbour

S43.023	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Oppose	Concerned the broadness of the policy will discourage investment in water quality treatment. Considers the policy does not recognise different hardstand areas differ in contaminant loading. Considers that financial contributions make more sense in developed catchments.	Reconsider the stormwater contribution approach.
S43.024	9 Te Awarua-o-Porirua Whaitua	Policy P.P27: Management of earthworks sites.	Support	Supports the use of good management practice. Considers that the policy provides for the implementation of appropriate controls.	Retain as notified
S43.025	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Oppose	Considers the policy is onerous, and does not recognise that winter earthworks may be feasible depending on other factors (location, soil types, slope). Seeks for greater flexibility in the policy, provided that activities are undertaken in accordance with the GWRC Erosion and Sediment Control Standard, and are managed and monitored.	Policy WH.P31: Winter shut down of earthworks Earthworks over 3,000m ² in area shall: (a) be shut down from 1st June to 30th September each year, unless they can be staged or otherwise undertaken in a manner that avoids adverse effects on water quality , and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021).
S43.026	9 Te Awarua-o-Porirua Whaitua	Rule P.R1: Point source discharges of specific contaminants - prohibited activity.	Oppose	Concerned the rule does not provide for situations where discharges of specific contaminants may be necessary due to there being no feasible alternatives, and can be treated to an acceptable level. Seeks greater flexibility in the rule.	Rule P.R1: Point source discharges of specific contaminants - prohibited activity The point source discharge of more than incidental levels of: (a) chemical cleaning products including vehicle cleaning products and detergents unless these are biodegradable and non-ecotoxic , bleach and disinfectant, or (b) paint and other substances used for the purpose of protecting surfaces (including stain and paint wash), or

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(c) solvents including paint stripper, or (d) liquid fuels, including diesel, petrol, oil, grease, except where these have been treated by an interceptor system to collect hazardous contaminants and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, or (e) radiator coolant, or (f) cooking oil, or (g) cement slurry , or cement wash cement slurry and concrete cutting waste unless these have been captured and treated to achieve a pH required by the water quality standards for the receiving waterbody , or (h) drill cooling water into water or onto or into land, including via a stormwater network, where it may enter a surface water body or coastal water is a prohibited activity.
S43.027	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend	Refers to submitter's own comments on Policy P.P15. Opposes requirements for financial contributions.	Remove clause c of Rule P.R6.
S43.028	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Oppose	Considers there are many instances where earthworks can be undertaken without adverse effects during winter months. Considers that small scale road maintenance projects would require resource consent due to being considered "earthworks", which would not be feasible to undertake during winter months or completely avoid sediment run-off. Considers the standard requiring no sediment discharge is unreasonable. Concerned with cost implications of resource consent being required for a large number of earthworks during winter months, regardless of their scale, and that environmental gains will be trivial.	Rule P.R22: Earthworks - permitted activity Earthworks and the associated discharge of sediment and/or flocculant is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (i) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (ii) soil or debris from earthworks is not placed where it

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>can enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(iii) the area of earthworks must be stabilised within six months after completion of the earthworks, and</p> <p>(iv) there is no discharge of sediment from earthworks and/or flocculant from areas greater than 25 m² into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(v) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p>
S43.029	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Oppose	<p>Considers there are many instances where earthworks can be undertaken without adverse effects during winter months. Considers that small scale road maintenance projects would require resource consent due to being considered "earthworks", which would not be feasible to undertake during winter months or completely avoid sediment run-off. Considers the rule is out of step with Policy P.28 and is more stringent than the policy directs, noting that the rule applies to all earthworks regardless of scale. Concerned with cost implications of resource consent being required for a large number of earthworks during winter months, regardless of their scale, and that environmental gains will be trivial.</p>	<p>Rule WH.R24: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met:</p> <p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than:</p> <p>(i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>(ii) 30% in any other river, and</p> <p>(b)(i) earthworks with less than 3,000 m² of disturbed area at any one time which intend to work between 1st June and 30th September in any year must prepare a site specific winter earthworks plan, which shall be provided to Greater Wellington Regional Council as part of this application for resource consent;</p> <p>(ii) earthworks which exceed 3,000 m² of disturbed area</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					at any one time shall not occur between 1st June and 30th September in any year.
S43.030	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Oppose	Considers there are many instances where earthworks can be undertaken without adverse effects during winter months. Considers that small scale road maintenance projects would require resource consent due to being considered "earthworks", which would not be feasible to undertake during winter months or completely avoid sediment run-off. Considers the rule out of step with Policy P.28 and is more stringent than the policy directs. Concerned with cost implications of resource consent being required for a large number of earthworks during winter months, regardless of their scale, and that environmental gains will be trivial. Considers the non-complying activity status too restrictive given the number of activities that would be captured under Rule P.R25.	Alter Rules P.R22, P.R23 and P.R24 to provide for low level activities, rather than requiring a non-complying activity status consent for all earthworks between 1 June and 30 September where any run-off occurs. This could be provided alongside additional oversight and control of erosion and sediment control plans by Council so that Council has additional certainty over the measures and mitigation proposed.

S221 Generation Zero

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S221.001	General comments	General comments - overall	Not Stated	Considers the current quality of water disproportionately affects Ngāti Toa physical health and jeopardizes the cultural practices and mātauranga that reinforce them. Considers this also impacts mana whenua across the Wellington region. Considers collecting kai moana from the harbour is a standard indicator of waterway health in the catchments.	Not stated
S221.002	General comments	General comments - water bodies	Not Stated	Support recommendations for improving the health and well-being of coastal waterbodies towards Te Mana o te Wai in Waituata Te Whanganui-a-tara. C. Suggests sections such as 4.6 on Biodiversity, where "maintain or where practicable restore" is used, could focus on improvement as well as	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				restoration. Suggests goal for policy should not be maintenance but improvement and should align better with principles of stewardship and Kaitiakitanga inherent to Te Mana o te Wai.	
S221.003	General comments	General comments - water bodies	Support	Support emphasis on coastal receiving environment and considers this aligns with the set objectives of holistic water health approach and with te ara Wairua o te Wai values.	Not stated
S221.004	General comments	General comments - target attribute states	Amend	Endorses the TAS objective of Option 1 (achieving goals by 2040) because it will incentivise greater innovation. Suggest interim targets to make the timeframe less divisive.	Not stated
S221.005	General comments	General comments - wastewater	Amend	Notes there is no quantified analysis of social and cultural benefits from wastewater improvements and no monetary cost assessment of not improving wastewater systems over the next 40 years. Concern that wastewater will need to be resilient to factor changes such as projected population growth, increased extreme rainfall, and sea level rise. Suggests that resilient long-term infrastructure will provide risk reduction as well as social and cultural benefits.	Not stated
S221.006	General comments	General comments - water quality improvements	Not Stated	Concerns surrounding the release of untreated wastewater into coastal areas, harbours and freshwater rivers as it is both detrimental to the health of the community and contributes to environmental degradation.	Not stated
S221.007	General comments	General comments - water quality improvements	Support	Concerns for the number of Part FMU's where copper and zinc baselines are D and C. Supports the recommendations of Te Awarua-o-Porirua WIP. Supports Policy Package Option 1 as choice of action.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S221.008	General comments	General comments - urban development	Amend	Supports infill housing and brownfield redevelopment preference. Supports upzoning both for environmentally friendly housing shortage needs but also the cost efficiency of improving stormwater in existing urban areas vs in greenfield areas. Considers the need for redevelopment of existing urban areas to accommodate urban intensification without stormwater degradation of surrounding waterways. Supports Policy Package Option 1 and 3 but not 2.	Not stated
S221.009	General comments	General comments - consultation	Not Stated	Suggests a collaborative approach with affected community members to promote social cohesion and minimise backlash to economic costs of improving infrastructure. Suggests simplified guides to RPS changes so submissions are accessible to the community.	Not stated
S221.010	2 Interpretation	Coastal water management units	Support	Not Stated	Not stated
S221.011	4 Policies	4.6 Biodiversity, aquatic ecosystem health and mahinga kai.	Not Stated	Suggests sections such as 4.6 on Biodiversity, where "maintain or where practicable restore" is used, could focus on improvement as well as restoration. Considers the current wording presents restoration as optional. Suggests goal for policy should not be maintenance but improvement and should align better with principles of stewardship and Kaitiakitanga inherent to Te Mana o te Wai.	Not Stated

S161 GILLIES GROUP MANAGEMENT LTD

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S161.001	General comments	General comments - overall	Oppose	Opposes the entirety of PC1	1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set out in their submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought as part of the submission
S161.002	General comments	General comments - overall	Oppose	Notes several drafting errors which create unintended consequences for housing and land development because the provisions have immediate legal effect.	Not stated
S161.003	General comments	General comments - urban development	Oppose	<p>Considers implications of PC1 on affordability of housing and land development will be significant and are not appropriately addressed. Considers financial contributions for new residential units will have cascading effects on housing affordability and new requirements are inconsistent with provisions relating to housing affordability in the NPS-UD, and are not addressed in the s32 report. Opposes Schedule 30 and associated provisions and considers the financial contribution requirements burdensome and will adversely affect housing availability and affordability.</p> <p>Considers PC1 and its supporting documentation does not assess impacts on landowners and developers.</p> <p>Notes potential impacts on the commercial viability of the private sector and considers a mandatory flat fee financial contribution may incentivise large lots over intensification, which is inconsistent with Objective 2 and associated policies of the NPS-UD, and is not addressed in the s32 report.</p> <p>Considers the policy relies on financial contributions without consideration for alternatives or acknowledgement of changes in land use that may improve water quality, highlighting limitations due to stormwater contaminant treatment only being practicable for a portion of the contaminant load.</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Highlights lack of clarity on the feasibility, effectiveness and timing of mechanisms outlined in the schedule. Opposes clarification from GWRC that financial contributions will be required for developments achieving reductions greater than 85%. Considers the proposed contributions are not effects-based.	
S161.004	General comments	General comments - urban development	Oppose	Opposes non-complying activity status for winter earthworks. Considers current approach to managing winter earthworks is effective. Considers that a blanket non-complying activity status does not take into account the scale, nature or duration of works. Considers the requirement to stabilise earthworks and implement sediment controls prior to shut down may not be feasible resulting in unintended environmental outcomes. Concerned the prescribed shut down period may not align with specific site conditions. Considers blanket restrictions do not effectively address the diversity of different sites and applicants which demonstrate the required management of winter works should be supported to avoid delays of housing supply.	Not stated
S161.005	General comments	General comments - unplanned greenfield development	Oppose	Opposes new provisions relating to unplanned development, and that they deny a consenting pathway for proposals that may have positive outcomes for the community or for freshwater. Notes the s32 evaluation suggest that contaminants can be addressed through a combination of treatment and financial contributions, therefore considers prohibited activity status inappropriate. Considers the need for two plan changes to enable greenfield development poses challenges for the private sector's responsiveness to housing needs, and is onerous and costly. Considers the approach may jeopardise the economic viability of development and hinder the supply of affordable housing.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S161.006	General comments	General comments - stormwater management	Oppose	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers the standards pose significant burdens on property owners and developers. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers PC1 does not adequately evaluate financial costs on landowners, developers and ratepayers, including flow-on costs on the commercial viability of housing supply and affordability.	Not stated
S161.007	2 Interpretation	Hydrological control	Amend	Considers the definition will not assist in the interpretation of provisions as it does not outline actual controls. Notes the definition of "stormwater treatment system" provides examples as well as specifications in Schedule 28.	Amend definition to outline what hydrological controls are, including examples and a schedule with technical standards.
S161.008	2 Interpretation	Impervious surfaces	Amend	Considers a roof with rainwater collection should be not be considered an impervious surface where it complies with hydraulic neutrality rules. Considers the implementation of greywater reuse is not a regulatory requirement and will significantly add to development costs.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas porous or permeable paving slatted decks which allow water to drain through to a permeable surface porous or permeable paving and living roofs roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S161.009	2 Interpretation	Redevelopment	Amend	Seeks for the definition to exclude extensions to existing buildings, to allow a permitted baseline for small redevelopment of existing sites.	Amend definition as follows and make any other consequential relief necessary to give effect to this submission point:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e. including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing activities that only involve the re-roofing of existing buildings extensions to existing buildings
S161.010	2 Interpretation	Unplanned greenfield development	Oppose	Notes the definition relates to associated prohibited activity rules that are opposed.	Delete definition
S161.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes provisions for unplanned greenfield growth as the prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Notes that the s32 report states that all contaminants can be mitigated through treatment and financial contributions, and considers that prohibited activity status is inappropriate in this case. Further considers the prohibited activity status inconsistent with Policy 8 of the NPS-UD. Notes that the s32 report sets out the prohibited activity status to require both a regional and district plan change to enable greenfield development. Considers the need for two plan changes will be expensive and will make it difficult for market responsiveness to the provision of housing.	Amend policy as follows and make any other consequential relief necessary to give effect to this submission point: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S161.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers that clauses (a), (b) and (c) may pose significant burdens on property owners and developers. Considers that communal stormwater treatment may not be practical in all scenarios. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers the s32 report does not adequately assesses the costs of PC1 on landowners and developers, nor the broader impacts on urban growth and housing supply.	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.
S161.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the proposed financial contributions framework. Recognises the importance of managing stormwater contaminants, however considers financial contribution requirements burdensome, hindering greenfield development, housing availability and affordability. Considers costs to landowners/developers are not assessed, including flow-on impacts on housing supply and affordability, and consequential effects on commercial viability to provide for urban growth. Considers a mandatory flat fee financial contribution may incentivise large lots over intensification. Considers the policy relies on financial contributions without consideration for	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				alternatives or acknowledgement of changes in land use that may improve water quality, highlighting limitations due to stormwater contaminant treatment only being practicable for a portion of the contaminant load. Highlights lack of clarity on the feasibility, effectiveness and timing of mechanisms outlined in the schedule. Opposes clarification from GWRC that financial contributions will be required for developments achieving reductions greater than 85%. Considers the proposed contributions are not effects-based.	
S161.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes the avoidance/prohibited approach to greenfield development. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Considers the prohibited activity status is inconsistent with the NPS-UD.	Delete policy
S161.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Opposes non-complying activity status for winter earthworks. Notes that large storm events can occur throughout the year, resulting in large sediment discharges. Considers that existing management of winter earthworks should be retained, through a separate approval process against established criteria, with oversight from compliance officers. Notes that current practice enables consideration of the track record of works completed before winter. Considers that a blanket non-complying activity status does not take into account the scale, nature or duration of works. Considers the requirement to stabilise earthworks and implement sediment controls prior to shut down is not feasible in all situations, resulting in perverse environmental outcomes. Concerned the prescribed shut down period may not align with specific site conditions.	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers blanket restrictions do not effectively address the diversity of different sites. Considers that applicants which demonstrate the required management of winter works should be supported to avoid delays of housing supply.	
S161.016	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	Considers the rule requires new connections to the stormwater network to obtain regional resource consent, whereas new connections to discharge to the network are controlled by territorial authorities.	Amend rule as follows and make any other consequential relief necessary to give effect to this submission point: Rule WH.R2: Stormwater to land - permitted activity The discharge of stormwater onto or into land, including where contaminants may enter groundwater: (a) that is not from a high risk industrial or trade premise, or (b) that is not connected to that does not discharge from, or to, a local authority stormwater network, is a permitted activity provided the following conditions are met: (...)
S161.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Amend	Considers the rule requires new connections to the stormwater network to obtain regional resource consent, whereas new connections to discharge to the network are controlled by territorial authorities.	Amend rule as follows and make any other consequential relief necessary to give effect to this submission point: Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity The discharge of stormwater from an existing individual property into water, or onto or into land where it may enter a surface water body or coastal water, (a) that is not from a high risk industrial or trade premise, or (b) that is not from a port, airport or state highway, or (c) that is not connected to does not discharge from, or to, a local authority stormwater network, is a permitted activity, provided the following conditions are met: (...)
S161.018	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces -	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers the conditions may pose significant burdens on property owners and developers. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m ² of impervious areas. Considers that costs to landowners, developers, ratepayers are not assessed, including flow-on	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.			water, including through an existing local authority stormwater network, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or Rule WH.R7, or prohibited under WH.R13 is a discretionary activity provided the following conditions are met: (a) the resource consent application includes a Stormwater Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and (b) if the proposal is for greenfield development a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).
S161.022	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Amend	Opposes the avoidance/prohibited approach to greenfield development. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Considers the prohibited activity status is inconsistent with the NPS-UD.	Amend rule as follows and make any other consequential relief necessary to give effect to this submission point: Rule WH.R12: All other stormwater discharges - non-complying activity The: (a) discharge of stormwater onto or into land, including where contaminants may enter groundwater, that is not permitted by Rule WH.R2, or (b) discharge of stormwater into water or onto or into land where it may enter a surface water body or coastal water, that is not permitted by Rule WH.R3, or a restricted discretionary activity under Rules WH.R8 or WH.R9, or (c) discharge of stormwater from a high risk industrial or trade premise that is not permitted by Rule WH.R4, or the use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater from a high risk industrial or trade premise that does not meet the conditions of Rule WH.R11, or (d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater into water or onto or into land where it may enter water, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or WH.R7, or a discretionary activity under Rule WH.R10 or WH.R11, or a prohibited

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					activity under WH.R13, is a non-complying activity.
S161.023	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Opposes the avoidance/prohibited approach to greenfield development. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Considers the prohibited activity status is inconsistent with the NPS-UD.	Delete rule
S161.024	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Considers the "and" after clause (b) means earthworks not on a farm require consent and is unlikely the intent of the rule.	Rule WH.R23: Earthworks - permitted activity Earthworks is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network. Note

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).
S161.025	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Opposes non-complying activity status for winter earthworks. Notes that large storm events can occur throughout the year, resulting in large sediment discharges. Considers current approach to managing winter earthworks is effective. Considers that a blanket non-complying activity status does not take into account the scale, nature or duration of works. Considers the requirement to stabilise earthworks and implement sediment controls prior to shut down may not be feasible resulting in unintended environmental outcomes. Concerned the prescribed shut down period may not align with specific site conditions. Considers blanket restrictions do not effectively address the diversity of different sites and applicants which demonstrate the required management of winter works should be supported to avoid delays of housing supply.	Amend rule as follows and make any other consequential relief necessary to give effect to this submission point: Rule WH.R24: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met: (a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m ³ , except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m ³ , the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.
S161.026	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes provisions for unplanned greenfield growth. Considers that prohibited activity status does not provide a consenting pathway to consider a proposal that may have positive outcomes for the community or for freshwater. Notes that the s32 report states that all contaminants can be mitigated through treatment and financial contributions, and considers that prohibited activity status is inappropriate. Further considers the prohibited activity status inconsistent with Policy 8 of the NPS-UD. Notes that the s32 report sets out the prohibited activity status to require both a regional and district	Amend policy as follows and make any other consequential relief necessary to give effect to this submission point: Policy P.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				plan change to enable greenfield development. Considers the need for two plan changes will be expensive and will make it difficult for market responsiveness to the provision of housing.	contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.
S161.027	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater discharges	Amend	Considers there is insufficient detail on the types of hydrological controls and WSUD are required for various types and scales of development. Considers the conditions pose significant burdens on property owners and developers. Considers that engineering advice should not be necessary for the creation of small impervious areas, noting a permitted activity rule for 30m2 of impervious areas.	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.
S161.028	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield	Oppose	Opposes financial contributions for residual stormwater contaminants. Considers the proposed policy and financial contributions framework does not recognise that greenfield developments may improve contaminant discharges. Considers the imposition of financial contributions as outlined in Schedule 30 places burden on developers and may hinder greenfield development and further exacerbate commercial viability of affordable housing supply.	Delete policy

S274 Goodman Contractors Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S274.001	2 Interpretation	Earthworks	Oppose	Doesn't make sense to have different definitions for earthworks between different districts in the same region.	Retain the old definition for the entire region.
S274.002	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Oppose	Considers changing discharge standards is onerous for contractors as suspended solids tests take time for results whereas turbidity which is a real time test. Queries who is a 'suitably qualified person' for taking tests and why the policy uses 100g/m3, as at a point in time after rainfall every site across the region could be non-compliant. Notes that working in a heavy materials could mean a high suspended solids reading but a low turbidity reading.	Amend provision to provide for the standard measure of NTU.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S274.003	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Concerns on economic impact of shutting down all earthworks over winter and that there has to be a balance between environment and commercial viability. Considers where sites are low risk and contractors capable of taking care of the environment then winter work should be able to occur and permits/consent able to be sought.	Amend PC1 to provide more enabling framework for winter works.
S274.004	9 Te Awarua-o-Porirua Whaitua	Policy P.P31: Water takes at minimum flows and minimum water levels.	Oppose	Water is a necessity in dusty conditions, and water take necessary for environmental control should be able to be taken in accordance with consent requirements.	Amend provision to enable water takes necessary for environmental controls.

S202 Graeme Iain Shellard , Sarah Elizabeth Shellard, Cameron Anthony Shellard, Finlay David Shellard

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S202.001	General comments	General comments - rural	Not Stated	(refer to raw submission for screenshot of question and answer from consultation) Considers the logic applied by the Council is fundamentally flawed and demonstrates a bias. Considers that there should be a representation of other land uses, and their expected contribution - including forestry and wildlife - on Colletts Stream catchment. Notes there are more wild deer, pigs, possums and potentially goats than farmed cattle, pigs and sheep. Considers it untrue that because lifestyle blocks have better pasture, they have higher stock levels per hectare. Considers the plan is targeting lifestyle blocks	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				based on an inference, an unvalidated assumption and the exclusion of other causes of the problem. Considers the lack of information will incur significant regretful spend.	
S202.002	General comments	General comments - overall	Not Stated	Considers the plan change attempts to change behaviour through legislation without any understanding of cost or impact and without consideration of costs for enforcement Considers no serious attempt has been made with landowners to discuss and address the perceived issues. Considers PC1 is fundamentally flawed, expensive and unmanageable, does not align with the direction of the government, and the option to work with landowners was not explored effectively.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting
S202.003	General comments	General comments - overall	Not Stated	Notes there is no information on RPS Plan Change 2. Considers the content of plan change 2 could have a material impact on submitters response to Plan Change 1 and could be detrimental to their understanding of the council's overall plan.	Share Plan change 2 high level changes or topics, and plan change 1 consultation be repeated to allow consideration of planned change 2 in response
S202.004	General comments	General comments - consultation	Not Stated	Considers the consultation process, including timeframes, was inadequate. Considers PC1 documents are not written in plain English, are difficult and cannot easily be viewed or digested.	Stop PC1 process and split the plan into digestible sub plans with a focus on users. Complete discussions with the wider group to identify when support can best be provided.
S202.005	General comments	General comments - economic cost/impact	Not Stated	Considers the cost of this work and the impact has not been effectively considered. Notes a range of activities associated with PC1 that will incur additional costs and that these costs are either incurred by GWRC or the landowner Considers these costs are extreme for the value gained and the source and value of funding required is not addressed. Considers it likely that there will be a split between landowners that comply and the approach to forcing	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting. Run workshops with the wider impacted community to review the originally considered high level options including all costs and benefits, impacts and high-level risks.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				landowners to comply, which is abrasive, divisive, expensive and unlikely to succeed.	
S202.006	5.4 Beds of lakes and rivers	5.4.5 Uses of beds of lakes and rivers.	Oppose	Consider this unnecessarily limiting to prevent scouring increasing and there are many situations where planting is not appropriate. Notes gabions and concrete blocks are used throughout the Hutt and Mangaroa valley since in many situations they are appropriate.	Reinstate the use of erosion protection structures.
S202.007	8 Whaitua Te Whanganui-a-Tara	Table 8.3 Primary contact site objectives in rivers.	Oppose	Notes there is no date range of collection of baseline data, no information relating to data collection or relating to recent weather patterns or river flows, nor any ongoing major works (including deforestation / harvesting) which impact water quality. Considers this means the information presented is flawed.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting
S202.008	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	Notes there is no date range of collection of baseline data, no information relating to data collection or relating to recent weather patterns or river flows, nor any ongoing major works (including deforestation / harvesting) which impact water quality. Considers this means the information presented is flawed.	Withdraw PC1. Develop and implement improvements through community-based support / education supported by measurements and reporting

S238 Greater Wellington Regional Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S238.001	General comments	General comments - definitions	Amend	Notes the NES-PF has been replaced by the NES-CF. Amend in PC1 provisions to replace NES-PF with NES-CF.	plantation commercial forestry / plantation commercial forestry
S238.002	General comments	General comments - definitions	Amend	Suggest a new definition of "urban zone" to support the definition of unplanned greenfield development.	Include new definition as follows: Urban zones are the following zones as set out in the National Planning standards: • Residential zones (large lot residential, low density residential, general residential, medium density

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>residential, high density residential</p> <ul style="list-style-type: none"> • Commercial and mixed-use zones (neighbourhood centre, local centre, commercial, large format retail, mixed use, town centre, metropolitan centre, city centre) • Industrial zones (light industrial, general industrial, heavy industrial) • Special purpose zones unless it can be demonstrated that the special purpose zone is a rural zone.
S238.003	General comments	General comments - definitions	Amend	Amend to update PC1 to NES-CF that replaced NES-PF after PC1 was notified	Insert new definition as follows: Commercial forestry has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2017
S238.004	2 Interpretation	Hydrological control	Amend	Considers there's a lack of clarity around what is required to be achieved through hydrological control, how this is done and there are different requirements needed for different scenarios.	Provide greater specificity in the definition, policies and/or rules relating to hydrological control to make it clear what is required to be achieved and how and in what circumstances (i.e. are different requirements needed in different scenarios). The inclusion of a metric should be considered.
S238.005	2 Interpretation	Nitrogen discharge risk	Amend	Notes definition is incorrectly worded.	Amend as follows: The quantitative assessment of nitrogen loss risk as determined using a recognised nitrogen risk assessment tool
S238.006	2 Interpretation	Recognised Nitrogen Risk Assessment Tool	Amend	Notes definition is incorrectly worded.	Amend as follows: The tool that provides a quantitative assessment of risk of diffuse nitrogen discharge from rural land that has been approved for use as a recognised nitrogen risk assessment tool by the Wellington Regional Council.
S238.007	2 Interpretation	Registered forestry adviser	Amend	Notes the legislation reference needs updating	Amend as follows: Registered forestry adviser Means a person registered under s63Q or s63T of Forests (Regulation of Log Traders and Forestry Advisers) Amendment Act 1949 2020 that who is authorised to give advice that relates to:
S238.008	2 Interpretation	Small stream riparian programme	Amend	Notes that consequential amendment is required as a result of changes to Schedule	Amend definition as follows: A programme prepared in compliance with Schedule 36A (farm environment plan – additional Small stream riparian programme)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S238.009	2 Interpretation	Unplanned greenfield development	Amend	Suggests amendments to clarify the intent of the definition.	Amend definition as follows: Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which as at 30 October 2023 also requires an underlying zone change to an urban zone, future urban zone or settlement zone (from rural/non urban/openspace to urban) through a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.
S238.010	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water quality, are maintained.	Amend	Seeks clarification of the intent of this objective	Amend objective as follows: Groundwater flows and levels, and water quality, are maintained at levels that: (a) ensure base flows or levels in surface water bodies and springs are supported, (b) and salt-water intrusion into the aquifer is avoided and there is no landward movement of the salt water/freshwater interface , and... Re-number remaining clauses.

S210 Guildford Timber Company Limited, Silverstream Forest Limited and the Goodwin Estate Trust.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S210.001	General comments	General comments - unplanned greenfield development	Amend Oppose	<p>Submitter has concerns as to zoning of their land and considers the zoning as 'unplanned greenfield areas' is contrary to previous the previous stance taken by GWRC and UHCC. The submitter notes they have invested time and money on expert assessments to date to support the rezoning of their land which have demonstrated the suitability of its land for residential and mixed use activities, and the economic and social benefits to the wider community, including affordable housing, recreational opportunities, and ecological enhancement of important areas.</p> <p>Submitter opposes their land being identified 'unplanned greenfield areas' on Planning Map 88 and being subject to the 'unplanned urban development' provisions of PC1, which include prohibited activity rules associated with stormwater discharges. Considers it is appropriate based on the planning history of the land for it to be included in the 'planned/existing urban area' notation on Planning Map 88.</p>	Seeks GWRC reclassify submitters land in Pinehaven/Silverstream (as shown on Map 1 in Appendix A with legal descriptions provided in Appendix B - refer to original submission) from 'unplanned greenfield areas' to 'Planned/existing urban area'.
S210.002	General comments	General comments - unplanned greenfield development	Oppose	<p>Opposes and seeks removal from PC1 all provisions that provide for unplanned greenfield development. The submitter considers the approach to prohibiting unplanned greenfield development (Policy WH.P2); avoiding all new stormwater discharges from unplanned greenfield development (Policy WH.P.16); and the subsequent prohibiting of stormwater from new unplanned greenfield development (Rule WH.R13) is overly restrictive, unwarranted and a misuse of the prohibited activity category. In particular the submitters are concerned that:</p> <p>Areas shown on Maps 86 - 89 are extensive in area</p>	Seeks definition of 'unplanned greenfield development' and all reference to 'unplanned greenfield development' and 'unplanned greenfield areas' be deleted from PC1 provisions, and for GWRC to rely on the PC1, existing NRP, and district plan provisions to address the effects of future greenfield development outside of existing urban areas.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and will affect an unidentified number of resource users unlikely to have been properly consulted (although it is noted feedback from consultation as part of the s.32 evaluation was unsupportive of the prohibited activity status of greenfield development within unplanned greenfield development areas - Para. 53; page 13 s.32 evaluation report);</p> <p>The costs and benefits/effectiveness and efficiency evaluation of adopting this prohibitive approach included in the s.32 evaluation report is general in nature and fails to identify and assess the extent the NPS-UD will be implemented (including being contrary to the intent of Objectives 2 and 6 and Policy 8), the costs and delays to resource users caused by the requirement to undertake a dual plan change process (there is no provision in the RMA for a dual private plan change process), and the ability of councils to respond to the housing needs of the region;</p> <p>Prohibiting unplanned greenfield development and requiring the resource user to go through two plan changes to change both the district and regional plans is a misuse of the prohibited activity category which is intended to be used with care and where the effects are easily identifiable and discrete - in this case the effects of the prohibited activity are not specified for any particular area, and the extent of the area does not warrant a blanket approach;</p> <p>Furthermore, there is no evaluation of reasons why another activity status (such as discretionary or non-complying) could be used for unplanned greenfield developments</p> <p>This approach would allow adverse effects of a particular proposal in a particular area to be considered, and the proposal declined if the effects did not meet the objectives and policies on the NRP;</p> <p>Adopting a plan change process to change the activity should not be used as an alternative to the</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>resource consenting process, but this appears to be the approach taken in PC1;</p> <p>There are restrictions on when private plan change requests can be made and Council has discretion as to whether they reject those requests or not, including not meeting priorities and whether the matter had been considered within the last 2 years. (clause 25, schedule 1 RMA). There is no certainty that a private plan change process is available.</p> <p>The objectives of PC1 do not justify the avoidance and prohibited approach adopted in the policies and rules;</p> <p>The definition of 'unplanned greenfield development' includes a note that states unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time PC1 was notified on 30th October 2023 - this limitation does not recognise that there are submissions to the draft FDS and PC50 of the UHCC district plan (that is still going through a plan change process that could result in rezoning of submitters land) seeking areas to be rezoned residential beyond the 30th October date specified, or capture the UHCC IPI implementation of the MDRS.</p> <p>Furthermore, there is an inconsistent application of the definition of 'unplanned urban development' by local authorities (i.e. large lot residential and hill residential lots have been included in Wellington and Hutt City Council areas, but rural residential has been excluded from UHCC and Porirua City Council which has similar types of urban development outcomes.</p>	
S210.003	General comments	General comments - plantation forestry	Amend	<p>The submitter considers the NES-CF provides a consistent and clear process for forestry practitioners to manage forestry operations, including on sites susceptible to erosion. The submitter is concerned the provisions included in PC1 add additional layers of requirements in</p>	<p>Seeks the following:</p> <p>NES-CF is used as the basis of management of commercial forestry in the Wellington region and the rules restricting plantation (commercial) forestry rules are deleted; Correctly refer to the Resource Management (National</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>policies and rules that are more restrictive to the updated NES-CF that are unjustified and unwarranted, and not required to implement the objectives of the NRP or NPS-FW. Considers these additional provisions will cause additional costs and delays, and potential confusion around which rules need to be considered on site. The submitter has reviewed and considered the proposed changes and does not see the proposed standards helping to manage more effectively the resource management issues encountered with commercial forestry. PC1 also provides for additional management practices and documentation for erosion and sediment control processes which are not occurring within 10m of a water body on areas identified by GWRC as having highly erodible soil. The level of assessment under Schedule 34 is above and beyond what is required under the NES-CF and are onerous and unnecessary for managing commercial forestry resource management issue.</p> <p>The requirement to progressively reduce and cease plantation (commercial) forestry beyond the next harvest on the highest erosion risk land and then to provide an objective to restore and revegetate the site, with a presumably native permanent woody species, is also strongly opposed. The submitter considers prohibiting forestry activity after the last harvest and then dictating through the schedule to not be able to consider other land uses for the site is a totally inappropriate use of the plan making tools available to manage resource management issues. It is an over-reaction and does not take into account the costs and benefits of this change in land use and property rights of land owners who undertake a forestry business on the land. There appears to have been no consultation with the Region's forestry industry in development of these provisions despite the significant impact it will have on the industry, the submitter's own operator was</p>	<p>Environmental Standards for Commercial Forestry) Regulations 2017 (Updated 3 November 2023); Correctly refer to 'commercial forestry' to be consistent with the updated NES-CF; Correct the Note after Rule WH.R19 on page 98 to refer to the NES-CF.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>not consulted as well as many of its contracting crews.</p> <p>The submitter also notes there are also a number of definitions which incorrectly refer to the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017. This incorrect reference is used throughout the PC1 provisions. This name was changed to the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2017 on 03 November 2023, by regulation 4 of the Resource Management (National Environmental Standards for Commercial Forestry) Amendment Regulations 2023.</p> <p>Furthermore the submitters note the term 'plantation forestry' is used throughout PC1 and is not defined. References to 'plantation forestry' in the NES-CF have been changed to 'commercial forestry' as part of the amendment regulations, and for consistency PC1 should reflect these changes.</p> <p>Finally, the submitters have identified that the 'Note' following Rule WH.R19 on page 98 of PC1 incorrectly references the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 instead of the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2017 (updated November 2023).</p>	
S210.004	General comments	General comments - plantation forestry	Amend	<p>Submitter is concerned that a number of provisions of PC1 that relate to plantation (commercial) forestry and vegetation clearance are incorrectly allocated as Freshwater Planning Process (FPP) provisions. The submitter considers it is unclear how plantation (commercial) forestry activities in line with the NES-CF (2023) are allocated to the FPP.</p> <p>In particular, the submitter notes: The definition of Afforestation, Harvesting, Mechanical land preparation, Replanting,</p>	Seek that definitions, policies and rules related to plantation (commercial) forestry covered by the NES-CF be removed from the FPP process

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Vegetation Clearance for the purpose of the plantation (commercial) forestry rules, that all come from the NES-CF (updated November 2023) but have been allocated to the FPP. The primary aim of these is regulations is forestry not freshwater; Policy WH.P28; Rules WH.R20; WH.R21 and WH.R22 controlling plantation (commercial) forestry are all allocated to the FPP process; Rules WH.R17; WH.R18 and WH.R19 relating to vegetation clearance are all allocated to the FPP process.	
S210.005	General comments	General comments - unplanned greenfield development	Not Stated	<p>Notes the regional and district plans are required to give effect to the NPS-UD.</p> <p>Notes submitters land was identified as a growth area in the Wellington Regional Future Growth Framework (2021) but the draft FDS1 (PPC1 to the Natural Resources Plan) has not included site as a Future Growth Area.</p> <p>Notes submitters land has been identified as a future urban growth area since 2007 in the Upper Hutt District Plan but plan change 50 to the Upper Hutt District Plan did not include provisions to allow the development of the submitters land as a future growth area.</p> <p>Notes in the HCC Land Use Strategy 2016 - 2043 (LUS) the submitter's land is identified as a growth area.</p> <p>Notes the submitters land is identified in the UHCC Long Term Plan 2021 - 2031 (LTP) (adopted 2022) as a growth area and is recognised and accounted for in the planning for public infrastructure upgrades for growth planning purposes. In particular, Silverstream bridge replacement, and Pinehaven reservoir upgrades for water supply both required to facilitate increased population growth in the area.</p>	Not Stated.
S210.006	2 Interpretation	Earthworks	Amend	Supports the exception to earthworks definition that adopts the definition 'earthworks' contained in the NES-PF for the purposes of the rules relating to	Seeks definition of 'earthworks' (subject to update to the new NES-CF) be retained as currently written.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				plantation (commercial) forestry, but notes NES-PF referred to has been superseded by the NPS-CF and seek for this updated NES-PF to be referenced in the definition.	
S210.007	2 Interpretation	Highest erosion risk land (plantation forestry)	Oppose	<p>Opposes mapping of 'highest erosion risk land (plantation forestry)' and 'highest erosion risk land (woody vegetation)'. Notes the NES-CF uses a different erosion susceptibility classification tool that divides the NZ landscape into 4 erosion categories: green (low) and yellow (moderate) - land less likely to erode where commercial forestry activities are permitted (subject to conditions being met); Orange (high risk) and red (very high risk) - land more likely to erode where most forestry activities can't be carried out on red-zoned land without resource consent, and some activities such as earthworks also require consent on orange-zoned land.</p> <p>Using this classification the submitters land is zoned green and yellow on the Ministry of Primary Industries (MPI) mapping of areas, meaning forestry activity is permitted under the NES-CF subject to meeting conditions. This classification seems to be in direct conflict to the maps prepared by GWRC which include 'highest erosion risk land (plantation forestry)' over the submitters land. The submitter therefore questions why there is such a variation in the classification of their site, and consider it is more appropriate for commercial forestry on its land to be managed through the NES-CF.</p> <p>Considers the quality of the mapping is poor and difficult to tell where the areas shown on Maps 94 and 95 start and finish on the submitter's site due to the pixelation that occurs when zooming in on a particular area. This poor mapping quality needs to be resolved so land users are able to determine where these areas are on their property, and the</p>	<p>Seeks the following:</p> <p>The management of commercial forestry activities on the submitters land be undertaken in accordance with the erosion susceptibility classification tool and the requirements of the NES-CF;</p> <p>That these PC1 definitions and provisions be deleted or the NRP be amended to be consistent with and take the same approach as the NES-CF - a more restrictive approach is not justified;</p> <p>Mapping of 'highest erosion risk land (plantation forestry)' and 'highest erosion risk land (woody vegetation)' to be improved to a higher quality so that when zooming in on a site on the map a resource user can easily determine where the relevant areas are located on a site.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				poor mapping could cause GWRC compliance issues at a later date. Considers it not possible for individual submitters to determine the extent their land is affected and to make a submission, this mapping should be redone and that aspect of the plan re-notified.	
S210.008	2 Interpretation	Hydrological control	Amend Oppose	Concerned with definition suggesting management of stormwater would be "... in a way that replicates natural processes...". Considers the reference to natural processes is inappropriate, and would seek the definition be amended to refer to 'hydraulic processes'.	The submitters seek the definition of hydrological control to be amended as follows: "The management of a range of stormwater flows and volumes, and the frequency and timing of those flows and volumes, from a site or sites into rivers, lakes, wetlands, springs, riparian margins, and other receiving environments in a way that replicates natural processes hydraulic processes for the purpose of reducing bank erosion, slumping, or scour, to protect freshwater ecosystem health and well-being."
S210.009	2 Interpretation	Impervious surfaces	Support	Not stated	Seeks definition of 'impervious surfaces' be retained as currently written.
S210.010	2 Interpretation	Stabilisation	Support	Not stated	Seeks definition of 'stabilisation' be retained as currently written.
S210.011	2 Interpretation	Stormwater treatment system	Support	Not stated	Seeks definition of 'stormwater treatment system' be retained as currently written.
S210.012	2 Interpretation	Unplanned greenfield development	Oppose	Considers the 'Note' that includes reference to 30th October 2023 is inflexible and unnecessary and does not account for councils (such as UHCC) that may have a plan change going through the process that intends to rezone land to residential beyond that date, or for future plan changes, including the IPI UHCC plan change which was approved by Council on 23 November 2023.	Seeks deletion of unplanned greenfield development definition
S210.013	3 Objectives	Objective O18: Rivers, lakes, natural	Support	Supports intent of Objective O18	Retain O18 as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		wetlands and coastal water are suitable for contact recreation and Māori customary use.			
S210.014	3 Objectives	Objective O19: Biodiversity, aquatic ecosystem health and mahinga kai in fresh water bodies and the coastal marine area are safeguarded.	Support	Supports intent of Objective O19	Retain O19 as notified
S210.015	3 Objectives	Objective O25: Outstanding water bodies identified in Schedule A (outstanding water bodies)	Amend	The submitter notes the new note states Tables 3.4, 3.5, 3.6 and 3.8 do not apply to Whaitua Te Whanganui-a-Tara but it is noted Tables 3.1 and 3.3 also have the symbol indicating these tables also do not apply to the Whaitua Te Whanganui-a-Tara, and the submitters consider these tables should also be referenced in Objectives O25 and O28.	Amend Objective O25 to include reference to Tables 3.1 and 3.3

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and their significant values are protected and restored.			
S210.016	3 Objectives	Objective O28: Ecosystems and habitats with significant indigenous biodiversity values are protected from the adverse effects of use and development, and where appropriate restored to a healthy functioning state including as defined by Tables 3.4, 3.5, 3.6, 3.7 and 3.8.	Amend	The submitters note the new note states Tables 3.4, 3.5, 3.6 and 3.8 do not apply to Whaitua Te Whanganui-a-Tara but it is noted Tables 3.1 and 3.3 also have the symbol indicating these tables also do not apply to the Whaitua Te Whanganui-a-Tara, and the submitters consider these tables should also be referenced in Objectives O25 and O28.	Amend Objective O28 to include reference to Tables 3.1 and 3.3

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S210.017	4 Policies	Policy P30: Biodiversity, aquatic ecosystem health and mahinga kai.	Support	Supports intent of Policy P30	Retain P30 as notified
S210.018	4 Policies	Policy P78: Managing point source discharges for aquatic ecosystem health and mahinga kai.	Support	Supports effects management approach of Policy P78	Retain P78 as notified
S210.019	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Supports Clause (a) that proposes to investigate financial support and rates relief options for accelerating retirement/revegetation of pastoral and plantation (commercial) forestry land uses. The submitter notes as currently written, PC1 brings in changes that prohibits intended future use (residential) and prevents continuation of the existing use of production forestry for parts of the submitters site. The submitter considers as a result of the introduction of PC1 provisions, their land will have little value and rates relief/financial support is appropriate, however they do note that in order for relief to be effective, relief is also necessary from District Council rates.	Retain M44 as notified or update to include reference to investigating the extension of rates relief to District Council rates.
S210.020	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater	Amend	Notes aspirational intent of objective to progressively improve the health of freshwater bodies (and the coastal marine area) and for them to be in a wai ora state by 2100. While generally supporting intent of the objective, the submitters	Amend WH.O1 to apply to natural freshwater bodies to avoid the all-inclusive nature of the intent which has unintended consequences.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		bodies and the coastal marine area within Whaitua Te Whanganu i-a-Tara is progressively improved and is wai ora by 2100.		note the objective is all-inclusive (relates to the health of all freshwater bodies) and the wai ora state requires all freshwater bodies to have planted margins which may not be physically or legally (due to property rights) possible. The submitter notes that the term 'freshwater bodies' is not defined in the RMA or any of the relevant planning instruments (NPS-FW; NES-FW; RPS; NRP), but freshwater is defined in the RMA as "means all water except coastal water and geothermal water". This means that the all-inclusive intent of Objective WH.O1 will apply freshwater bodies (such as roadside channels and man-made drains that convey freshwater) which is considered impracticable and unnecessary. The submitters consider the objective be amended to apply to natural freshwater bodies to avoid unintended consequences.	
S210.021	8 Whaitua Te Whanganu i-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganu i-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement	Support	Notes and supports the more focused intent of the objective on the health and wellbeing of groundwater, rivers and natural wetlands within the Whaitua. Notwithstanding this support, there are outcomes (such as river and erosion processes including bank stability (Clause (b)), and the extent and condition of indigenous riparian vegetation (Clause (c)) are to be increased or improved that do not appear to have any clear or acceptable targets that these matters can be assessed against. Questions what level of acceptance targets are intended to be used?	Retain WH.O2 as notified but consider identifying acceptable targets for matters not covered by TAS

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ent towards wai ora.			
S210.022	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water quality, are maintained.	Amend Oppose	Notes intent of the objective to 'protect' groundwater dependent ecosystems (Clause (b)) and ecosystems in connected surface water bodies (Clause (c)), and 'avoid' aquifer consolidation (Clause (f)). However oppose these approaches as they lead to restrictive and unnecessary restrictions in policies and rules to appropriately implement the objective. Consider an effects management approach as per the NPS-FM is more appropriate and provides a balanced response, and seek an amendment to these clauses to ensure consistency within the objective with Clauses (a), (d) and (e) and other objectives (such as Objective WH.O9).	Seeks the following amendments to Objective WH.O6 (or similar wording): i. Clause (b) be amended to read: " protect ensure that groundwater dependent ecosystems are maintained or improved where degraded " ii. Clause (c) be amended to read: " protect ensure that ecosystems in connected surface water bodies are maintained or improved where degraded, and " iii. Clause (f) be amended to read: " avoid or minimise aquifer consolidation"
S210.023	8 Whaitua Te Whanganui-a-Tara	Objective WH.O9: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Support	Supports approach to maintain or improve water quality, habitat, water quantity and ecological processes of rivers, and the reference to 'at least maintaining' TAS in Clauses (b) and (c).	Retain WH.09 as notified
S210.024	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend Oppose	Opposes Policy WH.P1 as it does not accurately reflect intent of the objectives being to maintain the aquatic ecosystem health where TAS are met, and improving them where TAS is not currently met. Considers the objectives provide more flexibility than the 'improve' approach in the policy.	Seeks the following amendments to Policy WH.P1 to better reflect and implement the objectives (or similar wording): "Improvement of aquatic ecosystem health Aquatic ecosystem health will be maintained or improved where relevant target attribute state is not met by: (a) progressively reducing the load or concentration of

Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					contaminants, particularly sediment, nutrients, pathogens and metals, entering water where relevant target attribute state is not met , and (b) maintaining or restoring habitats where relevant target attribute state is not met , and (c) maintaining or enhancing the natural flow regime of rivers and managing water flows and levels, strong where relevant target attribute state is not met , including where there is interaction of flows between surface water and groundwater, and (d) co-ordinating and prioritising work programmes in catchments that require changes to land use activities that impact on water."
S210.025	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend Oppose	<p>Seeks the following amendments to Policy WH.P1 to better reflect and implement the objectives (or similar wording):</p> <p>"Improvement of aquatic ecosystem health Aquatic ecosystem health will be maintained or improved where relevant target attribute state is not met by:</p> <p>(a) progressively reducing the load or concentration of contaminants, particularly sediment, nutrients, pathogens and metals, entering water where relevant target attribute state is not met, and</p> <p>(b) maintaining or restoring habitats where relevant target attribute state is not met, and</p> <p>(c) maintaining or enhancing the natural flow regime of rivers and managing water flows and levels where relevant target attribute state is not met, including where there is interaction of flows between surface water and groundwater, and (d) co-ordinating and prioritising work programmes in catchments that require changes to land use activities that impact on water."</p> <p>Considers objectives do not require such a restrictive approach and do not consider the dual process for unplanned greenfield development is</p>	<p>Amend Clause (a) to read (or similar wording): "Encourage prohibiting unplanned and other greenfield development and for other greenfield developments minimising the to minimise contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and";</p> <p>Additional thought be given to clearly identifying level of acceptable targets for these matters that are not cover by the TASS, as identified above in relation to Objective WH.O2</p> <p>Either delete or amend Clause (f) to read: requiring the active management adopting best practice principles and management of earthworks, forestry, cultivation and vegetation clearance activities; and</p> <p>Either delete or amend Clause (g) to read: "adopting best practice principles and management of soil conservation treatment, including revegetation with woody vegetation of land with high erosion risk,".</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				warranted as there is no dual plan change process in the RMA.	
S210.026	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity target attribute states.	Support	Supports proposed approach to achieving visual clarity targets, relative to the site at the Hutt River at Boulcott only.	Retain proposed visual clarity target at Boulcott
S210.027	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend Oppose	Oppose approach in the policy to avoiding the cumulative effects of point source discharges as this policy leads to overly restrictive rules and creates uncertainty for renewal of existing consents as the timeframe referenced in Clause (c)(ii) is not specified. Seeks policy be amended to provide a more flexible effects management approach consistent with objectives and other policies in PC1.	Seeks the following amendments to Policy WH.P6: Amend the policy to read (or similar wording): "The cumulative adverse effects of point source discharges, excluding stormwater network and wastewater discharges, to water are avoided or minimised and ..." Clarify the programme for timeframes and programme for the renewal of existing consents in Clauses (b) and (c).
S210.028	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Support	Supports Policy WH.P9	Retain WH.P9 as notified
S210.029	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater	Support	Supports Policy WH.P10	Retain WH.P10 as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		r discharges			
S210.030	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Support	Supports Policy WH.P14	Retain WH.P14 as notified
S210.031	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Support	Supports Policy WH.P15	Retain WH.P15 as notified
S210.032	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Oppose policy and in particular the 'avoid' approach which directly leads to the prohibited activity Rule WH.R13. The submitter opposes the use of prohibited activity rules for the reasons given in PART ONE of the original submission. The submitters do not consider the implementation of the PC1 objectives requires or justifies the avoidance as the only option for managing stormwater discharges from unplanned greenfield development, and the subsequent prohibited activity rule approach. As per Submission Point #2 in the original submission, the submitter seeks the policy be deleted from PC1 as it is not necessary to	Delete Policy WH.P16 or amend as follows (or similar wording): " Avoid Ensure all new stormwater discharges from unplanned greenfield development avoid or minimise any adverse effects where the discharge will enter ... "

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				implement the objectives. Alternatively, if deletion is not accepted, submitters seek an amended to the policy to provide a more flexible effects management approach consistent with the objectives and other policies in PC1.	
S210.033	8 Whaitua Te Whanganui-a-Tara	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Support	Supports WH.P17	Retain WH.P17 as notified
S210.034	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Oppose	<p>Oppose intent of Policy WH.P28 that has direct relevance to their commercial forestry operations, and results in the introduction of prohibited activity Rule WH.R22. As previously discussed in Submission Point #3 of the original submission, the submitter seeks commercial forestry activities to be managed through NES-CF which they consider are appropriate and justified. The submitter also raises the question of the differences in the mapping of erosion risk land in Submission Point #5 of the original submission and the quality of the mapping which is poor and is difficult to tell where the high erosion risk land (plantation (commercial) forestry) areas shown on Map 95 start and finish on the submitter's site due to the pixelation that occurs when zooming in on a particular area.</p> <p>Oppose Clause (c) that seeks to prohibit new and continuing (after harvesting) of plantation (commercial) forestry on highest erosion risk land (plantation forestry), which leads to prohibited activity Rule WH.R22. The submitters note the</p>	Mapping of 'highest erosion risk land (plantation forestry)' be deleted, or amended and improved to a higher quality so that when zooming in on the map a resource user can easily determine where the areas are located on a site; or Deletion of Clause (c).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				intent of Clause (c) is carried through into Schedule 34, as discussed later in this submission. Oppose the use of prohibited activity rules for the reasons given in PART ONE of the original submission. The submitters do not consider the implementation of the PC1 objectives requires or justifies the use of a prohibited activity rule approach and that the provisions of the NES, NPS-CF are more appropriate.	
S210.035	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Support	Supports the managing of the risk of sediment discharges from earthworks using best practise management which is considered reasonable and pragmatic.	Retain WH.P29 as notified
S210.036	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Support	Supports the standards for managing the discharge of sediment from earthworks over an area greater than 3,000m2 which are considered reasonable and pragmatic.	Retain WH.P30 as notified
S210.037	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Opposes winter shut down period for earthworks over 3,000m2 as the requirements are onerous and will delay developments, result in unnecessary costs and are not required with the standards set in Policy WH.P30 and included in the rules (note the submitter opposes the shut down period being included in Rule WH.R24 below). Considers there does not appear to be sufficient rationale to justify shut down period and notes winter works are totally appropriate to be undertaken if the soil type provides for this and sufficient management of earthworks controls are provided to manage effects, and or during construction a contractor has demonstrated they can work effectively in these conditions and the project requires works in this period. This is regularly based on the performance	Delete WH.P31

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				of a contractor, winter works are able to be undertaken and in many cases is allowed for and assessed as being acceptable in resource consent applications. This operational performance standard that is normally site specifically assessed should be deleted as a policy.	
S210.038	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Support	Supports Rule WH.R2	Retain WH.R2 as notified
S210.039	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Support	Supports Rule WH.R3	Retain WH.R3 as notified
S210.040	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend Oppose	Supports the permitted activity status for stormwater discharges from new and redeveloped impervious surfaces less than 1,000m ² , but opposes the exclusion of 'unplanned greenfield development' included in the rule. Considers reference to unplanned greenfield development unnecessary and inappropriate as the rule is clearly focused on new or redevelopment of existing impervious surfaces, which is reasonable and pragmatic. Concerned that Clause (a) seems to restrict all impervious area to less than 1000m ³ for the entire site for all time which is considered onerous and overly limiting. Such an approach does not account	Retain Rule WH.R5 be retained as notified, subject to the deletion of the reference to 'unplanned greenfield development' and the following amendment to Clause (a): "the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m ² on an existing lot or future subdivided lot over a 12 month period (baseline property existing impervious area as at 30 October 2023) and...".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				for a large site being subdivided into lots, or if the impervious surfaces are historical.	
S210.041	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend Oppose	While the submitters support the controlled activity status for stormwater discharges from new and redeveloped impervious surfaces greater than 1,000m ² but less than 3,000m ² , they oppose the exclusion of 'unplanned greenfield development' included in the rule. Reference to unplanned greenfield development is unnecessary and inappropriate as the rule is clearly focused on new or redevelopment of existing impervious surfaces, which is reasonable and pragmatic. In addition, the submitters are concerned that Clause (a) seems to restrict all impervious area to between 1000m ² and 3,000m ² for the entire site for all time which is considered onerous and overly limiting. Such an approach does not account for a large site being subdivided into lots, or if the impervious surfaces are historical.	Retain Rule WH.R6 as notified, subject to the deletion of the reference to 'unplanned greenfield development' and the following amendment to Clause (a): "the proposal involves the creation of new, or redevelopment of existing impervious areas between 1,000m ² and 3,000m ² on an existing lot or future subdivided lot over a 12 month period (baseline property existing impervious area as at 30 October 2023) and..."
S210.042	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Amend	Supports the discretionary activity status for stormwater discharges from new and redeveloped impervious surfaces that are not permitted or controlled which is considered reasonable and pragmatic, but oppose the reference to the prohibited activity Rule WH.R13 relating to 'unplanned greenfield development' which they are seeking deletion of. Rule WH.R11 would need to be amended, as a consequential change, should GWRC accept the submitters request and delete Rule WH.R13.	Retain WH.R11 as notified subject to deletion of reference to Rule WH.R13
S210.043	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-	Amend Oppose	Considers non-complying activity status for all other stormwater discharges that do not comply with the various rules listed is onerous and unnecessary. Considers a discretionary activity status is appropriate for non-compliance with one or more of the various conditions and matters of discretion as the adverse effects of that part of the activity that cannot comply can be identified and assessed, and	Re-categorise WH.R12 to discretionary and delete reference to WH.R13

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		complying activity.		the application can be declined if the adverse effects are inappropriate and cannot be mitigated. In addition, the submitter opposes the reference to the prohibited activity Rule WH.R13 relating to 'unplanned greenfield development' which they are seeking deletion of. Rule WH.R12 would need to be amended, as a consequential change, should GWRC accept the submitters request and delete Rule WH.R13.	
S210.044	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	The submitters strongly oppose Rule WH.R13 and seek it be deleted in its entirety. As discussed in PART ONE of the original submission, including the prohibited activity status is onerous and not justified by the objectives included in PC1. Any adverse effects of stormwater from a new unplanned greenfield development not in the identified future growth areas can be addressed through the stormwater rules in proposed PC1 for new greenfield developments and a non-complying activity rule if the conditions and standards in the proposed rules are not met. It is also inconsistent with the NPS-UD. This amendment sought allows for stormwater effects to be properly considered and controlled.	Delete WH.R13 and introduce non-complying activity rule for activities that cannot comply with one or more conditions and standards in proposed rules.
S210.045	8 Whaitua Te Whanganui-a-Tara	Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.	Amend	Supports the permitted activity status for vegetation clearance on highest erosion risk land (woody vegetation) subject to better mapping as addressed in Submission Point #3 in the original submission.	Retain WH.R17 as notified subject to better mapping as addressed in Submission Point #3 of the original submission
S210.046	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest	Oppose	Opposes the controlled activity status for vegetation clearance on highest erosion risk land (woody vegetation) of more than a total area of 200m ² per property in any consecutive period. Considers the 200m ² area is far too restrictive and impracticable	Exempt normal plantation (commercial) forestry operation from Rule WH.R18

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		erosion risk land - controlled activity.		and does not recognise plantation forestry operations that require regular maintenance to cut down trees that potentially affect the slope stability and access of logging tracks. Normal operations also include clearance of 2m strips on either side of the logging track to maintain access. Oppose the need for controlled activity resource consents for these normal commercial forestry maintenance operations, noting they are controlled and managed under the NES-CF and seek an exemption from Rule WH.R18.	
S210.047	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Support	Supports the discretionary activity status for vegetation clearance on highest erosion risk land (woody vegetation) that do not comply with one or more of the conditions of Rules WH.R17 and WH.R18.	Retain WH.R19 as notified
S210.048	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Oppose	Oppose the controlled activity status for plantation (commercial) forestry not on high erosion risk land (pasture) or highest erosion risk land (pasture) subject to the conditions and matters of control listed as they consider the matters being provided for by the rule are already appropriately controlled through the NES-CF, which has just been through a review process and has been updated accordingly. The submitters do not consider there is any justification for PC1 addressing these matters as this adds a further layer of unnecessary bureaucracy and seek the rule to be deleted in its entirety. Should GWRC decline this submission point, would seek Rule WH.R20 to be amended to be consistent with, and not more restrictive than, the NES-CF. Also seek the better mapping as addressed in Submission Point #3 of the original submission, and the submitter is opposed to this rule being allocated to the FPP process given that it does not directly	Delete Rule WH.R20; or as an alternative if it is retained; Amend Rule WH.R20 to be consistent with, and not more restrictive than, the provisions of the NES-CF; and address the mapping issues identified in Submission Point #3 of the original submission, and Remove Rule WH.R20 from the allocation of the provision from the FPP

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				relate to freshwater and is relevant to Forestry NPS and NPS-IB should properly be part of the schedule 1 process.	
S210.049	8 Whaitua Te Whanganui-a-Tara	Rule WH.R21: Plantation forestry - discretionary activity.	Oppose	<p>Oppose the discretionary activity status for plantation (commercial) forestry that do not comply with one or more of the conditions of Rule WH.20. Consider the matters being provided for by the rule are already appropriately controlled through the NES-CF, which has just been through a review process and has been updated accordingly. Do not consider there is any justification for PC1 addressing these matters as this adds a further layer of unnecessary bureaucracy and seek the rule be deleted in its entirety.</p> <p>Should GWRC decline this submission point, seek the activity status for Rule WH.R21 be changed to restricted discretionary activity, with the matters of discretion restricted to the one or more conditions of Rule WH.R20 that cannot be met. The rule should be amended to be consistent with, and not more restrictive than, the NES-CF.</p> <p>As discussed in Submission Point #4 of the original submission, the submitter is also opposed to this rule being allocated to the FPP process given that it does not directly relate to freshwater and is relevant to Forestry NPS and NPS-IB should properly be part of the schedule 1 process.</p>	<p>Delete Rule WH.R21; or as an alternative and if it is retained;</p> <p>Amend the activity status of Rule WH.R21 to restricted discretionary activity, with the matters of discretion restricted to the one or more conditions of Rule WH.R20 that cannot be met, and to be consistent with, and not more restrictive than, the provisions of the NES-CF; and</p> <p>Remove Rule WH.R20 from the allocation of the provision from the FPP</p>
S210.050	8 Whaitua Te Whanganui-a-Tara	Rule WH.R22: Plantation forestry on highest erosion risk land - prohibited activity.	Oppose	<p>Opposes Rule WH.R22. As discussed in PART ONE of the original submission, including the prohibited activity status is onerous and not justified by the objectives included in PC1, and any adverse effects of a plantation (commercial) forestry can be considered through a the NESCF provisions, and such an onerous rule will adversely affect the viability of forestry industry in the Region. Considers this approach is not justified, there has been no consultation or engagement with industry and little evidential basis in the s32 to support this approach.</p>	Delete WH.R22

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				There also appears to be little consideration of the need to plant slopes to prevent erosion and the cost of doing so, without a return which will impose a significant burden on submitters. Seek the deletion of Rule WH.R22 in its entirety.	
S210.051	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Support	Support Rule WH.23.	Retain WH.23 as notified
S210.052	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Supports the restricted discretionary activity status for earthworks and associated discharges subject to the conditions and matters of discretion listed which are considered reasonable and pragmatic. Oppose shut down period for earthworks included condition (b) and matter of discretion (8) restricting winter works and preparation for closedown for reasons outlined in Submission Point #29 of the original submission relating to Policy WH.P31.	Seeks intent and wording of Rule WH.R24 be retained as written, except for the deletion of Clause (b).
S210.053	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Considers non-complying activity status for earthworks that do not comply with discretionary activity Rule WH.R24 onerous and unnecessary and will mean that consents where effects can be effectively managed, will not meet the threshold test and cannot be considered for consent. Consider a discretionary activity status is appropriate for a non-compliance with one or more of the conditions and matters of discretion as the adverse effects of that part of the activity that does not comply can be identified and assessed, and the application can be declined if the adverse effects are inappropriate and cannot be mitigated.	Recategorize WH.R25 from non-complying to a discretionary activity
S210.054	12 Schedule s	Schedule 34: Plantation Forestry Erosion	Oppose	Consider Schedule s34 requirements for sediment management plans related to commercial forestry erosion overly onerous and would cause significant costs and potential delays in getting the management plan approved. Consider the sediment	Re-write the sediment erosion plan requirements to better reflect the management requirements of the NES-CF, and in particular delete 'Management Objective 4' in any re-write.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and Sediment Management Plan.		management plan requirements should reflect the sediment management approach included in the NES-CF. Particularly opposes the requirements of Management Objective 4 which is implemented through Clause (c) of WH.P28.	

S049 Hamish Levak

S49.002	General comments	General comments - overall	Not Stated	Concern that proposed rules governing forestry in Plan Change 1 would render their forestry interests incapable of reasonable use and challenges the rule under Section 85 of the RMA.	Not stated
S49.003	General comments	General comments - economic cost/impact	Not Stated	Concern the costs and restrictions under the proposed new requirements will make small forestry operations uneconomic.	Not stated

S105 Hannah Bridget Gray (No2) Trust

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S105.001	2 Interpretation	2.2 Definitions	Amend	PC1 repeats 'woody vegetation' as a target state, concern around lack of proper definition and landowners being able to achieve this state. If term is defined in other legislation should be referenced properly.	Provide a clear definition of what constitutes "woody vegetation".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S105.002	2 Interpretation	Earthworks	Amend	Drain and culvert maintenance often requires clearing sediment or earth - similar to installing a fence post but should not be considered earthworks.	For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only: The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of land for the installation of fence posts or clearing of drains and culverts. Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017.
S105.003	2 Interpretation	Highest erosion risk land (pasture)	Amend	It is important that landowners understand the practical definition of 'highest erosion risk land (pasture). The definition provided refers to a specific map at a point in time. - does not enable landowners to accurately judge the impact of their impacts - does not enable farm environment plan certifiers to accurately evaluate yearly farm plans if the GWRC map is not up to date. -creates a reliance on GWRC re-mapping activities - There is also a significant time lag between landowners action and results.	Provide a clear definition of what Highest erosion risk land (pasture) is rather than referring to a point in time map.
S105.004	2 Interpretation	Impervious surfaces	Amend	Use of rain tanks, grey water reuse systems or any form of water collection and reuse should be encouraged as a responsible and environmentally friendly use of water rather than included in calculations as if it were environmentally damaging.	roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S105.005	2 Interpretation	Redevelopment	Amend	Supports Porirua City Council's submission point on this provision.	Amend the definition in line with the Porirua City Council's submission point on this provision.
S105.006	2 Interpretation	Wastewater network catchment or sub-catchment	Amend	Supports Porirua City Council's submission point on this provision.	Amend the definition in line with the Porirua City Council's submission point on this provision.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S226.001	General comments	General comments - stormwater management	Not Stated	Submission seeks clarity on matters relating to policy and rule frameworks for stormwater discharges to land/water, stormwater from impervious surfaces, and stormwater from high risk industrial or trade premises. Considers proposed policies/rules predominantly relate to discharges from larger sites or activities, such as municipal, state highway, or large urban area discharges, and does not provide alternate pathways for discharges from other sites, including smaller or industrial sites. Considers restriction of discharges entering the local authority network, to be a double-up of existing consenting requirements for local authorities under Schedule N of the NRP. Considers there should be a permitted activity pathway for discharge from any site, including	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				industrial sites, to enter the local authority network provided discharge quality criteria are met. Consider impervious surface rules too restrictive with the 1,000m2 limit, and provide onerous requirements of stormwater management plans and impact assessments for smaller impervious areas, and for any impervious surface on 'high risk industrial' or 'trade premise' sites.	
S226.002	2 Interpretation	High risk industrial or trade premise	Amend	Considers definition too vague and could lead to misinterpretation. Suggests for activities not listed, intent of definition appears to be if risk of contaminants entering stormwater, HRITP rules are relevant. Concerns definition puts too much interpretation to the applicant, with risk of non-compliance if GWRC interpret the risk of the activity differently to applicants.	Amend definition of HRITP to be more specific and clearer in the intent. Provide exceptions for HRITPs for example where discharges are treated via an interceptor.
S226.003	5.1 Air quality rules	Rule R42: All other discharges - discretionary activity.	Support	Supports Rule R42 as it provides more clarity than existing rule	No relief sought.
S226.004	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Not opposed to Policy WH.P2 in principle and supports fresh and coastal water quality improvements Opposes methods regulating discharge in policy including (c) requiring extensive hydrological controls for small sites and (d) imposing requirements for stormwater management strategies or impact assessments from all networks.	Remove the imposition of hydrological controls under (c), or amend wording to have regard to hydrological controls, rather than the imposition of such. Remove requirement of a reduction in contaminant load from stormwater network, or amend to include provisions or small site development discharges.
S226.005	8 Whaitua Te	Policy WH.P10:	Amend	Not opposed to WH.P10 and supports management of adverse effects on stormwater discharges but	Amend the Policy WH.P10 to have regard to matters (a) - (c)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Managing adverse effects of stormwater discharges.		opposes methods regulating these discharges, including hydrological control via (b) and the onerous requirements which flow into the rules for stormwater from impervious surfaces.	
S226.006	8 Whaitua Te Whanganui-a-Tara	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports use of stormwater management strategies where relevant; i.e. municipal discharges, state highways, or large urban redevelopment. Opposes stormwater management strategies and imposition of requirements of Schedule 31 for smaller site redevelopment, including where discharges from smaller sites temporarily enter the local authority network.	Amend Policy WH.P13 so that it relates to municipal discharges, state highway discharges, or large urban development only.
S226.007	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Higgins support stormwater management from impervious surfaces in general but considers clarification is needed. Policy text considers new or redeveloped impervious surfaces from greenfield and existing urban areas only but rule framework from policy includes all sites. Intent of the policy and how this translates into rule framework for small non-urban sites is unclear.	New policy relating to stormwater from new and impervious surfaces from industrial or commercial sites.
S226.008	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants -	Support	Supports discharge of specific contaminants as a prohibited activity unless treated by inceptor system	No relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		prohibited activity.			
S226.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Oppose	Supports conditions for discharges to land but opposes restrictions of rule under (b) as discharge from smaller sites should be permitted activity criteria is met, including via the local authority network under (b).	Remove (b) and stormwater to land is permitted provided conditions (c) to (e) which ensure water quality are met.
S226.010	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Oppose	Considers intent is unclear. If purpose is to improve surface water quality, it is unclear why (c) limits stormwater discharge to local stormwater networks instead of all discharges to surface water. Unclear why discharge directly into fresh/coastal water is permitted activity if certain water criteria is met but not into waters via the local authority network. If stormwater discharge quality standards are met under WH.R3, submitter consider the discharge should be allowed to enter the receiving surface or coastal water via the local authority network. Submitter considers exclusions in this rule for providing discharge to surface or coastal water which temporarily enters the local authority network should be made.	Limb (c) is removed, and stormwater to water is permitted provided conditions (d) to (h) are met, which ensures the discharge does not contain contaminants, limits the concentration of suspended solid input, and achieves water quality standards to not cause listed effects beyond the zone of reasonable mixing. Alternatively, the rule could be amended so that discharges which enter water via the local authority network be provided for as a permitted activity, subject to meeting the discharge quality conditions of the rule.
S226.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Oppose	Opposes rule pathway leading any HRITP (WH.R4) to Rule WH.R11 as a discretionary activity should any new impervious area be created, regardless of the area of impervious surface. Considers requirements to prepare a stormwater management strategy under Rule WH.R11 for any impervious surface on a HRITP is too onerous. Unclear if new HRITP activities would fall under this rule. Notes impervious surfaces can control contaminants becoming entrained in stormwater.	That rule WH.R4 be amended to provide for discharges from new or redeveloped impervious surfaces for a specified area, i.e. up to 3,000m ² , or a new rule created as a controlled or restricted discretionary activity for new or redeveloped impervious surfaces on a HRITP. Clarity on new HRITP sites in this rule.
S226.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new	Oppose	Concerned with restrictions for impervious surfaces on individual sites being limited to 1,000m ² as a permitted activity. Considers existing Rules R48/R49 for stormwater management and the	Increase the amount of impervious surface area as a permitted activity, subject to discharge water quality standards as conditions. Or amend the condition to provide

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and redeveloped impervious surfaces - permitted activity.		3,000m ² permitted area, is a more appropriate trigger. Requests permitted activity area is 3,000m ² or is calculated as a percentage of impervious area relative to the size of the site. Considers this will allow for larger sites to undertake impervious surfacing on relative scale to smaller sites. Considers impervious surfaces can provide positive outcomes, eg. paving an area of contaminated land.	for a percentage of impervious area relative to the total site size, as a permitted activity.
S226.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity.	Oppose	Considers the application of this rule as a controlled activity is too narrow and considers the rule should allow for impervious surfaces on any site as a controlled activity, if between 1,000 - 3,000m ² , and subject to conditions (i.e. not from a high risk industrial trade premise).	removed 'urbanised property' from the rule to account for impervious area between 1,000m ² - 3,000m ² as a controlled activity on any site. Provide a definition for 'existing urbanised area'.
S226.014	8 Whaitua Te Whanganui-a-Tara	Rule WH.R9: Stormwater from a local authority or state highway network-restricted discretionary activity.	Oppose	Considers intent is unclear as heading refers to stormwater from 'local authority or state highway networks' but text does not limit activity to these discharges, and is inclusive of all stormwater discharges unable to meet WH.R2 or WH.R3. As WH.R9 requires a stormwater management strategy, this suggests it aligns with the discharges from a local authority or state highway network, rather than an individual stormwater discharge. Rule text appears to align to these discharges also. Considers requirement for stormwater management strategies to be prepared (under Schedule 31) is onerous for sites with smaller discharges that meet permitted discharge quality conditions. Not providing a stormwater management strategy is non-complying activity under Rule WH.R12 for all	Creation of a new rule to differentiate from Rule WH.R9 to manage discharges into water, which may enter the network, as a restricted discretionary activity subject to water quality conditions. The new RD rule should not require a stormwater management strategy, but appropriate information provided in the consent application, including monitoring, to show compliance with discharge quality limit conditions. Amendment of WH.R9 so that it only relates to large urban area or state highway discharges.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>other stormwater discharges. Considers that this provides a very restrictive framework for stormwater discharges to water, and may lead to more applications sought as non-complying activities which appears unproportionally restrictive relative to the risk.</p> <p>Concerns it may lead to applicants applying for non-complying activities which avoids requirement for stormwater management strategies and is counter-intuitive to outcomes intended to be sought.</p> <p>Elements of a stormwater impact assessment appear overly onerous for small site developments which subsequently require smaller resource consent applications and supporting information. Under Schedule 29 (2), a catchment evaluation is required, and under (3), stormwater discharge calculations, which is too onerous a task for smaller site developments.</p>	
S226.015	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Oppose	Considers the requirement of a full stormwater impact assessment is too onerous for discharges from sites greater than 1,000m ² , that is not an urbanised property and there should be allowance for a controlled or restricted discretionary activity for impervious surfaces between 1,000 - 3,000m ² .	Create new rule to provide for discharges from new or impervious areas, other than urbanised areas, as a controlled or restricted discretionary activity, which does not require the preparation of a stormwater impact assessment.
S226.016	12 Schedules	Schedule 29: Stormwater Impact Assessments.	Amend	Supports the requirement for stormwater impact assessments for large scale developments, municipal discharges, state highways, and other high risk facilities. Opposes requirements of Schedule 29 for smaller site development.	Amend Schedule 29 to only relate to large urban developments, municipal discharges, or discharges from state highway, rather than for small site development or discharges from any impervious area on a HRITP.
S226.017	12 Schedules	Schedule 31: Stormwater	Amend	Supports stormwater quality standards but considers the requirements of a stormwater	Amend Schedule 31 to only relate to large urban developments, municipal discharges, or discharges from state highway.

					<p>associated with cable or pipe laying and maintenance, or</p> <p>(d) the construction, repair, upgrade or maintenance of:</p> <p>(i) pipelines, or</p> <p>(ii) electricity lines and their support structures, including the National Grid, or</p> <p>(iii) telecommunication structures or lines, or</p> <p>(iv) radio communication structures, or</p> <p>(v) firebreaks or fence lines, or</p> <p>(vi) a bore or geotechnical investigation bore, or</p> <p>(e) repair or maintenance of existing roads and tracks, and airfield runways, taxiways, and parking aprons for aircraft, or</p> <p>(f) maintenance of orchards and shelterbelts, or</p> <p>(g) domestic gardening, or</p> <p>(h) repair, sealing or resealing of a road, footpath, driveway, or</p> <p>(i) discharge of cleanfill material to a cleanfill area</p> <p>Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017.</p> <p>For all other whitua: The disturbance of a land surface from the time soil is first disturbed on a site until the time the site is stabilised. Earthworks includes blading, contouring, ripping, moving, removing, placing or replacing soil or earth, by excavation, or by cutting or filling operations, or by root raking.</p> <p>Earthworks do not include:</p> <p>(a) cultivation of the soil for the establishment of crops or pasture, and or</p> <p>(b) the harvesting of crops, and or</p> <p>(c) thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>or</p> <p>(d) the construction, repair, upgrade or maintenance of:</p> <p>(vii) pipelines, and-or</p> <p>(viii) electricity lines and their support structures, including the National Grid, and or</p> <p>(ix) telecommunication structures or lines, and-or</p> <p>(x) radio communication structures, and-or</p> <p>(xi) firebreaks or fence lines, and-or</p> <p>(xii) a bore or geotechnical investigation bore, and-or</p> <p>(e) repair or maintenance of existing roads and tracks, and airfield runways, taxiways, and parking aprons for aircraft, and-or</p> <p>(f) maintenance of orchards and shelterbelts, and-or</p> <p>(g) domestic gardening, and or</p> <p>(h) repair, sealing or resealing of a road, footpath, driveway, and or</p> <p>(i) discharge of cleanfill material to a cleanfill area</p>
S2.010	2 Interpretation	High risk industrial or trade premise	Amend	<p>Opposes the list of activities provided in the definition as the list includes activities, such as mineral extraction, refining, reprocessing, storage, and use, which are unlikely to generate industrial or trade waste contaminants.</p> <p>The Submitter requests the list be removed as there is insufficient evidence that the activities listed are high-risk industrial or trade premises, and it implies that those activities are pre-determined as meeting the definition (which is considered unhelpful).</p> <p>Opposes the use of the word 'contaminants' within the definition. The submitter considers the term "contaminant," as defined in the RMA, too broad to be used in the definition as "contaminant" could include any substance that is not the stormwater itself. Concerned all industrial or trade premises could potentially fall under the definition (not just those storing, generating, or using hazardous substances). Considers the scope of activities</p>	<p>Amend the definition of "high risk industrial or trade premise" as follows:</p> <p>High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include:</p> <ul style="list-style-type: none"> – boat construction and maintenance – commercial cement, concrete or lime manufacturing or storage – chemical manufacture, formulation or bulk storage, recovery, processing or recycling – fertiliser manufacture or bulk storage – storage of hazardous wastes including waste dumps or dam tailings associated with mining activities – petroleum or petrochemical industries including a petroleum depot, terminal blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, – scrap yards including automotive dismantling, wrecking or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>covered by the definition is unclear.</p> <p>On the basis that the focus of the provisions the definition relates to is the management of the risk of hazardous substances from high-risk industrial or trade premises being entrained in stormwater, the submitter requests the definition be amended to delete reference to "contaminants" and focus only on hazardous substances. Suggests this would also provide greater clarity to plan users on the scope of activities that will fall under the definition.</p>	<p>scrap metal yards – wood treatment or preservation, or bulk storage of treated timber – mineral extraction, refining and reprocessing, storage, and use – explosives and ordnances production, storage, and use – electronics including the commercial manufacturing, reconditioning, or recycling of computers, televisions, and other electronic devices – waste recycling, treatment, and disposal – engineering workshops with metal fabrication, or electroplaters power stations, substations, or switchyards.</p>
S2.011	2 Interpretation	Highest erosion risk land (pasture)	Oppose	<p>Opposes the mapping associated with these definitions, and in particular the "high erosion risk land (woody vegetation)" which is referenced in rules. The submitter demonstrates how the mapping is applied to their site in the raw submission</p> <p>Concerned the mapping is too high level and has not been substantiated. States that it is unclear how this mapping has been based, or whether it has been trothed. For example, the mapping of "Highest erosion risk land (Woody vegetation)" includes many small areas of identified land that are incohesive (the size of each individual square identified in the maps is 5m by 5m). The submitter questions the value of regulating small, incohesive areas of woody vegetation, given that the controlled activity threshold for vegetation clearance is 200m2.</p> <p>To ensure that the maps (and the rules for vegetation removal) are efficient to administer and effective at achieving their intended outcome, the submitter considers that the maps should be amended to only identify cohesive areas of woody vegetation, and remove incohesive or isolated areas. For consistency with the rules, isolated areas</p>	<p>Update all the mapping (pasture, woody vegetation and plantation forestry) with accurate and evidence-based mapping, or delete definitions and retain existing definition of "erosion prone land" as shown below: Erosion prone land The pre-existing slope of the land exceeds 20 degrees.</p> <p>Should the definitions be retained, the submitter seeks that those definitions are subject to the Part 1 Schedule 1 Process and not the Freshwater Planning Process.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>smaller than 200m2 should be removed from the maps.</p> <p>The submitter appreciates that this approach seeks to nuance the existing definition of 'erosion-prone land' in the operative plan which simply is defined by the slope of the land. However, the submitter considers that until GWRC has undertaken a robust vegetation and land instability mapping exercise, the former approach should be retained.</p> <p>Opposes notifying these definitions as part of the Freshwater Planning Process as the definition and associated rules relate to soil conservation and not freshwater. The submitter also notes that this would be inconsistent with the approach taken to the overarching objective and policy (derived from S2 of the RMA) of the Proposed Change 1 Regional Policy Statement, which have been confirmed by GWRC officers as subject to the Schedule 1 Process.</p>	
S2.012	2 Interpretation	Impervious surfaces	Amend	<p>Submitter notes that the definition would currently capture a range of surfaces that may exist within a quarry, including:</p> <ul style="list-style-type: none"> - Concrete pads, - Haul roads, - Site offices, - Storage sheds, - Processing plant. <p>Considers based on the Section 32 evaluation, the impervious surface rules are intended to capture urban development (e.g. residential, commercial and industrial activities in an urban area). Concerned the definition and associated rules as drafted would capture quarrying activities and</p>	<p>Amend the definition of "impervious surface" as follows:</p> <p>Impervious surfaces Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes:</p> <ul style="list-style-type: none"> roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, <p>and excludes:</p> <ul style="list-style-type: none"> grassed areas, gardens and other vegetated areas porous or permeable paving slatted decks which allow water to drain through to a permeable surface porous or permeable paving and living roofs roof areas with rainwater collection and reuse

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>prevent a reasonable consenting pathway.</p> <p>Seeks the definition explicitly exclude impervious surfaces associated with quarrying activities.</p>	<p>any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)any impervious surface associated with a quarrying activity</p>
S2.013	2 Interpretation	Unplanned greenfield development	Amend	<p>Seeks consequential amendment to this definition to include the defined term of 'greenfield development'.</p> <p>Submission refers to submission points seeking new definitions for Greenfield Development and Urban Development.</p>	<p>Amend the definition of "unplanned greenfield development" as follows: Unplanned greenfield development Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p>
S2.014	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Oppose	<p>Considers the removal of the reference to "structure" from the chapeau of the rule significantly reduces the range of structures that are permitted under the rule. States this change removes the ability to construct minor structures within the bed of a river without the need for resource consent and will make the following permitted structures a discretionary activity under R145:</p> <ul style="list-style-type: none"> - Intake structures, - Outfall structures, - Weirs (excluding those used for sediment retention) - Fish screens, - Fish passage devices, - Navigational aid structure, and - temporary structures. <p>Considers the existing rule appropriately provides for minor structures (less than 10 m2) through permitted conditions limiting the size of a structure. Considers the requirement to seek resource consent for the above activities is onerous, will result in unnecessary consenting costs, and is not</p>	<p>Changes are rejected and Rule R128 is retained as operative</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>efficient or effective.</p> <p>Considers this matter would be addressed by reinstating the words "structure, including" to the chapeau of the rule. States the Section 32 evaluation provided little explanation for the proposed change, other than the rule providing for a broad range of structures is inappropriate. States there is no acknowledgment of the efficiency of requiring resource consent for all minor structures that are no longer permitted.</p>	
S2.015	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river - permitted activity.	Support	Supports the inclusion of this rule which will negate the requirement for long term river diversions where that diversion is permanent.	Retain as notified.
S2.016	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai	Amend	<p>Supports this long-term vision for Whaitua Te Whanganui-a-Tara, however, seeks the changes outlined below to ensure requirements are reasonably achievable.</p> <p>Considers Āhua (natural character) restoration should only occur where natural character has been degraded. Considers that without providing for this caveat, it sets an unrealistic requirement on what is being restored and the baseline state.</p> <p>Considers requirements to plant the margins of freshwater bodies will not always be practicable as there are freshwater bodies that cannot have planted margins for various reasons including being piped or being of a concrete channel.</p> <p>Seeks this clause be amended to be "as far as practicable".</p>	<p>Amend Objective WH.O1 as follows: Objective WH.O1 The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.</p> <p>Note In the wai ora state: Āhua (natural character) is restored where it has been degraded and freshwater bodies exhibit their natural quality, rhythms, range of flows, form, hydrology and character. All freshwater bodies have planted margins as far as practicable All freshwater bodies and coastal waters have healthy functioning ecosystems and their water conditions and habitat support the presence, abundance, survival and recovery of At-risk and Threatened species and taonga species Mahinga kai and kaimoana species are healthy, plentiful enough for long term harvest and are safe to harvest and eat</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ora by 2100.			or use, including for manuhiri and to exercise manaakitanga Mana whenua are able to undertake customary practices at a range of places throughout the catchment.
S2.017	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water quality, are maintained.	Amend	<p>Considers the direction in clause (b) and (c) to protect groundwater-dependent ecosystems and ecosystems in connected surface water bodies is inconsistent with the NPS-FM, which requires freshwater and freshwater ecosystems to be "maintained" through Policy 5.</p> <p>The Submitter notes that "protection" is only afforded to outstanding freshwater bodies and habitats of indigenous freshwater species through Policies 8 and 9 of the NPS-FM accordingly. Considers protection to be a higher bar than maintain which could lead to perverse outcomes and an inability for reasonable development to occur.</p> <p>Seeks clarification on the term aquifer consolidation referenced in Clause (f).</p>	<p>1. Clarify what is "aquifer consolidation", and</p> <p>2. Amend Objective WH.O6 as follows: Groundwater flows and levels, and water quality, are maintained at levels that:</p> <p>(a) ensure base flows or levels in surface water bodies and springs are supported and salt-water intrusion is avoided, and</p> <p>(b) protect maintain groundwater dependent ecosystems, and</p> <p>(c) protect maintain ecosystems in connected surface water bodies, and</p> <p>(d) ensure that groundwater is of sufficient quality for human and stock drinking water, and</p> <p>(e) ensure there is not a long-term decline in mean annual groundwater levels, including artesian pressures and</p> <p>(f) avoid aquifer consolidation.</p>
S2.018	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	<p>Clause (a) requires a progressive reduction in the load and concentration of contaminants. The submitter understands that this is aligned with the required reductions to achieve improvements in water quality as required by Objective WH.O9. As drafted, the clause implies that this would apply to all water bodies, regardless of whether improvement is required or not. Changes are sought by the submitter to clarify this.</p> <p>Considers clause (b) would be applied broadly to all habitats, including exotic. States there is no requirement under the NPS-FM to restore all habitats, rather it is limited to indigenous wetland habitat, and restoration should only be required where that habitat has been degraded. The submitter seeks changes to clarify that restoration is</p>	<p>Amend Policy WH.P1 as follows: Policy WH.P1: Improvement of aquatic ecosystem health Aquatic ecosystem health will be improved by:</p> <p>(a) progressively reducing the load or concentration of contaminants where improvement in water quality is required, particularly sediment, nutrients, pathogens and metals, entering water, and</p> <p>(b) restoring indigenous habitats that have been degraded, and</p> <p>(c) enhancing the natural flow regime of rivers and managing water flows and levels, including where there is interaction of flows between surface water and groundwater, and</p> <p>(d) co-ordinating and and prioritising enabling work programmes in catchments that seek to improve aquatic ecosystem health require changes to land use activities that impact on water.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>limited to indigenous habitats and to caveat only to where those habitats have been degraded.</p> <p>Considers clause (d) is unclear about what is being coordinated and prioritised. It is also unclear what "catchments that require changes to land use activities that impact water" means, who decides this, or what those activities are. Suggests this clause should rather refer to enabling work programmes that provide for improvement.</p> <p>The submitter also notes that clause (d) is a method rather than a policy directive. Suggests that consideration is given to whether this would be better suited as a method rather than a policy directive.</p>	
S2.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Seeks amendments to clause (a) of this policy as described below.</p> <p>Considers this policy to be inappropriate because the definition of "unplanned greenfield development" is broad and uncertain. On this basis, the submitter considers the prohibition on unplanned greenfield development inappropriate.</p> <p>It is understood by the submitter that GWRC are focused primarily on unplanned urban development. The submitter seeks changes to this clause to clarify this. Considers this clause also currently prescribes the activity status of an activity, rather than being focused on an adverse effect.</p> <p>Considers financial contributions to offset residual adverse effects from stormwater contaminants is inconsistent with the NPS-FM and limits the ability to implement the effects management hierarchy. Suggests aquatic offsetting or aquatic compensation is required where there are more</p>	<p>Amend Policy WH.P2 as follows: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives: Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the discharge of stormwater contaminants generated by urban development, and where there are more than minor residual adverse effects caused by stormwater contaminants requiring aquatic offsetting in first instance, which may include a requiring financial contributions as to an aquatic offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>than minor residual adverse effects, rather than residual adverse effects generally. The submitter expects there will be some residual adverse effect, which is appropriate, provided that the effect is no more than minor.</p> <p>Considers this clause implies that financial contributions are the only form of offset that may be provided. Suggest that as Appendix 6 of the NPS-FM sets out principles that are to be applied when identifying an appropriate aquatic offset, it would be contrary to the NPS-FM to not allow for consideration against those principles.</p> <p>Considers that whilst the clause implies that only offsetting may be applied, the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided. The submitter accepts that a financial contribution may be an appropriate form of aquatic offset, but seeks that the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation to be undertaken.</p> <p>Supports the direction of Clause (e), but notes that the planting of riparian margins may not always be practicable. Changes are sought to recognise this.</p>	<p>urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation where practicable, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>
S2.020	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges	Amend	<p>Opposes this policy as it would apply to stormwater discharges from a quarry site and the direction is not practicable.</p> <p>Considers the policy is specifically directed toward urban activities as while these requirements are appropriate for urban development, they cannot be practicably applied to non-urban activities, including quarrying activities.</p>	<p>Amend Policy WH.P10 as follows: Policy WH.P10: Managing adverse effects of stormwater discharges All stormwater discharges from new urban development and associated land use activities shall be managed by: (a) using source control to minimise contaminants in the stormwater discharge and maximise, to the extent practicable, the removal of contaminants from stormwater, including through the use of water sensitive urban design measures, and</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>(b) using hydrological control and water sensitive urban design measures to avoid, remedy or mitigate adverse effects of stormwater quantity and maintain, to the extent practicable, natural stream flows, and</p> <p>(c) installing, where practicable, a stormwater treatment system for stormwater discharges from a property or properties taking into account:</p> <p>(i) the treatment quality (load reduction factor), and</p> <p>(ii) opportunities for the retention or detention of stormwater flows or volume, including any flood storage volume required,</p> <p>and</p> <p>(iii) any potential adverse effects that may arise as a result of the stormwater treatment system or discharge, including erosion and scour, and localised adverse water quality effects, and</p> <p>(iv) inspections, monitoring and ongoing maintenance, including costs, to maintain functionality in terms of treatment quality and capacity, and</p> <p>(v) existing or proposed communal stormwater treatment systems in the stormwater catchment or sub-catchment, or part Freshwater Management Unit.</p>
S2.021	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	<p>Considers it impracticable to avoid contaminants being entrained in stormwater as is acknowledged in the section 32 evaluation report, and by policies such as WH.P15, which recognises that there may be residual stormwater contaminants associated with development.</p> <p>Considers that as the focus of the policy is on the management of hazardous substances prepared, used, or stored at high-risk industrial and trade premises, reference to contaminants generally should be removed from the policy, so the policy is implementable and retains a clear focus on the management of hazardous substances.</p> <p>Considers the management of stormwater</p>	<p>Amend Policy WH.P11 as follows:</p> <p>Policy WH.P11: Discharges of contaminants hazardous substances in stormwater from high risk industrial or trade premises</p> <p>The discharge of stormwater to water, including discharges via from the stormwater network, from a high risk industrial or trade premise shall be managed by:</p> <p>a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and</p> <p>b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>contaminants is provided for under policies WH.P10 and WH.P14, which will also apply to high-risk industrial or trade premises.</p> <p>Seeks amendment to remove the general term "contaminants" from the policy.</p>	<p>and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and</p> <p>c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and</p> <p>d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.</p>
S2.022	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	<p>Seeks consequential amendments to the policy in line with the relief sought in relation to the submission point seeking a new definition of Greenfield Development.</p> <p>Changes sought include defining "greenfield development" and referencing urban development as being the activity the policy relates.</p> <p>Requests the terms rain gardens and bioretention devices as referenced in Clause (a)(ii) be defined.</p>	<p>Amend Policy WH.P14 as follows:</p> <p>Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces</p> <p>The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas caused by urban development reduced to the extent practicable, upon redevelopment, through implementing:</p> <p>(a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to:</p> <p>(i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and</p> <p>(ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and</p> <p>(b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal</p> <p>And</p> <p>Amend the definitions section to include a definition of "raingarden" and "bioretention device".</p>
S2.023	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant	Amend	<p>Seeks this policy be amended so it's consistent with the effects management hierarchy set out in the NPS-FM, which requires that aquatic offsetting or compensation is provided in circumstances where residual adverse effects are more than minor.</p>	<p>Amend Policy WH.P15 as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting or compensation for new greenfield development Where there are more than minor residual adverse effects of residual (posttreatment) caused by stormwater contaminants from new greenfield development, roads (not</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>of this rule was to account for all development, it is considered that the evidence provided through the Section 32 Evaluation justifying the rule and the evaluation against the efficiencies and effectiveness are insufficient.</p> <p>If the intent of the rule is to target urban development, the submitter seeks changes to clarify this.</p> <p>If the intent of the rule is to account for all development, the submitter seeks the rule to be deleted in its entirety. A default non-complying activity for quarrying activities is sought under WH.R12.</p>	
S2.034	8 Whaitua Te Whanganui-a-Tara	Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.	Oppose	<p>Should the definition and mapping be retained, the submitter considers that the rule is limiting in that it does not allow for any vegetation clearance of the specified land for most land uses.</p> <p>Considers the existing approach of managing erosion-prone land under Rule R104 -R107 of the NRP is more fit for purpose. Also, based on the Section 32 Evaluation, there are no apparent implementation issues associated with the existing rule framework.</p> <p>While the submitter's preference is that the existing rules of the operative plan are retained, should the proposed rules remain, they seek that the permitted rule provides for additional clearance of up to 200 m2 to avoid clearance of less than 200m2 becoming an innominate activity (and therefore discretionary).</p> <p>Opposes that the rule is subject to the Freshwater Planning Process as the rule relates to erosion and</p>	<p>Review mapping and definition of "erosion prone land".</p> <p>Consider Rule WH.R17 under a Part 1 Schedule 1 process.</p> <p>Amend Rule WH.R17 as follows:</p> <p>Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity Vegetation clearance on highest erosion risk land (woody vegetation) and any associated discharge of sediment to a surface water body is a permitted activity provided the following conditions are met: (a) the vegetation clearance is: (i) to implement an action in the erosion risk treatment plan for the farm, or(ii) for the control of pest plants, or (iii) no more than 200 m2 per property of vegetation clearance on highest erosion risk land (woody vegetation) in any consecutive 12-month</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				soil conservation, rather than specifically freshwater. Considers this to be inconsistent with the approach taken to the overarching objective and policy of the RPS Change 1 which considered those under the Schedule 1 process.	period , and (b) debris from the vegetation clearance is not placed where it can enter a surface water body.
S2.035	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Neutral	<p>Supports Rule WH.R18 in principle but considers this rule could be anticipated to capture the majority of vegetation clearance applications sought, where the permitted rule is not met.</p> <p>Clarification is sought as to how the 200m2 is calculated - is it the actual and cumulative area of identified woody vegetation or on a site that contains an area of woody vegetation?</p> <p>Opposes subjecting the rule to the Freshwater Planning Process as the rule relates to erosion and soil conservation, rather than specifically freshwater. Considers this to be inconsistent with the approach taken to the overarching objective and policy of the RPS Change 1 which considered those under the Schedule 1 process.</p>	<p>Review mapping and definition of "erosion prone land".</p> <p>Consider Rule WH.R18 under a Part 1 Schedule 1 process.</p> <p>Retain a controlled activity rule for vegetation clearance greater than 200 m2 over high erosion risk land.</p> <p>Clarify how the 200m2 will be calculated.</p>
S2.036	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Amend	<p>Depending on the outcome of other submission points, the submitter is neutral on rule WH.R19.</p> <p>Opposes subjecting the rule to the Freshwater Planning Process as the rule relates to erosion and soil conservation, rather than specifically freshwater. Considers this to be inconsistent with the approach taken to the overarching objective and policy of the RPS Change 1 which considered those under the Schedule 1 process.</p>	<p>Review mapping and definition of "erosion prone land".</p> <p>Consider Rule WH.R18 under a Part 1 Schedule 1 process.</p>
S2.037	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks -	Amend	Considers the use of "and" at the end of condition (b) excludes all earthworks that are not related to implementing farm erosion risk treatment plans or farm environmental plans from the permitted activity rule. As a result, all other earthworks, regardless of	<p>Consider Rule WH.R23 under a Part 1 Schedule 1 process.</p> <p>Amend Rule WH.R23 as follows: Rule WH.R23: Earthworks - permitted activity Earthworks and the associated discharge of sediment</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.		<p>size or whether they meet conditions (c) to (h) will be a restricted discretionary activity under rule WH.R24.</p> <p>Considers it is not efficient or effective to require resource consent for all earthworks, regardless of scale. Nor does it appear to be consistent with policies WH.P30 and WH.P31, which emphasise controlling earthworks over 3,000m2.</p> <p>The submitter notes that the inclusion of associated discharges to water is necessary to ensure the rule relates to a regional function. Without doing so, this rule would simply be regulating land use which is a territorial authority function.</p> <p>Considers clause (g) should not be included in Rule WH.R23 as discharges associated with earthworks are managed under rule (R91). Considers clause (g) is inappropriate as it's not consistent with the minor discharges rule, which permits a minor discharge of suspended solids to surface water bodies or coastal water.</p> <p>Opposes the rule being included within the freshwater planning instrument as the purpose of the rule is to manage land use for soil conservation. Given that the rule does not provide for discharges associated with earthworks, there is no justification for including it in the freshwater planning instrument. The submitter seeks that it be reallocated to the Part 1 Schedule 1 planning instrument.</p>	<p>and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface waterbody or coastal water, including from a stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or</p> <p>(b) the earthworks are to implement an action in the farm environment plan for the farm, and or</p> <p>(c) the area of earthworks does not exceed 3,000m2 per property in any consecutive 12-month period, and</p> <p>(d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and</p> <p>(e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note</p>

					close down period (from 1st June to 30th September each year) and any maintenance activities required during this period 9. Monitoring and reporting requirements
S2.039	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Considers that the non-complying activity rule is not sufficiently justified in the section 32 evaluation and does not appropriately provide for activities that do not meet restricted discretionary activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity.	Amend Rule WH.R25 as follows: Rule WH.R25: Earthworks - non-complying discretionary activity Earthworks, and the associated discharge of sediment into a surface water body or coastal water or onto or into land where it may enter a surface water body or coastal water from earthworks, including via a stormwater network, that does not comply with Rule WH.R24 is a non-complying discretionary activity.
S2.040	12 Schedules	Schedule 29: Stormwater Impact Assessments.	Neutral	Considers this schedule, and the associated rule, is directed at new urban development. Should the relief sought in earlier submission points not be granted and the schedule apply to quarrying activities, the submitter opposes the schedule and seeks amendment to ensure the schedule is appropriate and fit for purpose in the context of quarrying activities. Should the schedule not apply to quarrying activities, the submitter is neutral on the schedule.	No decision sought subject to acceptance of submission point for new quarry specific rules.
S2.041	12 Schedules	Schedule 30: Financial Contributions.	Neutral	As noted in the submission point on WH.P15 it is considered that requiring a financial contribution as an offset may only be applied where it is optional along with other forms of aquatic offsetting. Subject to the changes sought on P15 and R11, the submitter is neutral to this Schedule.	No decision sought subject to acceptance of submission points on P15 and R11.
S2.042	12 Schedules	Schedule 33: Vegetation Clearance Erosion	Amend	Opposes the schedule being included within the freshwater planning instrument, as the purpose of the schedule is to manage land use for soil conservation. Considers this to be inconsistent with the approach taken to the overarching objective and	Consider Schedule 33 under a Part 1 Schedule 1 process. Amend Part B of Schedule 33 as follows: A Management objectives The Erosion and Sediment Management Plan must

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and Sediment Management Plan.		<p>policy of the RPS Change 1 which considered those under the Schedule 1 process.</p> <p>The schedule is generally supported subject to an amendment to clause (d) to recognise that restoring and revegetating is not always practicable, particularly for activities such as quarrying where surfaces must remain exposed.</p>	<p>demonstrate that the measures adopted to address the identified risks will:</p> <p>(a) minimise sediment loss from the vegetation clearance by adopting, as a minimum, good management practice, and</p> <p>(b) avoid an increase in risk of loss of sediment to water relative to the risk of loss that exists from the land in a natural state, and</p> <p>(c) minimise the discharge of water and sediment resulting from the vegetation clearance into a surface water body, and</p> <p>(d) where appropriate, provide for the land to be restored and revegetated with appropriate species.</p>

S012 Horticulture New Zealand

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S12.001	General comments	General comments - rural	Not Stated	<p>Proposed rules restricting rural land use change would make crop rotation impossible, which is an essential horticultural management practice for soil health and reducing disease pressure. Notes that planting vegetables or cover crops with differing nutrient needs in succession can reduce fertiliser requirements. Considers that it can be appropriate to change land use from low-intensity horticulture (orcharding) to other horticulture use (vegetable growing). Suggests a permitted activity status for a change from horticulture to horticulture and for crop rotation is more appropriate. Considers that a change in pastoral land use to horticulture will contribute to the reduction of greenhouse gas emissions and should be enabled to achieve regional emissions targets. Considers National Direction does not restrict the conversion of land to horticulture due to freshwater concerns but rather recognises vegetable growing as nationally</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>significant through Specified Vegetable Growing Areas (National Policy Statement for Freshwater Management , Clause 3.33). The National Environmental Standards for Freshwater does control the intensification of dairy farming, but not other activities. Considers proposed land use change rules to be inefficient and ineffective. Considers a targeted approach that considers catchment contaminants and targeted mitigations for the highest contributing activities is more appropriate. Considers that most vegetables are grown only for domestic consumption, and it is not expected that vegetable growing will expand at a faster rate than population growth. Considers that restricting vegetable production will have nutritional and affordability consequences.</p>	
S12.002	8 Whaitua Te Whanganui-a-Tara	Policy WH.P22: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Amend	<p>Does not support the method of capping nitrogen discharges from individual properties. Suggests a targeted approach at the freshwater management unit (FMU) or sub-catchment scale. Recommends identifying contaminants degrading water quality and establishing and distributing contaminant load restrictions to different activities based on community values, prioritising the second hierarchy of Te Mana o te Wai (health needs of people, including drinking water and fresh fruits and vegetables), and reducing regional greenhouse gas emissions. Also suggests the framework should have a method to measure compliance with load reduction requirements. Considers capping discharges on every property is not a targeted approach and may adversely affect activities of great importance to the local community. Considers that nitrogen risk assessment tools that work for pastoral farming may not be appropriate for horticulture. Questions meaning of "intensively farmed" as fruit and vegetable growing are not</p>	<p>Amend Policy WH.P22 wording to as follows: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities Diffuse nitrogen discharges from large rural properties and from smaller rural properties that are intensively farmed, are capped, minimised and, on large properties and horticultural properties, reduced where necessary by ensuring that:</p>

		discretionary activity.			

S211 Hutt City Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S211.001	General comments	General comments - overall	Amend	Supports the intent of PC1, however expressed concern with the inclusion of the 2040 E. coli target, and the prohibition of unplanned urban growth.	Not stated
S211.002	General comments	General comments - target attribute states	Amend	Considers that setting an E. coli target timeframe of 2060 will be less costly to HCC ratepayers than the proposed 2040 timeframe.	Not stated
S211.003	General comments	General comments - target attribute states	Amend	Considers repair and upgrading the public network would only reduce a proportion of the contaminant load and there will be substantial costs to landowners to upgrade pipes (private laterals) within the private wastewater network that make a significant portion of untreated discharges to land and water, to meet the proposed 2040 target. Notes Wellington Water's concern in relation to the ability to deliver the work required to meet the 2040 target.	Amend the proposed 2040 E.coli target timeframe to 2060.
S211.004	General comments	General comments - urban development	Amend	Considers the prohibited activity status for unplanned urban growth is most restrictive activity and prevents the possibility of applying for resource consent. Notes Lower Hutt has sufficient housing capacity within existing urban areas for the next 30 years but there is a regional shortfall for industrial land. Notes the NPS-UD requires Council to review the Housing and Business Assessment (HBA) every three years to ensure that it provides sufficient housing and business development capacity based on the results of the HBA.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S211.005	General comments	General comments - urban development	Not Stated	Considers that the proposed prohibited activity status for unplanned greenfield development is inconsistent with Policy 8 of the NPS-UD, could prevent HCC from meeting its ongoing requirements under the NPS-UD, and precludes consenting pathways for development in unplanned greenfield areas which would otherwise be appropriate and/or have positive outcomes.	Not stated
S211.006	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Support	Supports the 100 year vision towards full restoration of te-Whanganui-a-Tara's waterways. Seeks clarification on whether the text from "Note In the wai ora state..." is part of the objective or is an advisory note. Considers it is not physically possible for all water bodies to have planted margins, therefore seeks that the requirement for planted margins be qualified with "where possible".	Objective WH.O1 The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100. Note In the wai ora state: -Āhua (natural character) is restored and freshwater bodies exhibit their natural quality, rhythms, range of flows, form, hydrology and character -All freshwater bodies have planted margins where possible -All freshwater bodies and coastal waters have healthy functioning ecosystems and their water conditions and habitat support the presence, abundance, survival and recovery of At-risk and Threatened species and taonga species -Mahinga kai and kaimoana species are healthy, plentiful enough for long term harvest and are safe to harvest and eat or use, including for manuhiri and to exercise manaakitanga -Mana whenua are able to undertake customary practices at a range of places throughout the catchment.
S211.007	8 Whaitua Te Whanganui-a-Tara	Table 8.1 Coastal water objectives.	Oppose	Considers increased cost to ratepayers to meet the 2040 E. coli target timeframe on top of business as usual rates increase is unaffordable. Considers a 2060 target more achievable than the 2040 target, providing other funding avenues are explored such as growth charging and debt funding and significant central government funding. Considers that repairing the public network would only reduce a portion of the contaminant load, noting that there will be substantial costs to landowners to upgrade	Amend the timeframe for target states for E.coli and enterococci coastal water objectives to 2060.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				pipes within the private wastewater network to meet the proposed 2040 target, particularly in relation to achieving Criteria WH.O3 (g) and (h). Concerned with lack of information on the achievability of target attribute states, including the impact on Council assets and city wide development capacity to allow informed decision making, citing similar concerns raised by other parties as set out in the s32 report. Considers that the funding requirements on housing and business development capacity is not sufficiently explored in the s32 evaluation	
S211.008	8 Whaitua Te Whanganui-a-Tara	Objective WH.O8: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Support	Considers there are significant challenges in terms of the costs to upgrade the wastewater network to achieve the reduction in E.coli by 2040. Supports the inclusion of 2040 in Objective WH.O8 on the basis that it does not impose the same significant challenges and costs on Council.	Amend Objective WH.O8 as follows: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact by ensuring that by 2040 2060 : (a) Escherichia coli concentrations are at least maintained, or improved where the target attribute states in Table 8.3 are not met, and (b) there is low risk of health effects from exposure to benthic cyanobacteria.
S211.009	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	Considers increased cost to ratepayers to meet the 2040 E. coli target timeframe on top of business as usual rates increase is unaffordable. Considers a 2060 target more achievable than the 2040 target, providing other funding avenues are explored such as growth charging and debt funding and significant central government funding. Considers that repairing the public network would only reduce a	Amend the timeframe for target states for E.coli and enterococci coastal water objectives to 2060.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				portion of the contaminant load, noting that there will be substantial costs to landowners to upgrade pipes within the private wastewater network to meet the proposed 2040 target, particularly in relation to achieving Criteria WH.O3 (g) and (h). Concerned with lack of information on the achievability of target attribute states, including the impact on Council assets and city wide development capacity to allow informed decision making, citing similar concerns raised by other parties as set out in the s32 report. Considers that the funding requirements on housing and business development capacity is not sufficiently explored in the s32 evaluation	
S211.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Concerned with the proposed prohibited activity status for unplanned greenfield development; considers that this precludes consenting pathways for development in unplanned greenfield areas which may have positive outcomes. Concerned that minor activities which extend into unplanned greenfield areas would be prohibited.</p> <p>Considers the s32 evaluation insufficient to justify the proposed prohibited activity status, noting contradictions with regard to the ability of PC1 to mitigate contaminants from urban developments. Further considers that the prohibition on greenfield development is inconsistent with the NPS-UD, particularly Policy 8, and may conflict with the submitter's ability to give effect to the NPS-UD.</p> <p>Notes commentary provided in the s32 report which states that unplanned greenfield development is to be prohibited to enable a future regional plan change alongside a district plan change. Considers that there will be a high economic cost to undertake two simultaneous plan changes, which is not sufficiently assessed in the s32 report.</p>	<p>Amend Policy WH.P2 as follows:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting avoiding unplanned greenfield development and for managing other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Seeks that this policy direction is amended to "avoid", with a non-complying activity status. Considers that Policy WH.P2(b) is not consistent with and duplicates (c) and (d), noting that the use of "encouraging" in (b) is inconsistent with "imposing" in (c) and "requiring" in (d).	woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater
S211.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Amend	Supports the use of actions plans to achieve objectives, provided that they are developed in partnership with territorial authorities.	Amend Policy WH.P3 as follows: Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways The Wellington Regional Council shall, in partnership with mana whenua and territorial authorities , prepare and deliver Freshwater Action Plans in accordance with Schedule 27 (Freshwater Action Plan). The first iteration of Freshwater Action Plans, to cover all rivers and lakes in the Whaitua Te Whanganui-a-Tara, shall be completed by December 2026. Freshwater Action Plans shall identify, in detail, the actions, including to support effective regulation, to achieve the target attribute states, and support relevant environmental outcomes, set in this Plan.
S211.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P7: Discharges to groundwater.	Amend	Supports in principle the reduction in point source discharges to ground water, however seeks clarification on policy wording, such as how discharges will be managed and how groundwater quality will be measured.	Review wording of policy to clarify intent.
S211.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges	Amend	Supports in principle the regulation of stormwater contaminants through hydrological control and WSUD to improve freshwater outcomes. Notes there is overlap with Hutt City District Plan rules which also manage hydrology of stormwater to manage the demand on the three waters network from urban development, which is not addressed in the s32 report. Considers PC1 provisions are light on detail on how hydrological controls and WSUD will be implemented, in comparison with the THW-Three Waters chapter of the Draft Hutt City District Plan	Develop more comprehensive objectives and policies for hydrological control and WSUD measures including acceptable solutions and amend policy – Develop a more comprehensive policy and implementation framework with regard to hydrological control and water sensitive urban design measures, including acceptable solutions and amend policy accordingly.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				which requires hydraulic neutrality measures to assist with managing peak stormwater runoff from development sites so the risk of downstream flooding is not increased, and assist with prolonging the life of existing stormwater management systems. Considers the inclusion of technical specifications in the NRP can assist smaller developments as they could rely on the technical specifications without having to develop bespoke solutions for their site and undertaking expensive hydrological and/or engineering calculations to demonstrate compliance. Supports the recognition of catchment-scale communal schemes.	
S211.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Support	Support managing these discharges.	Retain as notified
S211.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers that there is insufficient evidence to support Policy WH.P16. Considers that the policy duplicates WH.P2(a) and is therefore unnecessary.	Delete Policy WH.P16: Policy WH.P16: Stormwater discharges from new unplanned greenfield development. Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.
S211.016	8 Whaitua Te	Policy WH.P17: General	Amend	Supports the maintenance and improvement of wastewater discharges, subject to relief sought in	Retain as notified provided target attribute states for E.coli amended to 2060 in Table 8.1 and Table 8.4.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	wastewater policy to achieve target attribute states and coastal objectives.		regard to target attribute states for E.coli in Table 8.1 and 8.4.	
S211.017	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Amend	Disagrees with the s32 evaluation, which states that there is higher risk of sediment discharge during the winter period (June-September). Considers that large storm events can occur throughout the year, resulting in large sediment discharges. Considers that earthworks during the winter period may be appropriate when there is a poor summer earthworks period due to adverse weather. Considers a BAU approach for winter earthworks should be maintained as a standard condition of consent as a discretionary activity which would allow GW to provide permits to undertake earthworks within this period as appropriate and subject to conditions.	Delete policy Policy WH.P31: Winter shut down of earthworks. Earthworks over 3,000m² in area shall: (a) be shut down from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021).
S211.018	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	Supports the intent of the rule. However, considers that as written, the rule requires regional consent for all new connections to the stormwater network. Seeks clarification on why such activities should be regulated by GWRC, as opposed to the relevant territorial authority. Considers that the rule largely duplicates Rule WH.R3.	Consolidate WH.R2 and WH.R3 into one rule; or amend as follows: Rule WH.R2: Stormwater to land - permitted activity The discharge of stormwater onto or into land, including where contaminants may enter groundwater: (a) that is not from a high risk industrial or trade premise, or (b) that is not connected to that does not discharge from, or to, a local authority stormwater network , is a permitted activity provided the following conditions are met: (...)
S211.019	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual	Amend	Supports the intent of the rule. However, considers that as written, the rule requires regional consent for all new connections to the stormwater network. Seeks clarification on why such activities should be regulated by GWRC, as opposed to the relevant	Consolidate WH.R2 and WH.R3 into one rule; or amend as follows: Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity The discharge of stormwater from an existing individual

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		property to surface water or coastal water - permitted activity.		territorial authority. Considers that the rule largely duplicates Rule WH.R2.	property into water, or onto or into land where it may enter a surface water body or coastal water, (a) that is not from a high risk industrial or trade premise, or (b) that is not from a port, airport or state highway, or (c) that is not connected to does not discharge from, or to, a local authority stormwater network, is a permitted activity, provided the following conditions are met: (...)
S211.020	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend	Supports GWRC taking a greater role in regulating changes in impervious surfaces and requiring interventions, however considers the rule will have a significant economic impact on urban development. Considers the rule does not outline what types of hydrological controls should be implemented and does not provide clarity on solutions that would be considered acceptable for compliance, nor does the definition for "hydrological control". States that the second matter of control refers to best practicable options, however does not outline what these are. States that the s32 report does not quantify the costs of acceptable controls and the economic impact on urban development.	Develop an acceptable solution for compliance by: - incorporating guidance by reference; or - within the rule itself; or - as an appendix to the plan.
S211.021	8 Whaitua Te Whanganui-a-Tara	Rule WH.R10: Stormwater from new state highways-discretionary activity.	Amend	Seeks clarification on what is considered to be a new state highway.	Review rule wording.
S211.022	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development -	Amend	Concerned with the proposed prohibited activity status for unplanned greenfield development; considers that this precludes consenting pathways for development in unplanned greenfield areas which may have positive outcomes. Concerned that minor activities which extend into unplanned greenfield areas would be prohibited.	Amend rule WH.R13 as follows: Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity The use of land and the associated discharge of stormwater from impervious surfaces from unplanned greenfield development direct into water, or onto or into land where it may enter a surface water body or coastal water, including

**Proposed Change 1 to the Natural Resources Plan –

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		prohibited activity.		<p>Considers the s32 evaluation insufficient to justify the proposed prohibited activity status, noting contradictions with regard to the ability of PC1 to mitigate contaminants from urban developments. Further considers that the prohibition of greenfield development is inconsistent with the NPS-UD, particularly Policy 8, and may conflict with the submitter's ability to give effect to the NPS-UD.</p> <p>Notes commentary provided in the s32 report which states that unplanned greenfield development is to be prohibited to enable a future regional plan change alongside a district plan change. Considers that there will be a high economic cost to undertake two simultaneous plan changes, which is not sufficiently assessed in the s32 report.</p>	through an existing or proposed stormwater network, is a non-complying prohibited activity
S211.023	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Seeks that road maintenance be excluded from earthworks in the rule, noting that activities such as road resealing would otherwise unnecessarily require resource consent. Considers that the use of "and" means that earthworks of any scale would require resource consent under Rule WH.R24 unless associated with an erosion risk treatment plan or farm environment plan.	Amend Rule WH.23 as follows: Earthworks is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network. Note: this rule excludes repair or maintenance of existing roads, or repair, sealing or resealing of a road, footpath or driveway.
S211.024	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Disagrees with the s32 evaluation, which states that there is higher risk of sediment discharge during the winter period (June-September). Considers large storm events can occur throughout the year, resulting in large sediment discharges. Considers that earthworks during the winter period may be appropriate when there is a poor summer earthworks period due to adverse weather. Considers a BAU approach for winter earthworks should be maintained as a standard condition of consent as a discretionary activity which would allow GW to provide permits to undertake earthworks within this period as appropriate and subject to conditions.	Amend Rule WH.R24 as follows: Rule WH.R24: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met: (a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m ³ , except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m ³ , the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year
S211.025	13 Maps	Map 89: Unplanned greenfield areas - Hutt City Council.	Amend	Notes Map 89 reflects the Operative District Plan, however Council is yet to notify a district plan that fully implements the NPS-UD including the identified demand for housing and business land, therefore considers the avoid/prohibited approach may conflict with the submitter's ability to give effect to the NPS-UD.	Amend Map 89 to reflect the capacity required to meet identified housing and business demand in Hutt City

S249 Isabella Cawthorn

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S249.001	General comments	General comments - fresh water	Support	Strongly supports the water and indigenous biodiversity elements of PC1 .	Not stated
S249.002	General comments	General comments - water bodies	Support	Strongly supports the objectives for all the catchments in Te Upoko o te Ika.	Suggests that where the phrase "on a trajectory of measurable improvement" is used, the definition of "measurable" includes something statistically significant or an appropriate magnitude measure.
S249.003	General comments	General comments - target attribute states	Support	Strongly supports the Target Attribute States proposed for all catchments except for Te Awarua o Porirua in which the submitter would like strengthened.	Strengthen target attribute states for Te Awarua o Porirua
S249.004	General comments	General comments	Support	Considers Te Mana o te Wai to be a vital overarching and underpinning concept for how we think about and deal with water.	Make the hierarchy of obligations in Te Mana o te Wai clearer in the definitions and objectives, including prioritising mana whenua and their whakapapa and tikanga in decision-

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		- water bodies			making for water. Make clearer that Te Mana o te Wai guides all policy, plans and consents that impact on three waters, from the earliest stage of consideration and before options are presented to regional council, Planning Committee or consulted on with communities.
S249.005	General comments	General comments - stormwater management	Not Stated	Requests standards be developed for the minimum performance of stormwater retention devices and other green infrastructure.	Develop standards for the minimum performance of stormwater retention devices and other green infrastructure
S249.006	General comments	General comments - stormwater management	Not Stated	Requests standard be developed, and elements required for building consents, to reduce/prevent copper and zinc getting into stormwater. Considers MBIE should be promoting this kind of source control.	Develop standard to reduce/prevent copper and zinc getting into stormwater.
S249.007	General comments	General comments - wastewater	Not Stated	Considers the disposal of sewage sludge on land, and systems that hold / treat wastewater on site, are important and haven't been provided enough coverage.	Not stated
S249.008	General comments	General comments - rural	Not Stated	Request having a reference to the guidelines for Beneficial Use of Organic Materials on Productive Land (due next year) as a minimum	Provide a reference to the guidelines for Beneficial Use of Organic Materials on Productive Land as a minimum
S249.009	General comments	General comments - current legislation	Not Stated	Considers any duplication between the statutory requirements, plans, policies and processes of the Water Services Entities Act 2022 and requirements of the RMA, Spatial Planning Act, Natural Built Environments Act (including regional councils' freshwater plans) should be avoided. Considers There's a similar potential for duplication	Avoid duplication of legislation

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>between the requirement for asset management plans (AMPs),.</p> <p>Suggests if AMPs are not doing this job, they should be rewritten so they're strategically tied to manifesting the objectives of the relevant FMU or pFMU.</p>	
S249.010	General comments	General comments - wastewater	Not Stated	<p>Considers the construction, performance monitoring, inspection and pinging (enforcement) of on-site wastewater treatment facilities is crucial given they reduce peak loads on vulnerable infrastructure (especially enabling intensification), and their potential to pollute the wider network if badly built and not maintained.</p> <p>Requests the development of minimum standards for the construction of on-site wastewater treatment facilities, and standardised consent conditions for their operation and monitoring to ensure they continue to operate as intended.</p>	Requests the development of minimum standards for the construction of on-site wastewater treatment facilities, and standardised consent conditions for their operation and monitoring to ensure they continue to operate as intended.
S249.011	General comments	General comments - urban development	Support	<p>Considers effects of stronger rules on urban development and infrastructure is excellent.</p> <p>Considers rules that improve the ways land and water is used must be used.</p>	Not stated
S249.012	General comments	General comments - economic cost/impact	Support	Considers the costs imposed on developers are important. Supports imposed costs that prevent developments from affecting wai as it will encourage them to innovate and improve processes, or exit the market.	Not stated
S249.013	General comments	General comments - urban development	Support	Considers density done well enables sophisticated water management.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S249.014	General comments	General comments - overall	Support	Considers cost should not be pushed back on the environment. Considers there is an opportunity for a better system to be built with PC1.	Not stated
S249.015	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Support	Considers Method M45 a good thing with regards to funding	Avoid funding gaps
S249.016	8 Whaitua Te Whanganui-a-Tara	8.3.7 Take and use of water	Support	Support the rules in Schedule P (Efficient use). Seeks an enabling framework for allocating freshwater in the PC1 that manifests the hierarchy of obligations of Te Mana o Te Wai, and motivates people and organisations within a catchment to use water much more efficiently is needed. Suggest the frame work also needs to account for leaks and take a precautionary approach given climate change.	Not stated
S249.017	9 Te Awarua-o-Porirua Whaitua	Table 9.2: Target attribute states for rivers.	Amend	Considers the term maintain is used to frequently versus improve. Suggests the term improve if used may be able to drive more strongly a higher-performing urban form in any greenfield development.	Not stated

S259 Isla Walker

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S259.001	General comments	General comments – stormwater	Oppose	Considers the plan overly restrictive in relation to impervious surfaces as these surfaces help high volumes of rainfall-runoff quickly and reduce inundation contributing to landslips. Objects to existing impervious areas should not be included.	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S52.001	General comment s	General comments - overall	Not Stated	Supports submissions from National New Zealand Farm Forestry Association and Wellington branch of the New Zealand Farm Forestry Association	Not stated
S52.002	General comment s	General comments - economic cost/impac t	Oppose	Believes costs and restrictions of PC1 would make their forestry operation uneconomic and limit future income	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S52.003	General comments	General comments - overall	Oppose	Concerned rules governing forestry in PC1 would render interest in land incapable of reasonable use	Not stated

S094 Jo McCready

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S94.001	General comments	General comments - consultation	Oppose	Concerned with consultation and insufficient time for the community/landowners to fully consider the implications of the policies and rules proposed in PPC1 before entering the formal submission process. Considers GWRC has not undertaken appropriate consultation with affected parties.	Withdraw PC1 and undertake an effective period of consultation.
S94.002	General comments	General comments - maps	Oppose	Considers the maps provided within PC1 difficult to decipher at property level. Concerned with difficulty for landowners to determine how they might be affected.	Not stated.
S94.003	General comments	General comments - overall	Oppose	Considers heavy reliance on modelling to inform the policies and rules rather than emphasising collection of reliable data and applying appropriate actions.	Not stated.
S94.004	General comments	General comments - economic cost/impact	Oppose	Considers inadequate information on clearly committed resourcing from GWRC for implementation of PC1, leaving landowners unsure of the costs (financial and time) associated with PC1.	Not stated.
S94.005	General comments	General comments - overall	Oppose	Considers lack of information on support resourcing, including monitoring the implementation of PC1, means it is likely to potentially penalise those engaging proactively and using good management practices while failing to identify or deal with those engaging in poor management practices unless there are very blatant breaches.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S94.006	General comments	General comments - overall	Oppose	<p>Considers overall emphasis within PC1 is on regulatory methods and "requirements" on landowners rather than incentives to engage best practice.</p> <p>Considers better outcomes would be achieved weighted in accordance with Recommendations 58, 59, 60, 61 and 64 of Te Awarua-o-Porirua Whaitua Implementation Programme. Considers focusing on resourcing positive supports and actions rather than enforcements.</p>	Not stated.
S94.007	General comments	General comments - economic cost/impact	Oppose	<p>Concerned not all costs have been economically quantified and the environmental and cultural benefits have not been quantified through a specialist economic impact assessment.</p> <p>Considers if the benefits had been quantified, the benefits would not outweigh the costs associated with improving the environment in the manner directed by NPS-FM - particularly urban areas.</p> <p>Concerned of financial cost to ratepayers.</p>	Produce a cost-benefit exercise and follow a clear concept of financial accountability.
S94.008	General comments	General comments - definitions	Amend	Notes within the document there are a number of references to small rivers, less than 1 metre wide. Notes there is nowhere within the documents that states what the minimum size is and considers it unacceptable to have an open-ended definition for a minimum.	Amend: Clarify the definition upon which other regulations rely eg. Stock exclusion and fencing rules.
S94.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Not Stated	Considers other stock not mentioned are exempt from all rules.	Confirm the rules are exclusive to these animals.
S94.010	9 Te Awarua-	9.3.4 Land uses	Amend	Considers there are different pest plants within the region. Considers some pest plants threaten	Add definition of pest plants.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua			establishing native vegetation whilst others nurse revegetation.	
S94.011	9 Te Awarua-o-Porirua Whaitua	Rule P.R17: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	Considers conditions are arbitrary with no factual basis.	Amend conditions to allow for an individual property scale response.
S94.012	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Considers conditions are arbitrary with no factual basis. Considers the size of earthworks have no relation to property size. Considers weather window irrelevant as bad weather can occur at anytime of year.	Amend/remove these conditions.
S94.013	9 Te Awarua-o-Porirua Whaitua	Rule P.R27: The use of land for farming activities - discretionary activity.	Amend	Considers where monitoring sites are not defined, concentration should be demonstrated at property level to determine if it exceeds the target attribute state. Considers permitted changes in land use should be allowed if the properties' activities do not contribute to increasing concentrations.	Amend a) and b) to allow for an individual property scale response.
S94.014	12 Schedules	Schedule 35: Small farm registration.	Oppose	Notes landowners have to provide complex range of data including average stocking rates, perform calculations relating to Nitrogen emitting from the property and are required to calculate effective grazing areas, map the property boundaries and show waterbodies where stock exclusion is required under new rules and to show the location of fences relative to the waterbodies. Notes there will be few in the community who will have the level of expertise required to perform the complex mathematical calculations to collate the raft of data required or produce accurate maps, especially given the undulating nature of the terrain. Notes	Delete this requirement

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>GWRC have not produced the systems necessary to record the information.</p> <p>Notes a resource consent application takes time, costs money and is beyond the technical abilities of most individuals. There is no guarantee it will be approved and if it is, it may contain onerous conditions.</p>	

S276 Jody Louise Sinclair, Joshua William Lowry, Anne Friedarika Sinclair & Tracey Lynn Browne

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S276.001	General comments	General comments - consultation	Oppose	Concerned about the lack of consultation on PC1.	Withdraw PC1
S276.002	General comments	General comments - current legislation	Oppose	Questions the legality of the process undertaken by GWRC, citing recent Environment Court decisions.	Remove clauses that are demonstrably regulating by fiat and demonstrate respect for the rule of law.
S276.003	General comments	General comments - current legislation	Oppose	<p>Considers in any given catchment there will be upstream and downstream properties and very few indicative monitoring sites.</p> <p>Notes that the Managaroa catchment and Akatarawa Valley are complex networks of waterways and all properties in the catchment will be assessed, based on the downstream results from this single monitoring point and penalised accordingly. Considers this unacceptable.</p>	Remove all such clauses where GWRC has failed to establish an adequate network of monitoring sites.
S276.004	General comments	General comments - current legislation	Oppose	<p>Considers GWRC has decided that freshwater Management is pre-eminent and over-rules other national Policy Statements.</p> <p>Considers GW has erroneously decided to regard clauses (a), (b), and (c) of the Te Mana o te Wai hierarchy as mutually exclusive rather than regarding them as equally weighted and inter-</p>	Give equal weighting to all government legislation and disregard regulation by committee.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				dependent. Considers that GWRC has chosen to give maximum weight to one piece of legislation and has exacerbated that choice by taking in to account an opinion by one Whaitua in respect of levels of copper and zinc in stormwater which are not recognised in NPS-FM.	
S276.005	General comments	General comments - overall	Oppose	Considers there is confusion among GWRC staff and that contradictory advice has been given relating to the immediate legal effect of provisions and the fencing of waterways.	Delete the statement that all rules have immediate legal effect and substitute "all rules in this plan change will be held in abeyance pending the plan change passing through all stages required by the RMA".
S276.006	General comments	General comments - rural	Oppose	Considers GWRC do not know where sediment originates from and are guessing that it comes from farming activity and making the assumption that all sediment in rivers is the result of human activity. Considers it is important to take into account that a proportion arises from natural erosion processes and that it's important to form a complete picture of all factors within the catchments, both natural and man made. Considers within each of the Mangaroa and Akatarawa catchments GWRC should establish at least 3 monitoring points and accrue a significant data base to be able to identify the source of any quality reduction.	Within each of the Mangaroa and Akatarawa catchments, establish at least 3 monitoring points and accrue a significant data base to be able to identify the source of any quality reduction. Defer any further action on PC1 pending the gathering of an effective database.
S276.007	General comments	General comments - overall	Oppose	Considers there are errors in drafting which change the intended meaning	Review and undertake an edit of PC1
S276.008	General comments	General comments - rural	Oppose	Considers there is insufficient data to identify the point of origin of any contamination and PC1 requires registered farms to collect the data for GWRC at no cost to GWRC. Considers there are indicators from primary contact sites along the Hutt River that paint a clear picture and suggests this establishes that whatever contamination is present in the lower reaches is not originating from the farming communities of Akatarawa and Mangaroa.	Move away from attributing contamination problems to farming and re-focus on the more complex issues of urban sources.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Suggests a disproportionate amount of effort in trying to solve a problem that does not exist.	
S276.009	General comments	General comments - water bodies	Oppose	Notes there are a number of references to small rivers, less than 1 metre wide but nowhere within the PC1 states what the minimum size is. Considers it unacceptable to have an open-ended definition for a minimum.	Clarify the definition upon which other regulations rely eg. Stock exclusion and fencing rules. Provide a clear minimum width for small rivers
S276.010	General comments	General comments - rural	Oppose	Considers section 6.9 of the Section 32 report - (Sources of nitrogen and other contaminants) establishes that none of the measures aimed at the Mangaroa Valley and Akatarawa Valley farming community are justified. Considers the proposed measures will achieve little at an unquantified cost.	Withdraw all measures targeted at the Upper Hutt farming community.
S276.011	General comments	General comments - consultation	Oppose	Considers there is no quantification for the benefits or quantification of the costs and that just because GWRC consider they are obliged to do something is not a valid reason to have no idea of the value or cost of the exercise.	Produce a thorough cost-benefit exercise and recognise ratepayers are not a limitless source of funds.
S276.012	General comments	General comments - rural	Oppose	Considers the proposed stocking unit is unreasonable and the allocation of SU/HA is too low, especially compared to other regions.	Remove the proposed stocking unit rate and allocation from the plan.
S276.013	8 Waitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Amend	Notes the only animals referenced are cattle, farmed deer and farmed pigs. Suggests the community takes this to mean all other animals are exempt from the rules.	Confirm that the rules are exclusive to these animals.
S276.014	12 Schedule s	Schedule 35: Small farm registration.	Oppose	Concerned small farms registration will be too extensive and complex for lay people and many landowners will not have the information required or know how to collate the data required. Also concern surrounding the lack of developed systems from GWRC to record the information.	Remove the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating regulations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S250 John and Jacqueline Diggins

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S250.001	General comments	General comments - overall	Oppose	Supports ensuring high water quality and protecting waterways from sediment discharge but questions the data GWRC is relying on and the lack of consultation.	Not stated.
S250.002	General comments	General comments - consultation	Oppose	Concerned about lack of consultation from GWRC and onerous set of requirements impacting rural land owners.	Withdraw PC1 and then engage with representative groups and wider public.
S250.003	General comments	General comments - water bodies	Oppose	Cites GWRC Environment Court cases. Is concerned GWRC is trying to introduce rules, and methods to classify all streams, drains, ditches and ephemeral flows as rivers and that this is not consistent with the court rulings or judges findings.	A clear definition of what constitutes a natural waterway needs to be confirmed before PC1 is approved.
S250.004	General comments	General comments - current legislation	Oppose	<p>Suggests GWRC is contravening the Bill of Rights and there is erosion of property rights.</p> <p>Concerned PC1 is proposing sanctions against property owners on factors they have no control over.</p> <p>Suggests within any given catchment there will be upstream and downstream properties and very few indicative monitoring sites. Concerned properties will be assessed based on downstream results from a single monitoring point and penalised accordingly.</p>	Remove all clauses in PC1 where GWRC has failed to establish an adequate network of monitoring sites.
S250.005	General comments	General comments - freshwater	Oppose	<p>Notes information regarding the Mangaroa and Akatarawa catchment. Considers the headwaters of the catchments are 20km from the monitoring points. Cites a GWRC Zoom Q&A session.</p> <p>Considers GWRC is assuming that all sediment in rivers is the result of human activity. Suggests there is a strong probability that human activity can</p>	Put PC1 on hold until GWRC has established at least 3 monitoring points and has a significant data base to identify source of water quality reduction within the Mangaroa and Akatarawa catchments.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>contribute to the sediment load but it is important to consider that a proportion arises from natural erosion processes.</p> <p>Considers it vital that GWRC has a complete picture of all factors within the catchments, both natural and man-made rather than assuming all sediment is a result of human activity.</p>	

S050 John Anthony Carrad

S50.001	9 Te Awarua-o-Porirua Whaitua	Policy P.P21: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Amend	For clauses (a) and (b), nitrogen doesn't come from animals, it is supplied to soil by legumes or fertiliser. Nitrogen leaching must be accounted for in a scientifically robust manner.	Upgrade nitrogen leaching accounting method.
S50.002	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high	Oppose	Concerns regarding property and economic consequences due to requirements of schedule 36. Considers High and highest erosion risk maps are overstated and inaccurate.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		risk of erosion.			
S50.003	12 Schedule s	Schedule 36: Additional requirements for Farm Environment Plans in Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Concerns regarding property and economic consequences due to requirements of schedule 36. Considers High and highest erosion risk maps are overstated and inaccurate.	Not stated

S117 John Bowen

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S117.001	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Oppose	Considers there to be an insufficient amount of water quality monitoring sites in the Makara River. Suggests that data from the one and only monitoring site does not adequately show where sediment and contaminants are entering the river. Suggests that riverbanks washing away due to heavy rainfall or floods may be getting overlooked.	Increase the amount of water monitoring sites in the Makara catchment
S117.002	8 Whaitua Te Whanganu i-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges	Oppose	Considers the local community to be the most capable in determining how to best enhance and protect the local environment. Measures such as native planting and fencing have already been implemented.	Remove the regulatory approach under PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		from farming activities on land with high risk of erosion.			
S117.003	General comments	General comments - consultation	Oppose	Considers that the consultation process was insufficient. States PC1 should have been emailed to property owners to provide them with sufficient time to review it. Property owners with farms in Makara should also have been notified of PC1 as they will be impacted.	Improve the consultation process with the community.

S181 John Boyle

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S181.001	General comments	General comments - overall	Not Stated	Supports the Maymorn Collective submission in full	Not stated
S181.002	General comments	General comments - overall	Oppose	Opposes Plan Change 1	Not stated
S181.003	General comments	General comments - consultation	Not Stated	Concerned with the lack of consultation and consideration for the UHCC Proposed Plan Change 50 Rural (PC50r) which PC1 is inconsistent with	Withdraw PC1 and conduct appropriate consultation and engagement.
S181.004	General comments	General comments - unplanned greenfield development	Oppose	Opposes 'unplanned greenfield development' being a prohibited activity and believes each site should be considered individually on its merits.	Amend PC1 to allow to allow applications for new 'unplanned greenfield development'. Exclude areas covered by PC50 from 'unplanned greenfield development'

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S181.005	General comments	General comments - economic cost/impact	Oppose	Questions the credibility of PC1 due to the lack of a specialist economic impact assessment to quantify environmental and social benefits.	Withdraw PC1 and undertake a publicly disclosed detailed economic, social and cultural impact assessment that informs a revised plan change
S181.006	General comments	General comments - overall	Amend	Concerns with the drafting errors and failure to define key terms in PC1	PC1 is redrafted correctly and resubmitted for consultation.
S181.007	General comments	General comments - overall	Not Stated	Suggests PC1 is inconsistent with the incoming Government's 2023 election platform related to unlocking land for housing	Any decision that prohibits the ability to unlock land for housing as proposed by PC1 should be revised
S181.008	General comments	General comments - overall	Not Stated	Notes an absence of detail in PC1 around GWRC managed land.	Not stated
S181.009	General comments	General comments - water bodies	Not Stated	Concerned that 1080 drops on GWRC managed land will affect the waterways and soil quality.	Not stated

S179 John Coveney

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S179.001	General comments	General comments - overall	Not Stated	Considers regional bodies are overregulating.	Not stated
S179.002	General comments	General comments - fresh water	Not Stated	Where resource consent is required to take water, there should be evidence-based data showing detrimental effects. Opposes blanket regulation. Considers restrictions to take water from an allocated source should only be put in place when data or science shows there is a detrimental effect to that waterway, aquifer or ecosystem and/or the upstream or downstream cumulative effect.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

				Considers the current methodology results in costs relates to offsets, lost production and wasted infrastructure. Considers the status quo should apply until data or science proves otherwise and blanket regulation is opposed.	
--	--	--	--	---	--

S017 John Easter

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S17.001	2 Interpretation	Highest erosion risk land (plantation forestry)	Oppose	Considers Makara and Ohariu catchments are faulted with variable aspects and topography. Potential erosion varies within sub catchments, which cannot be determined through aerial scanning data.	Considers erosion potential of all land must be based on evidence from site investigation. Considers Map 92 is not fit for purpose other than as a tool to indicate where specific site investigation should be undertaken.
S17.002	2 Interpretation	Highest erosion risk land (pasture)	Amend	Considers Makara and Ohariu catchments are faulted with variable aspects and topography. Potential erosion varies within sub catchments, which cannot be determined through aerial scanning data.	Considers erosion potential of all land must be based on evidence from site investigation. Considers Map 92 is not fit for purpose other than as a tool to indicate where specific site investigation should be undertaken.
S17.003	2 Interpretation	High erosion risk land (pasture)	Amend	Considers Makara and Ohariu catchments are faulted with variable aspects and topography. Potential erosion varies within sub catchments, which cannot be determined through aerial scanning data.	Considers erosion potential of all land must be based on evidence from site investigation. Considers Map 92 is not fit for purpose other than as a tool to indicate where specific site investigation should be undertaken.
S17.004	2 Interpretation	Highest erosion risk land (woody vegetation)	Amend	Considers Makara and Ohariu catchments are faulted with variable aspects and topography. Potential erosion varies within sub catchments, which cannot be determined through aerial scanning data.	Considers erosion potential of all land must be based on evidence from site investigation. Considers Map 92 is not fit for purpose other than as a tool to indicate where specific site investigation should be undertaken.
S17.005	2 Interpretation	Hydrological control	Amend	Considers it is not possible to consider hydrological control without considering formative effects of extreme floods and droughts.	Considers interpretation needs to include flood risk management. Hydrological controls must consider effects of the Makara Stream mouth opening / closure on deposition and oxygen depletion.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S17.006	2 Interpretation	Stormwater	Amend	Considers current interpretation is an urban concept that is not relevant to rural catchments.	Change Stormwater to Runoff or alternatively introduce definition of Runoff that is appropriate to rural catchments.
S17.007	2 Interpretation	Whaitua	Amend	Considers the Makara/Ohariu catchments are isolated from the adjoining Wellington urban catchments and cannot be managed as an integrated system.	Create a separate Whaitua for the Makara/Ohariu catchment
S17.008	3 Objectives	Amendments to Chapter 3 - Objectives	Amend	Considers reforestation through retirement can take hundreds of years. Considers any disturbance of the stream bed yields high levels of decolouration which will exceed the generic requirements in the plan change. Considers provisions of the plan change are completely unrealistic and are not based on evidence. Considers the "reasonable timeframe" default of 2050 referred to in many objective statements is not achievable within the Makara / Owhariu whaitua. Considers revegetation of stream channels and adjacent floodplains will take many years.	Considers rural area objectives should be described as aspirational to be achieved over generations of landowners.
S17.009	9 Te Awarua-o-Porirua Whaitua	Policy P45: Protecting trout habitat.	Oppose	Considers the protection of introduced species is not relevant to freshwater policy.	Delete policy or amend to make clear this policy applies only to indigenous trout, not to introduced species.
S17.010	5.2 and 5.3 Discharges to land and water and land use rules	5.2 and 5.3 Discharges to land and water and land use rules	Amend	Concerned the objectives to establish vegetation and revegetation restricts machinery access in water which sometimes cannot be avoided. Suggests provisions mitigating adverse effects including limiting access to remediation or prevention of flood damage and limiting access to outside spawning periods and weekends to minimise effects on recreational use.	Suggests separate provisions are required for working in streams within the Makara/Ohariu whaitua.
S17.011	6 Other methods	Method M41: Identifying and responding	Amend	Concerned about the reliance on the use of a single monitoring site to support the provisions in PC1. Considers more monitoring sites are required (provides examples).	Water quality monitoring in the Makara/Ohariu catchment must be replicated at a sub catchment level to identify causes of degradation. Monitoring sites should include equipment and alarms which allow GWRC to respond within the timeframe required to identify adverse effects.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		g to degradatio n in freshwater bodies within Whaitua Te Whanganu i-a-Tara and Te Awarua-o- Porirua Whaitua.			
S17.012	6 Other methods	Method M42: Small farm property registratio n within Whaitua Te Whanganu i-a-Tara and Te Awarua-o- Porirua Whaitua.	Amend	The points in the attached document have been listed as new submission points by GWRC at the beginning of this submission.	Make council responsible for the preparation and registration of small farms plans in consultation with the property owner.
S17.013	8 Whaitua Te Whanganu ui-a-Tara	Table 8.4: Target attribute states for rivers.	Amend	Concerned about the reliance on the use of a single monitoring site to support the provisions in PC1. Water quality targets and timeframes are unrealistic.	Targets for Makara Stream in table 8.4 should be tagged as indicative and non-operational until targets can be determined to represent sub catchments at the confluences of major tributaries. Timeframe be determined by implementing intergenerational land use changes. The specified timeframe of 2040 should be replaced with an indicative figure, suggesting 2100 may be achievable.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S17.014	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Amend	Considers the requirements and benefits from implementing policies WH.P21-WH.P24 should be funded by regional and national communities.	Clarification that implementation and costs of implementation of policies in 8.2.4 are funded by Council.
S17.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P22: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Amend	Considers pastoral land should be measured by the area of land used for that purpose not the size of the block of land.	Clause (c) be clarified to refer to contiguous parcels for a specified land use not the area of the titles the areas are within.
S17.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Plans should be used to show areas which are subject to further investigation not those which are subject to contingent policies and rules.	Plans associated with erosion risk attached to PC1 should be labelled indicative to assist with interpretation and not be part of the plan change.
S17.017	General comments	General comments - overall	Not Stated	Considers plan change must be amended to include statutory provisions for central and local government funding for retirement of land, land-use changes, certification costs and mitigation measures required to meet objectives.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S17.018	General comments	General comments - rural	Not Stated	Considers mandated retirement of erosion prone pastoral land into permanent forest must be a regional/national responsibility planned and funded in accordance with a risk based regional plan.	Not stated.
S17.019	General comments	General comments - rural	Not Stated	Feels compensation for land retirement, covering loss of production and income and options for property purchase, should be included within the plan change or supporting regulation before plan change is implemented.	Not stated.
S17.020	General comments	General comments - target attribute states	Not Stated	Concerned about timeframes to achieve target outcomes in the Makara Catchment. Generic figures in plan change should be replaced with guidance notes.	Not stated.
S17.021	General comments	General comments - rural	Not Stated	Assumptions of silt leading to afforestation or mandated retirement of pastoral land must be replaced with evidence from sub catchments and tributaries.	Not stated.
S17.022	General comments	General comments – stormwater management	Not Stated	Considers the production of peak runoff to be a greater risk to the community than potential production of silt.	Not stated.
S17.023	General comments	General comments - overall	Not Stated	The points in the attached document have been listed as new submission points by GWRC at the beginning of this submission.	Not stated.
S17.024	General comments	General comments - overall	Not Stated	References the Rivers Control Act 1941 being a precedent for management of erosion and protecting property from flood damage.	Not stated.
S17.025	General comments	General comments - rural	Not Stated	Not Stated	Not stated.
S17.026	General comments	General comments - rural	Not Stated	Concerned that any use of streams including recreational uses will exceed requirements in PC1	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				and the PC1 provisions are unrealistic and not based on evidence.	
S17.027	General comments	General comments - rural	Not Stated	Not Stated	Not stated.
S17.028	General comments	General comments - rural	Not Stated	Not Stated	Not stated.
S17.029	General comments	General comments - overall	Not Stated	Concerned about the time it will take to achieve PC1's long-term goals and that the timeframes and expectations on landowners are unrealistic.	Not stated.
S17.030	General comments	General comments - overall	Not Stated	Considers PC1 needs to include provisions to address landowners being penalised for use of the land while those with lease agreements (using windfarms as an example) can avoid liability for diverting revenue into reforestation.	Not stated.
S17.031	General comments	General comments - overall	Not Stated	Considers land use changes that deal with runoff and reducing flood peaks in the Makara/Ohariu catchments will also deliver PC's objectives of reducing silt loads. Concerned PC1's focus on grade and cover of land (and not reducing flood flows) will not reduce transportation of silt.	Not stated.

S034 John Hill

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S34.001	General comments	General comments - overall	Support	Legislation or council directions must be clear and precise.	Legislation or council directions must be clear and precise.
S34.002	General comments	General comments - overall	Support	The plan change should not be able to be misinterpreted or used to support the ideology of any member or group within GWRC	Plan change should not be able to be misinterpreted or used to support the ideology of any member or group within GWRC
S34.003	General comments	General comments - overall	Support	An independent commissioner should be available to manage misuse or interpretation of rules.	Seeks access to a commissioner where situations outlined in submission occur.

S237.002	General comments	General comments - current legislation	Not Stated	Concerned lack of evidence and justification for forestry restrictions and how NES-CF controls are insufficient for managing forestry and associated effects.	Not stated
S237.003	General comments	General comments - current legislation	Not Stated	Considers PC1 duplicated existing controls under NES-CF including use of erosion mapping and management plan requirements.	Not stated
S237.004	General comments	General comments - economic cost/impact	Not Stated	Concerns with lack of evidence provided by GW on environmental effects from forestry.	Not stated
S237.005	General comments	General comments - current legislation	Not Stated	Promotes the correct application of stringency under the NES-CF for specific additional controls to the existing NES-CF framework to address water quality concerns, as the preferred approach and an alternative to the PC1 consented regime proposed.	Not stated
S237.006	General comments	General comments - water bodies	Not Stated	Supports principles of Te Mana o te Wai. Considers any rule, policy or objective of PC1 intended to give effect to Te Mana o te Wai must demonstrate it is necessary to do so.	Not stated
S237.007	General comments	General comments - target attribute states	Not Stated	Considers any rule, policy or objective of PC1 intended to give effect to a specified TAS must demonstrate it is necessary. Suggests scientific data supports that current forest landuse, controls, and management practices, as regulated under the NES-CF, are sufficient to achieve the desired target attribute state for	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>freshwater clarity Notes the Section 32 report and scientific evidence (Freshwater quality monitoring technical report) that commercial forestry as a land use, is beneficial for water quality; and that planting commercial forests (afforestation and replanting) should be encouraged, and not restricted or prohibited, by the NRP. Question if any of the amended policies, objectives and rules relating to commercial forestry land use are necessary to achieve target attribute states in other FMU or part-FMU. Opposes any proposed or amended rules in PC1 for commercial forestry, on the basis they are not necessary for achieving the target attribute state for visual clarity and total suspended sediment, and current National Standards are appropriate for managing forestry activities and their effects.</p>	
S237.008	General comments	General comments - overall	Not Stated	<p>Notes importance that policies, objectives or rules related to commercial forestry are supported by appropriate empirical evidence. Considers the collaboration reports suggests no scientific relationship between erosion risk, sediment delivery (connectivity), sediment yield, or receiving environment target state attributes, such as visual clarity. Question how spatial model of erosion risk can apply as a tool for managing water quality from land used for commercial forestry operations, particularly without any evidence GWRC having given due consideration to existing literature on connectivity and sediment yield. Opposes rules related to identified highest erosion risk land, land use and discharge consent thresholds, and erosion and sediment management plans, as they relate to commercial forestry activities</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and do not consider management practices beyond erosion risk, and are already adequately controlled for within NES-CF.</p> <p>Considers the Section 32 Report, does not provide evidence or justify that existing commercial forestry contributes to sedimentation and current forestry management practices and the regulatory framework are not adequate to address the improvements needed. Considers councils data suggests the existing regime controlled by NES-CF does not appear to contribute any additional sediment that would be necessary to address to achieve water clarity targets within catchments monitored with that land use.</p>	
S237.009	General comments	General comments - water quality improvements	Not Stated	<p>Seeks rules must be consistent with existing operating framework of NES-CF.</p> <p>Notes the sediment discharge provisions of the NES-CF form an important component of the permitted activity standards for forestry earthworks under the current regulatory regime, and apply irrespective of the identified erosion susceptibility of the land.</p> <p>Considers Council has overlooked role of water quality standards (namely permitted activity discharges) already provided for by NES-CF. Questions if further deviation from standards currently expressed by the National Standards is necessary or defensible.</p> <p>Considers as well as unnecessarily overriding existing discharge standards of NES-CF, PC1 is also duplicating existing requirements of National Standards for forestry operations to have a management plan address erosion and sedimentation from land disturbing activities.</p> <p>Considers as well as unnecessarily overriding existing discharge standards of NES-CF, PC1 is also duplicating existing requirements of National</p>	Seeks rules must be consistent with existing operating framework of NES-CF.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Standards for forestry operations to have a management plan address erosion and sedimentation from land disturbing activities. Considers there is no evidence provided in Council reports that current NES-CF framework for managing erosion, sediment, and water quality is deficient either in current monitoring data or desired future state. Also notes no evidence provided by Council that existing Forestry Earthworks and Harvest Management Plans within NES-CF is insufficient for managing forestry activities.	
S237.010	General comments	General comments - current legislation	Not Stated	<p>Notes PC1 must be implemented in accordance with statutory provisions. Notes National Environmental Standards take primacy over Plan rules unless the standards expressly provide otherwise, and PC1 should complement existing NES-CF framework and only introduce more stringent rules where necessary to achieve an objective developed to give effect to NPS-FM. Concerned current provisions seek to replace the current permitted activity approach of National Instruments leading to regulatory inconsistency. Notes whilst regulation 6 of NES-CF allows for a council to provide more stringent rules to meet an objective giving effect to NPS-FM, there is a process to be undertaken by council to justify any application of stringency, refers to Section 32 (4) of RMA.</p> <p>Submitter considers none of the proposed changes necessary, or validly justified. Considers Council has not undertaken any of its own research into how NES-CF provisions have been operating and has failed to provide evidence to support these proposed changes, including evidence to show current regulatory regime is not sufficient to achieve a plan objective.</p> <p>Suggests proposed or amended policies, objectives or rules of PC1 as they relate to commercial forestry</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				are not necessary or appropriately justified in accordance with the statutory provisions of Section 32(4) of RMA that apply to this type of plan change.	
S237.011	General comments	General comments - current legislation	Not Stated	<p>Considers NES-CF sufficient for managing forestry activities and notes Council have not provided any evidence contrary to this.</p> <p>Seeks Council should provide evidence that NES-CF is insufficient to meet the objectives for water quality, ecosystem health and mana whenua values in these FMUs before looking to pursue this plan change process further.</p> <p>Alternatively, seeks Council utilise stringency ability under NES-CF to develop more stringent rules for specific controls, noting Council must provide evidence to show the NES-CF controls are not sufficient to achieve a specific plan objective to give effect to NPS-FM in order to apply a more stringent rule.</p>	<p>Seeks Council provide evidence that NES-CF is insufficient to meet the objectives for water quality, ecosystem health and mana whenua values before progressing with PC1.</p> <p>Alternatively, Seeks Council should utilise stringency ability under NES-CF to develop more stringent rules for specific controls.</p>

S253 John Western

S208.001	General comments	General comments - overall	Oppose	Opposes PC1 in relation to the management of freshwater within Te Whaitua te Whanganui-a-Tara Implementation Programme, the amendments to the beds of lakes and rivers rules, and new sites with significant indigenous biodiversity values. Notes objection to 'new national direction' due to the change of Government and potential for national direction to change making PC1 unfit for purpose. Opposes the content of the Te Whaitua te Whanganui IP as it discusses the submitter's property.	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S208.002	General comments	General comments - consultation	Oppose	Concerned about the timing of consultation on PC1 at a busy and stressful time of the year given its length and complexity. Also concerned about a lack of direct consultation.	Extend public consultation

S257 Kāinga Ora

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S257.001	General comments	General comments - definitions	Amend	Notes provisions and rule framework refer to "greenfield development" but there is no corresponding definition.	Introduce new definition for Greenfield Development.
S257.002	General comments	General comments - overall	Amend	Not stated	That the specific amendments, additions or retentions which are sought, are accepted and adopted into the Natural Resources Plan, including such further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.003	2 Interpretation	Earthworks	Amend	Generally supports the definition as it aligns with the National Planning Standards. Clarification is sought in the related rules of Chapters 8 and 9 that exclude thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance.	Retain notified definition, subject to rules being amended to enable works associated with infrastructure. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.004	2 Interpretation	Hydrological control	Oppose	Considers the definition is non-specific and not appropriate for use as a permitted standard. Questions who is responsible for determining the PA status, and on what basis.	Amendment sought to provide greater clarity as to what constitutes a hydrological control. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.005	2 Interpretation	Impervious surfaces	Support	Supports proposed wording.	Retain notified definition

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S257.006	2 Interpretation	Redevelopment	Oppose	Opposes the inclusion of reconstruction and replacement within the definition.	Amendments sought Remove "reconstruction" and "replacement" from definition. Alternatively, create an appropriate exclusion for larger areas where no treatment is provided. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.007	2 Interpretation	Stabilisation	Support	Supports proposed wording.	Retain notified definition
S257.008	2 Interpretation	Stormwater treatment system	Support	Supports proposed wording.	Retain notified definition
S257.009	2 Interpretation	Unplanned greenfield development	Oppose	Opposes definition based on areas identified as 'unplanned greenfield area' on maps 86, 87, 88, and 89. Notes the maps do not reflect zoning changes that have been made by the Porirua PDP Hearing Panel. Considers the proposed 'unplanned greenfield areas' comprising open space zoned land in Porirua will inhibit public housing projects, as some existing open space zoned land is intended to be acquired and/ or will be the subject of land swaps. Considers it unclear what constitutes "greenfield development" in the context of "unplanned greenfield development", including whether infrastructure is included, and if so considers it unworkable. Considers the existing rule framework will constrain expansion and/or construction of new infrastructure in locations that benefit from a designation for such public works.	Amendments sought A full review of, and expansion to the areas identified as planned/existing urban areas on maps 86-89. Exclusion of land zoned as open space areas from unplanned greenfield areas where these are located in an urban environment. Include new definition for Greenfield Development. Within this definition, seek also an exclusion of infrastructure works (as infrastructure works often traverses non-urban zones to service the urban environment). Further infrastructure works (including network upgrades) can result in the enhancement and betterment of environmental and water quality outcomes). Delete associated Prohibited Activity rule framework / or reduce activity status to align with the NPS-UD. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.010	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater	Not Stated	Mostly supportive of the proposed objectives but notes that some objectives would be difficult to achieve. Seeks outcomes across PC1 to ensure the Plan Change does not extend beyond that necessary to	Consequential changes sought where relevant to reconcile outcomes to changes sought in specific rules. Amendments to align with and not go beyond what is required under the NPS-FM. Amend to reflect an extended timeline for the achievement of

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		bodies and the coastal marine area within Whaitua Te Whanganu i-a-Tara is progressively improved and is wai ora by 2100.		implement the NPS-FM, noting the considerable additional regulatory burden such a framework imposes upon a range of stakeholders. Considers this appropriate to ensure PC1 does not unnecessarily fetter the ability to deliver development outcomes, noting the national significance of enabling urban development. In terms of timelines for achievement of the Target Attribute States provided within the provisions at WH.O2, WH.O3, Table 8.1, WH.O8, Table 8.4, and WH.P4, seeks an extended timeframe from the 2040 currently prescribed to a more realistic timeframe to consider the costs and feasibility of achieving the TAS.	TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.011	8 Whaitua Te Whanganu i-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Generally supports the intent of this policy, but opposes reference to prohibiting unplanned greenfield development at WH.P2(a). Reasons for this are discussed in submission on the relevant policy and rule framework specific to unplanned greenfield development. Would support an extended timeline for the achievement of meeting the TAS.	Remove reference to prohibiting unplanned greenfield development at WH.P2(a). Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.012	8 Whaitua Te Whanganu i-a-Tara	Policy WH.P4: Achievement of the visual clarity target attribute states.	Neutral	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.013	8 Whaitua Te	Table 8.5: Sediment	Neutral	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	load reductions required to achieve the visual clarity target attribute states.			achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point source discharges.	Oppose	Supports the general intent of the policy, but opposes the restrictive avoid policy framework.	Amend to remove the avoidance framework, or alternatively, introduce an appropriate qualifier statement to the avoidance framework. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Supports the proposed policy but only in relation to the untreated state of discharges.	Alter so all points relate to untreated discharges Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S257.017	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges.	Support	Broadly supports the policy but considers the proposed rule framework that flows from this requiring the control and treatment of stormwater at site and corresponding thresholds are overly restrictive.	Retain policy as notified
S257.018	8 Whaitua Te Whanganui-a-Tara	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Generally supports this policy framework but seeks recognition of, and a pathway for, the development and implementation of catchment/sub-catchment Stormwater Management Plans for other entities outside of local authority and State Highway networks.	Not stated
S257.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	Generally supports provisions that seek to minimise the adverse effects of stormwater discharge on the environment but notes the 85% requirement as proposed by the policy introduces a significant cost to developers of a site. Concerned that this policy reads like a rule, would be difficult to achieve through redevelopment of existing urban environments, and could discourage brownfield redevelopment. Notes the policy is framed as if all impervious surfaces are in fact holding contaminants needing to be treated and considers this is a high and unreasonable test which will be costly to implement. Considers the focus should be more on those areas which contaminant loading is higher (i.e. roads with high vehicle use, large carpark areas, industrial areas).	Amendments sought Review policy drafting to ensure it is more "policy focused". Consequential amendments are sought to reflect changes sought in associated rules Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Seeks amendment to provisions to recognise a pathway for the creation and implementation of Stormwater Management Plans for other entities outside of local authority and State Highway networks.	
S257.020	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the financial contribution framework for greenfield development. Considers the broader provisions and regulatory framework of PC1 significantly onerous, and the further imposition of financial contributions will further limit the supply of affordable housing.	Delete policy and rules associated in regard to the requirement to pay financial contributions; Alternatively, Review financial contributions to enable consideration and account for of network improvements undertaken in the relevant catchment (to which the proposal relates), where such works would enhance existing water quality outcomes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.021	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes this policy and the Prohibited Rule framework and considers policy is too narrow since it does not provide any pathway or guidance other than avoidance and the proposed prohibited activity framework is overly onerous. Acknowledges that discharges from new urban areas generally increase the contaminant load within an undeveloped area but it is too far to automatically conclude that this would impede achievement of the target attribute state. Considers the activity status fails to recognise that greenfield development can provide a range of opportunities to more effectively undertake catchment-based stormwater management and enhance the environment, particularly those that are already in a degraded state. Noting the RMA is an effects-based framework, considers it unclear why new stormwater discharge from unplanned greenfield development is treated differently from stormwater discharge from planned development. Considers the s32 analysis contains inadequate	Delete the policy Alternatively, amend the proposed policy to provide a pathway where the effects from additional stormwater discharges can be managed appropriately. This alternative framework could also incorporate a set of criteria for out of sequence development, which is in line with the direction of the NPS-UD. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				justification of this framework and that the proposed framework is at odds with the NPS-UD - which requires responsiveness to urban development.	
S257.022	8 Whaitua Te Whanganui-a-Tara	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.023	8 Whaitua Te Whanganui-a-Tara	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.024	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Amend	Generally support this policy but questions if an accompanying technical review has been undertaken of the current GWRC Erosion and Sediment Control Guideline, and whether the practices set out within the document are capable of delivering the TSS standard under PC1. Refers to submission points against WH.P31.	Amendments sought Integrate consideration of winter works Consequential changes Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.025	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Oppose	Questions the 100g/m ³ TSS standard for earthworks and what has informed this standard. Notes supporting technical reports refer to a reduction in annual sediment load of 40% per year but do not draw a connection between this target reduction and the proposed standard in PC1.	Review of and explanation of the 100g/m ³ TSS standard. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S257.026	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Opposes this policy and the non-complying rule framework. Considers winter works can be adequately considered as a listed matter of discretion within a RDA rule, with conditions being placed accordingly to manage works during this period. Considers the framework lacks real-world practical application.	Delete the policy and consequential changes to WH.P29 and the related rule framework. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.027	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	Considers it unclear how discharge to soakpits is to be considered within the rule framework (or more generally across PC1). Seeks amendment to WH.R2(b) to clarify the presumed intent of this Permitted Activity rule i.e. that is not intended to capture discharge via soakpits (noting the definition of stormwater network includes soakpits). Notes these could risk elevation to NC activity under P.WH12.	Clarify that soak pits are permitted Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.028	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Oppose	Opposes the current thresholds of this rule. WH.R5(a) - Considers 1,000m ² of impervious area is a low baseline for development and will impose a considerable regulatory burden and cost on development through consent requirements, which has not been adequately assessed within the s32 analysis. Considers the focus should be more on those areas where contaminant loading is higher. Considers it unclear whether the 1000m ² threshold relates to only new areas of impervious surfaces, or whether the overall total of impervious surfaces of a redeveloped site is limited to 1000m ² (regardless of existing state). If the latter, Submitter seeks amendment so the 1000m ² threshold relates only to new surfaces totalling more than 1000m ² . WH.R5(c) - Considers the current standard requiring hydrological control where new impervious surface exceeds 30m ² is overly restrictive and unclear as to how to determine compliance. Considers it is unclear how the very low threshold of 30m ² has been determined, and the definition of "hydrological	Increase permitted impervious surface threshold above 1000m ² to at least no less than 5000m ² . Clarify that the threshold relates to new/additional areas of impervious surfaces Clarify that external fixings are excluded at WH.R5(b) Delete WH.R5(c). Include permitted pathway for developments where they are operating under a certified sub-catchment Stormwater Management Plan [or similar]. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				control" is also unclear. Considers the method of compliance appears to conflict with other water standards managing this issue, noting that Wellington Water's acceptable solutions do not align with the requirement for hydrological control. Notes the conflict with WWL standards, and duplication with emerging District Plan requirements. Amendments sought to account for off-site controls that have been designed to manage catchment run-off from large-scale development works.	
S257.029	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Oppose	Opposes the 1,000m ² threshold of impervious area, noting reasons outlined in submission on WH.R5. Seeks an additional measure by which a large-scale proposal can be considered as a Controlled Activity - regardless of compliance with WH.R6 (a) - where the stormwater is to be managed in accordance with a certified catchment/sub-catchment Stormwater Management Plan (or similar). Opposes WH.R6/P.R6(c) as it does not provide alternative framework applicable to catchment based solutions for attenuation, control and treatment associated with "greenfield development", and does not provide for reductions where treatment exceeds 85%.	Increase the 1000m ² -3000m ² threshold to align with the at least minimum of 5000m ² as a permitted activity in WH.R5. Failing implementation of changes sought under WH.R5, provide for proposal to be Controlled activity where it fails to meet WH.R6(a), but is being undertaken in accordance with a certified sub-catchment Stormwater Management Plan [or similar]. Include an exclusion to WH.R6(c) where a proposal is being undertaken as part of a wider comprehensive development that includes a catchment scale stormwater treatment system. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.030	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity.	Oppose	Opposes the starting point of a 1,000m ² threshold of impervious area noting reasons outlined in submission on WH.R5. Considers the range (1000m ² -3000m ²) provided for in this rule is too restrictive and should be increased. Suggests an upper limit of at least 5000m ² as permitted. Considers that this rule duplicates emerging regulation and rules introduced in District Plans in the region.	Increase the 1000m ² -3000m ² threshold commensurate with the minimum 5000m ² threshold for permitted activities. Failing implementation of changes sought under P.R5, provide for proposal to be Controlled activity where it fails to meet WH.R7(a), but is being undertaken in accordance with a certified sub-catchment Stormwater Management Plan [or similar]. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

		prohibited activity.		<p>achievement of the target attribute state. Considers the activity status fails to recognise that greenfield development can provide a range of opportunities to more effectively undertake catchment-based stormwater management and enhance the environment, particularly those that are already in a degraded state.</p> <p>Considers the s32 analysis contains inadequate justification of this framework and that the proposed framework is at odds with the NPS-UD - which requires responsiveness to urban development. Suggest that a set of criteria for out of sequence development is provided in line with the NPS-UD. Concerns around the lack of clarity in relation to how this framework is intended to apply noting the term 'greenfield development' is undefined.</p> <p>Considers it unclear what the full extent of activities are to be included within the scope of 'greenfield development' and would be concerned if this included infrastructure.</p> <p>Disputes the identified "Unplanned Greenfield Development" areas.</p>	necessary to fully achieve the relief sought in this submission.
S257.034	8 Whaitua Te Whanganui-a-Tara	Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.	Amend	Generally supports intent of this rule but seeks a clear threshold for vegetation clearance that can occur as a permitted activity.	Introduce a permitted threshold of vegetation clearance. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.035	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land -	Oppose	Generally supports the intent of this rule but considers the 200m ² threshold too onerous. Considers it unclear how 200m ² for the clearance of woody vegetation has been arrived at, noting the operative NRP provides for such clearance up to 2ha.	Increase the threshold of vegetation clearance before consent is required as a controlled activity. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		controlled activity.			
S257.036	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Oppose	Broadly supports the intent of this rule (as amended by Clause 16), but oppose WH.R23(c)(iv) as it is not practical or achievable to avoid all discharge from the site.	Delete WH.R23(c)(iv) Include an exclusion within the rule that exempts activities associated with the trenching of services - i.e. thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.037	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Questions the 100g/m ³ TSS standard for earthworks and seek clarification as to what has informed this standard. Notes the supporting technical reports refer to a reduction in annual sediment load of 40% per year but do not draw a connection between this target reduction and the proposed standard in PC1. Opposes the condition in the rule at WH.R24(b) as it places a restriction on earthworks between 1st of June and 30th September and the resulting escalation to a non-complying activity.	Delete the condition in the rule at WH.R24(b) where it places a restriction on earthworks between 1st of June and 30th September and the resulting escalation to a non-complying activity. Instead, include winter works as a matter of discretion within the relevant RDA rule. Include an exclusion within the rule that exempts activities associated with the trenching of services - i.e. thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.038	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Opposes the non-complying rule insofar as it relates to winter works.	Delete WH.R25 with consideration of winter works being a listed matter of discretion under WH.R24. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.039	9 Te Awarua-o-Porirua Whaitua	Objective P.O1: The health of Te Awarua-o-Porirua's groundwater, rivers, lakes, natural	Amend	Mostly supportive of the proposed objectives but notes that some objectives would be difficult to achieve. Seeks outcomes across PC1 to ensure the Plan Change does not extend beyond that necessary to implement the NPS-FM, noting the considerable additional regulatory burden such a framework imposes upon a range of stakeholders. Considers this appropriate to ensure PC1 does not unnecessarily fetter the ability to deliver	Consequential changes sought where relevant to reconcile outcomes to changes sought in specific rules. Amendments to align with and not go beyond what is required under the NPS-FM. Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		wetlands, estuaries, harbours and coastal marine area is progressively improved and is wai ora by 2100.		development outcomes, noting the national significance of enabling urban development. In terms of timelines for achievement of the Target Attribute States provided within the provisions at WH.O2, WH.O3, Table 8.1, WH.O8, Table 8.4, and WH.P4, seeks an extended timeframe from the 2040 currently prescribed to a more realistic timeframe to consider the costs and feasibility of achieving the TAS.	
S257.040	9 Te Awarua-o-Porirua Whaitua	Policy P.P1: Improvement of aquatic ecosystem health.	Support	Generally support this policy as it focuses on the improvement of ecosystem health, which is consistent with the NPS-FM.	Retain as notified
S257.041	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Generally support this policy as it focuses on the new attributes aimed specifically at providing for ecosystem health, which is consistent with the NPS-FM; although the related timeline for achievement of the corresponding TAS is sought to be extended, as noted elsewhere. Opposes reference to prohibiting unplanned greenfield development at P.P2(a) for reasons noted in submission against the relevant policy and rule framework specific to unplanned greenfield development.	Remove reference to prohibiting unplanned greenfield development at P.P2(a). Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.042	9 Te Awarua-o-Porirua Whaitua	Policy P.P4: Contaminant load reductions	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S257.043	9 Te Awarua-o-Porirua Whaitua	Table 9.3: Harbour arm catchment contaminant load reductions	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.044	9 Te Awarua-o-Porirua Whaitua	Policy P.P8 Avoiding discharges of specific products and waste.	Amend	Generally supports the proposed policy, but seeks amendments so it relates to the untreated state of discharges.	Alter so all points relate to untreated discharges Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.045	9 Te Awarua-o-Porirua Whaitua	Policy P.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Support	Supports this general policy which outlines requirement to manage SW discharge in order to achieve the stated TAS in the identified timeframes	Not stated
S257.046	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater discharges	Neutral	Broadly supports the policy but considers the proposed rule frameworks that flows from this requiring the control and treatment of stormwater at site and corresponding thresholds are overly restrictive.	Retain as notified
S257.047	9 Te Awarua-	Policy P.P13:	Amend	Generally supports provisions that seek to minimise the adverse effects of stormwater discharge on the	Consequential amendments are sought to reflect changes sought in associated rules.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	Stormwater discharges from new and redeveloped impervious surfaces.		environment but notes the 85% requirement as proposed by the policy introduces a significant cost to developers of a site. Concerned that this policy reads like a rule, would be difficult to achieve through redevelopment of existing urban environments, and could discourage brownfield redevelopment. Seeks amendment to provisions to recognise a pathway for the creation and implementation of Stormwater Management Plans for other entities outside of local authority and State Highway networks.	Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.048	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Oppose	Opposes the financial contribution framework for greenfield development. Considers the broader provisions and regulatory framework of PC1 significantly onerous, and the further imposition of financial contributions will further limit the supply of affordable housing. Notes no definition of greenfield development creates unhelpful ambiguity within the proposed framework.	Delete policy and rules associated in regard to the requirement to pay financial contributions; Alternatively, Review financial contributions to enable consideration and account for of network improvements undertaken in the relevant catchment (to which the proposal relates), where such works would enhance existing water quality outcomes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.049	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes this policy and the Prohibited Rule framework and considers policy is too narrow since it does not provide any pathway or guidance other than avoidance and the proposed prohibited activity framework is overly onerous. Acknowledges that discharges from new urban areas generally increase the contaminant load within an undeveloped area but it is too far to automatically conclude that this would impede achievement of the target attribute state. Considers the activity status fails to recognise that greenfield development can provide a range of opportunities to more effectively undertake catchment-based stormwater management and enhance the environment, particularly those that are already in a	Delete the policy Alternatively, amend the proposed policy to provide a pathway where the effects from additional stormwater discharges can be managed appropriately. This alternative framework could also incorporate a set of criteria for out of sequence development, which is in line with the direction of the NPS-UD. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>degraded state. Noting the RMA is an effects-based framework, considers it unclear why new stormwater discharge from unplanned greenfield development is treated differently from stormwater discharge from planned development. Considers the s32 analysis contains inadequate justification of this framework and that the proposed framework is at odds with the NPS-UD - which requires responsiveness to urban development.</p>	
S257.050	9 Te Awarua-o-Porirua Whaitua	Policy P.P16: General wastewater policy to achieve target attribute states and coastal water objectives.	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.051	9 Te Awarua-o-Porirua Whaitua	Policy P.P17: Progressing works to meet Escherichia coli target attribute states.	Amend	Generally supports but would support an extended timeline for the achievement of meeting the TAS.	Amend to reflect an extended timeline for the achievement of TAS which takes into consideration the feasibility and cost of achieving the prescribed timeframes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.052	9 Te Awarua-o-Porirua Whaitua	Policy P.P27: Management of earthworks sites.	Amend	Generally support this policy but questions if an accompanying technical review has been undertaken of the current GWRC Erosion and Sediment Control Guideline, and whether the practices set out within the document are capable of	Integrate consideration of winter works Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				delivering the TSS standard under PC1. Refers to submission points against P.P29	
S257.053	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	Questions the 100g/m ³ TSS standard for earthworks and what has informed this standard. Notes supporting technical reports refer to a reduction in annual sediment load of 40% per year but do not draw a connection between this target reduction and the proposed standard in PC1.	Not stated
S257.054	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Opposes this policy and the non-complying rule framework. Considers winter works can be adequately considered as a listed matter of discretion within a RDA rule, with conditions being placed accordingly to manage works during this period. Considers the framework lacks real-world practical application.	Delete the policy and consequential changes to WH.P29 and the related rule framework. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.055	9 Te Awarua-o-Porirua Whaitua	Rule P.R2: Stormwater to land - permitted activity.	Amend	Considers it unclear how discharge to soakpits is to be considered within the rule framework (or more generally across PC1). Seeks amendment to WH.R2(b) to clarify the presumed intent of this Permitted Activity rule i.e. that is not intended to capture discharge via soakpits (noting the definition of stormwater network includes soakpits). Notes these could risk elevation to NC activity under P.R11.	Clarify rule such that soak pits are permitted. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.056	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Oppose	Opposes the current thresholds of this rule. WH.R5(a) - Considers 1,000m ² of impervious area is a low baseline for development and will require impose a considerable regulatory burden and cost on development through consent requirements, which has not been adequately assessed within the s32 analysis. Considers the focus should be more on those areas where contaminant loading is higher. Considers it unclear whether the 1000m ² threshold relates to only new areas of impervious surfaces, or whether the overall total of impervious surfaces of a redeveloped site is limited to 1000m ² (regardless of	Increase permitted impervious surface threshold above 1000m ² to at least 5000m ² . Clarify that the threshold relates to new/additional areas of impervious surfaces Clarify that external fixings are excluded at P.R5(b). Delete P.R5(c). Include permitted pathway for developments where they are operating under a certified sub-catchment Stormwater Management Plan [or similar]. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				existing state). If the latter, Submitter seeks amendment so the 1000m ² threshold relates only to new surfaces totalling more than 1000m ² . WH.R5(c) - Considers the current standard requiring hydrological control where new impervious surface exceeds 30m ² is overly restrictive and unclear as to how to determine compliance. Considers it is unclear how the very low threshold of 30m ² has been determined, and the definition of "hydrological control" is also unclear. Considers the method of compliance appears to conflict with other water standards managing this issue, noting that Wellington Water's acceptable solutions do not align with the requirement for hydrological control. Notes the conflict with WWL standards, and duplication with emerging District Plan requirements. Amendments sought to account for off-site controls that have been designed to manage catchment runoff from large-scale development works.	
S257.057	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Oppose	Opposes the 1,000m ² threshold of impervious area, noting reasons outlined in submission on P.R5 and P.R6. Seeks an additional measure by which a large-scale proposal can be considered as a Controlled Activity - regardless of compliance with WH.R6 (a) - where the stormwater is to be managed in accordance with a certified catchment/sub-catchment Stormwater Management Plan (or similar). Opposes WH.R6/P.R6(c) as it does not provide alternative framework applicable to catchment based solutions for attenuation, control and treatment associated with "greenfield development", and does not provide for reductions where treatment exceeds 85%.	Increase the 1000m ² -3000m ² threshold commensurate with the relief sought in P.R5 above seeking a permitted threshold of at least 5000m ² . Failing implementation of changes sought under P.R5 above, provide for proposal to be Controlled activity where it fails to meet P.R6(a), but is being undertaken in accordance with a certified sub-catchment Stormwater Management Plan [or similar]. Include an exclusion to P.R6(c) where a proposal is being undertaken as part of a wider comprehensive development that includes a catchment scale stormwater treatment system. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.058	9 Te Awarua-o-Porirua Whaitua	Rule P.R7: Stormwater from new and	Oppose	Opposes the starting point of a 1,000m ² threshold of impervious area noting reasons outlined in submission on P.R5. Considers the range (1000m ² -3000m ²) provided for	Increase the 1000m ² -3000m ² threshold commensurate to the relief sought in P.R5 seeking a permitted threshold of at least 5000m ² . Failing implementation of changes sought under P.R5

		permitted activity.			
S257.063	9 Te Awarua-o-Porirua Whaitua	Rule P.R17: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	Generally supports the intent of this rule but considers the 200m ² threshold too onerous. Considers it unclear how 200m ² for the clearance of woody vegetation has been arrived at, noting the operative NRP provides for such clearance up to 2ha.	Increase the threshold of vegetation clearance before consent is required as a controlled activity. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.064	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Oppose	Broadly supports the intent of this rule (as amended by Clause 16), but oppose P.R22(c)(iv) as it is not practical or achievable to avoid all discharges from the site.	Delete P.R22(c)(iv) Include an exclusion within the rule that exempts activities associated with the trenching of services - i.e. thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.065	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Oppose	Questions the 100g/m ³ TSS standard for earthworks and seek clarification as to what has informed this standard. Notes the supporting technical reports refer to a reduction in annual sediment load of 40% per year but do not draw a connection between this target reduction and the proposed standard in PC1. Opposes the condition in the rule at P.R23(b) as it places a restriction on earthworks between 1st of June and 30th September and the resulting escalation to a non-complying activity.	Delete the condition in the rule at P.R23(b) where it places a restriction on earthworks between 1st of June and 30th September and the resulting escalation to a non-complying activity. Instead, include winter works as a matter of discretion within the relevant RDA rule. Include an exclusion within the rule that exempts activities associated with the trenching of services - i.e. thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.066	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Oppose	Opposes the non-complying rule insofar as it relates to winter works.	Delete P.R24 with consideration of winter works being a listed matter of discretion under P.R23. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S257.067	12 Schedule s	Schedule 30: Financial Contributions.	Oppose	Opposes the current Financial Contribution policy and rule framework and seeks a consequential review of Schedule 30. Seeks changes to enable consideration of whether a proposal is part of a wider comprehensive development (including those that are progressively staged) that includes a catchment scale stormwater treatment system.	Delete policy and rules associated in regard to the requirement to pay financial contributions; Alternatively, if the relief in 1 is not provided: Review financial contributions to enable consideration and account for network improvements undertaken in the relevant catchment (to which the proposal relates), where such works would enhance existing water quality outcomes. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.068	13 Maps	Map 86: Unplanned greenfield areas - Porirua City Council.	Oppose	Opposes definition based on areas identified as 'unplanned greenfield area' on maps 86, 87, 88, and 89. Notes the maps do not reflect zoning changes that have been made by the Porirua PDP Hearing Panel. Considers the proposed 'unplanned greenfield areas' comprising open space zoned land in Porirua will inhibit public housing projects, as some existing open space zoned land is intended to be acquired and/ or will be the subject of land swaps. Considers it unclear what constitutes "greenfield development" in the context of "unplanned greenfield development", including whether infrastructure is included, and if so considers it unworkable. Considers the existing rule framework will constrain expansion and/or construction of new infrastructure in locations that benefit from a designation for such public works.	Undertake a review of, and expansion to the areas identified as planned/existing urban areas on maps 86-89. Exclude land zoned as open space areas from unplanned greenfield areas, particularly where these are located in an urban environment. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.069	13 Maps	Map 87: Unplanned greenfield areas - Wellington City Council.	Oppose	Opposes definition based on areas identified as 'unplanned greenfield area' on maps 86, 87, 88, and 89. Considers it unclear what constitutes "greenfield development" in the context of "unplanned greenfield development", including whether infrastructure is included, and if so considers it unworkable.	Undertake a review of, and expansion to the areas identified as planned/existing urban areas on maps 86-89. Exclude land zoned as open space areas from unplanned greenfield areas, particularly where these are located in an urban environment. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers the existing rule framework will constrain expansion and/or construction of new infrastructure in locations that benefit from a designation for such public works.	
S257.070	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Oppose	Opposes definition based on areas identified as 'unplanned greenfield area' on maps 86, 87, 88, and 89. Considers it unclear what constitutes "greenfield development" in the context of "unplanned greenfield development", including whether infrastructure is included, and if so considers it unworkable. Considers the existing rule framework will constrain expansion and/or construction of new infrastructure in locations that benefit from a designation for such public works.	Undertake a review of, and expansion to the areas identified as planned/existing urban areas on maps 86-89. Exclude land zoned as open space areas from unplanned greenfield areas, particularly where these are located in an urban environment. Any further, alternative or consequential relief as may be necessary to fully achieve the relief sought in this submission.
S257.071	13 Maps	Map 89: Unplanned greenfield areas - Hutt City Council.	Oppose	Opposes definition based on areas identified as 'unplanned greenfield area' on maps 86, 87, 88, and 89. Notes areas on the maps do not include some land that is intended to be developed for urban purposes in the Hutt City jurisdiction, noting this Council is yet to notify its Proposed District Plan. Considers it unclear what constitutes "greenfield development" in the context of "unplanned greenfield development", including whether infrastructure is included, and if so considers it unworkable. Considers the existing rule framework will constrain expansion and/or construction of new infrastructure in locations that benefit from a designation for such public works.	Undertake a review of, and expansion to the areas identified as planned/existing urban areas on maps 86-89. Exclude land zoned as open space areas from unplanned greenfield areas, particularly where these are located in an urban environment. S232 Karen Pearce

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S232.001	3 Objective s	3.6 Water quality	Oppose	Considers the plan change should not be actioned because of the change in government.	Progress with the plan change should be stopped.

S205 Kelly Few-Mackay & Lewis Few-Mackay

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S205.001	General comments	General comments - consultation	Oppose	Concerned there was no consultation with affected parties. Considers properties of 4-20 ha should have been contacted directly.	Withdraw PC1 and undertake effective consultation.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S205.002	General comments	General comments - water quality improvements	Not Stated	<p>Considers data is insufficient to identify origination of contamination and PC1 requires registered farms to collect the data for GWRC and at no cost to them.</p> <p>Considers readings in Upper Hutt reaches are excellent and fed by the rural rivers. Establishing contamination present in the lower reaches is not originating from the farming communities of Akatarawa and Mangaroa.</p> <p>Concerned GWRC is trying to solve a problem that does not exist.</p>	Amend: Focus on urban source issues rather than contamination problems from farming.
S205.003	General comments	General comments - definitions	Amend	Notes there are a number of references to small rivers, less than 1 metre wide but concerned there is an open-definition for the minimum small river size.	Amend: Clarify definitions which influence other regulations.
S205.004	General comments	General comments - rural	Not Stated	Considers the section 32 report establishes that none of the measures aimed at the Mangaroa Valley and Akatarawa Valley farming community in section 6.9 are justified. Considers the proposed measures will achieve little at an unquantified cost.	Withdraw all measures targeted at the Upper Hutt farming/lifestyle block community.
S205.005	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Not Stated	<p>Concerned the registration process requires landowners to provide complex data such as average stocking rates, calculating effective grazing areas, map property boundaries and showing waterbodies where stock exclusion fencing is required under new rules.</p> <p>Considers whilst it seems to be a simple task, it assumes all landowners have the information readily available.</p>	Amend: Adopt suitable systems and support to collate and assist the information required.
S205.006	8 Whaitua Te	Policy WH.P23: Achieving	Not Stated	Concerned there is no data to suggest sediment is coming from farming activities and no data has been collected to understand the activities on	Defer PC1 until relevant data is collected.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	reductions in sediment discharges from farming activities on land with high risk of erosion.		lifestyle blocks. Concerned GWRC is making assumptions that all sediment is the result of human activity. Considers strong probability that human activity can contribute to the sediment load but important to consider proportion arises from natural erosion processes. Considers GWRC must take into account all factors within the catchments.	
S205.007	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Not Stated	Notes the definition of livestock only references cattle, farmed deer and farmed pigs. Considers any other stock are exempt from all rules.	Amend: Confirm the rules are exclusive to these animals.

S103 Kim Bowen

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S103.001	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Concerned with the single monitoring site in the Makara river. Considers this does not give accurate idea of where the sediment or contaminants would be originating from. Considers GWRC should increase number of monitoring sites to identify where water quality improvements could be made.	Increase the water monitoring sites
S103.002	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment	Oppose	Considers that local communities know how to look after their land areas the best. Disagrees with the regulatory approach for the proposed plan change taken by GWRC. Concerned with large costs associated with fencing.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges from farming activities on land with high risk of erosion.		Concerned that guardianship rights of the land will be lost.	
S103.003	2 Interpretation	Whaitua	Oppose	Concerned with the consultation process. Considers GWRC is not interested in genuine feedback and consultation from the affected community. Concerned the plan change will have a significant impact on farms in Makara and considers there has been minimal effort to notify the affected property owners.	Considers an improved consultation process with the community is required.

S281 Kirsty Gill

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S281.001	General comments	General comments - overall	Oppose	Concerned PC1 puts excessive restrictions on land owners.	Not Stated.
S281.002	General comments	General comments - consultation	Oppose	Considers the community has received insufficient information about the plan. Considers that meetings and deadlines to lodge a submission have been unfair and difficult to meet.	Not Stated.
S281.003	General comments	General comments - water quality improvements	Oppose	Opposes stock exclusion from waterways.	Not Stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S281.004	General comments	General comments - rural	Oppose	Concerned the GWRC has erroneously identified land as "erosion prone". Considers it unacceptable for GWRC to require landowners to retire land without compensation.	Not Stated.
S281.005	General comments	General comments - earthworks	Oppose	Considers earthwork provisions are complicated and farmers/land owners will not know how to meet requirements. Concerned stock welfare, farm safety and farm tracks access have been disregarded in new provisions.	Not Stated.
S281.006	General comments	General comments - overall	Oppose	<p>Opposes the broad-brush regulatory approach taken under PC1 and the removal of local decision making from the community.</p> <p>Agrees with the need to improve water quality where it is poor and where solutions are within landowners control. Considers fundamental evidence is required to do this effectively and equitably.</p> <p>Suggests GWRC recognise the personal work done by landowners and partner with the community rather than regulate against them.</p> <p>Notes they will be providing an additional submission in February.</p>	Not Stated.

					<p>and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>
<p>S169.007</p>	<p>8 Whaitua Te Whanganui-a-Tara</p>	<p>Policy WH.P10: Managing adverse effects of stormwater discharges</p>	<p>Amend</p>	<p>Concerns PC1 lacks detail on what types of hydrological controls and water sensitive design are required for development.</p> <p>Concerned the conditions in subsections (a)-(c) may burden property owners and developers and the focus in standard (c) on communal stormwater treatment systems may not be practical or achievable.</p> <p>Considers engineering advice should not be a requirement for the design of site specific controls for the creation of small areas of impervious surface.</p> <p>Concerns the s32 evaluation doesn't adequately assess the implication costs of PC1 and its impacts on urban growth and housing supply.</p>	<p>Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions.</p> <p>Delete reference to financial contributions.</p>
<p>S169.008</p>	<p>8 Whaitua Te Whanganui-a-Tara</p>	<p>Policy WH.P15: Stormwater contaminant offsetting for new</p>	<p>Oppose</p>	<p>Opposes financial contributions framework in Schedule 30. Considers imposing financial contributions is a burden that may hinder greenfield development growth impacting housing availability, housing supply costs and housing affordability. concerned that PC1 does not assess the costs to land owners/developers or the consequences for housing supply/affordability. Notes that financial</p>	<p>Delete Policy WH.P15</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		greenfield development.		<p>contributions dictate the viability of developments for the private sector. Notes the importance of the private sector to provide housing supply and how financial contributions dictate commercial viability of developments.</p> <p>Concerned the flat financial contribution fee would incentivise large lot developments rather than intensification. Considers the acknowledgement that stormwater contaminant treatment is only practicable for a portion of the contaminant load demonstrates the limitations of the proposed solution.</p> <p>Believes the policy heavily relies on financial contributions without consideration for alternatives or new developments that improve water quality. Concerns the use of financial contributions to offset stormwater contamination is not equitable or efficient. Considers Policy WH.P15 and P.P13 anticipate a potential deterioration in water quality and this should prompt exploration of solutions rather than relying on financial contributions.</p> <p>Concerned the feasibility, effectiveness and timing of catchment-scale stormwater treatment systems referenced in Schedule 30 is unclear Opposes GWRC's requirement for financial contributions even if a development could achieve an 85% reduction or more. Believes there is no effects-based reason for the charging of the proposed contribution.</p>	
S169.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new	Oppose	Opposes the avoidance/prohibited approach to greenfield development as the prohibited activity status provides no consenting pathway for proposals that may have positive outcomes.	Delete Policy WH.P16

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		unplanned greenfield development.		Considers the consent status is inconsistent with the NPS-UD.	
S169.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	<p>Opposes requirement for a non-complying resource consent to undertake winter earthworks.</p> <p>Considers large rain events at any time cause larger pulses of sediment than discharges of sediment over the winter period and the current practice for managing winter earthworks with GWRC oversight is sufficient. Considers this existing practice should be retained where it is managed through a separate approvals process against established GWRC criteria.</p> <p>Considers the non-complying activity status doesn't consider scale, nature or duration of the works or specific site conditions. Concerned that stabilising earthworks before the shutdown period may not always be feasible and may result in other perverse environmental outcomes. Considers blanket restrictions are not the most effective approach to address diverse challenges on different sites and areas</p> <p>Considers that where applicants demonstrate that winter works can be managed, this should be supported to avoid unnecessary delay of housing supply</p>	Delete Policy WH.P31
S169.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	Concerned the rule requires regional resource consent despite territorial authorities controlling new discharge connections to the network.	<p>Amend rule as follows and make any other consequential relief necessary to give effect to this submission point:</p> <p>Rule WH.R2: Stormwater to land - permitted activity The discharge of stormwater onto or into land, including where contaminants may enter groundwater: (a) that is not from a high risk industrial or trade premise, or (b) that is not connected to that does not discharge from, or</p>
