		offsetting for new greenfield development.			objectives and policies of same effect/guidance as NRP before notification with some policy relief for activities that require consent under the operative provisions.
S243.018	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Amend	Considers use of stormwater control to effectively manage or prevent land use inconsistent with integrated management principles contained in RMA.	Seeks objectives and policies be deleted or amended to provide opportunities for development within Porirua Whaitua. If not deleted, requests objectives and policies be amended to remove avoidance principles and be replaced with objectives and policies of same effect/guidance as NRP before notification with some policy relief for activities that require consent under the operative provisions.
S243.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Amend	Considers need for flexibility in policy for management of adverse effects of earthworks during certain periods. Considers policy is too blunt in its approach.	Delete or amend to provide for winter works subject to circumstantial criterion. That could include: Risk or likelihood of discharge; Topographical considerations/slope; Management of works; Distance to freshwater resources; Necessity of works; Economic considerations.
S243.020	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	Concerns the rules and standards will capture nearly all residential subdivision and nearly all proposals will fail the permitted standards. Notes this will add significant cost to urban development that is not effectively assessed in Council's s32 analysis. Concerns costs imposed will lead to further housing unaffordability and further escalation of house pricing. Notes where a subdivision creates a stormwater catchment in excess of 4ha then a controlled activity consent may be required and considers this should be the only standard that applies to the rule structure.	Seeks rules be deleted. If rule framework is to remain, seeks areas in conditions attached to rules should be amended to provide a more realistic area calculation.
S243.021	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new	Amend	Concerns the rules and standards will capture nearly all residential subdivision and nearly all proposals will fail the permitted standards. Notes this will add significant cost to urban development	Seeks rules be deleted. If rule framework is to remain, seeks areas in conditions

		impervious surfaces-discretionary activity.		of house pricing. Notes where a subdivision creates a stormwater catchment in excess of 4ha then a controlled activity consent may be required and considers this should be the only standard that applies to the rule structure.	
S243.028	9 Te Awarua-o-Porirua Whaitua	Rule P.R11: All other stormwater discharges - non-complying activity.	Amend	Concerns the rules and standards will capture nearly all residential subdivision and nearly all proposals will fail the permitted standards. Notes this will add significant cost to urban development that is not effectively assessed in Council's s32 analysis. Concerns costs imposed will lead to further housing unaffordability and further escalation of house pricing. Notes where a subdivision creates a stormwater catchment in excess of 4ha then a controlled activity consent may be required and considers this should be the only standard that applies to the rule structure.	Seeks rules be deleted. If rule framework is to remain, seeks areas in conditions attached to rules should be amended to provide a more realistic area calculation.
S243.029	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Oppose	Considers it not appropriate to use stormwater rules to effectively prohibit consideration of certain land uses. Notes land use control is a territorial function, not a regional council function. Considers prohibited activities do not provide for a flexible approach to changes in land use that may result in environmental benefits.	Remove prohibited activities rules for stormwater discharges.
S243.030	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development -	Oppose	Considers it not appropriate to use stormwater rules to effectively prohibit consideration of certain land uses. Notes land use control is a territorial function, not a regional council function. Considers prohibited activities do not provide for a flexible approach to changes in land use that may result in environmental benefits.	Remove prohibited activities rules for stormwater discharges.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		prohibited activity.			
S243.031	12 Schedule s	Schedule 27: Freshwater Action Plan requirements.	Amend	Considers information in schedule is not commensurate to scale of individual developments.	Remove or simplify this schedule. Plans should relate to functional engineering considerations and NZS4404 should be used as basis of plan.
S243.032	12 Schedule s	Schedule 30: Financial Contributions.	Oppose	For the reasons given under other parts of submission, there should not be financial contributions on stormwater discharges. Notes it is not specific or clear what the financial contributions will be used or taken for.	Remove need to provide financial contributions for stormwater discharges.
S243.033	General comments	General comments - overall	Oppose	Considers PC1 has been hastily prepared and is having unintended effects as a result of drafting errors, and are creating significant implications for housing affordability and land viability already due to the immediate legal effect of provisions.	Withdrawal of PC1 to allow for a comprehensive review of provisions of plan change as they relate to national guidance
S243.034	General comments	General comments - current legislation	Oppose	Notes the agreements of the government coalition to remove/replace legislation and suggest withdrawal of PC1 to allow a comprehensive review of PC1 provisions as they relate to national guidance.	Withdrawal of PC1 to allow for a comprehensive review of provisions of plan change as they relate to national guidance.
S243.035	General comments	General comments - urban development	Oppose	Considers PC1 has significant consequences for affordability of housing and land development in Wellington Region. Notes addition of a significant financial contribution for new residential units will have flow on housing affordability effects in the region and is inconsistent with Objective 2 and associated policies of NPS-UD. Concerns this has not been considered in the Section 32 report and completely ignores the affordability implications of the proposed changes.	Withdrawal of PC1 to allow for a comprehensive review of provisions of plan change as they relate to national guidance.
S243.036	General comments	General comments - urban	Oppose	Concerns PC1 introduces increased uncertainty and cost to the provision of housing in Wellington region, directly affecting housing affordability.	Remove the new requirements for stormwater management and financial contributions from all new stormwater discharge provisions or amended to provide a more balanced approach to catchment management.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		development		Considers requirement for financial contributions and risk cost introduced through additional consenting will have flow on effects to the cost of housing in the region and is inconsistent with Objective 2 and associated policies of NPS-UD.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S27.001	5.2 and 5.3 Discharges to land and water and land use rules	5.2 and 5.3 Discharges to land and water and land use rules	Support	Supports PC1 provisions regarding water and the Te Whanganui-a-Tara catchment objectives. Seeks for beaches to be swimmable year-round. Supports promoting activities on brownfield activity over greenfield activity. Considers that collaboration is necessary for the resourcing of improving water. Suggests councils collectively resource enforcement, science and complementary policy tools.	Retain as notified [inferred]

S011 Lindsay Jenkin

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S11.001	2 Interpretation	Stock unit	Amend	Smaller animals are not comparable to regular sized farm animals in terms of stock unit. Smaller breeds should be included as stock units in the definition through alternative weight ranges.	Amend the stock unit list to: - include the typical types of animals small block farms tend to run (list of examples provided in full submission). - Use a weight range calculation for equivalent stock units so that smaller animals can be accounted for.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S009 Louise Askin

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S9.001	General comments	General comments - overall	Support	Supports the group submission made by Mākara/Ohariu farmers'.	Not Stated.
S9.002	General comments	General comments - overall	Amend	Concerned PC1 detail is very different from WIP and considers requirement for testing through consultation to assess the reflection of community recommendations.	Not Stated.
S9.003	General comments	General comments - overall	Amend	Concerned the partnership approach recommended by WIP has not continued into PC1 delivery process and document. Considers it important for PC1 to prioritise partnership mechanisms, recognise the values and to provide a equitable and effective approach. Considers it important for GWRC actively considers impacts of these provisions on local communities in order to design support. Considers GWRC has not investigated the extent of waterway protection required under the provisions, land retirement (based on lay of the land opposed to mapped polygons) or financial implications for farmers. Concerned the ETS liabilities for not replanting forestry on certain land classes has not been considered.	Not Stated.
S9.004	General comments	General comments - overall	Amend	Considers PC1 should provide catchment context by incorporating whaitua-wide policies and prioritisation tools (e.g. mapping) as non-regulatory support to inform farm plans. Suggests this will result in robust (certified and audited) FWFP but will ensure farms can identify actual issues and solutions for unique landscapes and avoid regulatory "by-catch" from broad rules. Notes the Government's recent changes to the NPS-FM and timeframes for implementation may	Not Stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				change the effectiveness of this WIP recommendation.	
S9.005	General comments	General comments - overall	Amend	Notes the Government's recent changes to the NPS-FM and timeframes for implementation may change the effectiveness of this WIP recommendation.	Not Stated.
S9.006	General comments	General comments - overall	Amend	Notes PC1 was prepared swiftly to implement regulatory measures within NPS-FM timeframe and for GWRC's longer-term commitment to non-regulatory measures. Concerned non-regulatory measures outside of PC1 haven't occurred yet. Notes WIP identified fundamental barriers in the geographic areas such as: lack of data on the issue, identification solutions, need for community catchment group support, need for additional funding for on-farm works and a current lack of GWRC's compliance/enforcement of poor practice.	Give non-regulatory measures equal priority to PC1 (including outside of PC1 development process) and apply these measures in areas where regulation will be most prominent
S9.007	General comments	General comments - consultation	Amend	Concerned of PC1 public consultation process, with community awareness relying on local information channels and as PC1 will have significant implications for Wellington (particularly rural landowners), a higher level of community engagement is warranted.	Not Stated.
S9.008	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Considers it is unclear why this is listed as a key method when the design of associated policies and rules appear to have low impact. Considers this will have high compliance costs with low outcomes.	Clarify the scope and purpose of this method and either strengthen or remove. Oppose if there is no appropriate benefit from this process shown.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S9.009	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	<p>Seeks implementation of WIP recommendations 10, 11, 13, 14, 15 and 36.</p> <p>Considers the lack of water quality monitoring data and information on contaminant sources is a key limitation on the communities' ability to effect change in Mākara/Ohariu.</p> <p>Concerned support for catchment groups (urban and rural) is lacking in PC1.</p> <p>Considers PC1 needs to support community development of local catchment context and not rely on WIP or FWAP.</p>	Expand list to include other important non-regulatory measures proposed in the WIP, including support for catchment groups, additional water quality monitoring programmes, provision of local information/data, development of "catchment context, challenges and values".
S9.010	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	<p>Supports new focus on small rural properties as they may have different information channels compared to farms.</p> <p>Concerned GWRC has progressed the development of regulatory tools (PC1) but not additional non-regulatory tools as proposed in WIP.</p> <p>Concerned this has lost a communication opportunity during PC1 consultation stage, as GWRC could have presented communities with both regulatory tools and non-regulatory support, opposed to just the new rules.</p>	<p>Supports.</p> <p>Add "in partnership with community" in the description.</p> <p>Progress implementation with haste.</p>
S9.011	8 Whaitua Te Whanganui-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers and	Amend	<p>Supports the objectives as they reflect many objectives in the WIP, but is concerned the wording does not acknowledge the value that rural communities place on productive land use or the role that they have as direct kaitaki for Wellington's waterways.</p>	<p>Add:(i) Rural communities are thriving and integrating productive land use and healthy waterways on farms, forests and lifestyle blocks.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.			
S9.012	8 Whaitua Te Whanganui-a-Tara	8.2 Policies	Amend	Seeks implementation of WIP recommendation 32 and notes this doesn't appear elsewhere in PC1.	Include a policy on septic tanks in section 8.2.
S9.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Notes other sections of PC1 do not drive total stock exclusion from all waterways, but instead apply practical assessments that allow for other methods.	Amend as follows: " excluding livestock from waterbodies " to "reducing livestock access to waterbodies" .
S9.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of	Amend	Reference that WIP recommendations 10 and 13 state need for communities to be involved in catchment planning. Considers it unclear whether FWAP are intended to replace catchment plans. Presumes not a replacement due to being larger scale. Considers if FWAP are to include on-farm actions, then it should be essential that farmers and rural communities are key partners in development.	Include the rural community in the development of Action Plans.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		waterways			
S9.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Seeks implementation of WIP recommendation 15. Concerned the source of high e-coli levels in Mākara Stream is unknown and there are several potential sources. Considers the sources and levels need to be known for each catchment to be addressed effectively.	Add: " Identification of sources of e-coli specific to individual catchments ".
S9.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Seeks implementation of WIP recommendation 33. Considers work to reduce E-coli levels should only target areas where e-coli is shown to be an issue and there is not currently sufficient monitoring data to determine the levels and sources of e-coli across the multiple catchments. Considers it inappropriate to extrapolate the results of one monitoring site. Seeks landowner farm-scale monitoring be provided for - including feedback loops to monitor the impact of actions.	Add: " Incorporate e-coli reduction in catchment context and farm environment plans, based on monitored data " - to allow a farm-scale approach as already proposed for nitrogen and sediment.
S9.017	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high	Amend	Seeks implementation of WIP recommendations 33 and 36. Considers "woody vegetation" is only one option for land treatment and is a challenge to establish in exposed Mākara/Ohariu areas. Notes Meridian Energy does not allow revegetation with plants over 1m on many ridgelines across several of the largest local farms due to their disruption of wind flow. Considers the provision's requirement to maintain the woody vegetation will be unviable due to large-	Opposes (c). Use erosion/sediment risk treatment plans to identify the most appropriate methods and timeframes for managing sediment loss on each unique site.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		risk of erosion.		scale land retirement and reduced farm income from reduced production and high fencing costs incurred. Considers working alongside Meridian's windfarm an additional challenge where afforestation needs to be designed to no impede wind flow.	
S9.018	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	<p>Seeks implementation of WIP recommendation 36.</p> <p>Considers given the area's geology, the land mapped as the top 10% of unvegetated land at risk of erosion captures areas where erosion risk is not high. Concerned map applied at property-scale creates significant cost to land-owners.</p> <p>Considers on-farm actions need to be based on farm-scale assessment of erosion risks. Notes this is common practice in NZ and GWRC's existing erosion control programmed in Wairarapa. Notes regional mapping is used in other regions to prioritise landowner engagement and farm investment in land treatment and considers it is rarely used to regulate land treatment in regions where erosion risk is extreme.</p> <p>Concerned this policy assumes erosion from steep land is the key source of sediment but anecdotally streambank erosion from high flood flows is a key contributor of sediment in Mākara Stream catchment.</p> <p>Concerned retirement area will be much larger than mapped polygons due to need to aggregate areas and work with the landscapes to locate sensible fence lines.</p>	<p>Remove section (a) or modify to say "identifying highest erosion risk land (pasture)... at a farm-scale."</p> <p>Amend to focus on identifying "sediment sources" rather than solely erosion risk.</p>
S9.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in	Amend	<p>Seeks implementation of WIP recommendation 36.</p> <p>Supports sediment/erosion risk treatment plans based on farm-scale assessment not whaitua-scale mapping.</p>	<p>Refocus (b) from "erosion risk treatment plan" to "erosion and sediment risk treatment plan".</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		sediment discharges from farming activities on land with high risk of erosion.		Considers the sources of sediment are likely broader than hillside erosion in the Mākara and Ohariu catchments. Considers focus should be on broader topic of "sediment" to acknowledge the role of other existing sediment sources and management techniques such as low stocking rates and good pasture cover.	
S9.020	8 Whaitua Te Whanganui-a-Tara	Policy WH.P24: Phasing of farm environment plans.	Amend	Seeks implementation of WIP recommendation 34. Seeks phasing time is timed to best integrate with national roll out of FWFP so farmers are not duplicating efforts.	Revise the date for FEPs to be prepared and certified if this is inconsistent with the FWFP roll out.
S9.021	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Amend	Seeks implementation of WIP recommendation 34. Considers this policy be made consistent with the associated rule (or broader intent) regarding reduced access rather than restricted access. Considers fencing tool is limited in Mākara and Ohariu as areas are incredibly hilly and notes a good proportion of Mākara and Ohariu's large streams won't be covered in national stock exclusion regulations. Considers need to focus on actual risk from stock access to rivers in low intensity farms, regarding frequency of livestock access and actual impact on stream banks and water quality.	Replace "restrict" with "reduce through non-regulatory means". Shift the focus on non-regulatory drivers, as per the WIP recommendation. Amend the wording to clarify what size river is covered in this policy - and ensure that the title and policy wording are consistent.
S9.022	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Support	Considers policy can be enacted through native reversion, native planting or poplar/willow pole planting.	Retain as notified.
S9.023	8 Whaitua Te	Rule WH.R17:	Amend	Seeks implementation of WIP recommendation 36.	Note "high erosion risk land as identified in individual erosion risk management plans".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Vegetation clearance on highest erosion risk land - permitted activity.		Considers farm-scale assessments of highest risk land be used rather than current whaitua-wide mapping.	
S9.024	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	Seeks implementation of WIP recommendation 36. Considers farm-scale assessments of highest risk land be used rather than current whaitua-wide mapping.	Note "highest erosion risk land as identified in individual erosion risk management plans".
S9.025	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Amend	Considers it is unclear whether mapping is fit for purpose and suggests comparing against best practice mapping tools. Considers forestry is an effective soil conservation tool on erosion prone land, dependent on the severity of erosion risk and forestry type. Suggests prioritising productive/protective options for erosion prone land where suitable. Notes in Mākara/Ohariu, pine is one of the only tree species that will grow in wind exposed areas (other than low native scrub).	Review whether mapping is fit for purpose.
S9.026	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20	Amend	Considers provision has strong focus on nitrogen management, whereas WIP notes small properties may also contribute to e-coli levels. Considers a need to focus the work on catchment issues for small properties. Supports the use of "stock units" instead of livestock to determine farming intensity as considers it takes	Include assessment of e-coli risk. Remove farm registration requirement - limited benefit. Clarify 4-20ha based on "effective grazing area" or similar.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		hectares - permitted activity.		<p>into account diversity of livestock species on smaller properties.</p> <p>Concerned there is not good rationale for farm registration, particularly if nitrogen monitoring does not require reporting.</p> <p>Notes PC1 wording does not include requirement for any form of livestock exclusion from waterways other than national rules. Considers the smaller properties should have the same level of stock exclusion requirements, even if not through a full FEP.</p> <p>Considers the approach to determining what properties the provision applies to, is inconsistent with larger farms and should be based on effective grazing area.</p>	
S9.027	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	<p>Considers any farm environment plan work above the national regulations can contribute to FWFP as catchment context. Submitter recommends if rule is retained, that these two plans/programmes are designed to inform FWFP.</p> <p>Considers this provision is disproportionate to the treatment of larger streams. Considers in Mākara/Ohariu, a minor proportion of larger streams will require livestock exclusion under national regulations due to difficult topography.</p> <p>Suggests small streams should be part of a farm's assessment of waterway health and contaminant sources instead, oppose to a standalone programme. Considers this is relevant given the low farm stocking rates.</p>	<p>Ensure that the details of this rule are consistent with the content and timeframes for Freshwater Farm Plans.</p> <p>Remove the requirement for a Small Stream Riparian Programme.</p> <p>Retain inclusion of an erosion/sediment risk treatment plan - as detail to inform the FWFP.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S9.028	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Seeks implementation of WIP recommendation 33. Notes WIP recommends farm plans incorporate more streams rather than just MfE's "low slope" map (regardless of size) but does not propose a regulatory approach. References submitter's comments against Policy WH. P26.	Remove (b) since farm environment plans can pick up planning for all streams and non-regulatory measures can support on-farm work.
S9.029	8 Whaitua Te Whanganui-a-Tara	Rule WH.R30: The use of land for farming activities - discretionary activity.	Amend	Seeks implementation of WIP recommendation 15. Considers there aren't enough water quality monitoring sites to make this provision useful or fair. Considers limitations on farming should only be placed on properties where nitrogen is a shown problem and not across whole FMU.	Adjust the scale at which this is applied - from FMU-scale to small catchments/farm - to allow for local differences in stream contaminant levels to be assessed.

S022 Lynn Cadenhead

S287 M. Wylie Garcia

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S287.001	General comments	General comments - consultation	Oppose	Considers that meaningful consultation on PC1 has not been undertaken	Withdraw PC1
S287.002	General comments	General comments - current legislation	Oppose	Questions the legality of the process undertaken by GWRC, citing recent Environment Court decisions.	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
S287.003	General comments	General comments - current legislation	Oppose	Considers in any given catchment there will be upstream and downstream properties and very few indicative monitoring sites. Notes that the Mangaroa catchment and Akatarawa Valley are complex networks of waterways and all properties in the catchment will be assessed, based on the downstream results from this single monitoring point and penalised accordingly. Considers this unacceptable.	Remove all clauses where GWRC has failed to establish an adequate network of monitoring sites.
S287.004	General comments	General comments - current legislation	Oppose	Considers GWRC has decided that Freshwater Management is pre-eminent and over-rules other National Policy Statements. Considers GW has erroneously decided to regard clauses (a), (b) and (c) of the Te Mana o te Wai hierarchy as mutually exclusive rather than regarding them as equally weighted and inter-dependent. Considers that GWRC has chosen to give maximum weight to one piece of legislation and has	Give equal weighting to all government legislation and disregard regulation by committee.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				exacerbated that choice by taking in to account an opinion by one Whaitua in respect of levels of copper and zinc in stormwater which are not recognised in NPS-FM.	
S287.005	General comments	General comments - current legislation	Oppose	Considers there is confusion among GWRC staff and that contradictory advice has been given relating to the immediate legal effect of provisions and the fencing of waterways.	Delete the statement that all rules have immediate legal effect and substitute "all rules in this plan change will be held in abeyance pending the plan change passing through all stages required by the RMA."
S287.006	General comments	General comments - rural	Oppose	Considers GWRC do not know where sediment originates from and are guessing that it comes from farming activity and making the assumption that all sediment in rivers is the result of human activity. Considers it is important to take into account that a proportion arises from natural erosion processes and that it's important to form a complete picture of all factors within the catchments, both natural and man made. Considers within each of the Mangaroa and Akatarawa catchments GWRC should establish at least 3 monitoring points and accrue a significant data base to be able to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.
S287.007	General comments	General comments - rural	Oppose	Notes that the only animals referenced are cattle, farmed deer and farmed pigs and in the absence of any other stock being mentioned, considers that all such other animals are exempt from all rules.	Confirm that the rules are exclusive to these animals.
S287.008	General comments	General comments - rural	Oppose	Notes that land owners are required to furnish a complex range of data including average stocking rates, calculate effective grazing areas, map the property boundaries, show waterbodies where stock exclusion is required, show the location of fences relative to the waterbodies and calculations relating to Nitrogen emitting from the property Considers there will be very few in the community who will have the level of expertise required to gather and present the range of data required or produce accurate maps. Notes GWRC have not yet produced the systems	Delete the requirement for farms of 4 ha to register with GWRC . Require GWRC to have the necessary systems and applications in place prior to promulgating regulation that will not function appropriately without those systems. Confirm whether GWRC staff members have the authority to commit GWRC to a course of action which may be at variance to the letter of the drafted regulations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				necessary to record the information. Concerned that resource consent application takes time, costs money and is beyond the technical abilities of most individuals and there is no guarantee that it will be approved or it may contain onerous conditions.	
S287.009	General comments	General comments - overall	Oppose	Considers there are errors in drafting which change the intended meaning	Review and undertake an edit of PC1
S287.010	General comments	General comments - rural	Oppose	Considers there is insufficient data to identify the point of origin of any contamination and PC1 requires registered farms to collect the data for GWRC at no cost to GWRC. Considers there are indicators from primary contact sites along the Hutt River that paint a clear picture and suggests this establishes that whatever contamination is present in the lower reaches is not originating from the farming communities of Akatarawa and Mangaroa. Suggests a disproportionate amount of effort in to trying to solve a problem that does not exist.	Move away from attributing contamination problems to farming and re-focus on the more complex issues of urban sources.
S287.011	General comments	General comments - water bodies	Oppose	Notes there are a number of references to small rivers, less than 1 metre wide but nowhere within the PC1 states what the minimum size is. Considers it unacceptable to have an open-ended definition for a minimum.	Clarify the definition upon which other regulations rely e.g. Stock exclusion and fencing rules. Provide a clear minimum width for small rivers
S287.012	General comments	General comments - rural	Oppose	Considers section 6.9 of the Section 32 report - (Sources of nitrogen and other contaminants) establishes that none of the measures aimed at the Mangaroa Valley and Akatarawa Valley farming community are justified. Considers the proposed measures will achieve little at an unquantified cost.	Withdraw all measures targeted at the Upper Hutt farming community.
S287.013	General comments	General comments - overall	Oppose	Considers there is no quantification for the benefits or quantification of the costs and that just because GWRC consider they are obliged to do something is not a valid reason to have no idea of the value or cost of the exercise.	Produce a thorough cost-benefit exercise and recognise ratepayers are not a limitless source of funds.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S051 Mākara and Ohariu large farms

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S51.001	General comments	General comments - overall	Not Stated	Supports individual submissions made by other members of the Mākara/Ohariu community. Does not support PC1 in its current form, noting that feedback on PC1 is similar to that provided in the Whaitua process. Notes work undertaken by the community to improve water quality and biodiversity, including retiring coastal and steep land; and revegetation of wetlands, streams and hillsides.	Not stated.
S51.002	General comments	General comments - consultation	Not Stated	Opposes PC1 on the basis of it having a broad regulatory approach and a lack of local consultation. Supports the improvement of water quality where it is shown to be poor and where solutions are within community control, provided that the necessary information is available. Seeks that GWRC collaborates with the local community rather than imposing regulations. Expressed concern with a lack of consultation and short timeframes to make submissions.	Not stated.
S51.003	General comments	General comments - economic cost/impact	Not Stated	High cost of implementing PC1 will fall to a small number of individual landowners rather than developers or communities as is the case for urban provisions. Concerned with how short timeframes for implementation in PC1 are. Seeks the removal of the regulatory approach for PC1, or otherwise that GWRC provides targeted support mechanisms to compensate for potential losses in farm income.	Remove the regulatory approach for PC1.
S51.004	General comments	General comments - freshwater	Not Stated	Considers there is currently insufficient water quality data to identify where work should be targeted. States that there is almost no data which identifies the source of sediment or e-coli in streams, nor natural levels of sediment and e-coli. Notes that there is only one water quality monitoring site for Mākara and Ohariu, which only covers the Mākara	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Stream catchment. Considers there are streams within and outside the Mākara Stream catchment with good water quality, which would still be subject to land use restrictions. Seeks that a farm-scale and catchment-scale approach is adopted, rather than across a whaitua or Freshwater Management Unit.	
S51.005	General comments	General comments - overall	Not Stated	Concerned with how short the timeframes for implementation of PC1 are given the financial implications.	Revise the approach in PC1 to be more focused on community participation than regulation.
S51.006	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Not Stated	Supports financial support and rates relief for land retirement. Seeks for compensation for large-scale land retirement be included. Supports the farm-scale approach proposed.	Prioritise implementation of M44 prior to implementing new rules.
S51.007	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Considers the modelling and assumptions informing PC1 are not fit for purpose and the lack of real data makes it difficult to identify issues and work out what solutions are required.	GWRC to provide support for additional water quality monitoring in Makara and Ohariu catchments
S51.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	States the sources of E. coli must be known for each catchment to be addressed appropriately. Notes inconsistency with WH.P22 and WH.P23 and considers that work to reduce E. coli should only be targeted in areas where it is shown to be an issue. Considers it is inappropriate to extrapolate the results of one monitoring site across all of Makara and Ohariu. Considers local water quality studies are necessary, and seeks an option to undertake landowner-led, farm-scale monitoring.	Add " Identification of sources of e-coli specific to individual catchments ". Add " Incorporate e-coli reduction in catchment context and farm plans, based on monitored data "
S51.009	8 Whaitua Te	Policy WH.P23:	Amend	Regarding WH.P23(a), submitter expressed concern with the accuracy of the modelling and its	Refocus (a) to identify sediment sources rather than erosion risk

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.		<p>appropriateness for the assessment of sediment loss risk from individual farms. Concerned with generic assumptions on sources of sediment. Concerned with a focus on hill country erosion rather than streambank erosion during rainfall events. Supports revegetation of vulnerable areas, however highlights that there are multiple options that work best within farm systems. Considers that due to farming practices, that more land will need to be retired than indicated in PC1.</p> <p>Regarding WH.P23(b), submitter emphasises the same comments made on WH.P23(a), particularly that there are likely more sources of erosion than from hillsides. Emphasised the role of other existing management techniques.</p> <p>Opposes WH.P23(c); Concerned about the timeframe for transitioning to woody vegetation and how long it will take for vegetation to establish given conditions at this location. Expressed concern about cost of maintaining woody vegetation and potential for growth of pest plants. Mentioned potential conflict between revegetation and nearby windfarms. Considers the modelling is inaccurate and that retirement of farmland should not be required where there are no erosion issues.</p>	<p>Amend (b) to focus on erosion risk rather than sediment management</p> <p>Remove (c) and rely on actions and timeframes identified through farm-scale assessment such as Freshwater Farm Plans</p>
S51.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Amend	<p>Supports stream revegetation, however considers it costly and impractical within hilly landscapes. Notes potential for animal welfare issues if livestock cannot access streams for drinking water. Considers that a farm-scale approach is appropriate, rather than blanket restrictions. Seeks the policy to refer to reduced rather than restricted access.</p>	<p>[Inferred]</p> <p>Policy WH.P26: Managing livestock access to small rivers In addition to national stock exclusion regulations and the region-wide stock access requirements of Rule R98, Rule R99 or Rule R100 in this Plan, restrict reduce through non-regulatory means livestock access to a small river in the Mākara Stream and Mangaroa River catchments where the baseline state for the relevant part Freshwater Management Unit is below the national bottom line for visual clarity</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S51.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Not Stated	Supports stream shading, noting that planting for shade will also contribute to stream bank stabilisation.	Retain as notified.
S51.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Considers that additional farm plan work is unnecessary when there are existing similar process under national regulation.	Ensure that the details of this rule are consistent with the content and timeframes for Freshwater Farm Plans.
S51.013	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Oppose	Supports stream revegetation, however considers it costly and impractical within hilly landscapes. Notes potential for animal welfare issues if livestock cannot access streams for drinking water. Considers that a farm-scale approach is appropriate, rather than blanket restrictions. Submitter also refers to comments regarding WH.P29.	Delete provision
S51.014	8 Whaitua Te Whanganui-a-Tara	Rule WH.R29: Livestock access to a small river - discretionary activity.	Oppose	Supports stream revegetation, however considers it costly and impractical within hilly landscapes. Notes potential for animal welfare issues if livestock cannot access streams for drinking water. Considers that a farm-scale approach is appropriate, rather than blanket restrictions. Submitter also refers to comments regarding WH.P28.	Delete provision

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S109 Mark Phillips

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S109.001	4 Policies	Policy P70: Minimising effects of rural land use activities.	Amend	Considers that GWRC is selecting regenerating land with low stock units to control erosion rather than deforested plantation forestry blocks which is inconsistent with the Government's promotion of Pinus Radiatus. Considers that isolating erosion prone areas to stop stock movement will not prevent wild animals entering, and vegetated areas with no firebreaks are a fire risk that can damage waterways which flow into Pauatahanui Inlet. Queries whether land with one cow per 2+Ha or one family and associated infrastructure (driveway, sewage) to 2.5Ha is better for the environment. Considers that elimination should be the first option in controlling hazards, and that erodible areas should be removed down to the lowest river level of the property, to create a flat land with a gradual, controllable flow of water to Pauatahanui Inlet.	Amend plan change 1 erosion controls.

S230 Mary Beth Taylor

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S230.001	General comments	General comments - water quality improvements	Support	Supports the provisions and rules that will lead to better outcomes for freshwater quantity and quality in the region. Considers these make sense, are overdue, and should be implemented swiftly and decisively.	Not stated
S230.002	General comments	General comments - definitions	Amend	Considers GW should push for a better and more clear definition for 'Peatlands' under the RMA to work toward their protection and restoration. Considers the RAMSAR Convention should ideally be applied to the Mangaroa Peatland.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S115 Mary Hutchinson

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S115.001	General comments	General comments - overall	Support	Supports PC1, particularly the whitua process for Te Whanganui-a-Tara and Te Awarua-o-Porirua. Considers that PC1 should be integrated with the related functions and initiatives of other statutory authorities.	Retain PC1 as notified (inferred)
S115.002	General comments	General comments - consultation	Support	Considers PC1 requires effective community engagement and expressed disappointment with GWRC, Wellington Water and WCC community engagement as part of a previous project submitter was involved in. Supports Eugene Doyle's view (another submitter) that processes supporting community groups' participation in council and associated agencies' work needs to be improved.	Not stated
S115.003	8 Whaitua Te Whanganui-a-Tara	8.1 Objectives	Support	Requests interim milestones, supported by numerical objects and monitoring programmes are required to ensure actions implemented are effective.	Not stated
S115.004	8 Whaitua Te Whanganui-a-Tara	Table 8.3 Primary contact site objectives in rivers.	Support	Supports numerical requirements for lakes and surface water, particularly the Hutt River catchment in Table 8.3. Supports human health/contact recreation being the standard where water bodies are used for that purpose	Not stated
S115.005	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Support	Supports Target attribute states for rivers in Table 8.4	Not stated
S115.006	8 Whaitua Te Whanganui-a-Tara	8.2 Policies	Support	Supports policies WH.P1 to WH.P33 and any associated target attribute states and flow requirements	Not stated
S115.007	8 Whaitua Te	8.3 Rules	Support	Supports Rules WH.R1 to WH.R36. Supports, where possible, water sensitive urban design	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara			requirements to minimise runoff intensity where hard surfacing is increased.	

S042 Maryanne Gill

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S42.001	General comments	General comments - overall	Oppose	Concerned the submitter's farm is in jeopardy from PC1 policies. Considers restrictions are excessive and go beyond GWRC's mandates to "clean up" waterways. Concerned legal battles will occur due to deprivation of property rights from PC1. Notes the stress and pressure on farmers is already disproportionately high.	Not stated.
S42.002	General comments	General comments - overall	Oppose	Considers the plan severely restricts farmers and farming practices and is the reason why so many people are continually "giving up" farming. Considers Makara is already an example of this. Concerned of difficulty to meet regulations relating to farming and land use. Concerned animals cant get water because of alleged "stream contamination.	Not stated.
S42.003	General comments	General comments - consultation	Oppose	Concerned with the communication to affected parties and considers there has been insufficient information regarding PC1.	Not stated.
S42.004	General comments	General comments - rural	Oppose	Stock exclusion from waterways: Considers there is no evidence for stock exclusion from waterways in the south Makara stream. Notes the submitter already voluntarily undertakes riparian planting and water tests, which show no results of e-coli or nitrogen leaching. Concerned GWRC will eventually change cattle exclusion to include sheep and horses which will affect the submitters Horse Park business, and that	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				having to pipe water to over 30 paddocks would be uneconomical and against animal welfare codes. Concerns that strong enforcement of stock exclusion throughout Makara and Ohariu Valley has been recommended without sufficient evidence.	
S42.005	General comments	General comments - rural	Oppose	Silt contamination: Considers GWRC do not know the source of silt contamination, but blame farmers and exclude stock from water courses. Notes the makara river floods and considers silt falls off the sides of the streams during flooding. Considers riparian planting may help reduce the amount of silt, but nature cannot be stopped and rivers will always have silt contamination, but this is not caused by farming.	Not stated.
S42.006	General comments	General comments - rural	Oppose	Concerned with the models used relating to erosion prone land and considers local history proves erosion problems have not been an issue from farming this Region. Considers eroded soil is caused by feral goats and wild pigs from the Council owned Mountain bike park and cause more damage then grazing sheep and cattle. Considers GWRC should buy out/compensate all farmers/landowners for land retirement. Questions why native replanting is required, after it was compulsory to replace pine plantings with pines previously.	Not stated.
S42.007	General comments	General comments - rural	Oppose	Concerned with the limited areas which will be allowed to be grazed/used after PC1 due to the government direction on SNA areas and the "erosion prone" land identified in PC1 which must be retired or fenced and planted in natives and the lower slopes "stock grazing exclusion zones".	Not stated.
S42.008	General comments	General comments - overall	Oppose	Strongly opposes PC1 and the removal of community decision making. Agrees with the need to improve poor water quality where it is poor and where the solutions are within submitters control.	Recognise the work that submitter has done and partner and work with landowners rather than regulating against them.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers fundamental evidence is required to do this effectively and equitably. Requests GWRC to recognise the work that has been done and ask GWRC to partner and work with landowners rather than regulating against.	
S42.009	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Oppose	Considers the earthworks provisions in PC1 are complicated and impossible for a "lay person " to adhere or understand. Considers in order for farmers to protect their land and stock, they need access land at all times because stock welfare is dependent on it (especially during calving and lambing seasons). Concerned GWRC want to ban earthworks for 4 months of the year and considers this disregards farm safety, stock welfare and farm tracks access.	Not stated.

S214 Megan Persico

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S214.001	General comments	General comments - unplanned greenfield development	Oppose	Concerned the prohibition of greenfield developments fails to consider individual merits. Considers the emergence of decentralisation wastewater infrastructure will likely accelerate, reducing the potential environment impact from new subdivisions. Considers GWRC should consider greenfield developments individually on merits and impacts on the environment.	Review and amend to reflect the outcome of UHCC PC50 that was notified prior to PC1.
S214.002	General comments	General comments – current legislation	Not Stated	Considers PC1 should be put on hold due to signalled repeal of NPS-FM from the new government.	Put PC1 on hold.
S214.003	General comments	General comments - overall	Not Stated	Supports the "Maymorn Collective" submission.	Not Stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S214.004	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Considers farms under 20 hectares is a hobby and livestock welfare falls under MPI not GWRC.	Amend so that small farm registration only applies to farms greater than 20 hectares.

S004 Melanie Rattray

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S4.001	General comments	General comments - water bodies	Support	Considers limiting herd sizes and protecting rivers is a basic first step.	Retain as notified (inferred)

S114 Michael Marfell-Jones

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S114.001	General comments	General comments - consultation	Oppose	Recommends withdrawal of PC1, due to concerns with lack of consultation with rural communities.	Withdraw PC1 in full

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S114.002	General comments	General comments - overall	Oppose	Questions the legality of the process undertaken by GWRC as "regulation by fiat", citing recent Environment Court decisions.	Delete provisions that have not been informed through consultation [inferred]
S114.003	General comments	General comments - overall	Oppose	Expressed concern that some rules have immediate legal effect when consultation or on-site inspections have taken place, and that this may result in unknown or retrospective non-compliances.	Remove requirements for all rules to have immediate legal effect. Insert text which states "all rules in this plan change will be held in abeyance pending the plan change passing through all stages required by the RMA."
S114.004	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Does not support the prescribed information requirements, on the basis that it is too complex for laypeople to record.	Delete the requirement for farms of 4 ha to register with GWRC.

S029 Neil Deans

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S29.001	General comments	General comments - overall	Support	Supports GWRC's Whaitua process, and supports the implementation of the recommendations made by Whaitua members to address freshwater issues.	Not stated.
S29.002	General comments	General comments - water bodies	Support	The state of water bodies reflects the use of land, water and other resources in their catchments.	Not stated.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S29.003	General comments	General comments - water bodies	Support	Considers community values of many water bodies have been compromised but these streams and other water bodies continue to provide species' habitats. Considers collective action through the regional plan is required to secure and improve waterbodies and ensure they remain community assets.	Not stated.
S29.004	General comments	General comments - water bodies	Amend	Supports the direction of PC1 to require specific actions to improve water bodies over time. Recommends that interim and measurable milestones are set for achieving improved freshwater outcomes to ensure that measures are effective.	Not stated.
S29.005	5.4 Beds of lakes and rivers	5.4.8 Damming and diverting water	Amend	Considers issues around fish passage are not addressed (Rule R151A). Seeks for discretion to be available to require fish passage for activities which have existed for 10 years or more, where practical.	Enable discretion to require fish passage where practical.
S29.006	6 Other methods	6.16 Freshwater Action Plan programme	Support	No relevant comments	Retain as notified
S29.007	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Support	Supports the health of, and funding for, urban waterbodies. Notes the benefit of endorsement by local authorities in existing and new development.	Not stated.
S29.008	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Not stated	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S29.009	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Support	Supports Methods M43 and M44 and suggests this would also benefit from active endorsement by territorial local authorities in the development of existing and new urban development.	Not stated.
S29.010	8 Whaitua Te Whanganui-a-Tara	8.1 Objectives	Support	Supports objectives WH.01-WH.09 however recommends interim milestones are set, supported by numerical objectives and monitoring programmes to meet desired outcomes.	Implement interim milestones supported by numerical objectives and monitoring programmes
S29.011	8 Whaitua Te Whanganui-a-Tara	Table 8.3 Primary contact site objectives in rivers.	Support	Supports numerical requirements for running waters in addition to those for lakes. Considers human health for contact recreation should be the standard where the water bodies are used for that purpose.	Human health for contact recreation be the standard where water bodies are used for that purpose
S29.012	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Support	Supports target attribute states	Retain as notified
S29.013	8 Whaitua Te Whanganui-a-Tara	8.2 Policies	Support	Supports policies WH.P1-P.33 including the associated target attribute states and flow requirements.	Retain as notified
S29.014	8 Whaitua Te Whanganui-a-Tara	8.3 Rules	Support	Supports Rules WH.R1 to WH.R36 and notes wherever possible, water sensitive urban design should be required to minimise increased runoff intensity due to increasing hard surfaces.	Include requirement for WSUD in Rules WH.R1-WH.R36 where possible
S29.015	9 Te Awarua-o-Porirua Whaitua	9.1 Objectives	Support	Supports the provisions of Chapter 9	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S227 New Zealand Agrichemical Education Trust (NZAET)

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S227.001	5.1 Air quality rules	General conditions for the discharge of agrichemicals.	Amend	Notes only agrichemicals with hazardous properties are approved by the EPA and this rule effectively makes non-hazardous agrichemicals not permitted in the region. Notes that non-hazardous substances are already covered under the HSNO Act and associated EPA notices.	Delete "(d) the agrichemical is approved by the Environmental Protection Agency"
S227.002	5.1 Air quality rules	General conditions for the discharge of agrichemicals.	Amend	Notes that 5.1.13 (e) requires the user to follow the label but there are multiple situations where users of agrichemicals may not follow the label including crops where the product has not been formally approved. Considers it is reasonable to limit the application to the label requirements for domestic users of agrichemicals.	Move clause (e) to amended R37 to make it a requirement for domestic users of agrichemicals only. Add an equivalent statement to R38 - see separate submission point.
S227.003	5.1 Air quality rules	Rule R37: Handheld discharge of agrichemicals - permitted activity.	Amend	Considers that handheld application on commercial/public properties should be subject to greater oversight than proposed. Notes handheld application is not covered by requirements of R38(F) R38(G) and so no spray plan or notification is required.	Rename R37 to Handheld discharge of agrichemicals on a residential property
S227.004	5.1 Air quality rules	5.1.13 Discharge of agrichemicals.	Amend	Considers that requiring exact compliance with label conditions is restrictive for commercial agrichemical users. Notes the New Zealand Standard for the Management of Agrichemicals, and that requirements have, through the Standards NZ process, been confirmed as reasonable minimum requirements for agrichemical use in workplaces but they retain flexibility for off-label use where it is appropriate.	Replace 5.1.13 (e) with the following and move out of General Conditions and into R38: the discharge shall be undertaken in accordance with the good practice requirements set out in NZS 8409:2021 Section 5.2.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S227.005	5.1 Air quality rules	Rule R38: Motorised and aerial discharge of agrichemicals - permitted activity.	Amend	Considers notification requirements are too vague except for public spraying (g) and that appendix G3 requirements balances applicators and neighbour's needs. Suggests the deletion of R38(g) as Appendix G3 and G4 covers this content.	Amend R38(e)(ii) to reference NZS 8409: 2021 Appendix G3
S227.006	5.1 Air quality rules	Rule R38: Motorised and aerial discharge of agrichemicals - permitted activity.	Amend	Considers if R37 is renamed to cover residential handheld application of agrichemicals, this rule must be extended to cover handheld application in non-residential application sites.	Amend name of Rule to All other agrichemical application

S263 New Zealand Carbon Farming Group (NZCF)

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S263.001	General comments	General comments - overall	Oppose	<p>Notes that the purpose of PC1 is to give effect to NPSFM in two of the five whaitua of the Wellington region and implement regulatory and some of the non-regulatory recommendations from Whaitua Te Whanganui-a-Tara Implementation Programme ("TWT WIP") and Te Awarua-o-Porirua Implementation Programme ("Top WIP"), including by implementing the National Objectives Framework ("NOF") within Te Awarua-o-Porirua and Te Whanganui-a-Tara whaitua.</p> <p>Notes the Section 32 Report concludes the outcome sought by PC1 is the reduction of sediment in the rivers in Te Awarua-o-Porirua and Te Whanganui-a-Tara. The Section 32 Report concludes that:</p> <ul style="list-style-type: none"> plantation forestry has associated land disturbance 	<p>1. That the provisions of the Proposed Plan Change that regulate commercial forestry, including those provisions that are intended to prevail over the NESPF, are withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as:</p> <ul style="list-style-type: none"> - the efficiency and effectiveness of the NESCF has been monitored and the results of such monitoring support the need for provisions in the NRP that prevail over the NESCF; - the scope of the Proposed Plan Change clarified, including in respect of permanent forests, or commercial forests planted for carbon sequestration purposes; - decisions on submissions on Proposed Change 1 to the WRPS have been made; - the recommendations in the Te Whaitua te Whanganui-a-Tara Implementation Programme 2021 accurately and appropriately reflected in Proposed Plan Change provisions;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and discharges of sediment;</p> <ul style="list-style-type: none"> • forestry is a major land use in the Te Awarua-o-Porirua and Te Whanganui-a-Tara whaitua (13.5% and 8% respectively); • much of this forestry is located on steep land in the higher elevation areas; • harvesting of the forests occurs and will continue to occur; • therefore, to control sediment and meet outcomes, a combination of regulation of land uses and discharges will be required (including the avoidance of soil disturbance associated with plantation forestry on land with high risk of erosion, incentives and rules to permanently revegetate high risk erosion land). <p>Submitter accepts that some forestry related activities have adverse effects (including in respect of the discharge of sediment), but considers PC1 documentation does not provide sufficient evidence, or technical data to support proposed regulatory response. Considers that the regulatory response included in the PC1, being the avoidance of land disturbance, is disproportionate to outcome sought by PC1, being reduction of sediment in rivers.</p>	<p>- a fulsome evaluation of the provisions is undertaken in a manner consistent with section 32 of the RMA, with the outcome of that evaluation confirming the necessity of the Proposed Plan Change; and an evaluation is completed under section 32(4) of the RMA, that explicitly evaluates the relevant provisions of the Proposed Plan Change relative to the NESPF, with the outcome of that evaluation confirming the necessity of provisions that prevail over the NESPF.</p> <p>2. Should the relevant provisions of the Proposed Plan Change not be withdrawn (or the Proposed Plan Change is included in the NRP), NZCF seeks that the Proposed Plan Change is amended to make all required changes, including the specific amendments set out in Table at Appendix A. It is noted that the relief in Appendix A is only sought should NZCF's primary relief (being the withdrawal of the Proposed Plan Change or the Proposed Plan Change not being included in the NRP) not be accepted.</p> <p>3. Such further, alternative or consequential relief as may be necessary to fully give effect to this submission.</p> <p>4. Consistent with the Implementation Plans' recommendations, NZCF is available and willing to work collaboratively with GWRC, including through the sharing of information in respect of commercial forestry and the implementation of the NESCF, to further develop practice and any necessary regulatory intervention to address the adverse effects of discharges from commercial forestry activities on water quality.</p>
S263.002	General comments	General comments - fresh water	Oppose	<p>Notes majority of PC1 provisions subject to this submission form part of a freshwater planning instrument. Notes the Section 32 Report provides the following justification in 'Table A1: Analysis of PC1 provisions, including definitions, schedules, and maps, to identify the freshwater planning instrument' in respect of the forestry related provisions:</p> <p>"These policies, rules, method and supporting definitions, schedules and maps focus on the management of rural land use activities, forestry,</p>	<p>1. That the provisions of the Proposed Plan Change that regulate commercial forestry, including those provisions that are intended to prevail over the NESPF, are withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as:</p> <ul style="list-style-type: none"> - the efficiency and effectiveness of the NESCF has been monitored and the results of such monitoring support the need for provisions in the NRP that prevail over the NESCF; - the scope of the Proposed Plan Change clarified, including in respect of permanent forests, or commercial forests planted for carbon sequestration purposes;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and vegetation clearance. These provisions seek to manage the use of land to achieve freshwater outcomes. They relate to objectives that give effect to the NPS-FM."</p> <p>Given the stated primary intent of the provisions is to manage a land use activity, considers PC1 draws a longbow in determining scope of the freshwater planning instrument. Concerned using a freshwater planning instrument to address land use activities inappropriately affects (inferred) the procedural rights of the submitter.</p> <p>Notes PC1 including the Section 32 Report, does not explicitly identify the Objective that gives rise to the provisions being a freshwater planning instrument.</p>	<p>- decisions on submissions on Proposed Change 1 to the WRPS have been made;</p> <p>- the recommendations in the Te Whaitua te Whanganui-a-Tara Implementation Programme 2021 accurately and appropriately reflected in Proposed Plan Change provisions;</p> <p>- a fulsome evaluation of the provisions is undertaken in a manner consistent with section 32 of the RMA, with the outcome of that evaluation confirming the necessity of the Proposed Plan Change; and an evaluation is completed under section 32(4) of the RMA, that explicitly evaluates the relevant provisions of the Proposed Plan Change relative to the NESPF, with the outcome of that evaluation confirming the necessity of provisions that prevail over the NESPF.</p> <p>2. Should the relevant provisions of the Proposed Plan Change not be withdrawn (or the Proposed Plan Change is included in the NRP), NZCF seeks that the Proposed Plan Change is amended to make all required changes, including the specific amendments set out in Table at Appendix A. It is noted that the relief in Appendix A is only sought should NZCF's primary relief (being the withdrawal of the Proposed Plan Change or the Proposed Plan Change not being included in the NRP) not be accepted.</p> <p>3. Such further, alternative or consequential relief as may be necessary to fully give effect to this submission.</p> <p>4. Consistent with the Implementation Plans' recommendations, NZCF is available and willing to work collaboratively with GWRC, including through the sharing of information in respect of commercial forestry and the implementation of the NESCF, to further develop practice and any necessary regulatory intervention to address the adverse effects of discharges from commercial forestry activities on water quality.</p>
S263.003	General comments	General comments - definitions	Oppose	Notes 'Production forestry' is defined in NRP with reference to the NES-PF meaning permanent forests, such as commercial forests for carbon sequestration purposes, are not managed by provisions of PC1.	<p>1. That the provisions of the Proposed Plan Change that regulate commercial forestry, including those provisions that are intended to prevail over the NESPF, are withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as:</p> <p>- the efficiency and effectiveness of the NESCF has been</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Notes Section 32 Report includes the following statement suggesting the scope of PC1 expands as the NES-CF is addressed through submissions and decision-making: "In these FMUs, plantation forest management is currently only subject to the regulations of the NES-PF, that came into force on 1 May 2018. From 03 November 2023, the NES-PF will be replaced by the Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2023 (NES-CF). The NES-CF extends the NES-PF to cover carbon forests as well as plantation forests, so the Plan Change 1 provisions applying to forestry are expected to remain appropriate with respect to the NES-CF, with some amendments to terminology. As the NES-CF will not be in effect at the date of notification of Plan Change 1, any amendments will be managed through the submissions and decision-making process."</p> <p>Considers that whilst submission and decision-making processes can address alignment of PC1 provisions with the NESCF, submissions and decision-making cannot be used to expand scope of PC1 to also address 'carbon forests'. Considers management of discharges from 'carbon forests', or 'carbon forests' more generally, is outside the scope of PC1.</p>	<p>monitored and the results of such monitoring support the need for provisions in the NRP that prevail over the NESCF;</p> <ul style="list-style-type: none"> - the scope of the Proposed Plan Change clarified, including in respect of permanent forests, or commercial forests planted for carbon sequestration purposes; - decisions on submissions on Proposed Change 1 to the WRPS have been made; - the recommendations in the Te Whaitua te Whanganui-a-Tara Implementation Programme 2021 accurately and appropriately reflected in Proposed Plan Change provisions; - a fulsome evaluation of the provisions is undertaken in a manner consistent with section 32 of the RMA, with the outcome of that evaluation confirming the necessity of the Proposed Plan Change; and an evaluation is completed under section 32(4) of the RMA, that explicitly evaluates the relevant provisions of the Proposed Plan Change relative to the NESPF, with the outcome of that evaluation confirming the necessity of provisions that prevail over the NESPF. <p>2. Should the relevant provisions of the Proposed Plan Change not be withdrawn (or the Proposed Plan Change is included in the NRP), NZCF seeks that the Proposed Plan Change is amended to make all required changes, including the specific amendments set out in Table at Appendix A. It is noted that the relief in Appendix A is only sought should NZCF's primary relief (being the withdrawal of the Proposed Plan Change or the Proposed Plan Change not being include in the NRP) not be accepted.</p> <p>3. Such further, alternative or consequential relief as may be necessary to fully give effect to this submission.</p> <p>4. Consistent with the Implementation Plans' recommendations, NZCF is available and willing to work collaboratively with GWRC, including through the sharing of information in respect of commercial forestry and the implementation of the NESCF, to further develop practice and any necessary regulatory intervention to address the adverse effects of discharges from commercial forestry activities on water quality.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S263.004	General comments	General comments – plantation forestry	Oppose	<p>Notes that PC1 acknowledges the NESCF came into force on 3 November 2023, but does not give explicit consideration to whether NESCF (and particularly amendments that strengthen the approaches to the management of adverse effects of forestry related activities) are able to achieve the stated outcome of PC1, being the reduction of sediment in rivers in the two Whāita's (inferred)</p> <p>Notes the NESCF is a national direction planning instrument and secondary legislation made under sections 43, 43A and 44 of the RMA. Noting the purpose and role in the hierarchy of RMA planning instruments, submitter considers it is important for Council to allow the NESCF to be appropriately implemented (including required monitoring). Considers it is premature for Council to promulgate a plan change to regulate production forest activities when new regulations have been made. Seeks PC1 is withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as the efficiency and effectiveness of NESCF has been monitored and results of such monitoring support the need for provisions in NRP.</p>	Seeks PC1 be withdrawn (or the Proposed Plan Change is not included in the NRP) until such time as the efficiency and effectiveness of NESCF has been monitored and results of such monitoring support the need for provisions in NRP
S263.005	General comments	General comments – plantation forestry	Oppose	<p>Submitter understands PC1 prevails over those regulations in NESPF listed in the 'Note' that accompanies the new Rules in Chapters 8 and 9. In terms of NESCF, the Section 32 Report states: "The National Environmental Standards for Commercial Forestry (NES-CF) will, from 03 November 2023, supersede the NES-PF. The NES-CF will regulate commercial forestry activities for both carbon and timber production (plantation) forests. Plan Change 1 will introduce new provisions for forestry for the management of best practice to reduce sediment from sites. It is not expected that the NES-CF will impact on the approach being taken to manage forestry in Plan Change 1, and the new provisions will prevail over NES-CF rules."</p>	Seeks that PC1 is withdrawn (or the Proposed Plan Change is not included in the NRP).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Submitter considers this gives rise to an issue in respect of whether the PC1 provisions prevail over NESCF. Considers provisions of PC1 cannot prevail over NESCF because this was not included in PC1 as notified. Does not consider this confusion can be remedied by simply replacing the acronym 'NESPF' with 'NESCF' without scope of PC1 being called into question.	
S263.006	General comments	General comments - overall	Oppose	<p>Submitter notes Proposed Plan Change 1 WRPS is to give effect to the NPSFM and is therefore a freshwater planning instrument (in part). Notes that submissions on Proposed Change 1 are currently being heard and the final form of the WRPS (incorporating decisions on Proposed Change 1) is not known.</p> <p>Considers PC1 is also a freshwater planning instrument that is to give effect to the NPSFM. Considers it can be concluded that the final form of provisions in the WRPS as a result of Plan Change 1 to the WRPS will be relevant, and need to be given effect to, in the NRP.</p> <p>Considers that, because content of the WRPS that gives effect to the NPSFM is yet to be determined, it is premature and inefficient to notify NRP provisions that are also to give effect to the NPSFM.</p>	Seeks that PC1 is withdrawn (or the Proposed Plan Change is not included in the NRP).
S263.007	General comments	General comments – plantation forestry	Oppose	<p>Acknowledges Te Whaitua te Whanganui-a-Tara Implementation Programme addresses plantation forestry as follows:</p> <p>"Plantation forestry can have benefits for water quality, but it also brings a high risk of sediment loss in the years after harvesting, particularly in the headwaters of Te Awa Kairangi/Hutt River. Unfortunately, the evidence we have heard suggests that good-practice sediment management in line with national rules is not yet being consistently used. This suggests a need to ramp up</p>	Seeks PC1 be withdrawn (or the Proposed Plan Change is not included in the NRP) and redrafted to reflect recommendations in the Implementation Plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>investigations of, and prosecutions for, poor management with greater accountability to communities affected by the consequences of poor practice."</p> <p>In response, the Implementation Programme includes the following recommendation: "SUPPORTING BEST PRACTICE AND COMPLIANCE OF FORESTRY OPERATIONS Greater Wellington provides enough staff and resources to:</p> <ul style="list-style-type: none"> - Work with forestry groups (New Zealand Farm Forestry Association, New Zealand Forest Owners Association) and contractors to provide proactive advisory support that includes ensuring all forestry operators are aware (by 2023) of relevant regulatory requirements and good practice - Ensure all forestry operators in the whitua are monitored for compliance with NES-PF and other relevant requirements from 2023 onwards, and share this monitoring information with the community - Take enforcement action on non-compliance. <p>Submitter considers that while purported to implement the recommendations in the Implementation Plan, PC1 does not resemble the recommendations. In this regard, the Implementation Plan relies on NESPF, whereas PC1 seeks to override it. Also notes, PC1 fails to acknowledge benefits for water quality from plantation forestry that have been identified in the Implementation Plan.</p>	
S263.008	General comments	General comments - plantation forestry	Oppose	<p>Acknowledges the Te Awarua-o-Porirua Whitua Implementation Programme 2019 concludes as follows: "Earthworks and forestry operations, if undertaken correctly and on suitable land, should result in</p>	Seeks PC1 be withdrawn (or the Proposed Plan Change is not included in the NRP) and redrafted to reflect recommendations in the Implementation Plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>minimal (if any) discharges of sediment to the streams and harbour. The challenge is to ensure all earthworks and forestry operations are undertaken on suitable land and using good practice and the risks of sediment-laden water running off-site is minimised."</p> <p>Notes the Implementation Programme includes a specific section that addresses forestry - refer to Section 10.3 Forestry and recommendations 54-57.</p> <p>Notes that while purported to implement the recommendations in the Implementation Plan, the PC1 does not resemble the recommendations. Considers Implementation Plan also relies on NESPF and explicitly acknowledges time should be allowed for NESPF to be implemented. Notes as per the Te Whaitua te Whanganui-a-Tara Implementation Programme, PC1 fails to respond to recommendations that emphasise engagement and monitoring. Submitter agrees the NESPF, and now the NESCF, should be given time to 'bed-in' before more stringent provisions are included in the NRP.</p>	
S263.009	General comments	General comments – plantation forestry	Oppose	<p>Notes despite direction given in section 66 of RMA, PC1, including accompanying supporting documentation is silent on implications in respect of New Zealand's climate change response, and the contribution forestry makes to this response. That is:</p> <ul style="list-style-type: none"> - PC1 has not given any consideration to Emissions Trading Scheme, which is established and comprehensively managed under Climate Change Response Act 2002, including obligations and liabilities therein. For instance, the liability and costs for deforestation. - PC1 is directly contrary to New Zealand's Emissions Reduction Plan (made in accordance with section 5Z1 of the Climate Change Response Act 2002). The Emissions Reduction Plan includes an entire chapter (Chapter 14) that addresses 	Seeks PC1 be withdrawn (or not included in the NRP)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>forestry. Notes chapter identifies the following 'key actions' to support the role of forestry in meeting New Zealand's 2050 targets: "Support afforestation by: - considering amendments to the New Zealand Emissions Trading Scheme (NZ ETS) and resource management settings to achieve the right type and scale of forests, in the right place - supporting landowners and others to undertake afforestation, particularly for erodible land - providing advisory services to land users, councils, Māori and other stakeholders to support choices for sustainable afforestation. Encourage native forests as long-term carbon sinks through reducing costs and improving incentives. Maintain existing forests by exploring options to reduce deforestation and encourage forest management practices that increase carbon stocks in pre-1990 forests. Grow the forestry and wood processing industry to deliver more value from low-carbon products, while delivering jobs for communities." - PC1 is not consistent with New Zealand's National Adaptation Plan (made in accordance with section 5Z1 of the Climate Change Response Act 2002) and does not consider implications of Actions 3.13 and 6.12.</p>	
S263.010	General comments	General comments – plantation forestry	Oppose	<p>Submitter considers that the Section 32 Report: - fails to clearly identify Objective, or Objectives, the provisions of PC1 are to achieve and therefore does not support a conclusion that provisions are most appropriate; - does not include any evidence to support conclusions in respect of extent to which sediment in streams is reduced by various options that are evaluated; - fails to consider potential for sediment losses from</p>	Seeks PC1 be withdrawn (or not included in the NRP)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>land uses other than forestry, that is, potential for sediment losses to be greater where land is put to alternative uses;</p> <ul style="list-style-type: none"> - does not address New Zealand's Emissions Reduction Plan (made in accordance with section 5ZI of the Climate Change Response Act 2002) as required by section 66 of the RMA and particularly does not consider contribution forestry makes to achieving New Zealand's emissions reduction target; - does not address New Zealand's National Adaptation Plan (made in accordance with section 5ZI of the Climate Change Response Act 2002) as required by section 66 of the RMA and particularly does not consider 'Action 6.12: Implement the Sustainable Land Management Hill Country Erosion Programme' and acknowledgement that afforestation can reduce soil loss; - does not consider efficiency or costs in respect of practical implications of Maps 92 and 95, that is, the cost of areas where forestry is prohibited by virtue of the maps causing the ability to use neighbouring land for forest to be prevented or constraint through ownership, scale, access and economic constraints; - fails to describe or set out the social costs of the various options that have been evaluated; - does not quantify the costs of the various options, including in respect of employment and the New Zealand Emissions Trading Scheme; and - does not provide any evidence or data to support the conclusion the environment is degraded as a result of the status quo, including the NESPF, and the existing policy framework is unsuccessful at achieving outcomes set by objectives in NRP, Implementation Plans or national instruments. <p>Considers PC1 is flawed because the evaluation required under section 32(4) has not been completed or documented in the Section 32 Report.</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers the Section 32 Report is inadequate and fails to confirm the provisions are the most appropriate, efficient or effective means to achieve Objectives or give effect to higher order planning instruments.	
S263.011	2 Interpretation	Afforestation	Support	Does not oppose inclusion of a definition of 'Afforestation' in the NRP as the term should be consistently understood where it is used in the provisions of the NRP. Notes proposed definition refers to the NESPF 2017 and does not address establishment of permanent forests, including commercial forests for carbon sequestration purposes.	Retain 'Afforestation' definition as notified.
S263.012	2 Interpretation	Earthworks	Support	Does not oppose inclusion of a definition of 'Earthworks' in NRP and notes the definition appropriately replicates the definition required by the National Planning Standards for most activities. With regards to the definition that applies to Rules WH.R20, WH.R21, P.R19 and P.R20, submitter notes that the proposed definition refers to NESPF 2017 and therefore the exception in the definition does not apply to earthworks for the establishment of permanent forests, including commercial forests for carbon sequestration purposes.	Retain 'Earthworks' definition as notified.
S263.013	2 Interpretation	Erosion and sediment management plan	Amend	Subject to relief sought in this submission, submitter is unsure whether a definition of 'Erosion and sediment management plan' is necessary for implementation of NRP. Submitter does not oppose definition.	Retain definition of 'Erosion and sediment management plan' as notified where the definition is necessary to assist the implementation of NRP.
S263.014	2 Interpretation	Harvesting	Support	Does not oppose inclusion of a definition for 'Harvesting' in NRP as the term should be consistently understood where it is used in provisions of NRP. Notes the proposed definition refers to NESPF 2017 and as such does not address the establishment of permanent forests, including commercial forests for carbon sequestration purposes.	Retain definition of 'Harvesting' as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S263.015	2 Interpretation	Highest erosion risk land (plantation forestry)	Oppose	Submitter opposes proposed Maps 92 and 95 in their entirety. Does not consider the definition of 'Highest erosion risk land (plantation forestry)' is necessary or appropriate.	Delete definition of 'Highest erosion risk land (plantation forestry)' in its entirety.
S263.016	2 Interpretation	Mechanical land preparation	Support	Does not oppose inclusion of a definition for 'Mechanical land preparation' in NRP as the term should be consistently understood where it is used in provisions of NRP. Notes the proposed definition refers to NESPF 2017 and as such does not address the establishment of permanent forests, including commercial forests for carbon sequestration purposes.	Retain definition of 'Mechanical land preparation' as notified.
S263.017	2 Interpretation	Registered forestry adviser	Amend	<p>Does not oppose the definition of 'Registered forestry adviser' subject to relief sought in this submission.</p> <p>Considers the definition inappropriately narrows advice that may be given by a person registered under the Forests (Registration of Log Traders and Forest Advisers) Amendment Act 2020. That is, section 63M of the Forests (Registration of Log Traders and Forest Advisers) Amendment Act 2020 includes a more fulsome list of matters on which advice may be given. Notes that no rationale for narrowing these matters in the proposed definition is given in the Section 32 Report. Considers to extent that a definition is necessary, the definition should include all matters in Section 63M and seeks that definition is amended accordingly.</p>	<p>Amend definition of 'Registered forestry adviser' as follows:</p> <p>"Means a person registered under s63Q or s63T of Forests (Regulation of Log Traders and Forestry Advisers) Amendment Act 2020 that is authorised to provide a forestry advice service defined by s63M of the Forests (Regulation of Log Traders and Forestry Advisers) Amendment Act 2020. give advice that relates to:</p> <p>(a) the establishment, management, or protection of a forest, and</p> <p>(b) the management or protection of land used, or intended to be used, for any purpose in connection with a forest or proposed forest, including biophysical and land use topics described in Ministry for Primary Industries, 2023, Guidance: What is a forestry adviser?, and</p> <p>(c) the beneficial effects of forests, including how they contribute to environmental outcomes."</p>
S263.018	2 Interpretation	Replanting	Support	Does not oppose inclusion of a definition of 'Replanting' in NRP as term should be consistently understood where it is used in provisions of NRP, . Notes the proposed definition refers to NESPF 2017 and as such does not address establishment of permanent forests, including commercial forests for carbon sequestration purposes.	Retain definition of 'Replanting' as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S263.019	2 Interpretation	Vegetation clearance (for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20)	Support	Submitter does not oppose inclusion of a definition of 'Replanting' in NRP as term should be consistently understood where it is used in provisions of NRP. Notes the proposed definition refers to NESPF 2017 and as such does not address establishment of permanent forests, including commercial forests for carbon sequestration purposes.	Retain definition of 'Vegetation clearance' as notified.
S263.020	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Oppose	<p>Submitter opposes Policy WH.P28. More specifically, in terms of clause (a), submitter seeks the clause is deleted because:</p> <ul style="list-style-type: none"> -the rationale for, and appropriateness of, the approach to the identification of highest erosion risk land (plantation forestry) is not clearly set out; -the rationale for departing from the erosion susceptibility classification in the NESPF is not set out in the manner required by section 32(4); -The practical implications of the mapping and associated provisions have not been considered, including the extent to which the mapped areas result in greater constraints because matters such as scale, ownership and topography may result in larger areas no longer being viable for forestry uses. <p>In terms of clause (b), NZCF notes that planning and implementing erosion and sediment control is a normal part of forest operations. The NESPF includes requirement to manage erosion and sediment in any case. These Regulations have been updated in the NESCF. NZCF seeks limited amendments to clause (b) to reflect current best practice.</p> <p>NZCF does not support clause (c) of the Policy because preventing establishment of plantation forestry, or the continuation of plantation forestry, in identified areas:</p>	<p>Amend Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry</p> <p>"Reduce discharges of sediment from plantation forestry by: (a) identifying highest erosion risk land (plantation forestry), and (b) improving management of plantation forestry by requiring erosion and sediment management plans to be prepared and complied with, and (c) requiring that on highest erosion risk land (plantation forestry), plantation forestry is not established or continued beyond the harvest of existing plantation forest."</p>

					resource consent (including auditing of information) to demonstrate and/or monitor compliance with the resource consent and the erosion and sediment management plan 4. The timing, frequency and requirements for review, audit and amendment of the erosion and sediment management plan."
S263.024	8 Whaitua Te Whanganui-a-Tara	Rule WH.R22: Plantation forestry on highest erosion risk land - prohibited activity.	Oppose	<p>Submitter opposes Rule in its entirety for the following reasons:</p> <p>Considers there is neither a strong evidential basis nor objectives and policies (including in the WRPS, the NRP and the Proposed Plan Change) to justify applying the most extreme stringent approach to plantation forestry in particular locations.</p> <p>With reference to Royal Forest & Bird Protection Society of New Zealand Inc v Whakatane District Council [2017] NZEnvC 51 at [62] the Environment Court noted, the complexity of plan making means the classification of activities is likely to require specific analysis of effects of that activity against the particular objectives and policies which relate to the activity being assessed.</p> <p>The Court also emphasised that: Submitter is not aware of any operative objective or policy that directs such a stringent outcome. Further, no analysis of the nature described has been completed or documented in this instance. Considers the Rule overly stringent in circumstances where activities addressed by the Rule can be undertaken in a way that does not result in sediment discharges to rivers. No consideration has been given to afforestation being undertaken in a manner that does not result in discharges.</p> <p>Considers the Rule could result in an increase in discharges of sediment to rivers because, as</p>	<p>Delete Rule WH-R22 in its entirety, as follows: "Rule WH.R22: Plantation forestry on highest erosion risk land – prohibited activity Afforestation, earthworks, or mechanical land preparation for plantation forestry on highest erosion risk land (plantation forestry) is a prohibited activity."</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>acknowledged Plan, continued use of the identified area for forestry is likely to reduce discharges over life of a forest to a greater extent than other uses of the land, including retirement.</p> <p>Considers applying prohibited activity status to one use of highest erosion risk land is not even-handed as other potential land uses are not similarly managed. A more even-handed rule would be more directly related to the potential adverse effects of activities. That is, prohibiting the effects of discharges to freshwater, rather than prohibiting an activity.</p> <p>Considers the purpose of the rule is to reduce sediment in rivers, yet the rule prevents an activity as a whole in an ill-defined area. Considers that no direct causal relationship has been established for the activity and area such that prohibited activity status is appropriate or necessary.</p> <p>Considers prohibited activity status is inconsistent with, and contrary to, recommendations of Te Whaitua te Whanganui-a-Tara Implementation Programme and Te Awarua-o-Porirua Whaitua: Whaitua Implementation Programme.</p> <p>Considers prohibited activity status is contrary to New Zealand's Emissions Reduction Plan and New Zealand's National Adaptation Plan.</p>	
S263.025	9 Te Awarua-o-Porirua Whaitua	Policy P.P26: Achieving reductions in sediment discharges from plantation forestry.	Oppose	<p>Submitter opposes Policy P.P26 for all of the reasons set out in this submission. More specifically, in terms of clause (a), the submitter seeks that the clause is deleted because:</p> <ul style="list-style-type: none"> - the rationale for, and appropriateness of, approach to the identification of highest erosion risk land (plantation forestry) is not clearly set out; - the rationale for departing from the erosion susceptibility classification in the NESPF is not set out in manner required by section 32(4); - the practical implications of mapping and associated provisions have not been considered, 	<p>Amend Policy P.P26 as follows:</p> <p>"Policy P.P26: Achieving reductions in sediment discharges from plantation forestry</p> <p>Reduce discharges of sediment from plantation forestry by:</p> <p>(a) identifying highest erosion risk land (plantation forestry), and (b) improving management of plantation forestry by requiring erosion and sediment management plans to be prepared and complied with, and (c) requiring that on highest erosion risk land (plantation</p>

				of sediment to a river, the considerations that are relevant to the adverse effect, are sufficiently known and confined such that restricted discretionary activity status is the most appropriate activity status to apply in circumstances where the standards in Rule P.R19 are not met. Submitter suggests the 'matters of control' in Rule P.R19 are appropriate to apply as 'matters of discretion'.	discretionary activity. Matters of discretion 1. The content of the erosion and sediment management plan, including the actions, management practices and mitigation measures necessary to ensure that discharge of sediment will be minimised, and will not increase the average annual sediment load for the part Freshwater Management Unit in which the plantation forestry is located 2. The area, location and methods employed in the plantation forestry 3. The monitoring, record keeping, reporting and information provision requirements for the holder of the resource consent (including auditing of information) to demonstrate and/or monitor compliance with the resource consent and the erosion and sediment management plan 4. The timing, frequency and requirements for review, audit and amendment of the erosion and sediment management plan."
S263.029	9 Te Awarua-o-Porirua Whaitua	Rule P.R21: Plantation Forestry on highest erosion risk land - prohibited activity.	Oppose	<p>Notwithstanding primary relief, submitter opposes Rule P.R21 in its entirety for the following reasons:</p> <p>Submitter considers that there is neither a strong evidential basis nor objectives and policies (including in the WRPS, the NRP and the Proposed Plan Change) to justify applying the most extreme stringent approach (prohibited activity) to plantation forestry in particular locations.</p> <p>With reference to Royal Forest & Bird Protection Society of New Zealand Inc v Whakatane District Council [2017] NZEnvC 51 at [62] the Environment Court noted, the complexity of plan making means the classification of activities is likely to require specific analysis of effects of that activity against the particular objectives and policies which relate to the activity being assessed. Submitter is not aware of any operative objective or</p>	Delete Rule P.R21 in its entirety as follows: " Rule P.R21: Plantation Forestry on highest erosion risk land – prohibited activity Afforestation, earthworks, or mechanical land preparation for plantation forestry on highest erosion risk land (plantation forestry) is a prohibited activity. "

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>policy that directs such a stringent outcome. Further, no analysis of the nature described has been completed or documented in this instance. Considers the Rule overly stringent in circumstances where activities addressed by the Rule can be undertaken in a way that does not result in sediment discharges to rivers. No consideration has been given to afforestation being undertake in a manner that does not result in discharges.</p> <p>Considers the Rule could result in an increase in discharges of sediment to rivers because, as acknowledged Plan, continued use of the identified area for forestry is likely to reduce discharges over life of a forest to a greater extent than other uses of the land, including retirement.</p> <p>Considers applying prohibited activity status to one use of highest erosion risk land is not even-handed as other potential land uses are not similarly managed. A more even-handed rule would be more directly related to the potential adverse effects of activities. That is, prohibiting the effects of discharges to freshwater, rather than prohibiting an activity.</p> <p>Considers the purpose of the rule is to reduce sediment in rivers, yet the rule prevents an activity as a whole in an ill-defined area. Considers that no direct causal relationship has been established for the activity and area such that prohibited activity status is appropriate or necessary.</p> <p>Considers prohibited activity status is inconsistent with, and contrary to, recommendations of Te Whaitua te Whanganui-a-Tara Implementation Programme and Te Awarua-o-Porirua Whaitua: Whaitua Implementation Programme.</p> <p>Considers prohibited activity status is contrary to New Zealand's Emissions Reduction Plan and New Zealand's National Adaptation Plan.</p>

					resource consent held in respect of the plantation forest or property, or any requirement of the Plan that is not already authorised, and (c) the nature of the change is documented in writing and made available to the Wellington Regional Council."
S263.031	13 Maps	Map 92: Highest erosion risk land (Plantation forestry) - Te Awarua-o-Porirua.	Oppose	Does not support mapping of highest erosion risk land (Plantation forestry) because: -the rationale for, and appropriateness of, the approach to the identification of highest erosion risk land (plantation forestry) is not clearly set out; -the rationale for departing from the erosion susceptibility classification in NESPF is not set out in the manner required by section 32(4); and -The practical implications of mapping and associated provisions have not been considered, including extent to which the mapped areas result in greater constraints because matters such as scale, ownership and topography may result in larger areas no longer being viable for forestry uses.	Delete Map 92 and replace with the erosion susceptibility classification in the NESPF throughout PC1.
S263.032	13 Maps	Map 95: Highest erosion risk land (Plantation forestry) - Te Whanganu i-a-Tara.	Oppose	Does not support mapping of highest erosion risk land (Plantation forestry) because: -the rationale for, and appropriateness of, the approach to the identification of highest erosion risk land (plantation forestry) is not clearly set out; -the rationale for departing from the erosion susceptibility classification in NESPF is not set out in the manner required by section 32(4); and -The practical implications of mapping and associated provisions have not been considered, including extent to which the mapped areas result in greater constraints because matters such as scale, ownership and topography may result in larger areas no longer being viable for forestry uses.	Delete Map 95 and replace with the erosion susceptibility classification in the NESPF throughout PC1.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S195 New Zealand Farm Forestry Association (NZFFA)

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S195.001	General comments	General comments - plantation forestry	Not Stated	<p>Considers PC1 is biased against forestry. Notes Council monitoring demonstrates that water quality for catchments with significant forest cover is generally better water quality compared with other land uses.</p> <p>Concerned PC1 will cause a significant decline in commercial forest activity in the Wellington region which, in turn, will impact the regional economy, make it harder to meet climate change targets, and may lead to negative environmental effects.</p>	Not stated
S195.002	General comments	General comments - overall	Not Stated	Considers PC1 is not necessary or desirable.	Not stated
S195.003	General comments	General comments - overall	Amend	<p>Consider PC1 and S32 report do not meet requirements of S82(1)(a) of the Local Government Act 2002 .</p> <p>Considers members lack sufficient knowledge of Māori to understand parts of the documents.</p>	<p>Define more terms so there is less confusion and ambiguity.</p> <p>Translate Māori words into English, or have an English language version.</p>
S195.004	General comments	General comments - current legislation	Not Stated	Delete merged with above	Not stated
S195.005	General comments	General comments - plantation forestry	Not Stated	Seeks replanting not be regulated in the proposed plan	Seeks replanting not be regulated in PC1
S195.006	General comments	General comments - plantation forestry	Not Stated	Considers the proposed rules are a major disincentive for investment in commercial forestry and are likely to negatively impact opportunities to obtain an adequate return. Notes the conditions, or costs of meeting the conditions, will prevent land	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>from being harvested and the "highest risk" classification devalues the land and prevents the forest owner from obtaining an income from it.</p> <p>Considers PC1 will reduce the chances of meeting the Climate Change Commission advice to Government advocating increased planting of exotic forests between 2021 and 2030. Notes PC1 deters the submitter from advising planting trees as a long-term investment.</p> <p>Notes that under the Emissions Trading Scheme, owners are required to retain their land in forests after harvest.</p> <p>Notes if forest land is not replanted, it will generate no income and become a financial liability for the owner, while adding nothing to the region's social and economic wellbeing.</p>	
S195.007	General comments	General comments - overall	Oppose	<p>Considers the PC1 process has been rushed creating problems for those affected. Examples provided are as follows:</p> <p>Considers PC1 references and contains outdated definitions and regulations from the NES-PF despite this being superseded by the NES-CF regulations. Due to this, submitter considers it impossible to discern the actual meaning of the proposed new Plan.</p> <p>Considers the council's decision to make a submission to fix the missing controls on replanting included in the Section 32 report would be a significant departure from the publicly available intentions and is concerned that others may have made submissions had they known things were subject to change.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers Council have rejected recommendations from Te Awarua-o-Porirua WIP and Te Whanganui-a-Tara WIP for better enforcement of compliance and are undertaking a process that is complex, costly and addressing a problem has not been established with regulations that are unnecessary. It would be more cost effective to perform its role under the national standard.	
S195.008	General comments	General comments - plantation forestry	Not Stated	<p>Considers the council has not provided evidence to support claims within the S32 report forestry is responsible for the "current degraded state" of water bodies.</p> <p>Considers there is no evidence that the NES-PF failed to achieve the water quality standards of Greater Wellington, nor any evidence that the new, more stringent NES-CF will fail. Notes if PC1 is adopted, it would be impossible to determine whether or not the new regulations for forestry resulted in any discernible improvements in water quality. Considers without such evidence, there is no reason to undercut a national environmental standard.</p>	Not stated
S195.009	General comments	General comments - plantation forestry	Not Stated	<p>Consider PC1 will make it impossible for many forest owners to provide for their economic well-being or to make reasonable use of their land. Notes this applies the following situations:</p> <p>Notes where forest land is classed as "highest risk," the owner will not be able to derive any revenue from its post-harvest, despite the continuing costs of rates and property maintenance. Considers small parts of a block classified as erosion prone may be essential for access or for harvest infrastructure. Concerned if they are not used, the forest might not be harvested becoming a stranded asset.</p> <p>Concerned it may be impossible to meet all forestry</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				activities conditions in PC1 such as, meeting the maximum sediment level of 100 grams / m3 of runoff. Considers compliance costs may be simply too high to bother.	
S195.010	General comments	General comments - plantation forestry	Not Stated	<p>Considers GWRC have not provided forestry specific evidence related to the Wellington region that demonstrates the NES-PF (and now the NES-CF) does not give effect to a specific objective developed to give effect to the NES-FW. Considers there is no justification for the proposed new forestry rules.</p> <p>Considers GWRC have not provided forestry specific evidence to show the new rules will achieve improvements in terms of any particular objective developed to give effect to the NES-FM. Notes there is no defined link between the proposed more stringent rules and a particular objective. By contrast, there is plenty of evidence that plantation forestry as a land use leads to reduced sediment loads and improved water quality. Suggests that what is proposed does not comply with regulation 6.1 in the NES-CF.</p>	Not stated
S195.011	General comments	General comments - plantation forestry	Not Stated	<p>Considers the S32 report with respect to plantation forestry is deficient, incorrect, misleading and devoid of evidence problems are being caused by forestry or current forestry regulations.</p> <p>Considers the report omits mentioning that GWRC could be liable for compensation to China Forestry Group if PC1 goes ahead.</p>	Not stated
S195.012	General comments	General comments - rural	Not Stated	<p>Considers the S32 reports assumption that the NES-CF is focussed on including carbon forestry in the national environmental standards and therefore the PC1 provisions are justified, is incorrect.</p> <p>Considers the NES-CF focuses on stronger environmental protection For example it has new</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				requirements for Afforestation Plans to manage erosion and sedimentation and Harvest Management Plans.	
S195.013	General comments	General comments - plantation forestry	Not Stated	<p>Considers the s32 reports statement regarding the NES-PF erosion susceptibility classification system in comparison to the ESC mapping undertaken for Greater Wellington to be incorrect and misleading.</p> <p>Notes the ESC mapping undertaken for Greater Wellington defines the 'highest-risk' land as the most erodible 10% of forest land by area and land use within each Whāitua. Considers this is a relative measure, not an absolute one. Notes that just because land is in the top 10% does not imply that it is at risk of erosion.</p> <p>Notes if Greater Wellington is concerned that the land in its area has been misclassified in the NES-CF, then there are channels to update the mapping and classifications.</p>	Not stated
S195.014	General comments	General comments - plantation forestry	Not Stated	<p>Considers the S32 report intention to ensure plantation forestry does not establish or endure on highest erosion risk land and the most appropriate management practices are employed is laudable but inadequate.</p> <p>Considers it focuses on relative risk, not absolute risk. Notes if most of the land is erosion prone, then setting a target of 10% is irrelevant. Notes since the classification is by land use, there would always be a 'top 10%' of erosion risk land under plantation forestry and that land's retirement with each successive harvest would lead over time to very little plantation forestry remaining.</p>	Not stated
S195.015	General comments	General comments -	Not Stated	Notes the s32 report considers the notification process for forestry activities in the NES-PF is not fit for purpose, and there is no quality assurance or approval process provided for the notified plans.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		plantation forestry		<p>Considers there is no evidence that the plans provided under the NES-PF and now under the NES-CF are inadequate. Notes recommendations asking the Council to better enforce compliance within the NES-PF rather than seek more stringent regulations.</p> <p>Acknowledges there have been breaches, but that this will happen with any regulation irrespective of its stringency.</p> <p>Notes Regional Council staff will not enforce plans unless there is a complaint. Suggests even Greater Wellington staff are slow to act.</p> <p>Notes Greater Wellington staff are not aware of the content of the current regulations and suggests better resourcing and training, rather than more regulations, would lead to better outcomes.</p>	
S195.016	General comments	General comments - plantation forestry	Not Stated	<p>Comments for policy package option 1, for Plantation forestry and woody vegetation clearance and - efficiency and effectiveness of provisions, in the s32 report are as follows:</p> <p>Considers discrepancies in the interpretation of Te Awarua-o-Porirua WIP recommendations 54 and 55 within the S32 report. Suggests that these recommendations do not focus on improving plantation forestry management to reduce sediment, but rather call for changes within the framework of the NES-PF, contradicting the objectives of PC1. Also notes the request for Greater Wellington to work with the industry, which is not happening. Considers PC1 is not an adequate response to these recommendations.</p> <p>Considers that recommendation 37 is not focused on promoting best practices in plantation forestry</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and monitoring compliance, as highlighted in the S32 report. Notes its focussed on the Council's staffing level and seeks alignment with the NES-PF to enhance outcomes.</p> <p>Considers recommendations WIP 76,77,78 do not require all harvesting to be approved by the Council, or to be a controlled activity.</p> <p>Considers PC1 does not achieve the outcomes sought in the WIP recommendations.</p>	
S195.017	General comments	General comments - plantation forestry	Not Stated	<p>Comments for policy package options 2 and 3, for plantation forestry and woody vegetation clearance and - efficiency and effectiveness of provisions, in the s32 report are as follows:</p> <p>Considers the analysis confuses relative erosion risk with absolute erosion risk. Considers there is loose terminology, as New Policy uses the term "highest erosion risk" while New Rule uses "very high erosion risk," and the two terms are used synonymously when they are quite different. Very high erosion prone land is defined already in the provisions of the NES-CF and requires no change.</p>	Not stated
S195.018	General comments	General comments - plantation forestry	Not Stated	<p>Disagrees with the assessment for options 1, 2 and 3 in the s32 report. Considers there is no basis for the claim that sediment generated by plantation forestry is a problem within the Greater Wellington area because of the regulations governing forestry.</p> <p>Considers there is no evidence of the NES-PF generating worse environmental outcomes in the Wellington area than the pre-2018 consenting regime, nor is there evidence that either forestry or the NES-PF is responsible for the 'current degraded state' of water bodies in the region.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Notes there are studies showing that over the course of a whole rotation, commercial forestry is much better than many other land uses at minimising sediment flows. An example is the Pakuratahi paired-catchment study.</p> <p>Contend that the environmental benefits of the three options are equal.</p>	
S195.019	General comments	General comments - plantation forestry	Not Stated	Delete	Not stated
S195.020	General comments	General comments - plantation forestry	Not Stated	<p>Disagrees with the assessment that the social costs of Option 1 or 3 will be low. Considers both options would reduce plantation forestry activity in the region, leading to job losses within the industry, at the port, and at regional sawmills dependent on logs from the area. Considers the analysis does not attempt to quantify those impacts.</p> <p>With all three options the submitter disputes that plantation forestry contributes in any significant way to the sedimentation of our rivers and argue PC1 is unnecessary. Considers the NES-CF is quite capable of regulating forestry activities to control sediment flows when enforced.</p>	Not stated
S195.021	General comments	General comments - plantation forestry	Not Stated	<p>Considers the analysis in the Section 32 report does not quantify the monetary costs of the options.</p> <p>Notes other significant economic factors are the devaluation of forest land, the reduction of economic activity, and the loss of forest income from both timber and carbon credits.</p> <p>Suggests the economic costs of option 1 are high, and for option 3 are medium as both will increase</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the costs and create a "negative benefit". Considers the analysis should state this.	
S195.022	General comments	General comments - plantation forestry	Not Stated	Notes the analysis appears subjective rather than based on evidence or research. Considers making plantation forestry a controlled activity with 10% of the land to be retired will reduce the amount of land in forestry and may not improve water quality but reduce it. Considers there are more effective ways of improving water quality than those proposed under PC1.	Not stated
S195.023	General comments	General comments - plantation forestry	Not Stated	Notes the costs of PC1 may outweigh the benefits because as there is no evidence quantifying how much sediment is attributable to which land use, there is a high risk of adding costs without achieving real benefits.	Not stated
S195.024	General comments	General comments - definitions	Not Stated	PC1 uses the term 'plantation forestry' but it does not define it. Similarly it does not define 'harvesting.' There are alternatives to clear-felling, such as small coupe harvesting and continuous cover harvesting, which have little impact on either biodiversity or water quality. PC1 refers to an 'FMU,' yet this is only defined in the Section 32 report.	Define plantation forestry in accordance with NES-CF Define harvesting and exclude continuous cover and small coupe harvesting Define FMU
S195.025	General comments	General comments - maps	Oppose	Notes in the 2023 report by Easton Nation and Blyth, Forestry erosion risk is based on potential erosion risk on land currently in forestry should that land be converted to pasture. Consider the measure of erosion risk used is questionable as replanting forestry has a lower erosion risk than converting land to pasture. Considers the mapping resulting from the report by Easton Nation and Blyth is not useful for managing a forest, as it uses 5m by 5 m pixels when forests are managed to the nearest 0.5 ha. Suggests the mapping would have required at least a contiguous	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				size of 0.5 ha for each class of risk to be credible.	
S195.026	General comments	General comments - target attribute states	Oppose	<p>Considers Tables 8.4, 8.5 and 9.2 are at odds with the NPS-FW. Questions why the tables use a mix of states and numeric measurements; why parts have no information; or why there is no acknowledgement that further measurements are required to define a TAS.</p> <p>Acknowledges many of the numeric attributes used have not actually been measured, but are the result of modelling.</p>	Withdraw Tables 8.4, 8.5 and 9.2, undertake review of them and do not reinstate them until reviewed by an independent party.
S195.027	General comments	General comments - overall	Not Stated	Where they are not in conflict with this submission, supports the submissions from New Zealand Farm Forestry association - Wellington Branch, New Zealand Carbon Farming Group, Forest Enterprises, China National Forestry Group, John Turkington Limited and Juken New Zealand Limited.	Not stated
S195.028	General comments	General comments - overall	Not Stated	Considers PC1 needs to be rethought if it is to be effective in controlling the continued degradation of water quality in the region and helping improve the NRP.	Not stated
S195.029	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Oppose	Considers PC1 rules should not override The National Environmental Standards for Plantation Forestry (NES-PF) until that need is proven.	Delete rules in PC1 that are more stringent than the NES-CF

				<p>forests next to it would not. Considers this would prevent the agricultural land from being afforested despite the change resulting in higher water quality. Considers the relative assessment of risk is commercially and environmentally unsound, and appears biased against forestry.</p> <p>Considers for forestry, the information requirements in Schedule 34 such as details may not be known because forests are generally harvested when they are between 25 and 60 years old when harvesting or management techniques may have evolved. Questions why the information requested is required.</p> <p>Considers planting trees does not significantly increase the erosion risk or sediment discharge from land and planting timber trees has no greater effect on water quality than planting apple trees or cabbages. Due to this, there is considered to be no benefit in requiring an erosion and sediment management plan certified by a registered Forestry Adviser.</p> <p>As the RMA requires policies and rules to be effects based, it is considered these rules do not appear to comply.</p>	<p>be removed and the ESC classification of erosion risk used in the NES-CF be applied</p>
S195.040	9 Te Awarua-o-Porirua Whaitua	Rule P.R19: Plantation forestry - controlled activity.	Oppose	<p>Considers these rules impractical for the following reasons:</p> <p>Considers the rules are unnecessarily harsh as when a heavy rain event leads to the visual clarity exceeding the target condition at a single measurement site in the catchment, no further afforestation can take place until all measurement sites show acceptable values again.</p> <p>Considers the rules create an anomaly as pasture</p>	<p>Should neither the plan change process nor the courts accept the removal of Rule P.R19 and Rule WH.R20 for afforestation activities, it is requested that for afforestation activities conditions (c) and (d) be removed from Rule P.R19 and Rule WH.R20.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>areas with a high erosion risk must be retired to woody vegetation regardless of water clarity. However, if water clarity is poor, rules may prevent planting trees in non-erosion-prone forest land within the same catchment.</p> <p>Notes A FMU may cover several distinct catchments but with only one measurement point. Considers a failure of visual clarity in one catchment should not affect the consented right to plant in another catchment within the same FMU. Suggests the rules are too broadly drafted.</p>	
S195.041	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Oppose	<p>Considers the classification of land as high or highest risk does not express the absolute risk, but rather the risk relative to all other land with the same land use. The submitter notes a block of grazing land, adjacent to an existing forest on the same type of land could be classified as highest risk while the forests next to it would not. Considers this would prevent the agricultural land from being afforested despite the change resulting in higher water quality. Considers the relative assessment of risk is commercially and environmentally unsound, and appears biased against forestry.</p> <p>Considers for forestry, the information requirements in Schedule 34 such as details may not be known because forests are generally harvested when they are between 25 and 60 years old when harvesting or management techniques may have evolved. Questions why the information requested is required.</p> <p>Considers planting trees does not significantly increase the erosion risk or sediment discharge from land and planting timber trees has no greater effect on water quality than planting apple trees or cabbages. Due to this, there is considered to be no</p>	<p>Remove afforestation from P.R.19 and WH.R20</p> <p>Should neither the plan change process nor the courts accept this submission point it is requested that for afforestation activities, Rule P.R19 (b) and Rule WH.R20 (b) be removed and the ESC classification of erosion risk used in the NES-CF be applied</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>benefit in requiring an erosion and sediment management plan certified by a registered Forestry Adviser.</p> <p>As the RMA requires policies and rules to be effects based, it is considered these rules do not appear to comply.</p>	
S195.042	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Oppose	<p>Considers these rules impractical for the following reasons:</p> <p>Considers the rules are unnecessarily harsh as when a heavy rain event leads to the visual clarity exceeding the target condition at a single measurement site in the catchment, no further afforestation can take place until all measurement sites show acceptable values again.</p> <p>Considers the rules create an anomaly as pasture areas with a high erosion risk must be retired to woody vegetation regardless of water clarity. However, if water clarity is poor, rules may prevent planting trees in non-erosion-prone forest land within the same catchment.</p> <p>Notes A FMU may cover several distinct catchments but with only one measurement point. Considers a failure of visual clarity in one catchment should not affect the consented right to plant in another catchment within the same FMU. Suggests the rules are too broadly drafted.</p>	Should neither the plan change process nor the courts accept the removal of Rule P.R19 and Rule WH.R20 for afforestation activities, it is requested that for afforestation activities conditions (c) and (d) be removed from Rule P.R19 and Rule WH.R20.
S195.043	9 Te Awarua-o-Porirua Whaitua	Rule P.R19: Plantation forestry - controlled activity.	Oppose	<p>Questions whether GWRC has the staff, or technical and commercial expertise, to exercise the controls specified in (1) and (2).</p> <p>Considers the Whaitua recommendation observed that the Council could not discharge its responsibilities under the NES-PF. Considers the</p>	Remove items (1) and (2) from the Matters of Control.

				rules for appealing such a situation.	
S195.051	12 Schedule s	Schedule 34: Plantation Forestry Erosion and Sediment Managem ent Plan.	Oppose	In Objective B (2) it is noted the term 'natural state' is undefined. Considers if this objective is to apply to forest land it should equally apply to other land uses. Considers the identification and classification of 'highest erosion risk' land relied on in Objective B (4) is unsuitable.	Remove objectives B (2) and B (4) from Schedule 34.

S239 Orogen Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S239.002	General comment s	General comments - definitions	Not Stated	Seeks the addition for a definition for "greenfield development", particularly for the application of Rules WH.R6 and P.R6	Add definition of 'greenfield development' to Chapter 2.2.
S239.003	2 Interpreta tion	Earthwork s	Amend	Concerned the definition removes the former exclusions that apply in all other whitua, which are typically low-risk activities that required limited disturbance in comparison with earthwork activities that were not previously excluded. Considers including these former exclusions under the broad definition of 'earthworks' overstates the associated risk and will hamper development in the region. Notes that excluded activities may then have their own set of rules to manage their effects appropriately and acknowledge their lower risk.	Amend the definition of 'earthworks': The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes: gardening, cultivation, and disturbance of land for the installation of fence posts (a) cultivation of the soil for the establishment of crops or pasture, and (b) the harvesting of crops, and (c) thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and (d) the construction, repair, upgrade or maintenance of: (i) pipelines, and (ii) electricity lines and their support structures, including the National Grid, and (iii) telecommunication structures or lines, and (iv) radio communication structures, and

		ed impervious surfaces - discretionary activity.			
S239.008	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Considers the application of the Prohibited activity status too widespread, particularly for minor extensions of impervious surfaces. Considers that various consenting pathways should be available to accommodate different scales of activities in unplanned greenfield areas.	Reconsider Rules WH.R13 & P.R12, for example, through: -A revised activity status, or -Additional exclusions to the Rule
S239.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Considers the discharge of sediment from earthworks is unavoidable even with the use of sediment controls. Cites the technical reports for PC1, which reference studies specifying that the sediment removal of all devices are less than 100% and sediment discharges continue to occur, albeit at lower rates, even when the earthworks area is stabilised. Considers no earthworks will meet the permitted activity criteria, regardless of size and treatment.	(iv) There is no discharge of runoff sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, that is not treated by erosion and sediment control measures, and (v) Erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.
S239.010	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Considers the proposed TSS limit of 100g/m3 is too restrictive, and is a significant reduction from the existing threshold of 170 NTU that is currently imposed on land use consents. Considers that the proposed TSS limit has not been informed by empirical data on sediment control device performance across the Wellington region, or sufficient scientific evidence. States that the technical publications for PC1 do not mention the TSS standard of 100g/m3 and considers there is a lack of connection between the technical reports on the receiving water bodies and the proposed discharge standard. Seeks for the discharge	The submitter requests that the proposed total suspended solids limit is re-drafted to a meaningful threshold that achieves the outcomes sought. The submitter requests that provision is made for the use of NTU (nephelometric turbidity units) as an acceptable unit of measurement.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>standard to be redrafted in accordance with the best information available, in accordance with Section 1.6 of the NPS-FM.</p> <p>Considers measuring turbidity (NTU) is a reliable proxy for TSS, noting the long testing period for TSS results.</p> <p>Considers the proposed discharge standard disincentivises the use of high efficiency sediment devices, while increasing compliance risks. Concerned that the GWRC Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021) does not provide sufficient guidance to comply with the standard. Considers that the use of low efficiency devices will be encouraged, which will achieve compliance, however will decrease regional performance against target attribute states.</p>	
S239.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	<p>Concerned with the proposed non-complying activity status, stating that at the time that consent is applied for, information is not accurate enough to forecast site conditions during the "winter earthworks" period, particularly for larger earthworks which span over preceding non-winter months.</p> <p>Considers a non-complying activity status and requiring the supporting information at the consenting phase will mean the quality of the information provided is poor and will be reliant on assumptions including the size and location of earthworks, the type of construction activities, the performance of the proposed sediment control devices, seasonal variations in the local environment, and the applicant's resourcing capabilities</p> <p>Seeks for the retention of existing mechanisms for</p>	Delete (b). Insert earthworks activities during the winter period as a matter of discretion.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the applications for winter works, allowing for higher quality information to be provided.	
S239.012	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Amend	Does not support earthworks within the proposed winter period being a non-complying activity, however acknowledges that seasonal variations in rainfall and groundwater should be taken into consideration.	Earthworks over 3,000m ² in area shall: (a) be shut down require erosion and sediment controls appropriate for seasonal variations in rainfall and groundwater from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021).
S239.013	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	Considers there is ambiguity regarding "greenfield development". Seeks a definition for "greenfield development".	Add definition of 'greenfield development' to Chapter 2.2.
S239.014	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend	Considers there is ambiguity regarding "greenfield development". Seeks a definition for "greenfield development".	Add definition of 'greenfield development' to Chapter 2.2.
S239.015	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped	Amend	Considers there is ambiguity regarding "greenfield development". Seeks a definition for "greenfield development".	Add definition of 'greenfield development' to Chapter 2.2.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		impervious surfaces- discretionary activity.			
S239.016	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Oppose	Considers the application of the Prohibited activity status too widespread, particularly for minor extensions of impervious surfaces. Considers that various consenting pathways should be available to accommodate different scales of activities in unplanned greenfield areas.	Reconsider Rules WH.R13 & P.R12, for example, through: -A revised activity status, or -Additional exclusions to the Rule
S239.017	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Oppose	Considers the discharge of sediment from earthworks is unavoidable even with the use of sediment controls. Cites the technical reports for PC1, which reference studies specifying that the sediment removal of all devices are less than 100% and sediment discharges continue to occur, albeit at lower rates, even when the earthworks area is stabilised. Considers no earthworks will meet the permitted activity criteria, regardless of size and treatment.	(iv) There is no discharge of runoff sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, that is not treated by erosion and sediment control measures, and (v) Erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.
S239.018	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Oppose	Considers the proposed TSS limit of 100g/m3 is too restrictive, and is a significant reduction from the existing threshold of 170 NTU that is currently imposed on land use consents. Considers the proposed TSS limit has not been informed by empirical data on sediment control device performance across the Wellington region, or sufficient scientific evidence. States that the technical publications for PC1 do not mention the TSS standard of 100g/m3 and considers there is a lack of connection between the technical reports on	The submitter requests that the proposed total suspended solids limit is re-drafted to a meaningful threshold that achieves the outcomes sought. The submitter requests that provision is made for the use of NTU (nephelometric turbidity units) as an acceptable unit of measurement.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>the receiving water bodies and the proposed discharge standard. Seeks for the discharge standard to be redrafted in accordance with the best information available, in accordance with Section 1.6 of the NPS-FM.</p> <p>Considers measuring turbidity (NTU) is a reliable proxy for TSS, noting the long testing period for TSS results.</p> <p>Considers the proposed discharge standard disincentivises the use of high efficiency sediment devices, while increasing compliance risks. Concerned that the GWRC Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021) does not provide sufficient guidance to comply with the standard. Considers that the use of low efficiency devices will be encouraged, which will achieve compliance, however will decrease regional performance against target attribute states.</p>	
S239.019	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Oppose	<p>Concerned with the proposed non-complying activity status, stating that at the time that consent is applied for, information is not accurate enough to forecast site conditions during the "winter earthworks" period, particularly for larger earthworks which span over preceding non-winter months.</p> <p>Considers a non-complying activity status and requiring the supporting information at the consenting phase will mean the quality of the information provided is poor and will be reliant on assumptions including the size and location of earthworks, the type of construction activities, the performance of the proposed sediment control devices, seasonal variations in the local environment, and the applicant's resourcing capabilities</p>	Delete (b). Insert earthworks activities during the winter period as a matter of discretion.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Seeks for the retention of existing mechanisms for the applications for winter works, allowing for higher quality information to be provided.	
S239.020	12 Schedule s	Schedule 28: Stormwater Contamina nt Treatment.	Amend	Seeks for Schedule 28 to include all management practices as specified in the Water Sensitive Design for Stormwater: Treatment Device Guideline (Farrant et al. 2019), particularly the inclusion of pervious paving.	Include the use of pervious paving in keeping with the Water Sensitive Design for Stormwater: Treatment Device Guideline (Farrant et al. 2019).

S040 Pamela Govan

		d or improved.			
S213.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Support	Not stated	Retain as notified
S213.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Support	Not stated	Retain as notified
S213.017	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Support	Not stated	Retain as notified
S213.018	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity	Support	Notes lowering the Te Awakairangi lower mainstream load of 100kt/year by 24% requires action across all tributary catchments including our part-FMU.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		target attribute states.			
S213.019	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Notes observation of illegal discharges of substances into the stormwater network that ends up in streams. Seeks GWRC action plans include public education and promotion of importance for appropriate disposal of hazardous liquids.	Add a subpoint requiring Greater Wellington to undertake public education and highlight the impact of disposing of polluting liquids in stormwater.
S213.020	8 Whaitua Te Whanganui-a-Tara	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Considers (f) should include prioritising Schedule F sites. Notes stormwater discharges impact on indigenous fish populations including threatened species. Notes lack of stormwater reduction, removal and treatment of stormwater discharges for urban areas and recent greenfield development needs to be addressed through stream health improvements and achieving objectives of this Plan Change.	Add Schedule F sites to (f)
S213.021	8 Whaitua Te Whanganui-a-Tara	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Support	Notes stream is often subject to dry and wet weather wastewater discharges from network pipes in both Belmont and Kelson. Supports Kaitiaki monitoring teams and offers assistance with monitoring.	Not stated
S213.022	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Support	Supports (including financially) reduction in pollution from urban land use and infrastructure. Considers importance and fairness that pollution from rural land use also contributes, supported by GWRC, through the actions outlined in these policies.	Retain Policies 21 to 26 as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S213.023	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Amend	Supports progressive shading of streams as part of riparian retirement, planting, bank and streambed protection, not just where nutrient management is insufficient to achieve periphyton TASSs.	Remove the qualifier so shading is promoted everywhere.
S213.024	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Amend	Notes greenfield development earthworks decrease visual clarity downstream more than the proposed standard and through the winter period. Seeks stronger and more transparent regulation of sediment discharges. Notes sediment pollution is highly visible and is an interest to catchment groups. Requests (c) amended to require WRC to publish monitoring results and advise community catchment groups of where the results can be found.	Add wording requiring monitoring results are published and community catchment groups are informed where to view them.
S213.025	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Questions why FEPs or Korokoro Stream part FMU is not required by 2025. Suggests farms of more than 20ha are few with only one in the area impacting downstream water quality. Considers rationale for 2026 date is unclear and sees it as GW giving more time to prepare a FEP whilst requiring private farms to move faster.	Move Korokoro Stream into the 30 December 2025 tranche.
S213.026	8 Whaitua Te Whanganui-a-Tara	Rule WH.R36: Take and use of water exceeding minimum flows or core allocation - prohibited activity.	Support	Seeks GWRC act quickly to set water allocation rules for TWT as Te Awakairangi's low flow in summer is placing pressure on ecological and community values.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S213.027	12 Schedule s	Schedule F1: Rivers and lakes with significant indigenous ecosystems.	Support	Confirms presence of lamprey in Speedy's Stream and submitter stated they have an eDNA sample.	Retain as notified
S213.028	12 Schedule s	C. Freshwater Action Plans in Whaitua Te Whanganu i-a-Tara	Amend	<p>Supports attributes for Korokoro Stream partFMU with addition of deposited fine sediment and fish community health. Unclear why these are excluded given their importance to ecological health to support the diversity, condition and abundance of indigenous fish species including threatened species such as lamprey.</p> <p>Supports 2(a) but seeks a mandatory process for community involvement and add (e) outline community groups, their offered contributions and ways for councils to support them to work collectively onward the FAP objectives.</p>	<p>Retain Schedule, but add deposited fine sediment and fish community health as required attributes for Korokoro part-FMU.</p> <p>Specify a mandatory process for community involvement as envisaged in the Policy.</p> <p>And add (e) describe the community groups, their offered contributions and any ways councils propose to support them to work collectively toward FAP objectives.</p>
S213.029	13 Maps	Map 79: Part freshwater management units and target attribute state sites (rivers) - Te Whanganu i-a-Tara.	Support	Supports inclusion of Speedys Stream and Dry Creek in the Korokoro part-FMU	Retain as notified
S213.030	13 Maps	Map 89: Unplanned greenfield areas -	Support	Support inclusion of map. Considers it crucial any public or private plan change enabling such development must also propose to change this Plan in order that environmental effects can be fully assessed.	Retain as notified

		Hutt City Council.			
S213.031	13 Maps	Map 93: Highest and high erosion risk land (Pasture) - Te Whanganu i-a-Tara.	Support	Supports mapping and subsequent policies. Notes the mapping underscores importance for freshwater outcomes.	Retain as notified

S236 Parkvale Road Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S236.001	General comments	General comments - urban development	Oppose	Concerned effects of Plan Change 1 (PC1) is to prohibit residential rezoning of 200 Parkvale Road, and considers requirement of a further plan change to Natural Resources Plan (NRP) for future development is a disproportionate response to the scale of rezoning being sought from the Wellington City Council, and ultimate development yield that might be realised from this site.	Not stated
S236.002	General comments	General comments - current legislation	Oppose	Considers approach by PC1 contrary to directive of NPS-UD	Not stated
S236.003	General comments	General comments - stormwater management	Oppose	Supports need to address stormwater but does not agree with the prohibited activity status and subsequent plan change process. Consider section 32 evaluation has not given consideration to appropriate activity status for management of this activity, nor associated costs.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S236.004	General comments	General comments - current legislation	Oppose	Concerns PC1 gives effect to NPS-FM which if removed, will be out of step with higher order policy direction. Considers this should give Council pause for thought in progressing with PC1.	Not stated
S236.005	2 Interpretation	Unplanned greenfield development	Oppose	Opposes approach towards unplanned greenfield development and subsequent provisions.	Delete the definition of 'Unplanned Greenfield Development'.
S236.006	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Opposes approach towards unplanned greenfield development and seeks amendments to the policy that still provides for stormwater quality matters to be addressed appropriately.	Amend the policy as follows: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls nonurban development and stormwater discharges to rivers, and (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					Farm Plans) to improve farm practices that impact on freshwater.
S236.007	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	<p>Opposes approach towards financial contributions under schedule 30 and all associated provisions as it will impact housing affordability and is based on a flat fee basis regardless of catchment, scale of development, consideration of existing environment, or consideration of how effective onsite stormwater treatment may be.</p> <p>Concerned that it is unclear from PC1 provisions how greenfield development is defined for purposes of financial contribution provisions.</p>	Delete the policy
S236.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	<p>Opposed approach towards unplanned greenfield development and considers approach contrary to requirements of NPS-UD, in particular Policies 1(d) and 8.</p> <p>Considers a prohibited activity status a disproportionate response that has been inadequately assessed in section 32 evaluation.</p> <p>Considers requiring a plan change to both a district and regional plan will impose significant costs (E.g. stormwater effects of an area of land of less than 4ha can be appropriately considered and addressed through a resource consent process).</p>	Delete the policy
S236.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Amend	Opposes financial contribution approach as set out in Schedule 30 and all associated provisions.	Delete matter (b) of Rule and make any other necessary consequential amendments in respect of the proposed financial contribution regime.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S236.010	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Opposes approach towards unplanned greenfield development and Rule WH.R13 as a means to give effect to Policy WH.P16.	Delete the rule.
S236.011	12 Schedules	Schedule 30: Financial Contributions.	Oppose	Opposes approach to financial contributions as set out in Schedule 30 and all associated provisions.	Delete Schedule 30.
S236.012	13 Maps	Map 87: Unplanned greenfield areas - Wellington City Council.	Oppose	Opposes approach towards unplanned greenfield development .	Delete the map.

S282 Pat van Berkel

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S282.001	General comments	General comments - overall	Support	No submission point made - to be deleted	Not stated
S282.002	General comments	General comments - water quality improvements	Support	Seeks two recommendations be implemented on behalf of Whaitua Committee, fix water quality problems with pipe network and allow sufficient time to do this work.	Seeks a requirement in the NRP that water quality improvement (through pipe network repairs, etc) be staged and that the timeline be published and updated each year.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S282.003	General comments	General comments - target attribute states	Amend	Supports the 2040 Target Attribute State for e.coli, rather than 2060, stating it is enough time to obtain loans, expand workforces and carry out task.	Retain the TAS (Target Attribute State) for e-coli to reach high quality by 2040.
S282.004	General comments	General comments - overall	Support	Recognises four TA's will be required for PC1 and Whaitua's recommendations and notes addressing water issues in cities is vital.	Not stated
S282.005	General comments	General comments - overall	Amend	Concerned with no mention of the 300ha Mangaroa Peatland.	Include reference to the Mangaroa Peatland in PC1
S282.006	General comments	General comments - definitions	Amend	No definition for 'primary contact'.	Add 'primary contact' definition
S282.007	2 Interpretation	Primary contact sites	Amend	The definition of 'Primary contact sites' refers to Map 85 but Map 85 is not text searchable in the PDF.	Amend so all maps are text searchable Add a text list of the sites in the definition so they are searchable in the document.
S282.008	2 Interpretation	Unplanned greenfield development	Amend	Opposes 'unplanned greenfield development' as it creates an unclear assumption that it applies to land that is developable but is currently unplanned. Supports definition note	Not stated
S282.009	5.1 Air quality rules	General conditions for the discharge of agrichemicals.	Amend	Section 5.1.13 - General conditions for discharge of agrichemicals does not have a rule number	Add a rule number to Section 5.1.13 - General conditions for discharge of agrichemicals
S282.010	8 Whaitua Te Whanganui-a-Tara	Objective WH.O8: Primary contact sites within Te Awa	Oppose	Opposes Objective WH.O8 as it does not require e.coli level improvements by 2040 and omits measures for benthic cyanobacteria or cyanobacteria blooms. It also omits measures of swimmable days which is an easy-to-understand measure for the public.	Amend Objective WH.O8 to remove the words ' by ensuring ' and replacing them with ' and ensure '. Amend objective to cover the risk to dogs.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.		Objective WH.08 (b) does not cover risk to dogs as 'primary contact' refers to humans. Notes it is likely more people visit river with dogs than those without dogs.	
S282.011	8 Whaitua Te Whanganui-a-Tara	Table 8.3 Primary contact site objectives in rivers.	Amend	<p>Seeks addition of 'swimmable days' as a parameter in Table 8.3 as it easily understood by public and encompasses all quality reasons for why a river is not swimmable.</p> <p>Seeks addition of a benthic cyanobacteria or cyanobacteria blooms measure as a parameter in Table 8.3. Considers this a key measure for Te Awa Kairangi due to toxic algae in the river killing dogs and affecting people.</p>	<p>Add a Parameter in Table 8.3, namely "Swimmable Days".</p> <p>Add a Parameter in Table 8.3 which is a measure of benthic cyanobacteria or cyanobacteria blooms.</p>
S282.012	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Amend	Seeks addition of 'swimmable days' as a parameter in Table 8.3 as it easily understood by public and encompasses all quality reasons for why a river is not swimmable.	Add a Parameter in Table 8.4, namely "Swimmable Days".
S282.013	8 Whaitua Te Whanganui-a-Tara	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers	Amend	Supports in part the objective but notes it is incomplete.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		are maintained or improved.			
S282.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	<p>Clauses refer to 'where practicable' or 'where avoidance is not practicable' for contaminant discharges. Concerns developers could claim treatment systems are not practicable (preferring offsetting) when avoiding may be better than offsetting for environmental outcomes.</p> <p>No mention of permeable surfaces.</p>	<p>Add condition to WH.P10 (c): Where a stormwater treatment system is judged not practicable consider not undertaking the activity.</p> <p>Add a note to WH.P10 (b): Water sensitive urban design includes permeable surfaces and rainwater tanks.</p>
S282.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	<p>Clauses refer to 'where practicable' or 'where avoidance is not practicable' for contaminant discharges. Concerns developers could claim treatment systems are not practicable (preferring offsetting) when avoiding may be better than offsetting for environmental outcomes.</p>	Not stated
S282.016	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	<p>Notes that impervious surfaces are assumed and there is no requirement for permeable surfaces.</p>	<p>Add a new condition WH.P14 (a): include permeable surfaces where possible (eg, for minor roads, carparks, footpaths).</p>
S282.017	8 Whaitua Te	Policy WH.P15:	Amend	<p>Offsets may be used as a way of avoiding managing contaminants.</p>	<p>Add a note explaining how such avoidance is discouraged.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Stormwater contaminant offsetting for new greenfield development.			
S282.018	8 Whaitua Te Whanganui-a-Tara	Rule WH.R33: Take and use of water in the Whaitua Te Whanganui-a-Tara - restricted discretionary activity.	Amend	Notes Te Whanganui-a-Tara Whaitua Committee, recommends gradually raising the minimum flow of Te Awa Kairangi, Orongorongo and Wainuiomata rivers to 80% of MALF (mean annual low flow) over a 50 year period. At present the minimum flow of Te Awa Kairangi is at 30% of MALF.	Add to these rules the gradual changes in minimum flow that are required between 2021 (when the recommendation was accepted by Greater Wellington) and 2071
S282.019	8 Whaitua Te Whanganui-a-Tara	Rule WH.R34: Take and use of water in the Whaitua Te Whanganui-a-Tara - discretionary activity.	Amend	Notes Te Whanganui-a-Tara Whaitua Committee, recommends gradually raising the minimum flow of Te Awa Kairangi, Orongorongo and Wainuiomata rivers to 80% of MALF (mean annual low flow) over a 50 year period. At present the minimum flow of Te Awa Kairangi is at 30% of MALF.	Add to these rules the gradual changes in minimum flow that are required between 2021 (when the recommendation was accepted by Greater Wellington) and 2071
S282.020	13 Maps	Map 85: Primary contact sites - Te	Amend	Notes that Map 85 omits the primary contact site "Whakatikei River at Hutt Confluence"	Add site "Whakatikei River at Hutt Confluence" to Map 85 (and to a text list of the definition of Primary contact sites.)

		Whanganu i-a-Tara.			
S282.021	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Support	Supports Map 88 excluding the southern growth area	Not stated

S016 Pauatahanui Residents Association

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S16.001	General comments	General comments - consultation	Not Stated	Considers not sufficient time or consultation with the community for landowners to consider the implications of the policies and rules.	Not stated
S16.002	General comments	General comments - maps	Not Stated	Considers the maps in PC1 make it difficult for property owners to work out how they might be affected.	Not stated
S16.003	General comments	General comments - overall	Not Stated	Concerns regarding modelling to inform the policies and rules rather than collecting data and 'ground truthing' and then applying appropriate actions	Not stated
S16.004	General comments	General comments - overall	Not Stated	Concerns regarding implementation of the plan, and concerns about the financial and time cost to landowners.	Not stated
S16.005	General comments	General comments - overall	Not Stated	Concerned that poor implementation will penalise those engaging proactively and using good management practices while failing to identify or deal with those engaging in poor management practices.	Not stated
S16.006	General comments	General comments - overall	Not Stated	Considers better outcomes would be achieved if PC1 was weighted in accordance with Recommendations 58, 59, 60, 61 and 64 of Te	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Awarua-o-Porirua Whaitua Implementation Programme, focusing on resourcing support and actions rather than on enforcement.	
S16.007	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Considers achieving the objectives of the Natural Resources Plan and of Plan Change 1, rural landowners are supported through measures that include, but are not limited to, those outlined in Method 44.	Retain Method M44
S16.008	9 Te Awarua-o-Porirua Whaitua	9.1 Objectives	Support	Supports the objectives that seek to progressively improve the health of Te Awarua-o-Porirua's groundwater, streams, wetlands and coastal marine environment.	Retain the Objectives
S16.009	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Concerned that regulatory methods can lead to perverse outcomes, including intensification as rural landowners may choose to subdivide to smaller block sizes to maximise a return.	Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: Target attribute states and coastal water objectives will be achieved by non-regulatory methods, including Freshwater Action Plans, that encourage good management practices. Where measurable improvements in target attribute states are not being achieved, and where actions can have measurable outcomes such as discharges of contaminants, regulatory methods may be required
S16.010	9 Te Awarua-o-Porirua Whaitua	Policy P.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Amend	Considers the emphasis should be on positive actions rather than on regulatory methods to achieve better outcomes through collaboration and support.	Wellington Regional Council shall, in partnership with mana whenua, prepare and deliver Freshwater Action Plans in accordance with Schedule 27 (Freshwater Action Plan). The first iteration of Freshwater Action Plans, to cover all rivers and lakes in Te Awarua-o-Porirua Whaitua, shall be completed by December 2026. Freshwater Action Plans shall identify, in detail, the actions in detail, the actions, including to support effective regulation, to achieve the target attribute states, and support relevant environmental outcomes, set in this Plan.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S16.011	9 Te Awarua-o-Porirua Whaitua	Rule P.R16: Vegetation clearance on highest erosion risk land-permitted activity.	Amend	There are many different pest plants within the region with different effects on native vegetation.	Provide definition for pest plants
S16.012	9 Te Awarua-o-Porirua Whaitua	Rule P.R27: The use of land for farming activities - discretionary activity.	Oppose	Considers it should be possible to demonstrate at a property level whether target attribute states are exceeded and if the property activities are not contributing to an increase, then a change in land use should be permitted.	Amend provision to allow a property scale response.

S215 Paul Persico

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S215.001	General comments	General comments - economic cost/impact	Oppose	Considers PC1 will create a problem and financial burden for lifestyle property owners in Mangaroa and Akatarawa areas, but will achieve nothing as no problem exists. Considers PC1 will be a huge cost to rate payers and the money would be better of spent finding the source of the problem and rectifying it. Agrees with the Maymorn Collective Submission in all aspects.	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S251 Peka Peka Farm Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S251.001	General comments	General comments - unplanned greenfield development	Oppose	<p>Opposes the approach for providing unplanned greenfield development as a prohibited activity and considers it contrary to NPS-UD. In particular, Objective 2, Objective 6 (c), Policy 1 (d) and Policy 8 and 8 (a).</p> <p>Considers unplanned greenfield development as a prohibited activity is fundamentally at odds with the requirement of NPS-UD to be responsive to unanticipated or out of sequence development and to support the competitive operation of land and development markets. Considers it will add significant costs which have not been appropriately assessed in Section 32 report. Considers insufficient assessment of prohibited activity status has been had compared to use of non-complying or discretionary activity status. Opposes targeted approach intended to preclude 'unplanned' greenfield development.</p>	Not stated
S251.002	General comments	General comments – urban development	Oppose	Opposes financial contribution proposed by PC1. Considers an approach will impact housing affordability, is one-size fits all, does not account for site specific approaches and ignores opportunities to comprehensively treat stormwater (eg. Extensive wetlands).	Not stated
S251.003	General comments	General comments - current legislation	Oppose	Concerns the replacement of the NPS-FM creates uncertainty where higher order policy PC1 is giving effect to is subject to change. PC1 already takes a more restrictive position than what the NPS-FM and is further out of step with the higher order policy it is seeking to give effect to.	Not stated
S251.004	2 Interpretation	Unplanned greenfield	Oppose	Opposes approach towards unplanned greenfield development and requests deletion of definition.	Delete the definition: Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89

**Proposed Change 1 to the Natural Resources Plan –

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S280 Peter Handford

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S280.001	General comments	General comments - overall	Not Stated	Considers focus of PC1 should be achieving environmental outcomes, not prescriptive blanket removal of land uses from particular areas	Not stated.
S280.002	General comments	General comments - plantation forestry	Not Stated	Considers forestry management can be applied where this a strong focus on environmental outcomes such as soil and water protection and biodiversity	Not stated.
S280.003	General comments	General comments - plantation forestry	Not Stated	Concerns PC1 creates blanket exclusion for forestry rather than set out measurable outcomes across all land uses with identified monitoring approaches	Not stated.
S280.004	General comments	General comments - plantation forestry	Not Stated	Concerns PC1 creates a blanket exclusion for "highest erosion risk" areas without recognising range of forest management options. Considers this removes potential for forest management to of provide ecosystem services including biodiversity, carbon sequestration, soil and water protection and recreation. Considers Innovative and environmentally sensitive forest management approaches should be facilitated and encouraged as low impact forestry management is possible without negative impacts	Not stated.

S054 Peter Kiernan

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S54.001	General comments	General comments - overall	Not Stated	Supports the New Zealand Farm Forestry Association Inc, and the New Zealand Farm	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Forestry Association's Wellington branch submissions	
S54.002	General comments	General comments - economic cost/impact	Oppose	Concerned the decisions of the proposed plan change could be rolled out on the Kapiti Coast - where the submitter resides. Concerned the extra costs associated with consultant and resource consent fees will make forestry uneconomical. Believes that rules governing forestry in PC1 would render interest in land incapable of reasonable use citing section 85 of the RMA.	Ensure that if national standards are followed forestry harvesting be a Permitted Activity under the plan
S54.003	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Not Stated	Considers that without local scientific data that changes to the forestry rules are not justified.	Not Stated
S54.004	8 Whaitua Te Whanganui-a-Tara	Rule WH.R21: Plantation forestry - discretionary activity.	Not Stated	Considers that without local scientific data that changes to the forestry rules are not justified.	Not Stated
S54.005	8 Whaitua Te Whanganui-a-Tara	Rule WH.R22: Plantation forestry on highest erosion risk land - prohibited activity.	Not Stated	Considers that without local scientific data that changes to the forestry rules are not justified.	Not Stated
S54.006	General comments	General comments - plantation forestry	Oppose	Considers that without local scientific data that changes to the forestry rules are not justified.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S203 Peter Thomson

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S203.001	General comments	General comments - overall	Not Stated	Supports the submission of Robert Anker	Not stated
S203.002	General comments	General comments - overall	Not Stated	Notes PC1 changes are largely drawn from, or a result of, the direction stated in the NPS-FM for Freshwater Management and that the Government has committed to replacing the NPS- FM. Considers it is inappropriate and a waste of ratepayers money to commit to the implementation / adoption of the Natural Resources Plan as the Government has indicated that the NPS FM will be replaced.	Withdraw PC1 until the new National Policy Statement for Freshwater Management has been released.
S203.003	General comments	General comments - rural	Not Stated	Notes the majority of rural landscape is bush and plantation forest and the vast majority of the water catchment in Upper Hutt is publicly owned. Notes the Section 32 report (Section 6.9 Sources of nitrogen and other contaminants) notes that stocking rates are low, even for the classes of land grazed and that absolute stock numbers are low. Notes presence of wild animals, deer and wild pigs in the region and on GWRC and DOC land, considers the animals likely to cause contamination of fresh water will be dominated by wild deer and pigs on GRWC's own land. Considers that GWRC do not have good practices for fresh water management on their land and suggests the impact of livestock is not material in respect to the quality of the fresh water in Upper Hutt.	Remove stocking rates specifically for Amendments to Chapter 8 - Whaitua Te Whanganui-a-Tara.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S018 PF Olsen Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S18.001	2 Interpretation	Afforestation	Support	Supports consistency with higher order documents i.e. NES-CF	Retain as notified
S18.002	2 Interpretation	Earthworks	Amend	Concerned with having different definitions for earthworks and seeks consistency within legislation. Seeks clarification on if earthworks rules apply for forestry earthworks outside of Rules WR.20, WR.21, WH.R22, P.R19, P.R20 and P.R21.	Amend the definition of Earthworks to provide consistency. Exclude forestry earthworks from earthworks rules.
S18.003	2 Interpretation	Harvesting	Support	Supports consistency with higher order documents i.e. NES-CF	Retain as notified
S18.004	2 Interpretation	Highest erosion risk land (plantation forestry)	Oppose	Considers that there is more research available to determine landslide by susceptibility, citing recent New Zealand research.	Delete the mapping layer or have it peer reviewed to establish its scientific validity.
S18.005	2 Interpretation	Highest erosion risk land (pasture)	Oppose	Considers that there is more research available to determine landslide by susceptibility, citing recent New Zealand research.	Delete the mapping layer or have it peer reviewed to establish its scientific validity.
S18.006	2 Interpretation	Highest erosion risk land (woody vegetation)	Oppose	Seeks more comprehensive information regarding the highest erosion risk for woody vegetation. Considers that the supporting technical report accompanying the mapping system is inadequate to substantiate any provisions in PC1.	Delete this definition
S18.007	2 Interpretation	Mechanical land preparation	Support	Supports consistency with higher order documents i.e. NES-CF	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S18.008	2 Interpretation	Replanting	Support	Supports consistency with higher order documents i.e. NES-CF	Retain as notified
S18.009	2 Interpretation	Stabilisation	Amend	Seeks consistency across the plan. Seeks clarification on if the definition applies for forestry earthworks.	Amend to clarify definition across the entire plan. Exclude earthworks for forestry from this definition. For plantation forestry, default to the NES-CF.
S18.010	2 Interpretation	Vegetation clearance (for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20)	Support	Supports consistency with higher order documents i.e. NES-CF	Retain as notified
S18.011	3 Objectives	Objective O18: Rivers, lakes, natural wetlands and coastal water are suitable for contact recreation and Māori customary use.	Amend	Notes the NPS-FM recognises Maori Customary uses as a significant attribute that should be uniformly upheld throughout the entire region	Amend the provision to be consistent across the region.
S18.012	4 Policies	Policy P36: Restoring Wairarapa Moana	Oppose	Notes the significance of adhering to legislative principles to ensure changes are effective, clear and fair, and that language should be used that allows adaptability to changing circumstances. Considers the use of "restore" or "avoid" inappropriate, as they do not allow adaptability to changing circumstances.	Amend to change the word restore for the aim of restoring the ecological health and significant values of Wairarapa Moana.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S18.013	5.4 Beds of lakes and rivers	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Concerned with financial implications of (n) for forestry activities, noting that the s32 report states that economic impact will be low to moderate. States that the NES-CF has not been considered, namely with management plan requirements.	Amend to exclude forestry activities of compliance with the general condition (n).
S18.014	6 Other methods	Method 39: Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Concerned there is no provision for independent review or peer review.	Amend to include that an independent body will do the report, which should be peer-reviewed for its validity.
S18.015	6 Other methods	Method M40: Fish passage action plan programme for Whaitua Te Whanganu i-a-Tara and Te Awarua-o-	Amend	Seeks reports are independently reviewed or peer reviewed.	Amend to include that an independent body will do the report , which should be peer-reviewed for its validity.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Porirua Whaitua.			
S18.016	6 Other methods	Method M41: Identifying and responding to degradation in freshwater bodies within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Not Stated	Seeks reports are independently reviewed or peer reviewed.	Amend to include that an independent body will do the report , which should be peer-reviewed for its validity.
S18.017	8 Whaitua Te Whanganu i-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganu i-a-Tara is progressively improved	Amend	Questions the meaning and assessment of "natural state". Considers that the impact of population growth on water resources should be taken into account.	Amend this provision to delete the natural state and include the best freshwater quality possible according to the receiving environment.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and is wai ora by 2100.			
S18.018	8 Whaitua Te Whanganui-a-Tara	Objective WH.O5: By 2040 the health and wellbeing of the Parangarau Lakes and associated natural wetlands are on a trajectory of improvement towards wai ora.	Amend	Seeks amendment of the provision based on the submitters comments on Table 8.2.	Amend the provision to based on a suitable table consistent with NPS-FM.
S18.019	8 Whaitua Te Whanganui-a-Tara	Table 8.2 Target attribute states for lakes.	Amend	<p>Considers the setting of the proposed target attribute states has not been consistent with 3.11(8) of the NPS-FM. Considers there is a lack of due consideration given to the environmental outcomes, target attribute states of receiving environments, and connections between water bodies, as required by the clause.</p> <p>Questions the effectiveness of the proposed target attribute states and considers that they do not reflect an adequate understanding of environmental outcomes. Questions the use of freshwater accounting systems to inform the setting of target attribute states and emphasises the importance of accurate and up-to-date information.</p>	Revise target attribute states in accordance with Clause 3.11(8) of the NPS-FM.

Considers that pastoral systems are treated preferentially to forestry and questions the scientific basis of the proposed regulations. Cites a study which highlights the positive impact of trees on water quality, and suggests that forests provide water storage during winter and release rainfall gradually, which mitigates downstream flooding. Seeks that the proposed rules, particularly those that restrict tree planting near water bodies, recognise the positive contributions of well-managed forests.	Delete the provision
S18.064	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Seeks clarification on if the rule applies to forestry earthworks.	Amend to clarify if the permitted activity requirement applies to forestry earthworks.
S18.065	9 Te Awarua-	Rule P.R23: Earthwork	Amend	Seeks clarification on if the rule applies to forestry earthworks.	Amend to clarify if restricted discretionary activity will apply to forestry earthworks.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	s - restricted discretionary activity.			
S18.066	9 Te Awarua- o-Porirua Whaitua	Rule P.R24: Earthwork s - non- complying activity.	Amend	Seeks clarification on if the rule applies to forestry earthworks.	Amend to clarify if restricted discretionary activity will apply to forestry earthworks.
S18.067	9 Te Awarua- o-Porirua Whaitua	Rule P.R25: Farming activities on properties of between 4 hectares and 20 hectares - permitted activity.	Amend	Considers there is preferential leniency towards farming practices over forestry activities which disadvantages the forestry sector. Considers the approach obstructs the growth of both sectors and presents challenges for water quality. Considers the approach contradicts scientific evidence, leading to adverse social and economic consequences. Considers that farming activities should be subject to similar retirement rules as forestry activities.	Amend to include the retirement of farming activity in high-risk erosion land (pasture) and highest erosion-risk land (pasture).
S18.068	9 Te Awarua- o-Porirua Whaitua	Rule P.R26: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Considers that there is preferential leniency towards farming practices over forestry activities which disadvantages the forestry sector. Considers the approach obstructs the growth of both sectors and presents challenges for water quality. Considers the approach contradicts scientific evidence, leading to adverse social and economic consequences. Considers that farming activities should be subject to similar retirement rules as forestry activities.	Amend to include the retirement of pastoral land use in high-risk erosion land (pasture) and highest erosion-risk land (pasture).
S18.069	9 Te Awarua- o-Porirua Whaitua	Table 9.5: Phase in of farm environme nt plans	Oppose	Considers there is preferential leniency towards farming practices over forestry activities which disadvantages the forestry sector. S199 Pikarere Farm Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S199.001	General comments	General comments - overall	Not Stated	<p>Considers the Plan is complicated and difficult to follow and the time to get to grips with it has been limited.</p> <p>Questions if the approach of PC1 is right, and notes that properties can vary greatly with steeper hill areas no more prone to erosion or run-off than valley floors.</p> <p>Is a party to the Ohariu/Makara Farmers' Submission and supports fresh, clean water and soil preservation.</p>	Not stated
S199.002	12 Schedule s	Schedule 36: Additional requirements for Farm Environment Plans in Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Not Stated	<p>Considers Farm Environment Plans should be specific to the property and practical and simple to prepare, and practical to implement, including in relation to costs.</p> <p>Considers nitrogen loss assessment and assessment tool should be practical and easy to work. Assessment of risks relating to farming activities and stream bank erosion calculations, assessment of slips and hill slope run-off should also be practical. Erosion risk treatment plans should be practical and take account of normal and proper farming operations.</p>	Not stated
S199.003	General comments	General comments - economic cost/impact	Not Stated	Considers cost is an important factor and should be given proper consideration.	Not stated
S199.004	13 Maps	Map 91: Highest	Amend	Considers submitters farm, although identified on the "Highest Erosion Risk Land" shown on Maps 91	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		erosion risk land (Woody vegetation) - Te Awarua-o-Porirua.		and 94, does not include any significant erosion risk.	
S199.005	13 Maps	Map 94: Highest erosion risk land (Woody vegetation clearance) - Te Whanganu i-a-Tara.	Amend	Considers submitters farm, although identified on the "Highest Erosion Risk Land" shown on Maps 91 and 94, does not include any significant erosion risk.	Not stated

S240 Porirua City Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S240.001	General comments	General comments - definitions	Not Stated	Considers a definition of 'urban environment' is required in place of 'urbanised area' in various proposed provisions to provide greater regulatory certainty.	Insert definition for Urban Environment: Has the same meaning as given in section 1.4 of the National Policy Statement for Urban Development 2020.
S240.002	General comments	General comments - economic cost/impact	Not Stated	Concerns that with the financial levers and system available, Council cannot afford the improvements Plan Change 1 is seeking. Considers it is not viable to expect city ratepayers alone to cover the magnitude of cost identified in the three waters reform programme and that the approach taken in Plan Change 1 is ignorant of the national issue that councils cannot afford to maintain and upgrade wastewater networks under the current funding model available to them. Notes it comes down to the degree to which	Regional Council work closely with territorial authorities on the challenge of funding maintenance and funding of wastewater networks.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				outcomes can be achieved, the length of time and who pays.	
S240.003	General comments	General comments - target attribute states	Oppose	Opposes the 2040 E.coli target of PC1 and concerned this will affect the consenting of stormwater and wastewater discharge consents. Considers that some catchments will require a 90% reduction which is impossible in the short timeframe. Concerned the rates increase of 12-14% per year for network upgrades to meet the 2040 target, on top of BAU rates, is not tenable. Considers that whilst the 2060 target of 6-7% is more achievable provided other funding avenues are explored, including growth charging and debt funding. Also notes significant central government funding will be required. Considers the numbers do not take into account debt affordability and availability with Local Government Funding Agency Covenants.	Not stated
S240.004	General comments	General comments - overall	Oppose	Considers the use of the prohibited activity rule is a blunt instrument and careful consideration should be given to its use, particularly when considering the tensions that exist between national policy statements for freshwater and urban development (noting that the NPS-UD requires consideration be given to out of sequence urban development). Considers there is insufficient evidence to support the approach taken, especially considering the prohibited activity status approach. Considers the definition and associated provisions may result in unintended consequences with no consenting pathway to consider a proposal located in these areas that may have positive outcomes, including positive outcomes for freshwater.	Not stated
S240.005	General comments	General comments - maps	Not Stated	Considers unplanned greenfield maps are inconsistent with Panel decisions on the Porirua Intensification Planning Instrument. Seeks that if the maps are retained for unplanned greenfield development, Greater Wellington officers engage with Council's planning officers to ensure maps	Greater Wellington officers engage with Council's planning officers to ensure maps accurately reflect the Hearing Panel's decisions. Otherwise, a policy pathway is provided for the final Future Urban Zoning in Porirua PDP to be subject to Policy P14 and associated rules and methods, rather than Policy P15.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				accurately reflect the Hearing Panel's decisions. Otherwise, a policy pathway needs to be provided for the final Future Urban Zoning in Porirua PDP to be subject to Policy P14 and associated rules and methods, rather than Policy P15.	
S240.006	General comments	General comments - urban development	Not Stated	Supports in principle Greater Wellington regulating Water Sensitive Urban Design (WSUD) and other stormwater controls to improve freshwater outcomes. Considers the provisions are light on detail on how WSUD will be implemented. It is unclear what specifications will apply to WSUD, how development will be monitored where no resource consent is required, and how these assets will be maintained and by who. Questions if there will be an MOU or transfer of functions for territorial authorities to play a role. Considers for WSUD to really deliver, a coordinated regional implementation programme is needed.	Not stated
S240.007	General comments	General comments - stormwater management	Not Stated	Unclear how the new plans and strategies which are required relate to each other, and how they relate to existing programmes such as Council's strategies and Wellington Water's current programme to develop stormwater management strategies.	Not stated
S240.008	General comments	General comments - overall	Not Stated	Considers the PDF format of PC1 and the NRP, with no hyperlinked definitions and with A4 maps in appendices, is out of step with current technology and best practice where plans are presented in digital formats. Considers converting PC1 and the NRP to an eplan format will improve regulatory compliance and reduce costs through time savings for plan users.	Request that Greater Wellington convert both the PC1 and the NRP to an eplan format as soon as practicable to enable plan users to efficiently find information
S240.009	2 Interpretation	Earthworks	Amend	Support use of National Planning Standards definition, and limiting application to new provisions to avoid unintended consequences with operative provisions.	Amend definition as follows: For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Seeks that Rule P.R22 is amended to include exclusions for activities like road maintenance. Notes the reference to the National Policy Statement needs to be updated.	The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of land for the installation of fence posts. Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017 . Resource Management (National Environmental Standards for Commercial Forestry) Regulations 2023
S240.010	2 Interpretation	Hydrological control	Amend	Considers the definition does not assist in the implementation of associated rules as it does not outline examples of what these controls actually are. Notes the definition of 'stormwater treatment system' has some examples on what types of systems are included along with specifications in Schedule 28.	Amend definition to provide clarity to plan users.
S240.011	2 Interpretation	Impervious surfaces	Amend	Notes there is no rule requiring rainwater reuse in PC1 or the NRP. Supports 'roof areas with rainwater collection' being excluded, as this is regulated through the Three Waters Chapter of the Proposed Porirua District Plan subject to Wellington Water specifications that provide for some limited reuse for gardening but do not require tanks to be plumbed back into the house. Concerns that this is a significant cost that not been assessed in the s32 Evaluation.	Amend definition as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: -roofs -paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: -grassed areas, gardens and other vegetated areas -porous or permeable paving -slatted decks which allow water to drain through to a permeable surface -porous or permeable paving and living roofs -roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S240.012	2 Interpretation	Limit	Amend	Referring to the source document of the definition would be more consistent with other definitions below e.g. 'Nationally threatened freshwater species'.	Amend definition as follows: Has the same meaning as given in section 1.4 of the National Policy Statement for Freshwater Management 2020: A limit on resource use or a take limit.
S240.013	2 Interpretation	Redevelopment	Amend	<p>Considers the definition does not work in the context of the associated rules. Notes that Policy WH.P2 seeks to "encourage" redevelopment, but associated provisions do not permit the associated increases in impervious surfaces that are included in this definition which would be expected with the use of this term in a policy. Notes that WH.R4 refers to "redevelopment of existing impervious surfaces" which is unnecessary as the definition of redevelopment is inclusive of impervious surfaces.</p> <p>Concerned the definition would capture small-scale redevelopment such as rooms being added on to existing homes. Considers these should be exempted as the Proposed Porirua District Plan would address these additional surfaces. In addition 'urban environment' is a term defined in the NPS-UD, and it would provide greater certainty than 'urbanised property'.</p>	<p>Amend the definition as follows:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property in an urban environment (i.e. including brownfield development and upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes:</p> <ul style="list-style-type: none"> -minor maintenance or repairs to roads, carparking areas, driveways and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing -activities that only involve the re-roofing of existing buildings-extensions to existing buildings
S240.014	2 Interpretation	Unplanned greenfield development	Amend	<p>Concerned the definition and associated provisions may result in unintended consequences with no consenting pathway to consider a proposal located in these areas that may have positive outcomes, including for freshwater. Notes this is covered in more detail in relation to Policy P.P2 in the submission.</p> <p>Considers Map 86 will not align with the decisions version of the Proposed Porirua District Plan (covered in more detail in relation to Map 86). Considers rezoning development areas requires the application of a range of zones, including from rural to open space zones for future reserves, therefore the following is not always accurate: '(from</p>	<p>Amend definition as follows:</p> <p>Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				rural/nonurban/ open space to urban)', nor is the note.	
S240.015	2 Interpretation	Wastewater network catchment or sub-catchment	Amend	Unclear if definition is intended to capture the wastewater network that exists on private land, including sewer laterals (assumes not)	Amend definition as follows: The wastewater pipes, pumpstations, storage tanks, manholes and associated devices located upstream of or prior to a wastewater treatment plant in public ownership . A wastewater network catchment may be split into a number of sub-catchments.
S240.016	6 Other methods	Method M36: Freshwater Action Programme.	Amend	Supports action plans to achieve objectives and considers action plans should be developed in partnership with territorial authorities rather than being informed by them. Working in partnership would reflect the long-term partnership approach taken under the Harbour Strategy and Action Plan between councils and Ngāti Toa. Considers the s32 evaluation of Council feedback on this point at pre-notification consultation has not addressed this concern and does not make sense, as Method M36 seeks to direct a partnership with mana whenua (submitter references paragraph 51 of Part A of the s32 report). Considers Council is a key stakeholder as a regulator, land owner and asset owner and an action plan developed in partnership with Council is more likely to be successful.	Amend the method so that territorial authorities are partners to development and delivery of action plans: Method M36: Freshwater Action Plan programme Wellington Regional Council will implement a programme to prepare, deliver, monitor and review Freshwater Action Plans for all part Freshwater Management Units identified in Schedule 27. Freshwater Action Plans will be: (a) developed in partnership with mana whenua and territorial authorities , and be informed by engagement with catchment communities, territorial authorities and stakeholders, and (b) prepared and published for all Freshwater Management Units and/or part Freshwater Management Units in the Wellington region by December 2026, and (c) prepared for all attributes identified in Schedule 27 A2. Freshwater Action Plans may also be prepared for, or incorporate, actions for any other relevant target attribute state or environmental outcome identified in partnership with mana whenua or with the community. Wellington Regional Council, in partnership with mana whenua and territorial authorities , and informed by engagement with catchment communities, territorial authorities and stakeholders, may make changes or additions to any Freshwater Action Plan, at any time, for the purpose of achieving the target attribute states and/or environmental outcomes set in this Plan.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S240.017	6 Other methods	Method M38: Freshwater Action Plan for the Rangituhi catchment	Amend	<p>Supports action plans to achieve objectives and considers action plans should be developed in partnership with territorial authorities rather than being informed by them. Working in partnership would reflect the long-term partnership approach taken under the Harbour Strategy and Action Plan between councils and Ngāti Toa.</p> <p>Considers Council is a key stakeholder as a regulator, land owner and asset owner and an action plan developed in partnership with Council is more likely to be successful.</p> <p>Notes that Method M38(c) can only occur in partnership with Council as the owner of the piped public stormwater network.</p>	<p>Amend so that territorial authorities are partners to development and delivery of action plans:</p> <p>Method M38: Freshwater Action Plan for the Rangituhi catchment Wellington Regional Council will, in partnership with Ngāti Toa Rangatira and Porirua City Council, prepare a Freshwater Action Plan for the Rangituhi catchment to contribute to achieving the target attribute states identified in Objectives P.O3 Table 9.1 and P.O6 Table 9.2 and relevant environmental outcomes identified in Objective P.O3 and P.O6, and including the huanga of mahinga kai and Māori customary use as identified by Ngāti Toa Rangatira.</p> <p>In accordance with Schedule 27, the Rangituhi Freshwater Action Plan will identify, in detail, the actions, including actions to support effective regulation, to achieve the target attribute states and environmental outcomes in Objectives P.O3 and P.O6.</p> <p>The Rangituhi Freshwater Action Plan will include:</p> <ul style="list-style-type: none"> (a) prioritising improvements to hotspot areas of elevated metal concentrations within the harbour, and (b) implementing a targeted pollution prevention programme, and (c) identifying areas of piped stream in the lower reaches of the Rangituhi catchment that could be daylighted.
S240.018	6 Other methods	Method 39: Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara	Support	Supports the development of a Freshwater Action Plan for the nationally threatened freshwater species	Retain as notified

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and Te Awarua-o-Porirua Whaitua.			
S240.019	6 Other methods	Method M40: Fish passage action plan programme for Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Support	Supports identification and remediation of barriers to fish passage.	Retain as notified
S240.020	6 Other methods	Method M41: Identifying and responding to degradation in freshwater bodies within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Support	Supports monitoring and addressing causes of any degradation of freshwater bodies.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S240.021	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Amend	Supports in principle but considers method lacks detail in terms of timing and methodology. Notes that 'deemed to comply' solutions should sit within provisions relating to hydrological controls as outlined in the submission.	Amend method to include timeframes and methodology for all actions.
S240.022	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Supports in principle but considers method lacks detail in terms of timing and methodology.	Amend method to include timeframes and methodology for all actions.
S240.023	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Amend	Supports in principle but considers method lacks detail in terms of timing and methodology. Questions the achievability of other regulatory provisions if additional sources of funding cannot be accessed.	Amend method to include timeframes and methodology, and/or amend regulatory policies that are reliant on additional funding for wastewater and stormwater networks to be achievable with existing funding sources.
S240.024	9 Te Awarua-o-Porirua Whaitua	Objective P.O1: The health of Te Awarua-o-Porirua's groundwater, rivers, lakes, natural wetlands, estuaries, harbours and coastal marine	Amend	Supports 100 year vision towards full restoration of Te Awarua-o-Porirua waterways. Considers it unclear if the text from "Note In the wai ora state..." forms part of the objective or it is some form of explanatory/advisory note. If it does form part of the objective, seeks the deletion of the word "note". Considers it is not possible for waters to be in a natural state without the full restoration of the catchment to a pre-human state which is not the intention of this Plan Change, suggest that a qualifier is needed that waters are restored where possible.	Amend objective as follows: Objective P.O1 The health of Te Awarua-o-Porirua's groundwater, rivers, lakes, natural wetlands, estuaries, harbours and coastal marine area is progressively improved and is wai ora by 2100. Note In the wai ora state: <ul style="list-style-type: none"> Te Awarua-o-Porirua is a taonga of Ngāti Toa Rangatira and must be respected by others Mauri is restored, and waters restored to are in a natural state where possible Ecological health is excellent in freshwater and coastal water environments Rivers flow naturally, with ripples and the river beds are stony

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		area is progressively improved and is wai ora by 2100.			<ul style="list-style-type: none"> • Mahinga kai, taonga, mahinga ika and kaimoana species are healthy, abundant, diverse, present across all stages of life, sizeable, and able to be culturally harvested by mana whenua • Mahinga kai, taonga, mahinga ika and kai moana species are safe to harvest and eat or use, including for mana whenua to exercise manaakitanga • Mana whenua and communities are able to undertake a full range of activities • Mana whenua are able to undertake cultural activities and practices
S240.025	9 Te Awarua-o-Porirua Whaitua	Objective P.O2: Te Awarua-o-Porirua's groundwater, rivers, lakes and natural wetlands, and their margins are on a trajectory of measurable improvement towards wai ora.	Amend	<p>Support in principle setting a trajectory of measurable improvement towards restoration of Te Awarua-o-Porirua's waterways.</p> <p>Notes that P.O2 does not link to a table of target attribute states and it is not clear what locations and what specific state is required to meet these.</p> <p>WH.O8 for example sets out specific E.coli states for primary contact sites, but it is unclear what E.coli states need to be achieved to meet primary contact outcomes WH.O2 (f) and (g) in areas outside these specific sites.</p> <p>Notes there are significant challenges in costs to upgrade the wastewater network to achieve this objective in terms of a reduction in E.coli by 2040 to achieve Criteria P.O2 (f) and (g).</p>	<p>Amend objective to link to specify target attribute states and locations for outcomes being sought, and amend the objective as follows:</p> <p>Objective P.O2 Te Awarua-o-Porirua's groundwater, rivers, lakes and natural wetlands, and their margins are on a trajectory of measurable improvement towards wai ora, such that by 2040:</p> <p>(a) water quality, habitats, water quantity and ecological processes are at a level where the state of aquatic life is meaningfully improved, and</p> <p>(b) erosion processes, including bank stability, are improved to significantly reduce the sedimentation rate in the harbour to a more natural level, and</p> <p>(c) the extent and condition of indigenous riparian vegetation is increased and improved, and</p> <p>(d) the diversity, abundance and condition of mahinga kai are increased so that mana whenua are able to harvest healthy mahinga kai for their people, and</p> <p>(e) huanga of mahinga kai and Māori customary use for locations identified in Schedule B (Ngā Taonga Nui a Kiwa) are maintained or improved, and by 2060:</p> <p>(f) mana whenua are able to safely connect with freshwater and are able to practice their customary and cultural practices, including mahinga kai gathering, and</p> <p>(g) mana whenua and communities can safely connect with</p>

				work, or funding it upfront with cost recovery. Considers costs to address these issues could be between \$10,000 to \$20,000 per property or more with Wellington Water's high level indicative estimates between \$250 - 350 million. Considers the impact of the above funding requirements on housing and business development capacity is not sufficiently explored in the s32 Evaluation.	
S240.032	9 Te Awarua-o-Porirua Whaitua	Policy P.P1: Improvement of aquatic ecosystem health.	Support	Supports the progressive reduction of contaminants and restoration of habitats.	Retain as notified.
S240.033	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Considers prohibition of unplanned greenfield development may result in unintended consequences with no consenting pathway to consider a proposal located in these areas that may have positive outcomes, including positive outcomes for freshwater.</p> <p>Considers the activity status is a blunt instrument that would also make an incursion into these areas prohibited no matter how small. For example a new road connecting urban areas (or urban to rural areas) would be prohibited if it needed to "clip" an area mapped as unplanned.</p> <p>Considers policy direction should be amended to "avoid" with a non-complying activity status.</p> <p>Notes the application of a prohibited activity status requires a high level of evaluation to justify its use and considers that the s32 Evaluation is insufficient. Considers the s32 Evaluation contains contradictory statements with regard to the ability of PC1 to mitigate contaminants from urban developments. Questions how a prohibited activity status could be justified on an effects management basis if PC1</p>	<p>Amend the policy as follows:</p> <p>Policy P.P2 Management of activities to achieve target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting avoiding unplanned greenfield development and for managing other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers, and</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>manages all water quality effects, including residual effects as stated in the s32.</p> <p>Considers the prohibition on greenfield development is inconsistent with the NPS-UD.</p> <p>Considers Map 86 is inconsistent with the decisions on the Proposed Porirua District Plan. In some instances the unplanned area includes areas confirmed as Future Urban Zone including in Waitangirua, Pukerua Bay and Judgeford. There are also parts of Judgeford that were not rezoned as Future Urban Zone due to natural hazard risk.</p> <p>Considers the avoid/prohibited approach may directly conflict with Council's ability to give effect to the NPS-UD.</p> <p>Concerned Hongoeka has been identified as an area of unplanned urban development, meaning any greenfield development in this area is prohibited. This will likely be of concern to Hongoeka Whanau. Hongoeka is partly urban in nature in terms of lots sizes, and has reticulated sewerage and drinking water supply. Council worked in partnership with Te Rūnanga and with the Hongoeka Marae Committee on creating an enabling zoning for this area in the PDP.</p> <p>Considers a prohibited activity status makes it difficult for territorial authorities to consider a plan change in an unplanned greenfield area as per Policy 8 of the NPS-UD.</p> <p>Concerned about having to undertake two plan changes (both a district and regional plan change) would be an administrative and financial impediment to urban development and the economic impact of having to undertake two parallel plan changes has not been fully assessed in the s32 with regard to the NPS-UD, or in terms of the impact on housing and business capacity.</p> <p>States intent of P.P2(b) is unclear and is</p>	<p>vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				inconsistent with and duplicates (c) and (d). Supports the regulation of contaminant discharges from redevelopment activities, and considers that the "encouraging" policy direction is inconsistent with the "imposing" and "requiring" policy direction in (c) and (d).	
S240.034	9 Te Awarua-o-Porirua Whaitua	Policy P.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Amend	Supports action plans to achieve objectives and considers action plans should be developed in partnership with territorial authorities rather than being informed by them. Considers Council is a key stakeholder as a regulator, land owner and asset owner and an action plan developed in partnership with Council is more likely to be successful.	Amend the policy as follows: Policy P.P3: Freshwater Action Plans role in the health and wellbeing of waterways Wellington Regional Council shall, in partnership with mana whenua and territorial authorities , prepare and deliver Freshwater Action Plans in accordance with Schedule 27 (Freshwater Action Plan). The first iteration of Freshwater Action Plans, to cover all rivers and lakes in Te Awarua-o-Porirua Whaitua, shall be completed by December 2026. Freshwater Action Plans shall identify, in detail, the actions, including to support effective regulation, to achieve the target attribute states, and support relevant environmental outcomes, set in this Plan.
S240.035	9 Te Awarua-o-Porirua Whaitua	Policy P.P4: Contaminant load reductions	Support	Supports in principle the reduction in annual sediment load.	Retain as notified.
S240.036	9 Te Awarua-o-Porirua Whaitua	Policy P.P5: Localised adverse effects of point source discharges	Support	Supports in principle the reduction in point source discharges.	Retain as notified.
S240.037	9 Te Awarua-	Policy P.P6: Point	Support	Supports in principle the reduction in point source discharges.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	source discharges			
S240.038	9 Te Awarua-o-Porirua Whaitua	Policy P.P7 Discharges to groundwater.	Amend	Supports in principle the reduction in point source discharges to ground water. Considers the policy is unclear, for example, it is not clear how will these discharges be managed or how the quality of groundwater will be measured in terms of water quality attributes.	Review wording of policy to clarify intent.
S240.039	9 Te Awarua-o-Porirua Whaitua	Policy P.P8 Avoiding discharges of specific products and waste.	Amend	Supports in principle avoiding discharges of these contaminants but notes it is near impossible to regulate individual landowners from discharging cleaning products and paints. Considers non-regulatory methods need to be used to educate people. Notes clause (b) would capture any animals that are confined, including sheep in a paddock at a low density. If the intent of to capture intensive indoor farming this should be clarified.	Amend policy as follows: Policy P.P8 Avoiding discharges of specific products and waste Avoid discharges to freshwater and coastal water, including where this is via the stormwater network, of: (a) chemical cleaning products, paint, solvents, fuels and coolant, oil, wet cement products and drill cooling water, or (b) animal effluent from an animal effluent storage facility or from an area where animals are confined indoors , or (c) untreated industrial or trade waste, or (d) untreated organic waste or leachate from storage of organic material.
S240.040	9 Te Awarua-o-Porirua Whaitua	Policy P.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Support	Supports the policy in principle.	Retain as notified.
S240.041	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse	Amend	Supports in principle regulating stormwater contaminants through hydrological control and water sensitive urban design measures (WSUD) to improve freshwater outcomes.	Develop a more comprehensive policy and implementation framework with regard to hydrological control and water sensitive urban design measures, including acceptable solutions and amend policy accordingly.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		effects of stormwater discharges		<p>Considers there is a degree of overlap with district plan rules which also manage hydrology of stormwater from urban development and the s32 Evaluation has not addressed this overlap in functions. Considers for hydrological controls and WSUD to really deliver, a coordinated regional implementation programme is needed.</p> <p>Notes that the while the Three Waters chapter of the Proposed Porirua District Plan does not explicitly require water sensitive design, this is promoted through the requirements for hydraulic neutrality and compliance with the Wellington Water Regional Standard for Water Services May 2019. It also provides specifications for rules such as rainwater tanks which are required for new residential units.</p> <p>Considers the PC1 provisions are light on detail on how hydrological controls and WSUD will be implemented including what specifications will apply to WSUD and what would be considered an acceptable solution to comply with the provisions.</p> <p>Considers if the NRP included technical specifications, smaller developments could rely on these without having to develop a bespoke solution for their site and undertake expensive hydrological and/or engineering calculations to demonstrate compliance.</p> <p>Support recognition of catchment scale communal schemes which may be more appropriate from a maintenance perspective than lots of small systems.</p>	
S240.042	9 Te Awarua-	Policy P.P11: Discharge	Support	Supports managing these discharges.	Retain as notified

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	s of a contaminant in stormwater from high risk industrial or trade premises.			
S240.043	9 Te Awarua-o-Porirua Whaitua	Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports the use of stormwater management strategies to achieve freshwater outcomes but considers clause (c) could be strengthened to be more active, as other contaminants are transported via the stormwater system that need to be reduced to achieve objectives and target attribute states including E.coli and sediment.	<p>Amend policy as follows:</p> <p>Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy Stormwater discharges from local authority and state highway networks shall be managed by:</p> <p>(a) reducing the copper and zinc loads in discharges to the coastal water management units of Onepoto Arm and Pāuatahanui Inlet in Map 82 and the harbour arm catchments in Map 84 by 15% for copper and 40% for zinc to contribute to meeting the target attribute states and coastal water objectives for copper and zinc in the Onepoto Arm and Pāuatahanui Inlet of Te Awarua-o-Porirua, and</p> <p>(b) reducing the copper and zinc loads in discharges to the Open Coast coastal water management units to contribute to meeting the coastal water objectives to maintain or improve, and</p> <p>(c) reducing the concentration and contaminant loads of copper and zinc from discharges to surface water bodies in order to maintain, and in degraded part Freshwater Management Units improve, the water quality state for dissolved copper and zinc to contribute to meeting the target attribute states in those part Freshwater Management Units, and</p> <p>(d) supporting the achievement of any reducing the concentration of contaminant loads to achieve other relevant target attribute states or coastal water objectives including for ecosystem health, nutrients, visual clarity and Escherichia coli or enterococci,</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					and (e) implementing a stormwater management strategy and stormwater management plans prepared in accordance with the information and requirements set out in Schedule 31 (stormwater strategy - whaitua), and (f) monitoring and modelling the stormwater network to identify catchments to be prioritised, the copper and zinc concentrations and loads in the discharge, and changes in discharge volume and quality over time following improvements in the network infrastructure, and (g) prioritising the reduction, removal, and/or treatment of stormwater discharges to Schedule A (outstanding water bodies) or Schedule C (mana whenua) sites, or mahinga kai.
S240.044	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers 'minimised' means the same as 'reduced to the extent practicable'. Changes suggested so clause WH.P14(b) aligns with P.R6 and P.R7.	Amend the policy as follows: Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces The adverse effects of stormwater discharges from new greenfield development and redevelopment of existing urban areas shall be minimised , and adverse effects of stormwater discharges from existing urban areas reduced to the extent practicable, upon redevelopment, through implementing: (a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to: (i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and (ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and (b) where stormwater discharges will enter a river directly or indirectly (through an existing local authority stormwater network) , hydrological controls either on-site, or off-site via a communal stormwater treatment system.
S240.045	9 Te Awarua-	Policy P.P14: Stormwater	Support	Supports policy in principle as it provides a pathway for development while addressing residual adverse effects.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	r contamina nt offsetting for new greenfield developm ent.			
S240.046	9 Te Awarua- o-Porirua Whaitua	Policy P.P15: Stormwate r discharges from new unplanned greenfield developm ent.	Oppose	Considers there is an insufficient evidence base to support the approach being taken, especially considering that there is a prohibited activity status associated with new unplanned greenfield development. Considers that a consenting pathway is required through a non-complying activity status to avoid any unintended consequences that may result through taking a prohibited approach. Considers this policy directly duplicates P.P2(a) and is therefore unnecessary.	Delete Policy P.P15
S240.047	9 Te Awarua- o-Porirua Whaitua	Policy P.P16: General wastewate r policy to achieve target attribute states and coastal water objectives.	Amend	Supports in principle the maintenance and improvement of wastewater discharges, subject to relief sought in regard to target attribute states for E.coli in Table 9.1 and 9.2.	Retain as notified provided target attribute states for E.coli amended to 2060 in Table 9.1 and 9.2.
S240.048	9 Te Awarua- o-Porirua Whaitua	Policy P.P17: Progressin g works to meet Escherichi a coli	Amend	Policy duplicates Local Government Act responsibilities as it directs operational asset management decision making rather than directing what matters will be considered in assessing resource consents for wastewater network catchment discharges	Delete policy, or reframe to direct decision making on wastewater network catchment discharges.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>technological improvements and other methods to reduce or remove wastewater discharges to water.</p> <p>Note Kaitiaki monitoring teams within the Whaitua must be engaged with and be provided the opportunity to undertake the kaitiaki monitoring.</p>
S240.051	9 Te Awarua-o-Porirua Whaitua	Policy P.P20: Managing diffuse discharges of nutrients and Escherichi a coli from farming activities.	Amend	Supports reducing diffuse discharges from farming activities, however consider this policy can be deleted as it unnecessarily cross references other policies.	Delete Policy P.P20
S240.052	9 Te Awarua-o-Porirua Whaitua	Policy P.P21: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Support	Supports reducing diffuse discharges from farming activities.	Retain as notified.
S240.053	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges	Amend	Supports reducing hill country erosion to reduce sediment loads into waterways. Considers planting of native species should be encouraged where these can provide suitable stabilisation for erosion prone land, this would also assist improving biodiversity values within the catchment.	Amend policy as follows: Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion Reduce discharges of sediment from farming activities on high erosion risk land and highest erosion risk land by: (a) identifying highest erosion risk land (pasture) and high

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		from farming activities on land with high risk of erosion.			erosion risk land (pasture), and (b) requiring that farm environment plans prepared for farms with highest erosion risk land (pasture) and/or high erosion risk land (pasture) include an erosion risk treatment plan, and (c) ensuring erosion risk treatment plans: (i) deliver permanent woody vegetation cover on at least 50% of highest risk erosion land (pasture) that is in pasture on a farm within 10 years and appropriate erosion control treatment for the remaining highest risk erosion land (pasture) and high erosion risk land (pasture) that is in pasture on the farm, and (ii) identify and respond to risks of sediment loss on high erosion risk land (pasture) associated with grazing livestock, earthworks or vegetation clearance, by using effective erosion control treatment, and(iii) encouraging planting of native species where these can provide suitable stabilisation for erosion prone land, and (d) Wellington Regional Council providing support to landowners to implement erosion risk treatment plans.
S240.054	9 Te Awarua-o-Porirua Whaitua	Policy P.P23: Phasing of farm environment plans.	Support	Supports phased timetable for implementing farm plans.	Retain as notified.
S240.055	9 Te Awarua-o-Porirua Whaitua	Policy P.P24: Managing rural land use change.	Support	Supports restricting land use change to those that maintain or reduce diffuse discharges.	Retain as notified.
S240.056	9 Te Awarua-o-Porirua Whaitua	Policy P.P25: Promoting stream shading.	Support	Supports progressive shading of streams to improve habitats.	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S240.057	9 Te Awarua-o-Porirua Whaitua	Policy P.P26: Achieving reductions in sediment discharges from plantation forestry.	Support	Supports reduction of sediment discharges from forestry.	Retain as notified.
S240.058	9 Te Awarua-o-Porirua Whaitua	Policy P.P27: Management of earthworks sites.	Support	Supports management of sediment discharges from earthworks.	Retain as notified.
S240.059	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	Supports intent of policy, but considers it is written more like a rule or a standard	Reword as a policy, or relocate into rules section of Chapter.
S240.060	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Notes the s32 evaluation states there is higher risk for discharges of sediment from earthworks over the winter period. Considers large storm events cause larger pulses of sediment discharges and that large storm events are becoming more unpredictable and can occur anytime throughout the year. Notes a poor summer earthworks season due to adverse weather may result in significant lost time to safely undertake earthworks, and the winter period may be appropriate for projects to catch up on progress and stabilise the land. Considers the BAU approach for winter earthworks should be maintained, i.e. as a standard condition of consent as a discretionary activity as these	Amend policy as follows: Policy P.P29: Winter shut down of earthworks Earthworks over 3,000m² in area shall: (a) be shut down from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				conditions allow for GW to provide permits to undertake earthworks within this period as appropriate and subject to conditions.	
S240.061	9 Te Awarua-o-Porirua Whaitua	Rule P.R1: Point source discharges of specific contaminants - prohibited activity.	Support	Supports in principle the avoidance of these discharges, but notes reducing them will rely heavily on non-regulatory means including education as monitoring will be almost impossible (e.g. regulating cars being washed in front of homes and people cleaning off paint brushes).	Retain as notified.
S240.062	9 Te Awarua-o-Porirua Whaitua	Rule P.R2: Stormwater to land - permitted activity.	Amend	Supports in principle but notes territorial authorities control new connections to discharge to the network. Concerned that as written, this rule requires all new connections to the stormwater network to obtain a regional resource consent. It is unclear why this needs to now be regulated by the Regional Council, and this is possibly a drafting error. Considers the rule duplicates P.R3 to a large extent as they both control storm water to land/water with similar conditions.	Consolidate P.R2 and P.R3 into one rule, or amend as follows: Rule P.R2: Stormwater to land - permitted activity The discharge of stormwater onto or into land, including where contaminants may enter groundwater (a) that is not from a high risk industrial or trade premise, or (b) that is not connected to that does not discharge from, or to, a local authority stormwater network is a permitted activity provided the following conditions are met: (...)
S240.063	9 Te Awarua-o-Porirua Whaitua	Rule P.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Amend	Supports in principle but notes territorial authorities control new connections to discharge to the network. Concerned that as written, this rule requires all new connections to the stormwater network to obtain a regional resource consent. It is unclear why this needs to now be regulated by the Regional Council, and this is possibly a drafting error. Considers the rule duplicate P.R2 to a large extent as they both control storm water to land/water with similar conditions.	Consolidate P.R2 and P.R3 into one rule, or amend as follows: Rule P.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity The discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, from an existing individual property (a) that is not from a high risk industrial or trade premise, or (b) that is not from a state highway, or (c) that is not connected to that does not discharge from, or to, a local authority stormwater network

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					is a permitted activity provided the following conditions are met: (...)
S240.064	9 Te Awarua-o-Porirua Whaitua	Rule P.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Support	Supports in principle.	Retain as notified.
S240.065	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	<p>Generally supports Greater Wellington taking a greater role in regulating changes in impervious surfaces and requiring interventions, but notes that the 30sqm threshold in this rule for requiring hydrological controls for any impervious surfaces is a low threshold and will impact the cost of development and create a regulatory burden on GWRC.</p> <p>Notes the rule does not outline what types of hydrological controls should be implemented and it is unclear what would be considered an acceptable solution to comply with the provisions. Notes the definition of 'hydrological control' doesn't provide any guidance in this regard and considers the s32 Evaluation does not outline the costs of acceptable controls and the economic impact on urban development.</p> <p>Suggests a possible solution for a hydrological control, at least for new buildings, are rainwater tanks. Notes that the District Plan requires that rain tanks be installed on new residential buildings that comply with Wellington Water's guide 'Managing Stormwater Runoff' which only sets the sizes for</p>	<p>Develop an acceptable solution for compliance with WH.R5(c)(ii) either through incorporating guidance by reference, within the rule itself, or as an appendix to the plan.</p> <p>Amend the rule as follows and/or delete WH.R5(c)(ii):</p> <p>Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment activities of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing or new local authority stormwater network, that is not a high risk industrial or trade premise or unplanned greenfield development, is a permitted activity, provided the following conditions are met: (a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m² (baseline property existing impervious area as at 30 October 2023) and (b) all new building materials associated with the development shall not include exposed zinc (including</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>rainwater tanks for buildings with a roof area larger than 40sqm. As this is the only acceptable solution known to Council for hydrological controls, it is recommended that the threshold start at 40sqm at a minimum.</p> <p>Considers more guidance for plan users on how they can comply with the rule, either through incorporating guidance by reference, within the rule itself, or as an appendix to the plan, is needed for successful implementation.</p> <p>Notes the s32 Evaluation does not outline the costs to GW to monitor compliance with this rule and considers the term "an existing urbanised property" is not necessary as this is outlined in the definition of redevelopment.</p> <p>Seeks changes to enable Parks & City Services Team to carry out their business-as-usual activities in line with the Proposed District Plan for Porirua noting most earthworks activities carried out are carried out in the context of open space and in sensitivity to the environment in accordance with the Reserves Act 1977. Considers this distinct from the activities that this rule is designed to control.</p> <p>Notes that construction, operation, and maintenance earthworks activities carried out by the Parks & City Services Team are generally low-risk in terms of environmental impacts, and there is difficulty siting permanent hydrological control in reserves that have limited flat land and competing uses. Further notes that the land on which reserves are situated usually has a lot of porous surfaces such as grass and vegetation, mitigating the need for on-site hydrological control. Considers that this level of hydrological control is not required on reserve land.</p>	<p>galvanised steel) or copper roof, cladding and spouting materials, and (c) the proposal provides hydrological control measures (for example rain tanks) onsite or offsite, where discharges will enter a surface water body (including via an existing local authority stormwater network): (i) for all impervious areas associated with a greenfield development, or (ii) for all redeveloped and new impervious areas involving greater than 40304000m² of impervious area of a redevelopment (an existing urbanised property), and (...) Note: this rule does not apply to the construction, operation, and maintenance of tracks, boardwalks, and playground equipment on land managed under the Reserves Act 1977'</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S240.066	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend	<p>Generally supports GW taking a greater role in regulating changes in impervious surfaces and requiring interventions, but note that this rule will have a significant economic impact on urban development and create a regulatory burden on GWRC.</p> <p>Notes the rule does not outline what types of hydrological controls should be implemented and it is unclear what would be considered an acceptable solution to comply with the provisions, and the definition of 'hydrological control' doesn't provide any guidance in this regard.</p> <p>Notes the second matter of control refers to best practicable options, but it does not outline what these are (as opposed to stormwater treatment system which has some guidance on acceptable types of systems in the definition along with specifications in Schedule 28)</p> <p>The s32 Evaluation does not quantify the costs of acceptable controls and the economic impact on urban development.</p>	Develop an acceptable solution for compliance either through incorporating guidance by reference, within the rule itself, or as an appendix to the plan.
S240.067	9 Te Awarua-o-Porirua Whaitua	Rule P.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas- controlled activity.	Amend	<p>Generally supports GW taking a greater role in regulating changes in impervious surfaces and requiring interventions, but note that this rule will have a significant economic impact on urban development and create a regulatory burden on GWRC.</p> <p>Notes the rule does not outline what types of hydrological controls should be implemented and it is unclear what would be considered an acceptable solution to comply with the provisions, and the definition of 'hydrological control' doesn't provide any guidance in this regard.</p> <p>Notes the second matter of control refers to best practicable options, but it does not outline what these are (as opposed to stormwater treatment</p>	Develop an acceptable solution for compliance either through incorporating guidance by reference, within the rule itself, or as an appendix to the plan.

				<p>system which has some guidance on acceptable types of systems in the definition along with specifications in Schedule 28)</p> <p>The s32 Evaluation does not quantify the costs of acceptable controls and the economic impact on urban development.</p>	
S240.068	9 Te Awarua-o-Porirua Whaitua	Rule P.R9: Stormwater from new state highways-discretionary activity.	Amend	Considers it unclear what constitutes a new state highway. For example, it is unclear if a slight widening of seal on shoulders would be considered new state highway, or is this intended to capture entirely new stretches of state highway.	Review rule wording.
S240.069	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-discretionary activity.	Support	Supports this policy, including reference to a schedule setting out requirements for a stormwater impact assessment.	Retain as notified.
S240.070	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Amend	<p>Considers prohibition of unplanned greenfield development may result in unintended consequences with no consenting pathway to consider a proposal located in these areas that may have positive outcomes, including positive outcomes for freshwater.</p> <p>Considers the activity status is a blunt instrument that would also make an incursion into these areas prohibited no matter how small. For example a new road connecting urban areas (or urban to rural areas) would be prohibited if it needed to "clip" an area mapped as unplanned.</p> <p>Considers policy direction should be amended to</p>	<p>Amend rule as follows:</p> <p>Rule P.R12: Stormwater discharges from new unplanned greenfield development - prohibited activity The use of land and the associated discharge of stormwater from impervious surfaces from unplanned greenfield development direct into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing or proposed stormwater network, is a prohibited non-complying activity.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>"avoid" with a non-complying activity status. Notes the application of a prohibited activity status requires a high level of evaluation to justify its use and considers that the s32 Evaluation is insufficient. Considers the s32 Evaluation contains contradictory statements with regard to the ability of PC1 to mitigate contaminants from urban developments. Questions how a prohibited activity status could be justified on an effects management basis if PC1 manages all water quality effects, including residual effects as stated in the s32.</p> <p>Considers the prohibition on greenfield development is inconsistent with the NPS-UD. Considers Map 86 is inconsistent with the decisions on the Proposed Porirua District Plan. In some instances the unplanned area includes areas confirmed as Future Urban Zone including in Waitangirua, Pukerua Bay and Judgeford. There are also parts of Judgeford that were not rezoned as Future Urban Zone due to natural hazard risk. Considers the avoid/prohibited approach may directly conflict with Council's ability to give effect to the NPS-UD.</p> <p>Concerned Hongoeka has been identified as an area of unplanned urban development, meaning any greenfield development in this area is prohibited. This will likely be of concern to Hongoeka Whanau. Hongoeka is partly urban in nature in terms of lots sizes, and has reticulated sewerage and drinking water supply. Council worked in partnership with Te Rūnanga and with the Hongoeka Marae Committee on creating an enabling zoning for this area in the PDP. Considers a prohibited activity status makes it difficult for territorial authorities to consider a plan change in an unplanned greenfield area as per Policy 8 of the NPS-UD.</p> <p>Concerned about having to undertake two plan</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>changes (both a district and regional plan change) would be an administrative and financial impediment to urban development and the economic impact of having to undertake two parallel plan changes has not been fully assessed in the s32 with regard to the NPS-UD, or in terms of the impact on housing and business capacity.</p> <p>States intent of P.P2(b) is unclear and is inconsistent with and duplicates (c) and (d). Supports the regulation of contaminant discharges from redevelopment activities, and considers that the "encouraging" policy direction is inconsistent with the "imposing" and "requiring" policy direction in (c) and (d).</p>	
S240.071	9 Te Awarua-o-Porirua Whaitua	Rule P.R13: Wastewater network catchment discharges to water - restricted discretionary activity.	Amend	Supports in principle the maintenance and improvement of wastewater discharges, subject to relief sought in regard to target attribute states for E.coli in Table 9.1 and 9.2.	Retain as notified provided target attribute states for E.coli amended to 2060 in Table 9.1 and 9.2.
S240.072	9 Te Awarua-o-Porirua Whaitua	Rule P.R14: Existing wastewater discharges from a treatment plant to coastal and freshwater -	Support	Support.	Retain as notified

		discretionary activity.			
S240.077	9 Te Awarua-o-Porirua Whaitua	Rule P.R19: Plantation forestry - controlled activity.	Support	Supports reduction of sediment discharges from forestry.	Retain as notified
S240.078	9 Te Awarua-o-Porirua Whaitua	Rule P.R20: Plantation forestry - discretionary activity.	Support	Supports reduction of sediment discharges from forestry.	Retain as notified
S240.079	9 Te Awarua-o-Porirua Whaitua	Rule P.R21: Plantation Forestry on highest erosion risk land - prohibited activity.	Support	Supports reduction of sediment discharges from forestry.	Retain as notified
S240.080	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Support	<p>Concerned the 'and' after clause b means that any earthworks City-wide that aren't on a farm technically require consent no matter how small. This is unlikely the intent of the rule and is likely a drafting error.</p> <p>Notes the earthworks definition is aligned with the National Planning Standards and this removes an exemption for road maintenance activities. Considers they should be exempt to remove the need to apply for unnecessary consents which will add costs and delays to the road maintenance programme. Considers exclusion should be in the rule itself to comply with the National Planning Standards.</p> <p>Concerns earthwork consents required for coastal</p>	<p>Amend rule as follows:</p> <p>Rule P.R22: Earthworks - permitted activity Earthworks is a permitted activity, provided the following conditions are met:</p> <ul style="list-style-type: none"> (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and-or (c) the area of earthworks does not exceed 3,000m² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>restoration, conservation, and management activities will discourage projects and work against coastal resilience and enhancement.</p> <p>Notes soft engineering approaches to coastal protection, in particular, placement of compacted fill, are increasingly used as the effects of sea level rise start to impact coastlines and compacted fill is low impact relative to rock armouring and other coastal protection methods.</p> <p>Excluding these activities will enable soft engineering approaches to be undertaken without the need to apply for consents which will add significant costs and delays to Council's coastal adaptation programme. Considers this approach is consistent with the Proposed Porirua District Plan and the New Zealand Coastal Policy statement.</p>	<p>(e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(f) the area of earthworks must be stabilised within six months after completion of the earthworks, and</p> <p>(g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and</p> <p>(h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note-This rule excludes coastal restoration, conservation, and management activities where undertaken by a statutory authority or their nominated contractor.</p> <p>-This rule excludes repair or maintenance of existing roads, or repair, sealing or resealing of a road, footpath or driveway where undertaken by a statutory authority or their nominated contractor.</p> <p>-Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).</p>
S240.081	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	<p>Notes the s32 evaluation states there is higher risk for discharges of sediment from earthworks over the winter period.</p> <p>Considers large storm events cause larger pulses of sediment discharges and that large storm events are becoming more unpredictable and can occur anytime throughout the year.</p> <p>Notes a poor summer earthworks season due to adverse weather may result in significant lost time to safely undertake earthworks, and the winter period may be appropriate for projects to catch up on progress and stabilise the land.</p>	<p>Amend rule as follows:</p> <p>Rule P.R23: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met:</p> <p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers the BAU approach for winter earthworks should be maintained, i.e. as a standard condition of consent as a discretionary activity as these conditions allow for GW to provide permits to undertake earthworks within this period as appropriate and subject to conditions.	of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m ³ , the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.
S240.082	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Support	Support in principle	Retain as notified
S240.083	9 Te Awarua-o-Porirua Whaitua	Rule P.R25: Farming activities on properties of between 4 hectares and 20 hectares - permitted activity.	Support	Generally supports reducing diffuse discharges from farming activities. Considers associated rules regulating nitrogen discharges from smaller properties will create a regulatory burden for landowners. Greater Wellington needs to ensure that resources dedicated to this process do not come at the expense of other programmes that may have a greater impact on water quality elsewhere in the catchment.	Not stated
S240.084	13 Maps	Map 86: Unplanned greenfield areas - Porirua City Council.	Amend	Considers Map 86 is inconsistent with the decisions on the Proposed Porirua District Plan. In some instances the unplanned area includes areas confirmed as Future Urban Zone including in Waitangirua, Pukerua Bay and Judgeford. There are also parts of Judgeford that were not rezoned as Future Urban Zone due to natural hazard risk. Considers the avoid/prohibited approach may directly conflict with Council's ability to give effect to the NPS-UD.	Amend map to reflect decisions version of the planning maps in the Proposed Porirua District Plan. Include the Hongoeka Māori Purpose Zone within the Planned/existing urban area.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Concerned that Hongoeka has been identified as an area of unplanned urban development, meaning any greenfield development in this area is prohibited but notes Hongoeka is partly urban in nature in terms of lots sizes, and has reticulated sewerage and drinking water supply. Notes Council worked in partnership with Te Rūnanga and with the Hongoeka Marae Committee on creating an enabling zoning for this area in the PDP.	

S165 PUKERUA HOLDINGS LIMITED

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S165.001	General comments	General comments - overall	Oppose	Opposes: 1. The entirety of PC1; and specifically: 2. Amendments to definitions; 3. Amendments to Chapters 5.2 and 5.3 - Discharges to land and water and Land use rules; 4. New Chapter 8 - Whaitua Te Whanganui-a-Tara 5. New Chapter 9 - Te Awarua-o-Porirua 6. Amendments to schedules 7. Amendments to maps	Seeks the following amendments to PC1: 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the relief sought set in relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.
S165.002	General comments	General comments - overall	Oppose	Concerned about the unintended consequences of several drafting errors given the provisions took immediate legal effect at notification. Notes that responses to questions raised at the Q&A sessions are still pending and the application and interpretation of provisions remain in a state of flux	Seeks the following amendments to PC1: 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND 3. Any other relief (including consequential relief) to give

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.
S165.003	General comments	General comments - economic cost/impact	Oppose	Concerns PC1 will impact housing affordability negatively. Opposes schedule 30 and associated provisions. Consider the financial contribution burdensome and may impede on urban growth and intensification. Concerned PC1 and supporting documentation fail to assess the impact on landowners and developers, potentially impacting the private sector's commercial viability. Opposes a flat fee without evaluation, as it risks incentivising the provision of large lots over intensification, undermining Objective 2 and associated policies of the NPS-UD, which were not addressed in the Section 32 Report. Concerns about reliance on financial contributions vs alternative solutions within policy. Considers proposed financial contribution to offset residual stormwater deterioration should not be the only option, despite NPS prioritising water quality. Considers that Schedule 30 highlights the collection of funds for catchment-scale stormwater treatment systems, but the feasibility, effectiveness, and timing of such systems remain unclear. The submitter opposes the proposal from GWRC that this fee would be mandatory even if a development achieves greater than 85% reduction in wastewater, a stance strongly opposed as lacking proportionality and any effects-based rationale.	Seeks the following amendments to PC1: 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set in relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.
S165.004	General comments	General comments - earthworks	Oppose	Opposes the non-complying resource consent requirement for winter earthworks and instead seeks the existing approach to managing winter earthworks be retained because it has proven effective. Considers it is inappropriate to applying a blanket non-complying activity status for winter works, instead assessing the project's pre-winter track record and factors such as scale, nature, duration of the works and management of works	The Submitter seeks the following amendments to PC1: 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief set in relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				already undertaken in the applicable site. Concerns the requirement to stabilise earthworks against erosion and implement sediment controls before shutting down may not be feasible, potentially leading to unintended environmental consequences. Concerned a blanket shutdown period may not align with the diverse challenges of different sites and areas. Considers if an applicant demonstrates the ability to manage winter works effectively, such instances should be supported to prevent unnecessary delays in housing supply and delivery	3. Any other relief (including consequential relief) to give effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.
S165.005	General comments	General comments - unplanned greenfield development	Oppose	<p>Considers that as the section 32 evaluation suggests all contaminants can be addressed through a combination of treatment and financial contributions, the prohibited activity classification is inappropriate from effects management standpoint and lacks justification'</p> <p>Considers that the requirements for both a regional and district plan change for greenfield development pose significant challenges to the private sector's responsiveness to housing needs, making it onerous and costly. Considers this approach could impact the economic viability of development hinder the supply of affordable housing.</p>	<p>Seeks the following amendments to PC1:</p> <ol style="list-style-type: none"> 1. Withdrawal of PC1 in its entirety to allow for a more comprehensive review of the policy and rule framework as it relates to freshwater management (including stormwater management and earthworks); OR 2. Should the relief sought in point 1) not occur, the Submitter seeks the relief sought out in Sin relation to specific provisions of PC1 as set out in Section 3 of the original submission; AND 3. Any other relief (including consequential relief) to give effect to the decisions sought in relation to specific provisions of PC1 as set out in Section 3 of the original submission.
S165.006	General comments	General comments - stormwater management	Oppose	<p>Considers PC1 lacks sufficient detail about what types of hydrological controls and water-sensitive design required for different types/scales of development. Considers requiring the treatment of all impervious surfaces is a big financial burden to owners, simultaneously reducing the need for the treatment of areas due to control of building materials. Concerned that the conditions in the standards pose significant burdens on property owners as a whole. Concerned that the Permitted activity rule that impervious surfaces less than 30m² should necessitate engineering advice for the design of site-specific controls. Concerns about</p>	<p>Seeks the following amendments to PC1:</p> <ol style="list-style-type: none"> 1. 				implications for facilitating necessary urban growth. Concerns that PC1 lacks consideration for financial costs and impacts on the commercial viability of housing supply.	
S165.007	2 Interpretation	Hydrological control	Amend	Concerned the definition does not outline what the controls are	Amend definition to outline what hydrological controls are, including examples and a schedule with technical standards.
S165.008	2 Interpretation	Impervious surfaces	Amend	Considers a roof with rainwater collection that complies with hydraulic neutrality rules in district plans should not be considered impervious surfaces. Implementing grey water reuse would add to development costs and is not a requirement of any regulation including PC1 or the NRP.	Amend definition as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs, paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas, porous or permeable paving, slatted decks which allow water to drain through to a permeable surface, porous or permeable paving and living roofs, roof areas with rainwater collection and reuse, any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S165.009	2 Interpretation	Redevelopment	Amend	Considers this definition should exclude extension to existing buildings to allow a baseline for small redevelopment of existing sites as a permitted activity in associated rules.	Amend definition as follows: For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. This includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving, installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing, activities that only involve the re-roofing of existing buildings, extensions to existing buildings
S165.010	2 Interpretation	Unplanned greenfield development	Oppose	Opposes the definition as it relates to associated prohibited activity rules that are opposed	Delete definition
S165.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities	Amend	Opposes the unplanned greenfield growth policy and rules. Prohibited activity status provides no consenting pathway for proposals in these areas, even if they would have better outcomes for the community and freshwater than intensive rural	Amend policy as follows and make any other consequential relief necessary to give effect to this submission point: Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		to achieve target attribute states and coastal water objectives.		activities. Notes that the section 32 report appears to state that all contaminants can be mitigated with a combination of treatment and the use of financial contributions (refer paragraph 64 of Part C) and considers that, if this is the case, the prohibited activity status is inappropriate in terms of effects management. Also considers the prohibited activity status is inconsistent with the NPS-UD, in particular Policy 8. Concerned about requiring district and regional plan changes and the significant time and cost associated with this. Concerns about the effects of two plan changes making it difficult to be responsive in providing housing and the economic viability of development.	discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants,
S165.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges	Amend	Considers PC1 lacks sufficient detail around what types of hydrological controls and water-sensitive design are required for different types/scales of development. Concerned the conditions outlined in subsections (a),(b), and (c) may pose significant financial burdens on property owners and developers. Concerned the policy's focus on communal stormwater treatment systems within a catchment or sub-catchment, as laid out in (c), may also not be achievable in all scenarios. Considers that as there is a permitted activity rule for impervious surfaces as small as 30m ² , the creation of these small areas of impervious surfaces should not have to seek engineering advice to design site-specific controls. Considers the S32 assessment does not adequately assess the costs and impacts on broader urban growth and supply of housing in the region.	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions. Delete reference to financial contributions.
S165.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant	Oppose	Opposes the new framework relating to financial contributions in section 30. Concerned that financial contributions will hinder greenfield developments, impact housing availability and affordability, and PC1 does not assess these costs. Concerned mandatory blanket financial contribution will	Delete policy

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		offsetting for new greenfield development.		incentivise the development of large lots rather than intensification. Considering that acknowledging stormwater contamination is only practicable for a portion of the contaminant load shows the limitations of the proposed solution. Concerned stormwater contaminant treatment shows an overreliance on financial contribution without adequately exploring alternatives. as land use changes could improve water quality. Considers the proposed financial contribution to offset residual stormwater deterioration should not be the only option and is not the most equitable or efficient approach. Considers anticipating potential water quality deterioration, as outlined in Policy WH.P15 and P.P13, should prompt a more comprehensive exploration of solutions beyond relying solely on financial contributions. Considers the feasibility, timing and effectiveness of catchment-scale stormwater treatment systems unclear. Strongly opposes the application of a mandatory fee even if a development achieves greater than 85% reduction. Considers the proposed contribution is inconsistent with the purported purpose outlined by the GWRC.	
S165.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes the avoidance/prohibiting approach to greenfield development. Concerned this activity status would provide no pathway for a proposal even if it had positive impacts on the community or freshwater. Considers the use of a prohibited activity status is not consistent with the NPS-UD as outlined above in this submission.	Delete definition
S165.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down	Oppose	Opposes the requirement to seek a non-complying resource consent to undertake winter earthworks. Considers large rain events that produce larger sediment pulses can occur any time, not just in the	Delete policy: Policy WH.P31: Winter shut down of earthworks Earthworks over 3,000m² in area shall: (a) be shut down from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and

					suspended solids in the receiving water at or about the point of discharge exceeds 100g/m3, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.
S165.041	12 Schedule s	Schedule 30: Financial Contributio ns.	Oppose	Opposes the new framework relating to financial contributions in section 30. Concerned that financial contributions will hinder greenfield developments, impact housing availability and affordability, and PC1 does not assess these costs. Concerned mandatory blanket financial contribution will incentivise the development of large lots rather than intensification. Considering that acknowledging stormwater contamination is only practicable for a portion of the contaminant load shows the limitations of the proposed solution. Concerned stormwater contaminant treatment shows an overreliance on financial contribution without adequately exploring alternatives. as land use changes could improve water quality. Considers the proposed financial contribution to offset residual stormwater deterioration should not be the only option and is not the most equitable or efficient approach. Considers anticipating potential water quality deterioration, as outlined in Policy WH.P15 and P.P13, should prompt a more comprehensive exploration of solutions beyond relying solely on financial contributions. Considers the feasibility, timing and effectiveness of catchment-scale stormwater treatment systems unclear. Strongly opposes the application of a mandatory fee even if a development achieves greater than 85% reduction. Considers the proposed contribution is inconsistent with the purported purpose outlined by the GWRC.	Delete Schedule 30

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S241 Pukerua Property Group Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S241.001	General comments	General comments - overall	Oppose	Opposes entirety of PC1; specifically Amendments to Chapters 5.2 and 5.3 - Discharges to land and water and Land use rules; and Amendments to Chapter 9 - Te Awarua-o-Porirua	Withdrawal of PC1
S241.002	General comments	General comments - economic cost/impact	Oppose	Considers PC1 has significant consequences for affordability of housing and land development in Wellington Region. Notes addition of a significant financial contribution for new residential units will have flow on housing affordability effects in the region and is inconsistent with Objective 2 and associated policies of NPS-UD. Concerned this has not been considered in the Section 32 report and completely ignores the affordability implications of the proposed changes, despite this being a key objective of the NPS-UD.	Withdrawal of PC1
S241.003	General comments	General comments - overall	Oppose	Notes haste in PC1 preparation with reference to the Clause 16 memo amending errors in rules. Highlights poor approach to planning policy.	Withdrawal of PC1
S241.004	General comments	General comments - consultation	Oppose	Notes the agreements of the government coalition to remove/replace legislation and suggest withdrawal of PC1 to allow a comprehensive review of PC1 provisions as they relate to national guidance. Because of those factors the submitter suggests the plan change is premature	Withdrawal of PC1
S241.005	General comments	General comments - stormwater management	Oppose	Concerns PC1 introduces increased uncertainty and cost to the provision of housing in Wellington region, directly affecting housing affordability. Considers requirement for financial contributions and risks cost introduced through additional consenting will have flow on effects to the cost of	Withdraw PC1. If PC1 not withdrawn, submitter seeks relief from combination of increased risk and cost through removal of financial contributions associated with new stormwater discharge provisions outlined in submission. Should relief not occur, submitter seeks new requirements

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				housing in the region and is inconsistent with Objective 2 and associated policies of NPS-UD.	for stormwater management and financial contributions be removed from new stormwater discharge provisions or amended to provide a more balanced approach to catchment management.
S241.006	General comments	General comments - definitions	Not Stated	Notes confusion in document as to what types of development the plan change relates to. Considers it should not relate to Rural Lifestyle or Rural development.	Withdraw PC1. If PC1 not withdrawn, there is a need to define "Greenfield Development" in the Plan Change to avoid confusion.
S241.007	General comments	General comments - overall	Not Stated	Considers errors and cost implications of plan change and the current state of flux with regard to national direction for freshwater management, purpose of the RMA would be better achieved by withdrawing PC1 to both await the changes in national direction from the new government and correct errors in the document that already have legal effect.	Withdraw PC1. Should PC1 not be withdrawn, submitter seeks amendment to stormwater discharge rules to reduce level of additional cost and risk introduced by the plan change.
S241.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Considers using stormwater control to effectively manage or prevent land use is not consistent with integrated management principles contained in RMA.	Withdraw PC1. If PC1 not withdrawn, delete objectives and policies using stormwater controls to manage or prevent land use. If objective and policies are not deleted, they should be amended to remove avoidance principles and replaced with objectives and policies with same effect/guidance as remainder of PC1 before notification with perhaps some policy relief for activities that require consent under operative provisions (in force before PC1).
S241.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Considers using stormwater control to effectively manage or prevent land use is not consistent with integrated management principles contained in RMA.	Withdraw PC1. If PC1 not withdrawn, delete objectives and policies using stormwater controls to manage or prevent land use. If objective and policies are not deleted, they should be amended to remove avoidance principles and replaced with objectives and policies with same effect/guidance as remainder of PC1 before notification with perhaps some policy relief for activities that require consent under operative provisions (in force before PC1).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S217 R P Mansell; A J Mansell, & M R Mansell

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S217.001	General comments	General comments - overall	Not Stated Oppose	Considers the use of the prohibited activity status for unplanned greenfield development is inappropriate, as the effects are not specified for any particular area. Considers requiring two plan changes (district and regional) is a misuse of the prohibited activity category, which is intended to be used where effects are easily identifiable and discrete. Notes the effects of the prohibited activity are not specified for any particular area, and the extent of the area does not warrant a blanket approach. Considers this proposed approach is onerous, costly and will not achieve implementation of the NPS-UD. Considers the current rules of the NRP and the proposed PC1 rules for planned greenfield development are sufficient to manage the adverse effects of unplanned greenfield development. Seeks for provisions which avoid or prohibit activities associated with unplanned greenfield development to be deleted.	<p>Policies associated with unplanned greenfield developments to be amended to provide for the "avoidance or minimising" of adverse effects</p> <p>This relates to policies WH.P5 & P.P5, WH.P6 & P.P6, WH.P16 & P.P15.</p> <p>Stormwater discharge activities associated with unplanned greenfield development which have prohibited activity status to either be deleted or have their activity statuses amended.</p> <p>This relates to policies WH.P2 & P.P2; Rules WH.R13 & P.R12.</p>
S217.002	General comments	General comments - maps	Not Stated	Concerned with the quality and detail of the PC1 maps.	Improve quality/resolution of PC1 maps.
S217.003	2 Interpretation	Unplanned greenfield development	Amend Oppose	Concerned development in areas identified as unplanned greenfield development require a plan change process to enable the development. Considers the dual plan change process required under PC1 to change greenfield development from unplanned to planned should not be used as an alternative to the resource consenting process. Concerned the private plan change process will not be effective. Opposes only planned greenfield development being provided for in PC1 and unplanned greenfield development requiring a dual plan change. Considers that the prohibition of	<p>All greenfield development to be considered on their merits, and rely on provisions in the NRP and district plan zoning/provisions to manage adverse effects of greenfield development.</p> <p>Delete all provisions referencing "unplanned greenfield development". Delete definition for "unplanned greenfield development"</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				activities is contrary to the NPS-UD. Considers insufficient evidence is provided in the s32 report.	
S217.004	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water quality, are maintained.	Amend Oppose	Notes Objectives WH.O6 and P.O5 intend to 'protect' groundwater dependent ecosystems and ecosystems in connected surface water bodies, and 'avoid' aquifer consolidation (Objective WH.O6). Opposes these approaches as they lead to restrictive and unnecessary restrictions in policies and rules to appropriately implement the objective. Considers an effects management approach is more appropriate and provides a balanced response.	[...] (b) protect ensure that groundwater dependent ecosystems are maintained or improved where degraded (c) protect ensure that ecosystems in connected surface water bodies are maintained or improved where degraded , and [...] (f) avoid or minimise aquifer consolidation [...]
S217.005	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Considers the policy does not accurately reflect the objectives on aquatic ecosystem health. Considers that the objectives provide more flexibility than only an "improve" approach.	Improvement of aquatic ecosystem health Aquatic ecosystem health will be maintained or improved where relevant target attribute state is not met by: (a) progressively reducing the load or concentration of contaminants, particularly sediment, nutrients, pathogens and metals, entering water where relevant target attribute state is not met , and (b) maintaining or restoring habitats where relevant target attribute state is not met , and (c) maintaining or enhancing the natural flow regime of rivers and managing water flows and levels where relevant target attribute state is not met , including where there is interaction of flows between surface water and groundwater, and (d) co-ordinating and prioritising work programmes in catchments that require changes to land use activities that impact on water.
S217.006	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Amend Oppose	Considers the proposed shut down period for winter earthworks is onerous and unnecessary in light of the other provisions.	Delete winter shut down requirements. Retain existing effects management approach for sediment discharges from earthworks.
S217.007	8 Whaitua Te	Rule WH.R5:	Amend	Generally supports the proposed activity status; however considers the exclusion of "unplanned	Retain permitted activity status.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Stormwater from new and redeveloped impervious surfaces - permitted activity.		greenfield development" unnecessary and inappropriate, as the rule is already focussed on new or redevelopment of existing impervious surfaces. Considers that the proposed impervious area limit is too restrictive and does not account for subdivision of large properties into smaller lots, or where impervious surfaces are historical.	Amend clause (a) as follows: (a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m ² on an existing lot or future subdivided lot over a 12 month period (baseline property existing impervious area as at 30 October 2023) and... Delete 'unplanned greenfield development' from rule WH.R5
S217.008	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Not Stated	Supports the proposed activity status; considers the proposed impervious area limit is too restrictive and does not account for subdivision of large properties into smaller lots, or where impervious surfaces are historical.	Retain controlled activity status. Amend clause (a) as follows: (a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m ² on an existing lot or future subdivided lot over a 12 month period (baseline property existing impervious area as at 30 October 2023) and... Delete 'unplanned greenfield development' from rule WH.R6
S217.009	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Amend	Supports the proposed activity status, however opposes the reference to Rule WH.R13.	Retain discretionary activity status. Delete reference to Rule WH.R13.
S217.010	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-	Amend	Generally supports the effects management approach relating to contaminants in stormwater discharges, however considers that discretionary activity status is more appropriate than non-complying activity status.	Retain existing effects management approach for contaminants in stormwater discharges. Amend activity status from non-complying to discretionary.

S220.001	General comments	General comments - definitions	Not Stated	Requests a definition of "greenfield development" is included. Presumably a greenfield development is the development of an existing grassed property (mapped as 'planned/existing urban area') with no	Include a definition of "greenfield development"

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				existing impervious surfaces, where the development also includes provision of new roads to be vested and new sewage and stormwater infrastructure to be vested.	
S220.002	2 Interpretation	Earthworks	Oppose	Opposes the definition of "earthworks" that relates to the Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua as the definition removes all reasonable exceptions from the current definition and only excludes gardening, cultivation and post holes.	Retain the original definition of earthworks for all whaitua.
S220.003	2 Interpretation	High risk industrial or trade premise	Amend	Notes the key points of this definition are that the activity involves contaminants / hazardous substances and that these are exposed to rain. Conditionally supports the definition as the definition requires exposure to the weather.	Rosco seeks the addition of an exception to be added to the end of the definition - as follows: However, where these activities are contained within buildings, full covered or fully bunded to prevent discharge of stormwater from the hazardous substance / contaminants, they are excluded from the definition.
S220.004	2 Interpretation	Hydrological control	Amend	Opposes the definition as the existing use rights that a site should enjoy for it's current stormwater discharge are lost due to the definition requiring the volume of stormwater discharged from a developed infill / brownfield site to be reduced as far as practicable so that the discharge is not more than if the site was an undeveloped grassed site. Notes that as various permitted activity rules refer to a requirement to utilise hydrological controls as a permitted standard, the use of the term as far as practicable suggests that a discretion has to be exercised in order to determine if an activity is permitted or not. Considers such discretion creates uncertainty for applicants and therefore is not appropriate for a permitted standard. Questions who would determine whether a proposal achieves a suitable reduction of stormwater runoff that is as far as practicable and what criteria would be taken into consideration when determining if a proposal for hydrological control is appropriate.	Amend definition as follows: The management of a range of stormwater flows and volumes , and the frequency and timing of those flows and volumes , from a site or sites into rivers, lakes, wetlands, springs, riparian margins, and other receiving environments that reduces the existing stormwater flows by 50% in a way that replicates natural processes for the purpose of reducing bank erosion, slumping, or scour, to protect freshwater ecosystem health and well-being.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S220.005	2 Interpretation	Impervious surfaces	Support	Supports the definition of impervious surfaces, in particular the exclusions. Submits that technical guidance should be provided on the detail of how to achieve porous/permeable paving and the reticulation/storage systems required for water collection and reuse.	Provide technical guidance on the detail of how to achieve porous/permeable paving and the reticulation/storage systems required for water collection and reuse.
S220.006	2 Interpretation	Redevelopment	Support	Supports the definition of redevelopment, in particular the exclusions.	Retain as notified
S220.007	2 Interpretation	Stormwater	Support	Supports the definition of stormwater, in particular the exclusions. Notes a typographical error referring to rules in sections "8.2 and 9.2", which should refer to sections 8.3 and 9.3.	Correct typographical error to refer to correct sections.
S220.008	2 Interpretation	Stormwater treatment system	Support	Supports the definition of stormwater treatment system, in particular the inclusions for the use of infiltration trenches and proprietary devices are supported.	Retain as notified
S220.009	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Oppose	Notes Rule R128 was originally promulgated to reduce the need to obtain permits for minor structures needed in the bed of a watercourse/lake provided the works met the general standards. Opposes the changes as they reduce the scope of activities that would be permitted.	Retain the operative rule R128.
S220.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Notes one of the stated policy methods is to prohibit unplanned greenfield development and therefore opposes this policy.	Amend the policy to restrict discharges from unplanned greenfield development.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S220.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Support	Supports the policy and notes the requested changes to the definition of high risk industrial or trade premises are consistent with the policy.	Retain as notified
S220.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	Opposes the policy. Notes the policy does not specify at what rate/frequency the stormwater treatment is to be achieved. Considers it is not clear from the policy whether the stormwater treatment system is to accommodate the annual rainfall at once, or whether the treatment is achieved over a daily, weekly or monthly period. Considers that the design and sizing of a stormwater treatment system should be based on the average weekly rainfall.	The design and sizing of a stormwater treatment system should be based on the average weekly rainfall.
S220.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Notes this policy seeks to avoid all stormwater discharges to water from unplanned greenfield development (as mapped) and opposes this policy. Considers that an avoidance policy is too restrictive to be applied to such large areas of the City, even if they are non-urban.	Amend to a minimisation policy.
S220.014	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield	Amend	Considers that as there is no definition of greenfield development, there is uncertainty as to which rule (WH.R6 or WH.R7) would apply to a development.	Include definition of greenfield development

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		impervious surfaces - controlled activity.			
S220.015	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity.	Amend	Considers that as there is no definition of greenfield development, there is uncertainty as to which rule (WH.R6 or WH.R7) would apply to a development.	Include definition of greenfield development
S220.016	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Opposes the prohibited activity status of Rule WH.R13 and considers that there should be an ability to seek a regional consent for the stormwater discharge from impervious surfaces associated with new unplanned greenfield development, particularly where the territorial authority supports a development, including via a plan change process.	Amend rule WH.R13 to be a non-complying activity.
S220.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Oppose	Opposes the restrictions that no sediment can be discharged from a site during earthworks. Notes it is common practice to utilise erosion and sediment control measures during an earthworks operation, but it would be near impossible to guarantee that site development could prevent any and all discharges of sediment from the site in all weather events.	Apply a more pragmatic measure for the limit of sediment that can be discharged. Either cross reference to the permitted standards under rule WH.R3; or use some other practical measurement of the amount of sediment in stormwater runoff.
S220.018	8 Whaitua Te	Rule WH.R24:	Amend	Considers that this rule should include a non-notification clause.	Amend Rule WH.R24 to include a non-notification clause.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S189 Samuel Kahui

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S189.001	9 Te Awarua-o-Porirua Whaitua	Objective P.O2: Te Awarua-o-Porirua's groundwater, rivers, lakes and natural wetlands, and their margins are on a trajectory of measurable improvement towards wai ora.	Amend	Believes using the word 'maintain' is not sufficient	Remove the word 'maintenance' from point (h) of Objective P.O2
S189.002	General comments	General comments - overall	Support	Supports the direction in PC1 and urges Councillors to continue to support these changes through to their implementation. Considers PC1 must solve some of the biggest problems including aging and leaky infrastructure, inappropriate urban development and poor land use practices and a strong and enforced regulatory backbone is required.	Not stated
S189.003	General comments	General comments - water quality improvements	Support	Considers there has not been enough care for the health of harbours, estuaries, rivers, lakes, streams, wildlife and communities have suffered as a result, and action must be taken. Suggests the regional plan must drive improvement and no longer allow inaction, declining water quality or inefficient water use. Supports measures in Plan Change 1 that will, if implemented properly end harmful wastewater entering directly into our streams and coastal	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				waters, water sensitive urban design becoming the norm in towns and cities of our region, and farms and plantation forests no longer harming waterways and the wildlife that live in them. Considers these are the first steps on the journey to restoring Te Mana o Te Wai - the dignity, integrity, significance, power of water - and our water regaining its mauri. Considers that development done right is possible and built environments can be weaved into the natural world.	
S189.004	General comments	General comments - economic cost/impact	Support	Notes PC1 will be expensive but that true costs of not implementing PC1 are huge, felt over multiple generations and may be irreversible. Considers GWRC can provide the framework and assist with the collaboration of mana whenua, communities, and stakeholders in the restoration and celebration of Wai and natural environments. Mā whero, mā pango ka oti ai te mahi.	Support PC1 through to implementation.
S189.005	General comments	General comments - target attribute states	Support	Supports the timeframes for achieving the target attribute states set out in PC1, noting that in many cases these are only first step improvements to reverse the decline and get water quality above national bottom lines.	Not stated
S189.006	8 Whaitua Te Whanganui-a-Tara	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for	Support	Not stated	Support to improve Wai TAS to achieve safe access and contact.

		primary contact.			

S110 Save Our Hills (Upper Hutt) Incorporated

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S110.001	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Support	<p>Seeks stormwater discharges from Upper Hutt City Council's (UHCC) proposed "Southern Growth Area (SGA)" (i.e. Guildford Timber Company's proposed development on Pinehaven Hills) are not permitted until the Pinehaven Stream baseline flood model has been rectified to ensure hydrological control, and the Pinehaven Floodplain Management Plan has been updated to incorporate the rectified Pinehaven Stream flood model.</p> <p>Considers if this is not done then hydrological control (including hydraulic neutrality) will not happen with consequences for the environment, for natural resources, private property, human life and public safety.</p> <p>Supports Map 88 which identifies the Upper Hutt City Council's proposed "Southern Growth Area" (i.e. Guildford Timber Company's proposed development on Pinehaven Hills) as "unplanned greenfield development".</p>	Do not allow any new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S196 Sera Moran

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S196.001	General comments	General comments - overall	Oppose	Opposes PC1.	Withdraw PC1.
S196.002	General comments	General comments - consultation	Oppose	Concerned the rural community only discovered PC1 by word of mouth .	Withdraw PC1.
S196.003	6 Other methods	6.17 Small farm property registration	Oppose	Concerned with requirement for small farms to be registered and to provide complex information. Considers large animals/livestock welfare should remain under MPI not GWRC.	Delete the requirement for farms of 4 ha to register with GWRC.

S095 Sharyn Hume

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S95.001	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Supports range of financial support options for land retirement but would like to see compensation included for large-scale land retirement. Seeks that a farm-scale approach be better integrated into sediment and erosion control policies and rules.	Prioritise this work prior to implementing new rules.
S95.002	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Considers modelling assumptions are not fit for purpose, and lack of local water quality monitoring data makes it hard to see where the water quality issue is and what solutions to implement.	Include increased GWRC support for additional water quality monitoring activities in Mākara and Ohariu, including community led.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S95.003	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Lack of consistency with WH.P22 (nitrogen) and WH.P23 (sediment). Thinks works to reduce e-coli levels should only target areas where e-coli is shown to be an issue, and there is not enough data to determine the levels and sources of e-coli across the area's multiple catchments. Local water quality studies need to be carried out and the option for landowner-led, farm-scale monitoring provided for, including monitoring of the impact from actions taken.	Add "Incorporate e-coli reduction in catchment context and farm plans, based on monitored data"
S95.004	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Concern about accuracy of mapping and modelling, considers modelling is not fit for purpose in Makara/Ohariu. Considers the policy needs to allow for a farm-scale assessment of sediment sources. Concern about PC1 focus on hill country erosion rather than streambank erosion in high flows which is anecdotally a greater contributor to sediment losses. Does not support revegetation of vulnerable areas of farmland - but notes there are options for revegetation sites that best work within the farm system. Areas forced into retirement will be much bigger than the mapped areas due to the need to aggregate areas and work with the landscape to locate fence lines.	Identify sediment sources by using a farm-scale assessment rather than the erosion-risk mapping proposed. Refocus this section on identifying "sediment sources" rather than solely erosion risk.
S95.005	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high	Amend	Wants to see broader focus on sources of sediment rather than just erosion on hillsides.	Refocus from "erosion risk" to "sediment management".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		risk of erosion.			
S95.006	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Oppose	Concern the provision will financially impact farms due to the timeframes and requirement to retire land from grazing. Concern that some woody vegetation will not be successful on steepest areas and fencing and retiring land will be the only tool available. Considers native planting will not be affordable on this scale, and it will be unviable to maintain woody vegetation given the large-scale land retirement and reduced farm income from reduced production and high fencing costs. Considers modelling is inaccurate and farmland with no actual erosion issue should not need to be retired.	Remove this blanket approach and instead rely on the bespoke actions and timeframes that will be identified through farm-scale assessment, including through audited Freshwater Farm Plans.
S95.007	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Amend	Make this policy consistent with the associated rule regarding reduced access rather than restricted access. Concerned about high cost and practicalities of fencing streams in some areas.	Replace "restrict" with "reduce through non- regulatory means". Amend the policy wording to match the heading scope about river size.
S95.008	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Oppose	Concerns about livestock access to streams for drinking water due to risk around reticulated water supply infrastructure functioning well in hill country paddocks. Considers a farm-scale approach would help identify solutions, including ponds for stock water and sediment retention.	Delete policy since this can instead be incorporated into certified/audited Freshwater Farm Plans.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

S235 Shonaugh Wright

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S235.001	General comments	General comments - overall	Not Stated	<p>Submitter values the water quality values of the following areas for contact recreation and ecosystem health:</p> <ul style="list-style-type: none"> i. Te Awakairangi / the Hutt River ii. Akatarawa River iii. Whakatikei River iv. Titahi Bay v. Lyall Bay vi. Otaki River <p>Considers the natural form and character of these waterbodies is an important part of their value. Natural form and character creates rapids and other features of these sections of river that make them valuable for kayaking.</p> <p>Te Awakairangi / the Hutt Gorge is an outstanding run for whitewater kayaking, which traverses what they consider an outstanding landscape with outstanding amenity values. Would like to see the outstanding value of this section of river recognised in the plan.</p> <p>The natural and wildlife values of these areas are also important to submitter.</p>	Requests the outstanding value of this section [Te Awakairangi / the Hutt Gorge] of river recognised in the plan.
S235.002	General comments	General comments - freshwater	Not Stated	<p>Observes algae in summer months when flows are low resulting in issues with recreation and amenity as well as human health when making contact with water.</p> <p>Concerns that river engineering such as railway iron degrades water quality and creates potential hazards for river users when slash and logs get caught on structures</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S235.003	General comments	General comments - overall	Support	Supports PC1 and the initiatives to improve water quality in the catchment.	Requests that GWRC initiatives are carried through to the operative plan, particularly where they protect and restore ecosystem health, contact recreation values, natural form and character, and amenity.
S235.004	General comments	General comments - freshwater	Support	Supports the concept of Te Mana o te Wai and the hierarchy of obligations.	Prioritise ecosystem health and contact recreation prioritised.
S235.005	General comments	General comments - water quality improvements	Support	Key concerns are water quality (particularly e. coli, sediment, algal growth/periphyton, and ecosystem health); amenity; contact recreation; and natural form and character.	<p>Suggests the outstanding kayaking values in the Whaitua recognised in the plan, particularly for the Hutt Gorge (which has outstanding kayaking, amenity, and landscape values).</p> <p>Recognition in the plan of the outstanding kayaking/packrafting/rafting values in the Whaitua, particularly for the Hutt Gorge (which has outstanding kayaking, amenity, and landscape values)</p> <p>More work by GWRC to monitor and preserve natural character and to strengthen objectives, policies, and rules which allow the river to function more naturally, particularly in its reaches influenced by flood protection</p> <p>Targets for natural character that are similar to the targets set for water quality and objectives and policies to support these</p> <p>More work to enhance water quality in the coastal environment, for use of 'flat water' environments to learn and train without compromising health if contact is made with the water</p> <p>Retain coastal water quality indicators/targets.</p>
S235.006	General comments	General comments - target attribute states	Support	Supports targets in the water quality target tables	Requests as much work as possible is done through environmental limits to achieve these targets.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S099 Simon Wright

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S99.001	General comments	General comments - overall	Support	Supports PC1 and the rules and incentives that will make development more sustainable. PC1 will not just help address environmental challenges but will inspire innovation with unexpected social and economic benefits that may have impacts beyond the Wellington region. Considers it is unacceptable to allow developments that pollute the water or degrade the land, or for associated costs to be socialised and/or passed on to future generations.	Not stated
S99.002	General comments	General comments - overall	Support	Important that compliance is achieved and that monitoring for impacts and outcomes occurs. Compliance teams will need to be adequately resourced.	Not stated
S99.003	General comments	General comments - overall	Support	Suggests the use of participatory approaches that encourage and support members of the public to contribute. This might be through the education system, citizens science, participatory evaluation or re-purposed Whaitua committees.	Not stated

S262 Southern North Island Wood Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S262.001	General comments	General comments - plantation forestry	Not Stated	Supports the inclusion of Te Mana o te Wai in the NPS-FM. However, considers the rules need to be supported by appropriate evidence, implemented in accordance with relevant statutory provisions and consistent with the NES-CF Framework.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S262.002	General comments	General comments - overall	Not Stated	Considers that PC1 is inconsistent with the whitua committee recommendations and is too onerous.	Not stated
S262.003	General comments	General comments - plantation forestry	Not Stated	Considers there has been no consideration for ETS implication with the removal of land from production.	Not stated
S262.004	General comments	General comments - maps	Not Stated	Considers there are impracticalities of the current erosion mapping class system. Considers the resolution too low and does not reflect forest scale erosion risk.	Not stated
S262.005	General comments	General comments - maps	Not Stated	Considers PC1 poses a significant risk to forest investment in the region. Considers the loss of productive area, often for no major environmental gains, lowers land values, wards off investment and has a direct economic impact on people of the region.	Not stated
S262.006	General comments	General comments - plantation forestry	Not Stated	Notes commercial forestry is a major export earner and employer of local people and service providers during establishment, management and harvesting; and at the port and local sawmills. Notes in the two Whaituas the total area in plantation forest is almost 12,000 ha. Notes that as well as income and employment, plantation forests provide major environmental benefits relating to climate regulation, reducing erosion, and preventing sediment getting into waterways. Notes forests also act as a carbon sink and help mitigate climate change, and that the Climate Change Commission has recommended a national increase in the plantation forest estate by 500,000 ha between 2021 and 2030.	Not stated
S262.007	General comments	General comments -	Not Stated	States that plantation forests discharge less sediment than other commercial land uses, citing the Pakuratahi Land Use Study by Garth Eyles and Barry Fahey.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		plantation forestry		States that monitoring shows water quality is higher in catchments with significant forest cover, compared to other land uses. Concerned that PC1 will result in a decline in commercial forestry, resulting in adverse economic and environmental effects.	
S262.008	General comments	General comments - plantation forestry	Not Stated	Considers that PC1 deters investment in commercial forestry, primarily due to the proposed rules and associated costs, which may hinder harvesting of certain lands. Concerned that the "highest risk" classification of land will diminish land value for forest owners. Considers that PC1 is inconsistent with local and national climate objectives.	Not stated
S262.009	General comments	General comments - plantation forestry	Not Stated	States the s32 report attributes current water quality issues to forestry without sufficient supporting evidence. Considers that recent NES-CF changes are sufficient to protect freshwater.	Not stated
S262.010	General comments	General comments - plantation forestry	Not Stated	Notes the NES-CF was altered to include permanent carbon forestry to fix a loop hole related to resource consents and notifications. Considers PC1 will severely impact forest owners in the region with ETS registered forests. Notes one member of the submitter's organisation will lose between 4% and 18% of productive area by forest, which equates to 330ha. The ETS Liability on this area at current prices is approximately \$18 million NZD.	Not stated
S262.011	General comments	General comments - plantation forestry	Not Stated	Considers there is insufficient evidence to suggest that: <ul style="list-style-type: none"> - there is an issue with sediment produced from plantation forestry; - the NES-CF has led to more adverse environmental outcomes compared to the pre-2018 consenting regime; - that either forestry or the NES-CF are attributed to current water quality issues. 	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Disagrees with the s32 evaluation of the social costs for Options 1 and 3 being minimal, due to job losses in plantation forestry operations, at the port, and regional sawmills. Considers that the NES-CF is sufficient to manage sediment from forestry activities.	
S262.012	General comments	General comments - plantation forestry	Not Stated	<p>Considers the analysis of monetary implications in the s32 report is insufficient as it is feasible to estimate costs of resource consent applications, consent processing and monitoring, devaluation of forestry land, a decline in economic activity and forfeiture of income from timber and carbon credits. Considers s32 should explicitly acknowledge high and medium economic costs for Option 1 and Option 3, respectively.</p> <p>Notes further economic considerations, being devaluation of forest land; decline in economic activity; and loss of income from timber and carbon credits. Considers the economic costs for Option 1 (as evaluated in the s32 report) will be substantial, and moderate for Option 3, both resulting in an overall "negative benefit".</p>	Not stated
S262.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Considers the rules of PC1 should not override the NES-CF. Seeks that Rules P.R19, P.R20, P.R21, WH.R20, WH.R21 and WH.R22 are deleted, including associated notes which state that rules prevail over the NES-PF. Objects to any other rules which would substitute those of the NES-PF. Objects to the inclusion of forestry activities in Policies WH.P2, P.P2, WH.P28 and P.P26. Seeks that replanting is not regulated in PC1.</p>	<p>Remove proposed forestry related changes, i.e. P.R19, P.R20 and P.R21, as well as Rules WH.R20, WH.R21 and WH.R22 and also the detailed notes that these new rules prevail over certain rules in the NES-PF.</p> <p>Object to any other substitution of rules in the NES-PF with new rules in the plan.</p> <p>Remove policies WH.P2 , P.P2, WH.P28 and policy P.P26 as far as they relate to forestry.</p> <p>Seek that replanting will not to be regulated in the plan.</p>
S262.014	8 Whaitua Te	Policy WH.P28: Achieving	Oppose	<p>Considers the rules of PC1 should not override the NES-CF. S031 Stormwater360

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S31.001	6 Other methods	Method M43: Supporting	Not Stated	Suggests overseas approaches to managing stormwater discharge are examined to confirm treatment goals are achievable and monitorable,	Seeks that the types of approaches used in the USA be applied to NZ to ensure the best outcomes for the environment.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		the health of urban waterbodies.		<p>cites California and Washington examples.</p> <p>Suggests a model of individual site monitoring of stormwater discharges is used rather than blanket concentration requirements and considers defining influent vs effluent and using dissolved metals only is a more applicable way to measure treatment efficiencies than percent removal alone.</p> <p>Suggests there should be a clear process and register for any proprietary device 'deemed to comply'.</p>	
S31.002	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Not Stated	Suggests overseas approaches for funding strategies and ideas are investigated, noting payment from manufacturers for certification of proprietary treatment devices as an example.	Not stated
S31.003	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Not Stated	Target attribute states refer to dissolved metals concentration whereas Schedule 28 (Table 1 and Table 2) refer only to the percentage of Copper or Zinc to be removed. Suggest consistency throughout rules/ policies.	Define speciation throughout stormwater rules to achieve TAS defined in Table 8.4. Table 1 and 2 of Schedule 28: Stormwater Contaminant Treatment should reflect dissolved metals.
S31.004	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Not Stated	<p>Supports no exposed zinc and copper building materials in new development sites and considers there is an opportunity to regulate retrofitting treatment to downpipes for existing/ sites with high contaminant loading (notes this could fit better under Rule WH.R4).</p> <p>Cites study into urban sources of copper, lead and zinc by Auckland Regional Council.</p>	Not stated
S31.005	9 Te Awarua-	Table 9.2: Target	Not Stated	Target attribute states refer to dissolved metals concentration whereas Schedule 28 (Table 1 and	Define speciation throughout stormwater rules to achieve TAS defined in Table 8.4.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	attribute states for rivers.		Table 2) refer only to the percentage of Copper or Zinc to be removed. Suggest consistency throughout rules/policies.	Table 1 and 2 of Schedule 28: Stormwater Contaminant Treatment should reflect dissolved metals.
S31.006	12 Schedule s	Schedule 28: Stormwater Contaminant Treatment.	Amend	Support the use of a treatment train approach but suggests approach defined is outdated and doesn't take the influent contaminants concentration or the PSD into account. Suggests the range of allowable influent concentration for contaminants should be defined and specific parameters for influent and effluent should be defined for various treatment types.	Not stated
S31.007	12 Schedule s	Table 1: Target load Reductions for Copper and Zinc	Amend	Suggests target load reductions are unrealistic and questions where the 90% removal via bioretention comes from and why TSS isn't considered under the schedule. Notes the speciation is not defined and questions if the Schedule refers to Total Copper and Total Zinc, and if so this is inconsistent with the Target Attribute States (TAS) as the units for measurement in TAS are dissolved concentrations - suggests consistent measurement is better. Notes that heavy metals are transported via suspended solids and so there might be a reason to include TSS in the target load reductions. Cites water research foundations stormwater BMP database summary.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S044 Sue Hawkins

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S44.001	2 Interpretation	Highest erosion risk land (plantation forestry)	Oppose	Farms should be assessed on a singular basis due to diverse contours in the Makara/Ohariu region. Already controlled by RMA regulations and forestry rules. Lack of evidence to support assumption that steep slopes are a significant source of sediment.	REVIEW the general conditions relating to Forestry on risk land.
S44.002	2 Interpretation	Sacrifice paddocks	Oppose	Concerned about the financial implications of sacrificing paddocks and the practicalities of fencing off rivers due to the nature of the land. The area has been involved in revegetation projects and pest control activities. Fencing off the river will be impractical due to the nature of the slopes, and previous flood damage has caused loss of structures, causing more damage downstream. Could meet council description of Clean Green Belt descriptive.	No decision requested but seeks an independent review of the provision.
S44.003	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Oppose	Change to "manage livestock access with temporary fencing where practical. Given that some of the area could be flood prone.	Amend Policy WH.P26 as follows... Restrict livestock to small rivers

S038 Summerset Group Holdings Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S38.001	2 Interpretation	Hydrological control	Amend	Questions how the definition will assist in the interpretation of provisions as it does not outline what the controls are.	Amend definition to outline what hydrological controls are, including examples and a schedule with technical standards.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S38.002	2 Interpretation	Impervious surfaces	Amend	Considers roofing with rainwater collection, complying with hydraulic neutrality rules included in recent district plans in these catchments should not be considered an impervious surface. Suggests that the implementation of grey water reuse would add to development costs, and is not a requirement of any regulation including PC1 or the NRP.	Amend definition as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: <ul style="list-style-type: none"> • roofs • paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: <ul style="list-style-type: none"> • grassed areas, gardens and other vegetated areas • porous or permeable paving • slatted decks which allow water to drain through to a permeable surface • porous or permeable paving and living roofs • roof areas with rainwater collection and reuse • any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)
S38.003	2 Interpretation	Redevelopment	Amend	Considers extensions to existing buildings should be excluded from the definition to allow a baseline for small redevelopments of existing sites as a permitted activity in associated rules.	Amend definition as follows: For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e. including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes: <ul style="list-style-type: none"> • minor maintenance or repairs to roads, carparking areas, driveways and paving • installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing • activities that only involve the re-roofing of existing buildings • extensions to existing buildings
S38.004	2 Interpretation	Unplanned greenfield development	Oppose	Definition relates to associated prohibited activity rules that the submitter opposes.	Delete definition: Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) through a District Plan

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.
S38.005	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Opposes prohibiting unplanned greenfield growth.</p> <p>Concerned the activity status will provide no consenting pathway for proposals located in these areas that may have positive/better outcomes for the community, freshwater and intensive rural activities.</p> <p>Considers the prohibited activity status to be inappropriate in terms of effects management and unjustified by the Section 32 Evaluation which states that all contaminants can be mitigated with a combination of treatment and the use of financial contributions (refer paragraph 64 of Part C).</p> <p>Considers the prohibited activity status to be inconsistent with Policy 8 of the NPS-UD.</p> <p>Based on the S32 report, the submitter assumes the purpose of the prohibited activity status is to require both a regional and district plan change to enable greenfield development. Concerned the two plan changes will make it difficult for the market to be responsive to providing housing, be expensive and impact the economic viability of development.</p> <p>Concerned these impacts on housing supply have not been sufficiently assessed in the Section 32 Evaluation.</p>	<p>Amend policy:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers, and</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>
S38.006	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse	Amend	<p>Considers PC1 to be lacking in sufficient detail on the types of hydrological controls and water sensitive designs required for various types and scales of development.</p>	<p>Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		effects of stormwater discharges.		<p>Concerned compliance with this policy will be difficult and require expensive bespoke solutions as there are no technical guidelines/ compliant solutions incorporated into the plan change. For example, the creation of small areas of impervious surfaces should not require engineering advice to design site specific controls.</p> <p>Considers the cost of the approach on landowners/developers and the impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation.</p>	
S38.007	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Submits that as the cost of the 85% treatment requirement on landowners/ developers, and the impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation, it is potentially inconsistent with the NPS-UD.	Review 85% treatment requirement based on complete economic analysis including impacts on housing and business land supply throughout the region.
S38.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	<p>Considers the policy is inconsistent with the NPS-UD including Policy 8 as the cost of the approach proposed on landowners/developers and its impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation.</p> <p>Questions how the policy interacts with the prohibited activity approach for unplanned greenfield development.</p>	<p>Delete policy: Policy WH.P15: Stormwater contaminant offsetting for new greenfield development The adverse effects of residual (post treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of a financial contribution in accordance with Schedule 30 (financial contribution).</p>
S38.009	8 Whaitua Te	Policy WH.P16: Stormwater	Oppose	Opposes the avoidance/prohibited approach being taken to greenfield development	<p>Delete policy: Policy WH.P16: Stormwater discharges from new unplanned greenfield development</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	r discharges from new unplanned greenfield development.		<p>Concerned the activity status will provide no consenting pathway for proposals located in these areas that may have positive/better outcomes for the community, freshwater and intensive rural activities.</p> <p>Considers the use of a prohibited activity status is not justified in the Section 32 Evaluation and is not consistent with the NPS-UD.</p>	<p>Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.</p>
S38.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	<p>Opposes the requirement to seek a non-complying resource consent to undertake winter earthworks.</p> <p>Considers the S32 statement that there is higher risk for discharges of sediment over the winter period the incorrect. Suggests that large rain events, that can occur at any time, cause larger pulses of sediment .</p> <p>Suggests current practices for the management of winter earthworks managed through conditions of consent with oversight from Council monitoring staff be retained.</p>	<p>Delete policy: Policy WH.P31: Winter shut down of earthworks Earthworks over 3,000m² in area shall: (a) be shut down from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2024).</p>
S38.011	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	<p>Territorial authorities control new connections to discharge to the network and considers the rule requires all new connections to the stormwater network to obtain a regional resource consent.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R2: Stormwater to land - permitted activity The discharge of stormwater onto or into land, including where contaminants may enter groundwater: (a) that is not from a high risk industrial or trade premise, or (b) that is not connected to that does not discharge from, or to, a local authority stormwater network, is a permitted activity provided the following conditions are met: (...)</p>
S38.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing	Amend	<p>Territorial authorities control new connections to discharge to the network and considers the rule requires all new connections to the stormwater network to obtain a regional resource consent.</p>	<p>Amend rule:</p> <p>Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity</p>

					<p>flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).</p>
S38.019	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	<p>Opposes the requirement to seek a non-complying resource consent to undertake winter earthworks.</p> <p>Considers the S32 statement that there is higher risk for discharges of sediment over the winter period to be incorrect. Suggests that large rain events, that can occur at any time, cause larger pulses of sediment .</p> <p>Suggests current practices for the management of winter earthworks managed through conditions of consent with oversight from Council monitoring staff be retained.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R24: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met: (a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m3, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m3, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.</p>
S38.020	9 Te Awarua-	Policy P.P2: Management	Amend	<p>Opposes prohibiting unplanned greenfield growth.</p> <p>Concerned the activity status will provide no</p>	<p>Amend policy:</p> <p>Policy P.P2 Management of activities to achieve target</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	ent of activities to achieve target attribute states and coastal water objectives.		<p>consenting pathway for proposals located in these areas that may have positive/better outcomes for the community, freshwater and intensive rural activities.</p> <p>Considers the prohibited activity status to be inaccurate, inappropriate and unjustified by the Section 32 Evaluation which states that all contaminants can be mitigated with a combination of treatment and the use of financial contributions (refer paragraph 64 of Part C).</p> <p>Considers the prohibited activity status to be inconsistent with Policy 8 of the NPS-UD.</p> <p>Based on the S32 report, the submitter assumes the purpose of the prohibited activity status is to require both a regional and district plan change to enable greenfield development. Concerned the two plan changes will make it difficult for the market to be responsive to providing housing, be expensive and impact the economic viability of development.</p> <p>Concerned these impacts on housing supply have not been sufficiently assessed in the Section 32 Evaluation.</p>	<p>attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land-use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers, and</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p> <p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation, and</p> <p>(f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and</p> <p>(g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and</p> <p>(h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>
S38.021	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater discharges	Amend	<p>Considers PC1 to be lacking in sufficient detail on the types of hydrological controls and water sensitive designs required for various types and scales of development.</p> <p>Concerned compliance with this policy will be difficult and require expensive bespoke solutions as there are no technical guidelines/ compliant solutions incorporated into the plan change. For example, the creation of small areas of impervious surfaces should not require engineering advice to</p>	Review policy and rule framework for the treatment of stormwater, and provide technical standards for acceptable solutions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				design site specific controls. Considers the cost of the approach on landowners/developers and the impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation.	
S38.022	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Submits the cost of the 85% stormwater treatment requirement on landowners/ developers, and the impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation, it is potentially inconsistent with the NPS-UD.	Review 85% treatment requirement based on complete economic analysis including impacts on housing and business land supply throughout the region.
S38.023	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Oppose	Considers the policy is inconsistent with the NPS-UD including Policy 8 as the cost of the approach proposed on landowners/developers and its impacts on housing supply in the region has not been sufficiently assessed in the Section 32 Evaluation. Questions how the policy interacts with the prohibited activity approach for unplanned greenfield development.	Delete policy: Policy WH.P15: Stormwater contaminant offsetting for new greenfield development The adverse effects of residual (post treatment) stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via an existing or new stormwater network, are to be offset by way of a financial contribution in accordance with Schedule 30 (financial contribution).
S38.024	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Oppose	Opposes the avoidance/prohibited approach being taken to greenfield development Concerned the activity status will provide no consenting pathway for proposals located in these areas that may have positive/better outcomes for the community, freshwater and intensive rural activities. Considers the use of a prohibited activity status is	Delete policy: Policy P.P15: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network. Note Any unplanned greenfield development proposals will

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S182 Susan Boyle

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S182.001	General comments	General comments - overall	Not Stated	Agrees with the Maymorn Collective submission in all aspects	Not stated
S182.002	General comments	General comments - overall	Oppose	Opposed to the proposed Plan Change 1.	Not stated
S182.003	General comments	General comments - consultation	Not Stated	Concerned that affected landowners have not been adequately consulted and that PC1 is inconsistent with UHCC Plan Change 50.	Withdraw PC1 and conduct appropriate consultation and engagement.
S182.004	General comments	General comments - unplanned greenfield development	Not Stated	Strongly opposes new 'unplanned greenfield development' being prohibited. Considers decentralisation wastewater infrastructure will reduce the potential environmental impact from new developments. Considers GWRC should assess each development on its merits and the impact it has on the environment and any mitigations proposed.	Amend PC1 to allow application for a new 'unplanned greenfield development'. Areas covered by PC50r are not deemed to be 'unplanned greenfield development'.
S182.005	General comments	General comments - economic cost/impact	Not Stated	Concerned the environmental and social benefits have not been quantified through a specialist economic impact assessment. Challenges the credibility of the GWRC plan change.	Withdraw PC1 and undertake economic, social and cultural impact assessment to inform a revised plan change.
S182.006	General comments	General comments - overall	Not Stated	Concerned PC1 contains many errors and fails to define what some key terms mean, preventing stakeholders from understanding what is proposed, and make well informed submissions.	PC1 is redrafted correctly and resubmitted for consultation.
S182.007	General comments	General comments - overall	Not Stated	Concerned PC1 is inconsistent with the incoming Government's 2023 election platform, specifically that major towns and cities will be required to zone land for '30 years' worth of housing demand immediately.	Any decision that prohibits the ability to unlock land for housing as proposed by PC1 should be revised, to consider, the directive of Central Government policy initiatives, such as changes to the Resource Management Act.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S182.008	General comments	General comments - rural	Not Stated	Concerned PC1 does not address how GWRC will manage its own land including natural sediment movement on the land, streams being controlled by natural gravity and animal movements on the land and in streams. Also concerned that GWRC activity on the land has impacts on waterways and streams, particularly as a result of 1080 drops.	Withdraw PC1

S119 Susan Sturman

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S119.001	General comments	General comments - water quality improvements	Not Stated	<p>Supports PC1's water elements.</p> <p>Considers there should be no dry weather discharges of wastewater into stormwater.</p> <p>Suggests that cross connections should be actively identified and fixed (at landowners expense if on private land).</p> <p>Concern of hygiene issues in waterways due to sewage contamination.</p> <p>Considers there should be no wet weather overflows of wastewater into stormwater and contamination should not be permitted just because it is raining. Considers anything allowing rain to enter the wastewater system should be actively identified and fixed (at landowners expense if on private lane).</p>	Not stated
S119.002	General comments	General comments - overall	Not Stated	<p>Considers that fines should be enforced for contaminant discharges.</p> <p>Concerned about the goals and timeframes set. Suggests small, achievable, and measurable goals</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>should be the focus and then assess the value provided and use feedback and innovation to continuously improve interventions.</p> <p>Considers that restoring water quality, preventing flooding, and protecting water supply is critical for council to fund and manage. Encourages councils to collectively resource enforcement, science, and complementary policy tools like education, industrial water plans, community governance, and citizen water-care activity.</p>	
S119.003	8 Whaitua Te Whanganui-a-Tara	Policy WH.P19: Managing wastewater network catchment discharges	Amend	<p>Concerned that 2 per year is too permissive (WH.P19) because there is no constant real-time monitoring of e Coli in the waterways.</p> <p>Considers that finances should be put towards identifying and stopping the causes of rain entering wastewater networks instead of providing finances for managing overflows.</p>	Not stated

S245 Tama Potaka, Minister of Conservation

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S245.001	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganu	Amend	<p>Considers provision gives effect to Part II of the RMA and the NPS Freshwater Objectives and Policies, including Te Mana o te Wai.</p> <p>Questions the achievability of having planted margins in all waterbodies.</p>	Amend bullet point two from: " All freshwater bodies have planted margins " to " All freshwater bodies have vegetated margins where practicable. "

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		permitted activity.		Considers a similar amendment is required for condition (b) as concerned that the effects on human health and ecosystems from these pollutants is uncontrolled.	does, or is likely to, cause adverse effects on human health, ecosystems, or property.

S286 Taranaki Whānui

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S286.001	General comments	General comments - definitions	Amend	Considers consequential changes may be required to provide for the relief sought by Taranaki Whānui for other provisions.	Amend definitions as necessary to provide for the relief sought by submitter.
S286.002	General comments	General comments - definitions	Not Stated	Seeks a definition of papakāinga is required as consequential amendment to provide for relief sought in relation to enabling papakāinga activities.	Add definition for Papakāinga: Any activity undertaken in the traditional rohe of tangata whenua to sustain themselves, which is on land held under Te Ture Whenua Māori Act 1993, or on land where there is an ancestral connection to the land and the land will remain in Māori ownership in the long term. Papakāinga includes residential activities and commercial activities that provide employment and / or income to support those living in the papakāinga as well as (but not be limited to): social, cultural, economic, conservation and recreation activities, marae, wāhi tapu and urupā.
S286.003	General comments	General comments - target attribute states	Not Stated	Supports targets and timeframes with respect to contaminants, but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Concerned that this target will not be achievable with current funding mechanisms. Considers there is a need to prioritise and progress a programme of new streams of funding not reliant on existing ratepayer base.	Not stated
S286.004	General comments	General comments - unplanned greenfield	Not Stated	Concerns unplanned greenfield areas and associated provisions will impose significant costs and impact ability of Taranaki Whānui whānau to develop ancestral lands. Notes land not yet returned to Māori ownership through treaty settlements,	Freshwater effects of development of these sites are addressed through a regional consent process rather than a regional plan change

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		development		includes many sites in areas mapped as "unplanned greenfield land" including rural and open space land. Considers prohibition on developing these lands inconsistent with principles of Te Tiriti.	
S286.005	General comments	General comments - overall	Not Stated	Concerned additional rules for stormwater management would create additional barriers to develop land for long-term benefit of Taranaki Whānui uri through Papakāinga.	Not stated
S286.006	General comments	General comments - overall	Not Stated	Notes the huanga of mahinga kai in Schedule B has not been updated following the Whaitua process and publication of Te Mahere Wai o Te Kāhui Taiao.	Seeks amendment of Schedule B in consultation with mana whenua to fully reflect mahinga kai values and outcomes, including those expressed in Te Mahere Wai o Te Kāhui Taiao
S286.007	2 Interpretation	Hydrological control	Amend	Considers definition does not provide assistance in implementation of associated rules as it does not outline examples of what hydrological controls are acceptable. Considers there is no guidance on what compliant hydrological controls would look like, and is an issue considering it is required for all new impervious surfaces over 30sqm.	Amend definition to improve clarity.
S286.008	2 Interpretation	Impervious surfaces	Amend	Concerned definition is linked to rules that would impose significant costs on the development of papakāinga. Concerned this will make it hard to develop land for the long-term benefit of Taranaki Whānui whanau.	Amend definition as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: -roofs -paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: -grassed areas, gardens and other vegetated areas -porous or permeable paving -slated decks which allow water to drain through to a permeable surface -porous or permeable paving and living roofs -roof areas with rainwater collection and reuse -any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)- papakāinga

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S286.009	2 Interpretation	Unplanned greenfield development	Amend	Concerned policy and provisions will impose significant costs and impact the ability of Taranaki Whānui whanau to develop their ancestral lands. Notes land not yet returned to Māori ownership through treaty settlements, includes many sites in areas mapped as "unplanned greenfield land" including rural and open space land. Considers prohibition on developing these lands inconsistent with principles of Te Tiriti.	Amend definition as follows: Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 and excludes: -land either currently owned by mana whenua, or identified for potential future ownership through a right of first refusal or deferred selection process through Treaty Settlements. which also require an underlying zone change (from rural/nonurban/ open space to urban) through a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023. Freshwater effects of development of these sites are addressed through a regional consent process rather than a regional plan change
S286.010	6 Other methods	Method M36: Freshwater Action Plan programme.	Support	Supports action plans to achieve objectives	Retain as notified.
S286.011	6 Other methods	Method M37: Freshwater Action Plan for the Parangarahu Lakes.	Support	Supports action plans to achieve Parangarahu Lakes objectives	Retain as notified.
S286.012	6 Other methods	Method 39: Freshwater Action	Support	Supports development of a Freshwater Action Plan for nationally threatened freshwater species.	Retain as notified.

		target attribute states and coastal objectives.		a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	
S286.049	8 Whaitua Te Whanganui-a-Tara	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	Retain policy provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.
S286.050	8 Whaitua Te Whanganui-a-Tara	Policy WH.P19: Managing wastewater network catchment discharges .	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	Retain policy provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.
S286.051	8 Whaitua Te Whanganui-a-Tara	Policy WH.P20: Managing existing wastewater treatment plant discharges .	Amend	Supports full restoration of Te-Whanganui-a-Tara's waterways towards wai ora by 2040 but notes significant infrastructure investment is required by 2040 to meet the E.coli target. Submitter is concerned this target will not be achievable with current funding mechanisms. Considers it should be a priority to find new streams of funding that are not reliant on the existing ratepayer base and regular monitoring and reporting on progress towards the target is completed.	Retain policy provided: -Method M45 is implemented as a priority and new infrastructure funding mechanisms are put in place; and -regular monitoring and reporting is undertaken on progress towards the target.
S286.052	8 Whaitua Te	Policy WH.P21: Managing	Amend	Supports reducing diffuse discharges from farming activities, but notes clause (a) just refers to other policies and can be deleted.	Amend policy. Policy WH.P21: Managing diffuse discharges of nutrients

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	diffuse discharges of nutrients and Escherichia coli from farming activities.			and Escherichia coli from farming activities. Reduction in diffuse discharges of nutrients and Escherichia coli from farming activities shall be achieved by: (a) capping, minimising and reducing diffuse discharges from individual rural properties in accordance with WH.P22, WH.P23 and WH.P24, and (b) applying target attributes states as limits on rural land use change and intensification, and (c) progressively establishing and maintaining woody vegetation on highest erosion risk land as a limit on land use in accordance with WH.P28, and (d) excluding stock from water bodies as a limit on land use in accordance with Policy WH.P26, and (e) supporting good management practice.
S286.053	8 Whaitua Te Whanganui-a-Tara	Policy WH.P22: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Support	Support in principle.	Retain as notified.
S286.054	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high	Amend	Supports in principle, but notes planting of indigenous species should be encouraged where possible.	Amend policy as follows: Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion Reduce discharges of sediment from farming activities on high erosion risk land and highest erosion risk land by: (a) identifying highest erosion risk land (pasture) and high erosion risk land (pasture), and (b) requiring that farm environment plans prepared for farms with highest erosion risk land (pasture) and/or high erosion

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		risk of erosion.			risk land (pasture) include an erosion risk treatment plan, and (c) ensuring erosion risk treatment plans: (i) deliver permanent woody vegetation cover on at least 50% of highest risk erosion land (pasture) that is in pasture on a farm within 10 years and appropriate erosion control treatment for the remaining highest risk erosion land (pasture) and high erosion risk land (pasture) that is in pasture on the farm, and (ii) identify and respond to risks of sediment loss on high erosion risk land (pasture) associated with grazing livestock, earthworks or vegetation clearance, by using effective erosion control treatment, and (iii) encouraging planting of indigenous species where these can provide suitable stabilisation for erosion prone land, and (d) Wellington Regional Council providing support to landowners to implement erosion risk treatment plans.
S286.055	8 Whaitua Te Whanganui-a-Tara	Policy WH.P24: Phasing of farm environment plans.	Support	Support in principle.	Retain as notified.
S286.056	8 Whaitua Te Whanganui-a-Tara	Policy WH.P25: Managing rural land use change.	Support	Support in principle.	Retain as notified.
S286.057	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Support	Support in principle.	Retain as notified.
S286.058	8 Whaitua Te	Policy WH.P27:	Support	Support in principle.	Retain as notified.

S116 Taumata Arowai

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S116.001	General comments	General comments - definitions	Amend	Notes differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Notes the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology (including bore, community drinking water supply, drain, greywater, group drinking water supply, health needs of people, sludge, wastewater, wastewater network, water sensitive urban design) in the NRP have not been amended through PC1 to align with the Planning Standards. Supports amendments to these terms.	Requests that terminology (existing terms not proposed to be amended in PC1, including bore, community drinking water supply, drain, greywater, group drinking water supply, health needs of people, sludge, wastewater, wastewater network, water sensitive urban design) is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S116.002	General comments	General comments - definitions	Amend	Notes the WSA framework for identification, monitoring, and management of risks to water sources is intended to work together with resource management legislation. Notes changes are made to rules that recognise proximity to source water intakes but that no change has been made to the reference to drinking water supplies (community drinking water supply and group drinking water supply) and these references are out of date due to the repeal of the Health (Drinking Water Amendment Act) 2007 and enactment of the WSA.	Amend definitions of community drinking water supply and group drinking water supply as appropriate to reflect legislative changes to what constitutes a drinking water supply.
S116.003	2 Interpretation	Containment standard	Amend	Notes differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted that the National Planning Standards establish definitions local authorities must use, and that other wastewater, stormwater and drinking water terminology in the NRP have not been amended to align with the Planning Standards. Considers definitions between Taumata Arowai and GWRC should align or at a minimum, not conflict, as this could lead to reporting complications for network operators who need to provide data to both Taumata Arowai and GWRC.	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant failure or equipment damage, or a discharge being caused by capacity being exceeded in the wastewater network.
S116.004	2 Interpretation	Dry weather discharges	Amend	Notes that differing terminology used by different groups in different regions makes national comparison of environmental performance difficult. Taumata Arowai will define discharges based on root causes rather than weather condition (e.g. dry weather discharge and wet weather discharge) and is working to establish nationally consistent wastewater and stormwater terminology. Also noted	Requests that terminology is aligned with that used in the NPS, WSA, and that being developed by Taumata Arowai, as possible and appropriate. Requests that consideration be given to replacing the descriptors 'dry weather discharge' and 'wet weather discharge', to instead describe wastewater network discharges based on their root cause e.g. a discharge caused by blockages, a discharge caused by plant

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S176.001	General comments	General comments - overall	Support	Submitter supports incorporating the appropriate Whaitua Committee's recommendations into PC1 to the NRP as proposed.	Seeks PC1 should address issues to restore degraded and degrading ecosystems. Integrate PC1 with the related functions and initiatives from the respective statutory agencies, including GWRC, Porirua and Wellington City Councils and Wellington Water as current water managers.
S176.002	General comments	General comments - target attribute states	Support	Notes long-term target attribute timeframes require interim target attribute state timeframes set for intervals of not more than 10 years with baselines which need to be achieved by the interim target date set. Acknowledges outcomes sought from	Timeframes must contain interim and measurable milestones (including five yearly reporting). Retention of dates recommended by Whaitua Committee rather than pushing out the dates of achieving an improved

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>actions to improve ecosystem health will be a long-term prospect. But notes timeframes should not be arbitrarily set several decades in the future and must include interim and measurable milestones (such as five yearly intervals) in achieving the ultimate goal by 2040. Considers there must be a regular critique of the actions being implemented to ensure they are effective.</p> <p>Notes expectation to meet the target attribute states of water quality by 2040 and any delay will mean the community will have to (and continued risk of having to) continue living with an increasingly degraded environment and increased rehabilitation costs as a result. Notes need to establish meaningful and robust environmental limits through the inclusion of the limits recommended by the Whaitua Committee in 2019 .</p> <p>Supports the long-term goal of improvement to target attribute state. Notes Target Attribute States need to be set to allow maintenance and/or restoration of this level of ecosystem health, which in cases will likely involve setting limits and bottom lines well above the national bottom lines. Considers all waterbodies, not just rivers and streams, should have set Target Attribute States, this includes estuaries, wetlands, and groundwater.</p> <p>Considers a functional NRP requires objectives, policies, methods, rules, timelines and dates that are robust and scientifically based to succeed in restoring health to degraded waterbodies. Notes the NRP needs to provide clear guidance as to how these will be incorporated into existing and future resource consents and this is also applicable to developing resource consent conditions that allow for unambiguous enforcement options while</p>	<p>attribute state by decades.</p> <p>Ensure the environmental limits are set to achieve "ecological health" and other associated values such as recreation, amenity, and custodianship.</p>

				undertaking compliance function of the Regional Council.	
S176.003	12 Schedule s	Schedule 27: Freshwater Action Plan requirements.	Support	<p>Supports requirement to develop Freshwater Action Plans.</p> <p>Supports approach of developing Freshwater Action Plans which protect, maintain, or enhance macroinvertebrate, periphyton, and fish abundance and community attributes as necessary and where applicable, where these communities also include life stage habitat protection actions for all species.</p> <p>Notes need to develop Freshwater Action Plans for urban catchments.</p>	Retain requirement for Freshwater Action Plans
S176.004	6 Other methods	Method M36: Freshwater Action Plan programme.	Support	<p>Supports requirement to develop Freshwater Action Plans.</p> <p>Supports approach of developing Freshwater Action Plans which protect, maintain, or enhance macroinvertebrate, periphyton, and fish abundance and community attributes as necessary and where applicable, where these communities also include life stage habitat protection actions for all species.</p> <p>Notes need to develop Freshwater Action Plans for urban catchments.</p>	Retain requirement for Freshwater Action Plans
S176.005	General comments	General comments - overall	Amend	<p>Considers there needs to be a focus on key contributors to contaminant loading in the harbour, including sedimentation, nitrogen, phosphorus, and bacterial (E. coli), and there is a need for urgent actions to address these environmental stressors that are driving degradation of waterbodies and harbour.</p> <p>Considers an approach to prioritise actions to improve ecosystem health can be modelled to ensure the key actions are prioritised and an</p>	Suggests that PC1 policies related to stormwater discharge require demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>evaluation can be made for potential improvements in estuary health arising from diversion of wastewater from an estuary, and estimating catchment diffuse nutrient load reductions required to meet estuary health objectives. Considers a focus on key contributors could provide potential leverage to increase the prioritisation of central government funding for cleaning up water bodies by highlighting the urgency of action.</p> <p>Considers a do-nothing approach is not an option and references the extent and health of eel grass (<i>Zostera muelleri</i>) beds has been reduced over many decades in Porirua Harbour, and sediment inputs into waterways from earthworks from new urban development (subdivision), land use, and forestry must be avoided or tightly controlled to allow freshwater and coastal receiving environments to be restored to a state of health and wellbeing.</p> <p>Considers rules and methods should focus on avoiding activities which contribute the most sediment from construction, subdivision development and forestry as the effects of these activities are seldom mitigated and never remedied. Considers the policies governing adverse effects of stormwater discharges (e.g., Policy P.P10, Policy WH. P10) contain clauses giving reasons to not put good management practices into effect. This is not supported in current form.</p> <p>When discussing adverse environmental impacts of stormwater or wastewater discharges, it is also required to actively consider ecosystem health - this requires a demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied. This should be referred to in the PC1 GWRC NRP.</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S176.006	General comments	General comments - consultation	Amend	Supports inclusion of a method that provides for meaningful community engagement. Considers this would define requirements for structures and processes that enable communities to participate in all issues in advocating for environmental guardianship.	Include a method related to community engagement to ensure updates on progress of implementation are carried out - and actions are not deferred due to arguments of economic affordability or feasibility.
S176.007	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river - permitted activity.	Amend	Considers Rule 5.4.8 should be a discretionary activity to provide fish passage over artificial barriers such as dams even for those that have existed for 10 years or more - rather than reverting to permitted activity status. Considers if these are consented using permitted activity status, this will authorise a past decision which leaves a negative legacy and does not address the issues around fish passage that remain.	Make Rule R151A a discretionary activity
S176.008	General comments	General comments - overall	Not Stated	Expects the implementation of actions that result from plan changes will be appropriately resourced and funded.	Not stated.
S176.009	General comments	General comments - water bodies	Support	Supports rules and methods that provide for, or encourage, increasing the extent of wetland habitat in the rural landscape and in the river/stream corridors.	Clarify and strengthen rules and methods to support actions to increase wetland habitat.
S176.010	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Support	Supports Methods M43 and M45 to support the health of, and funding for, urban waterbodies, particularly in relation to stormwater discharges - and considers this needs to be considered by the City Councils when assessing improving existing urban sites or urban development projects.	Not stated.
S176.011	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Supports Method M44 to support health of rural water bodies. Notes in order for rural landowners to retire pasture and undertake protective fencing of vegetation, especially on high erosion prone slopes, there must be a sufficient quid-pro quo for landowners by way of incentives and financial relief. Does not support local authority suggestions that lower valuations of	Seeks the following be implemented: (a) investigate financial support and rates relief options for accelerating retirement/revegetation of pastoral and plantation forestry land uses, and (b) support the effective uptake and implementation of Farm Environment Plans, and (c) promote uptake of good management practice in rural land uses, including for pastoral farming and plantation

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				land and therefore lower rates are already baked in to rating formulas and sufficient to compensate landowners for "doing the right thing" for the environment.	forestry, and (d) develop and deliver a specific programme of engagement and education with small (<20ha) landowners.
S176.012	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Support	Supports Methods M43 and M45 to support the health of, and funding for, urban waterbodies, particularly in relation to stormwater discharges - and considers this needs to be considered by the City Councils when assessing improving existing urban sites or urban development projects.	Not stated.
S176.013	9 Te Awarua-o-Porirua Whaitua	Policy P.P22: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Support	Notes PC1 includes strong provisions (such as Policy P.P22) to reduce sediment discharges from farming activities on land with a high risk of erosion. Supports the measures proposed in P.P22 which will deliver farm management plans and risk erosion plans but notes implementing these can be costly to landowners and suggests support is needed for both risk erosion and farm management plans.	Not stated.

S229 Te Kamaru Station Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S229.001	General comments	General comments - overall	Oppose	Does not support the Plan Change 1 in its current form and opposes the broadbrush regulatory approach taken and the removal of local decision making. Agrees with the need to improve water quality - where it is poor and where the solutions are within our control - but considers fundamental	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				information is required to do this effectively and equitably. Asks council to recognise the work the submitter has done to date and partner with us in this work rather than regulate us.	
S229.002	General comments	General comments - consultation	Oppose	Concerned with a lack of consultation, content which is difficult for most people to understand, short timeframes to make submissions, and the submission timing just prior to Christmas. Notes opportunities that were missed that would have helped engagement, including: a. Direct mail contact with rural property owners, identified through council's rating database. b. Formal engagement with our Community Board; and c. Provision of information on the GWRC website - more accessible written information, invitation to the PC1 rural webinars/meeting. Additional forms of communication are essential if GWRC really wants meaningful community feedback.	Not stated
S229.003	General comments	General comments - economic cost/impact	Amend	Considers the cost of implementing the proposed changes on farms will be very high and will significantly impact farm viability as financial implications fall directly to individual landowners in rural communities. Considers the Plan Change lacks the flexibility to stage work. Considers the proposed changes will significantly devalue properties.	Remove PC1's regulatory approach. or provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.
S229.004	General comments	General comments - overall	Amend	Considers there is not sufficient information to know where water quality is a problem are and therefore how to effectively target work and PC1 proposes broad rules across multiple catchments instead of seeking to target interventions for the best outcomes. Notes there is only one water quality monitoring site across Makara and Ohariu's full 15,000 hectares and it only relates to the 8,000 hectare Makara	Take a farm-scale and catchment-scale approach, rather than whaitua-wide or across a "Freshwater Management Unit

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Stream catchment. Considers smaller streams located on Terawhiti have good water quality but stringent land use rules will still apply. Considers the proposed regulatory implications are wide-reaching, create social and financial cost, and risk not achieving the outcomes efficiently. Considers solutions are best achieved on-farm but that streams cross property boundaries and therefore must be part of a catchment-wide approach.	
S229.005	General comments	General comments - overall	Amend	Concerned that the PC1 provisions will result in non-compliances and subsequent prosecution within a short timeframe, noting that the transition time from current land uses is very short, considering the cost of implementation for farmers. Seeks for a collaborative approach to be taken rather than implementation of blanket regulation.	Take an approach based less on blanket rules, modelled scenarios and enforcement and more on empowering and partnering with the community.
S229.006	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Is pleased to see that a range of financial support options for land retirement are proposed, including rates relief and would like to see this also include compensation if large-scale land retirement progresses. Also pleased to see the farm-scale approach promoted.	Prioritise this work prior to implementing new rules. Integrate farm-scale approach into PC1's sediment and erosion control policies and rules.
S229.007	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Considers the lack of local water quality monitoring data means GWRC has had to make assumptions based on modelling, which are not fit for purpose. Notes the lack of data also makes it difficult to see where the water quality is and what solutions to implement on farm.	Increase GWRC support for additional water quality monitoring activities in Mākara and Ohariu, including community-led.
S229.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and	Amend	Considers that the sources of E. coli must be known for each catchment to be addressed appropriately.	Add " Identification of sources of e-coli specific to individual catchments ".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Escherichi a coli from farming activities.			
S229.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichi a coli from farming activities.	Amend	Notes a lack of consistency with WH.P22 (nitrogen) and WH.P23 (sediment). Considers work to reduce E-coli levels should only target areas where e-coli is shown to be an issue and there is not currently sufficient monitoring data to determine the levels and sources of e-coli across the multiple catchments. Considers it inappropriate to extrapolate the results of one monitoring site. Seeks landowner farm-scale monitoring be provided for - including feedback loops to monitor the impact of actions.	Add "Incorporate e-coli reduction in catchment context and farm plans, based on monitored data" - to allow a farm-scale approach as per nitrogen and sediment.
S229.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Considers PC1 mapping does not correspond well with ground-truthed information on erosion from landowners. Concerned about both the accuracy of the modelled scenarios and considers it is not fit for purpose in Mākara/Ohariu. Concerns the policy includes generic assumptions on the source of sediment and that the policy focuses on hill country erosion as a source of sediment and not streambank erosion in high flow events - anecdotally a much higher contributor to sediment loss. Supports revegetation of vulnerable areas of farms but suggests there are multiple options for revegetation sites that best work within the farm system. Considers the area forced into retirement will be much bigger than the red areas mapped due to the need to aggregate areas and work with the landscape to locate sensible fencelines.	Identify sediment sources by using a farm-scale assessment of sediment sources rather than the erosion-risk mapping. Refocus this section on identifying "sediment sources" rather than erosion risk land/pasture.
S229.011	8 Whaitua Te	Policy WH.P23: Achieving	Amend	There are likely more sources of erosion than from hillsides. Emphasised the role of other existing	Refocus from "erosion risk" to "sediment management".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	reductions in sediment discharges from farming activities on land with high risk of erosion.		management techniques such as low stocking rates and good pasture cover.	
S229.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Oppose	<p>Clause (c) Concerned this provision will financially cripple many farms given the large area, timeframes and requirement to retire the land.</p> <p>Using poplars and willows (alongside grazing) is unlikely to be successful on submitter's steepest areas given the high-wind nature of the landscape and based on trial work to date. Therefore fencing and retirement will be the only tool available.</p> <p>Native planting will not be affordable on this scale and natural reversion will take a very long time to establish, including a significant period through gorse, creating a seed source within farms. The provision's requirement to "maintain" the woody vegetation will be unviable, given the large-scale land retirement and reduced farm income from less productive land and high fencing costs incurred. Another challenge to revegetation is working alongside Meridian's wind farms (crossing six of the submitter's farms) where afforestation needs to be designed to not impede wind flow.'</p>	Remove blanket approach and rely on the bespoke actions and timeframes that will be identified through farm-scale assessment, including via the audited Freshwater Farm Plans.
S229.013	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock	Amend	Support revegetating streams in theory but does not support this blanket rule due to the number of small streams, the costs, and the impracticality of fencing large swathes of land particularly with intersecting	<p>Make consistent with the associated Rule regarding reduced access where practical rather than restricted access.</p> <p>Replace "restrict" with "reduce through non-regulatory</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		access to small rivers.		gullies that are flood zones, Considers farm-scale analysis of risk and solutions is critical - rather than blanket restrictions. Considers there is risk to animal welfare if livestock do not have access to streams for drinking water, due to standard risks of reticulated water supply infrastructure functioning well in hill country paddocks.	means ". Amend the policy wording to match the heading about river size.
S229.014	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Amend	Recognises the value of riparian planting of natives and poplar/willows for shade where practical but notes planting to date has not been 100% successful due to the climate and wind conditions on the property.	Amend to "where economically practical to do so"
S229.015	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Considers that additional farm plan work is unnecessary when there is an existing similar process under national regulation.	Ensure that the details of this rule are consistent with the content and timing for Freshwater Farm Plans
S229.016	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Oppose	Recognises the value of riparian planting of natives and poplar/willows for shade where practical but notes planting to date has not been 100% successful due to the climate and wind conditions on the property.	Remove since this can be instead incorporate into certified/audited Freshwater Farm Plans as catchment context.
S229.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R29: Livestock access to a small river -	Oppose	Recognises the value of riparian planting of natives and poplar/willows for shade where practical but notes planting to date has not been 100% successful due to the climate and wind conditions on the property.	Remove since this can be instead incorporate into certified/audited Freshwater Farm Plans as catchment context.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		discretionary activity.			

S231 Te Marama Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S231.001	General comments	General comments - overall	Oppose	Does not support Plan Change 1 in its current form	Not stated
S231.002	General comments	General comments - overall	Oppose	Oppose the regulatory approach.	Seek council to work with community rather than regulate against it.
S231.003	General comments	General comments - consultation	Not Stated	Concerned about lack of consultation.	Seeks additional forms of consultation are implemented by GWRC.
S231.004	General comments	General comments - economic cost/impact	Not Stated	Concerned cost implications on farms as a result of proposed changes will be very high and will significantly impact farm viability. Notes unlike PC1 changes that impact urban areas, the financial implications fall directly to individual landowners in rural communities. Considers PC1 does not give flexibility to stage work, unlike three waters work where many costs are dispersed through rates increases / council debt over time. Submitter expects the proposed changes will significantly devalue properties given high cost of implementation and reduction in farm incomes. Seeks that council first and foremost remove PC1's regulatory approach proposed. If this does not occur, then we expect council to provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.	Seeks removal of PC1's regulatory approach. If this does not occur, then expects council to provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S231.005	General comments	General comments - overall	Not Stated	<p>Submitter notes insufficient information to know where water quality is a problem and notes no real data to show the source of these contaminants (both activity and location) or the natural state. Concerned about use of one water quality monitoring site for both the Ohariu and Makara catchments.</p> <p>Considers PC1 addresses the lack of local water quality information by bluntly proposing broad rules across multiple catchments instead of seeking to target interventions for the best outcomes. Considers the proposed regulatory implications are wide-reaching, create huge social and financial cost and risk not achieving the outcomes efficiently.</p>	Seeks GWRC take a farm-scale and catchment-scale approach, rather than whaitua-wide or across a "Freshwater Management Unit" to acknowledge that solutions are best achieved on-farm but that streams cross property boundaries and therefore must be part of a catchment-wide approach.
S231.006	General comments	General comments - overall	Not Stated	Concerned scale of PC1 provisions means many people will be non-compliant within a short timeframe and find themselves faced with prosecution. Considers transition time between current land use and implementing the proposed changes is very short considering the huge financial implications, farm system change required and land use change required.	Seeks GWRC take an approach based less on blanket rules, modelled scenarios and enforcement and more on empowering and partnering with the community.
S231.007	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Supports range of financial support options for land retirement (including rates relief) and the farm-scale approach being promoted.	Seeks farm scale approach is better integrated into PC1's sediment and erosion control policies and rules and seeks financial compensation if large-scale land retirement progresses.
S231.008	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Amend	Considers lack of local water quality monitoring data means GWRC has had to make assumptions based on modelling, which submitter considers are not fit for purpose. Notes lack of data also makes it difficult for submitter to see where the water quality is and what solutions are required.	GWRC provide more support for additional water quality monitoring activities in Makara and Ohariu, including community-led

				stockwater ponds and for policy to be consistent with the associated Rule regarding reduced access where practical rather than restricted access.	
S231.017	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Oppose	<p>Supports revegetating streams in theory but does not support the blanket rule.</p> <p>Notes preference to Farm-scale analysis of risk and solutions rather than blanket restrictions. Notes risk to increased animal welfare issues if livestock do not have access to streams for drinking water, due to standard risks of reticulated water supply infrastructure functioning well in hill country paddocks.</p> <p>A farm-scale approach needs to be supported to help deliver solutions such as sediment retention / stockwater ponds and for policy to be consistent with the associated Rule regarding reduced access where practical rather than restricted access.</p>	Remove rule as this can be instead incorporate into certified/audited Freshwater Farm Plans as catchment context.

S216 Te Rūnanga o Toa Rangatira (Te Rūnanga)

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S216.001	General comments	General comments - water bodies	Not Stated	Restoring the health of Te Awarua o Porirua and Te Whanganui a Tara are key priorities for the submitter	Provisions relating to the protection and restoration of Te Awarua o Porirua and Te Whanganui a Tara should be confirmed, adopted and implemented.
S216.002	General comments	General comments - fresh water	Support	Te Rūnanga provided input into the draft plan change including matters relating to Māori rights and interests to freshwater; Te Mana o Te Wai under the NPS-FM; mahinga kai as a highly significant value; and timeframes for E.coli target attribute states and the enterococci coastal water objectives.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Supports the proposed objectives and policies in the plan change which sets new direction to restoring rivers, lakes, natural wetlands for contact recreation and Māori customary use.	
S216.003	General comments	General comments - overall	Not Stated	<p>Considers the Te Whanganui a Tara and Te Awarua o Porirua planning frameworks implement the NPS-FM, the Ngāti Toa Statement on the Te Awarua o Porirua Whaitua and Te Mahere Wai for the Te Whanganui a Tara Whaitua.</p> <p>Considers for the first time cultural health of Te Awarua o Porirua and Te Whanganui a Tara is of central importance and there is a pathway towards wai ora involving respect for taonga, restoration of mauri, ecological health, mahinga kai and kaimoana</p>	Not stated
S216.004	General comments	General comments - overall	Not Stated	<p>Considers the new provisions set new targets and standards for coastal water, nationally threatened freshwater species, groundwater, water quality, habitats, water quantity, and ecological processes of rivers.</p> <p>Submitter is committed to working with the local authorities and Wellington Water Ltd to make these targets achievable especially in relation to stormwater and wastewater discharge consents.</p>	Not stated
S216.005	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	<p>Considers the intention of Policy WH.P2(a), Policy WH P.P15 and associated provisions is to restrict urban development that is ad hoc and uncoordinated to minimise water quality impacts, lack of stormwater infrastructure and other environmental effects.</p> <p>Supports a dedicated planning approach to development in the Wellington Region. Considers urban sprawl should be avoided when it results in poor environmental outcomes. Considers there a need to clarify the provisions relating to 'unplanned greenfield development' and the type of activities</p>	Clarify the provisions relating to 'unplanned greenfield development' and the type of activities that would be captured by this rule and the appropriate rule category. Submits that the plan change should be amended to provide a more balanced and nuanced approach with regard to managing the tension between restricting urban sprawl and provision for practical flexibility for development in nonurban areas. Amend WH.P2(a) to state: Restricting prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>captured by this rule and the appropriate rule category.</p> <p>Notes that Under the Ngāti Toa Rangatira Deed of Settlement Act 2014, land has been returned or acquired by Ngāti Toa Rangatira under the Right of First Refusal or other processes. These lands may involve historical legacy zones or activities which have been inherited from previous owners or land uses, such as former education and corrections facilities. Considers while new development will aim to achieve high standards of wastewater and stormwater disposal in terms of Water Sensitive Urban Design systems, there could be unanticipated challenges relating to existing (historical) infrastructure, buildings and related additions or alterations that may trigger the unplanned greenfield development rule.</p> <p>Considers similar issues may exist for areas where resource consents have been granted for activities in unplanned greenfield development areas but the zoning has yet to reflect existing activity. For example, upgrades to facilities in rural areas that could trigger the unplanned greenfield development rule. Notes this upgrades may not justify the expense and time of a private plan change process.</p> <p>Considers a strong alignment between the provisions of the district plans and NRP is needed when signalling land that may potentially become part of future urban development areas. For example, the NPR maps 86-89 may become 'out of date' due to district plan reviews. Considers this may require a two plan change process (an update to the relevant maps of the NRP and the district plan zoning).</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S216.006	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development – prohibited activity.	Amend	Considers a non-complying rule is more appropriate to regulate stormwater discharges which may enter a surface water body or coastal water when the land has not been zoned for urban development.	Change to rule WH.R13 to classify the relevant activity as non-complying instead of prohibited.
S216.007	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Amend	<p>Considers the intention of Policy WH.P2(a), Policy WH P.P15 and associated provisions is to restrict urban development that is ad hoc and uncoordinated to minimise water quality impacts, lack of stormwater infrastructure and other environmental effects.</p> <p>Supports a dedicated planning approach to development in the Wellington Region. S216.008	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 – Stormwater discharges from new unplanned greenfield development – prohibited activity.	Amend	Considers a non-complying rule is more appropriate to regulate stormwater discharges which may enter a surface water body or coastal water when the land has not been zoned for urban development.	Change to rule P.R12 to classify the relevant activity as non-complying instead of prohibited.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S224 Terawhiti Farming Co Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S224.001	General comments	General comments - overall	Not Stated	Does not support the Plan Change 1 in its current form and opposes the broadbrush regulatory approach taken and the removal of local decision making. Agrees with the need to improve water quality - where it is poor and where the solutions are within our control - but considers fundamental information is required to do this effectively and equitably. Asks council to recognise the work the submitter has done to date and partner with us in this work rather than regulate us.	Not stated
S224.002	General comments	General comments - consultation	Oppose	Concerned with a lack of consultation, content which is difficult for most people to understand, short timeframes to make submissions, and the submission timing just prior to Christmas. Notes opportunities that were missed that would have helped engagement, including: a. Direct mail contact with rural property owners, identified through council's rating database. b. Formal engagement with our Community Board; and c. Provision of information on the GWRC website - more accessible written information, invitation to the PC1 rural webinars/meeting. Additional forms of communication are essential if GWRC really wants meaningful community feedback.	Not stated
S224.003	General comments	General comments - economic cost/impact	Amend	Considers the cost of implementing the proposed changes on farms will be very high and will significantly impact farm viability as financial implications fall directly to individual landowners in rural communities. Considers the Plan Change lacks the flexibility to stage work. Considers the proposed changes will significantly devalue properties.	Remove PC1's regulatory approach. or provide a range of targeted support mechanisms to recognise the cost of implementation and to compensate for the ongoing loss of potential farm income.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S224.004	General comments	General comments - overall	Amend	<p>Considers there is not sufficient information to know where water quality is a problem are and therefore how to effectively target work and PC1 proposes broad rules across multiple catchments instead of seeking to target interventions for the best outcomes.</p> <p>Notes there is only one water quality monitoring site across Makara and Ohariu's full 15,000 hectares and it only relates to the 8,000 hectare Makara Stream catchment. Considers smaller streams located on Terawhiti have good water quality but stringent land use rules will still apply.</p> <p>Considers the proposed regulatory implications are wide-reaching, create social and financial cost, and risk not achieving the outcomes efficiently.</p> <p>Considers solutions are best achieved on-farm but that streams cross property boundaries an therefore must be part of a catchment-wide approach.</p>	Take a farm-scale and catchment-scale approach, rather than whaitua-wide or across a "Freshwater Management Unit
S224.005	General comments	General comments - overall	Amend	<p>Concerned that the PC1 provisions will result in non-compliances and subsequent prosecution within a short timeframe, noting that the transition time from current land uses is very short, considering the cost of implementation for farmers. Seeks for a collaborative approach to be taken rather than implementation of blanket regulation.</p>	Take an approach based less on blanket rules, modelled scenarios and enforcement and more on empowering and partnering with the community.
S224.006	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	<p>Supports financial support and rates relief for land retirement. Seeks for compensation for large-scale land retirement be included. Supports the farm-scale approach proposed.</p>	<p>Prioritise this work prior to implementing new rules.</p> <p>Integrate farm-scale approach into PC1's sediment and erosion control policies and rules.</p>
S224.007	6 Other methods	Method M44: Supporting the health of rural	Amend	<p>Considers the lack of local water quality monitoring data means GWRC has had to make assumptions based on modelling, which are not fit for purpose. Notes the lack of data also makes it difficult to see where the water quality is and what solutions to implement on farm.</p>	Increase GWRC support for additional water quality monitoring activities in Mākara and Ohariu, including community-led.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		waterbodies.			
S224.008	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Considers that the sources of E. coli must be known for each catchment to be addressed appropriately.	Add " Identification of sources of e-coli specific to individual catchments ".
S224.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Notes a lack of consistency with WH.P22 (nitrogen) and WH.P23 (sediment). Considers work to reduce E-coli levels should only target areas where e-coli is shown to be an issue and there is not currently sufficient monitoring data to determine the levels and sources of e-coli across the multiple catchments. Considers it inappropriate to extrapolate the results of one monitoring site. Seeks landowner farm-scale monitoring be provided for - including feedback loops to monitor the impact of actions.	Add " Incorporate e-coli reduction in catchment context and farm plans, based on monitored data ".
S224.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high	Amend	Considers PC1 mapping does not correspond well with ground-trothed information on erosion from landowners. Concerned about both the accuracy of the modelled scenarios and considers it is not fit for purpose in Mākara/Ohariu. Concerns the policy includes generic assumptions on the source of sediment and that the policy focuses on hill country erosion as a source of sediment and not streambank erosion in high flow events - anecdotally a much higher contributor to sediment loss. Supports revegetation of vulnerable areas of farms but suggests there are multiple	Identify sediment sources by using a farm-scale assessment of sediment sources rather than the erosion-risk mapping. Refocus this section on identifying "sediment sources" rather than erosion risk land/pasture.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		risk of erosion.		options for revegetation sites that best work within the farm system. Considers the area forced into retirement will be much bigger than the red areas mapped due to the need to aggregate areas and work with the landscape to locate sensible fencelines.	
S224.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	There are likely more sources of erosion than from hillsides. Emphasised the role of other existing management techniques such as low stocking rates and good pasture cover.	Refocus from "erosion risk" to "sediment management".
S224.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Oppose	Concerned about the timeframe for transitioning to woody vegetation and how long it will take for vegetation to establish given conditions at this location. Expressed concern about cost of maintaining woody vegetation and potential for growth of pest plants. Mentioned potential conflict between revegetation and nearby windfarms. Considers that the modelling is inaccurate and that retirement of farmland should not be required where there are no erosion issues.	Remove blanket approach and rely on the bespoke actions and timeframes that will be identified through farm-scale assessment, including via the audited Freshwater Farm Plans.
S224.013	8 Whaitua Te	Policy WH.P26: Managing	Amend	Support revegetating streams in theory but does not support this blanket rule due to the number of small streams, the costs, and the impracticality of fencing	Make consistent with the associated Rule regarding reduced access where practical rather than restricted access.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whangan ui-a-Tara	livestock access to small rivers.		large swathes of land particularly with intersecting gullies that are flood zones, Considers farm-scale analysis of risk and solutions is critical - rather than blanket restrictions. Considers there is risk to animal welfare if livestock do not have access to streams for drinking water, due to standard risks of reticulated water supply infrastructure functioning well in hill country paddocks.	Replace "restrict" with "reduce through non-regulatory means". Amend the policy wording to match the heading about river size.
S224.014	8 Whaitua Te Whangan ui-a-Tara	Policy WH.P27: Promoting stream shading.	Amend	Recognises the value of riparian planting of natives and poplar/willows for shade where practical but notes planting to date has not been 100% successful due to the climate and wind conditions on the property.	Amend to "where economically practical to do so"
S224.015	8 Whaitua Te Whangan ui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Amend	Considers that additional farm plan work is unnecessary when there is an existing similar process under national regulation.	Ensure that the details of this rule are consistent with the content and timeframes for Freshwater Farm Plans.
S224.016	8 Whaitua Te Whangan ui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Oppose	Recognises the value of riparian planting of natives and poplar/willows for shade where practical but notes planting to date has not been 100% successful due to the climate and wind conditions on the property.	Remove since this can be instead incorporate into certified/audited Freshwater Farm Plans as catchment context.
S224.017	8 Whaitua Te Whangan ui-a-Tara	Rule WH.R29: Livestock access to a small river -	Oppose	Recognises the value of riparian planting of natives and poplar/willows for shade where practical but notes planting to date has not been 100% successful due to the climate and wind conditions on the property.	Remove since this can be instead incorporate into certified/audited Freshwater Farm Plans as catchment context.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.			

S252 Thames Pacific

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S252.001	General comments	General comments - definitions	Amend	<p>Considers without a definition, there may be uncertainty about what constitutes a greenfield development in comparison to an infill/brownfield development.</p> <p>Considers a definition of 'greenfield' development would assist in providing certainty regarding the application of new rules.</p> <p>Considers the proposed definition of 'greenfield' development aligns with the definition of an urban environmental allotment under section 76(4C) of the RMA. Suggests this definition will not hinder the ability of large lots to accommodate the establishment of up to 2 dwellings, which is permitted by most District Plans in the region.</p>	<p>Add definition of greenfield development:</p> <p>Greenfield Development: The use of land that is predominately vacant with a site area of 4,000m² or greater, where the proposal will result in the development of 3 or more lots or dwellings for residential purposes regardless of staging.</p>
S252.002	General comments	General comments - overall	Oppose	<p>Supports initiatives to improve the quality of freshwater and the state of freshwater and coastal environments.</p> <p>Considers PC1 will have significant financial impacts particularly on pre-committed development projects</p> <p>Opposes PC1 in its current form and requests it be withdrawn to allow for genuine consultation to occur, consideration of matters raised through this submission process, and consideration of the new direction from the central Government.</p>	Withdraw PC1

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers PC1 does not provide sufficient certainty or clarity in the implementation of rules</p> <p>Considers PC1 will have significant financial impacts particularly on pre-committed development projects</p> <p>Considers PC1 will hinder growth through the prohibition of unplanned greenfield development</p>	
S252.003	General comments	General comments - urban development	Oppose	<p>Considers PC1 potentially conflicts with the intended outcomes of the NPS-UD to provide for well-functioning urban environments, including both through infill, and greenfield developments. Notes Policy 6 requires planning decisions that affect urban environments to consider the benefits of urban development and the contributions that development makes to provide or realise development capacity, and this has not been sufficiently considered in PC1 as economic impacts have not been assessed.</p>	Withdraw PC1
S252.004	General comments	General comments - consultation	Oppose	<p>Considers adequate consultation was not carried out with the development community and is concerned the draft version was not sent to the development community despite Subpart 1 of the NPS-FM requiring regional councils to engage with communities and tangata whenua.</p> <p>Considers that given the impact and extent of the proposed changes, the publication of a draft plan and consultation with the development community would minimise potential appeals and aid towards a more workable and functioning Natural Resources Plan.</p>	Withdraw PC1
S252.005	General comments	General comments -	Oppose	<p>Considers GWRC should wait to see what changes to the NPS-FM are proposed by the new government coalition to ensure PC1 is in alignment.</p>	Withdraw PC1

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		consultation		<p>Considers PC1 was rushed as the plan does not need to be notified until 31st December 2024.</p> <p>Considers the imposition of new rules with immediate legal effect is inconsistent with subpart 1 of the NPS-FM as there is still a significant amount of time before the plan change has to be notified.</p>	
S252.006	2 Interpretation	Hydrological control	Amend	<p>Suggests the hydrological control definition should be expanded to include reference to the measures proposed to manage the flows and volumes and an acceptable solution that is easily and commonly able to be implemented.</p> <p>Considers the current definition does not provide certainty regarding the rate or degree to which hydrological controls need to be implemented on-site and whilst there is mention throughout PC1 on retention, there is no definition as to an acceptable volume of water that needs to be provided for.</p> <p>Considers permitted activity standards (and the supporting definitions) should be clear and easy to understand without any ambiguity.</p> <p>References Table E10.6.3.1.1 of the Auckland Unitary Plan which contains hydrological controls. Notes a 5mm runoff depth has been used in the decision sought but recommends GWRC complete modelling to determine the runoff depth for each catchment as sensitivity to volume changes will vary between catchments. Suggests technical standards could also be referenced.</p>	<p>Request the following to the definition be added :</p> <p>Management measures may include:</p> <p>a) Rapid Infiltration devices such as soak pits; b) Permeable paving; or c) Rainwater retention tanks which:</p> <p>i) are plumbed into the toilet and/or an outdoor tap or taps; and ii) where connected to toilets, are capable of being topped up by potable water supply to a maximum volume of 100L.</p> <p>Where these measures provide a minimum retention volume of 5mm runoff depth over the impervious area which hydrology controls are required; and</p> <p>Provide detention (temporary storage) for the difference between the predevelopment and post-development runoff volumes from the 95th percentile, 24 hour rainfall event minus the 5 mm retention volume or any greater retention volume that is achieved, over the impervious area for which hydrology mitigation is required (unless further detention or infiltration measures are utilised downstream).</p> <p>Note: Compliance with the definition can be demonstrated by installing a rainwater tank in accordance with Approved Solution #1 of Wellington Water's Managing Stormwater Runoff Version 4 June 2023</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S252.007	2 Interpretation	Redevelopment	Amend	<p>Considers the definition should exclude minor alterations and additions to existing buildings to provide for the small redevelopment of existing sites as a permitted activity in associated rules.</p> <p>Notes the suggested 30m² amendment aligns with recent changes to the Building Regulations for sheds to avoid consenting requirements.</p>	<p>Amend definition and make any other consequential amendments necessary to give effect to this submission point, to provide for small scale alterations and additions to existing buildings:</p> <p>For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e including brownfield development upgrades to existing roads etc.) in relation to stormwater effects. this includes the replacement, reconstruction or addition (new) of impervious surfaces. Excludes:</p> <ul style="list-style-type: none"> -minor maintenance or repairs to roads, carparking areas, driveways and paving -installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing -activities that only involve the re-roofing of existing buildings-New buildings or alterations and additions to existing buildings of less than 30m²
S252.008	2 Interpretation	Unplanned greenfield development	Oppose	<p>Opposes the proposed prohibited activity rules.</p> <p>Considers the current provisions would make rezoning more costly, and take longer as they would require a plan change to a District Plan and the Natural Resource Plan.</p> <p>Considers that in some instances resource consent is more appropriate than a plan change. For example, when the size of the site or development is not such that a plan change is economically viable, or the effects are discrete and localised making a resource consent process more appropriate.</p> <p>Considers other proposed rules within PC1 that apply greenfield development adequately address effects on water quality without needing to prohibit development.</p>	<p>Requests the deletion of this definition and all subsequent references to unplanned greenfield development. Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/nonurban/ open space to urban) through a District Plan change to enable the development.</p> <p>Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p> <p>Amend definition to align with zones under a District Plan and avoid a plan change to both District and Regional Plans:</p> <p>Should the above relief not be obtained, submitter seeks the following revision:</p> <p>Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 not zoned as urban within a District Plan- which also require an underlying zone change (from rural/nonurban/open space</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are identified on maps 86, 87, 88 and 89 these areas and include those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023. And consequential amendments to other references or policies as needed to align with the above amendment.
S252.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes prohibited policy and rules. Concerned prohibiting activities can lead to perverse outcomes (experienced with the NES-FW) as there is no consenting pathway to consider proposals that have a net positive impact on the environment, including freshwater and coastal systems.	Amend policy to remove reference to prohibiting unplanned greenfield development. (a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants from greenfield developments and requiring financial contributions as to offset adverse effects from residual stormwater contaminants,
S252.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Considers there will be instances where it is not practicable to achieve hydrological controls i.e. when retention is not possible and there are low infiltration rates, more water will be discharged to a water network, even though the peak flows are being contained. Considers source control measures should be included in this policy as they are a way of reducing copper and zinc loads.	Amend policy wording to remove (b) and replace (b) where stormwater discharges will enter a river, hydrological controls either on-site, or off-site via a communal stormwater treatment system (b) Source control techniques that result in copper and zinc load reductions equal to or greater than what would be achieved through on-site or communal stormwater treatment systems or devices designed in accordance with (a).
S252.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned	Oppose	Opposes use of the term "avoid". Opposes the requirement to seek two separate plan changes if land is to be rezoned.	Request policy is deleted. Policy WH.P16: Stormwater discharges from new unplanned greenfield development Avoid all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		greenfield development.			
S252.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	<p>Opposes the requirement for non-complying resource consent to undertake winter earthworks.</p> <p>Notes high rainfall events can occur during any time of the year, and during summer months when the ground is less permeable, it is just as likely that sediment control measures will fail. In some soil conditions (i.e. sand, river gravels) it is preferable works occur when the ground is wet because it reduces the potential for sediment to be blown into waterways.</p> <p>Considers the s32 report fails to justify why this measure is required.</p> <p>Considers the current method of site-specific assessments during winter works in achieving the objectives of the NPS-FW.</p>	<p>Delete policy and related rules.</p> <p>Policy WH.P31: Winter shut down of earthworks Earthworks over 3,000m² in area shall: (a) be shut down from 1st June to 30th September each year, and (b) prior to shut down, be stabilised against erosion and have sediment controls in place using good management practices in accordance with the Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021).</p>

S275 The New Zealand Transport Agency

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S275.001	General comments	General comments - overall	Oppose	Concerned at the scale of changes proposed in the Plan change and the timeframes for implementation. Considers the section 32 analysis has not considered the costs associated with introducing such wide-ranging changes with immediate legal effect, including the cost of projects which are in construction and/or budgeted for this earthworks	Remove the immediate legal effect of provisions via a variation. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				season but which have no allocated funding for additional consents and/or more restrictive working conditions	
S275.002	General comments	General comments - definitions	Amend	Seeks that 'new state highways' is defined. Provides a suggested definition but is open to alternative wording, considers it must make clear that the definition only relates to 'new' state highways and not alterations to existing ones.	Define new state highways as: a new road operated by NZ Transport Agency. This excludes any upgrades or alterations to an existing state highway. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.003	2 Interpretation	Earthworks	Amend	Considers the definition is very confined and will not allow for the construction, repair, upgrade or maintenance of infrastructure.	Provide an exclusion (as per (d) "for all other whatua") to enable construction, repair, upgrade or maintenance of infrastructure where standards are met. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.004	2 Interpretation	Redevelopment	Amend	Supports excluding 'minor maintenance and repairs to roads...' and 'installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing'. Seeks that the scale of maintenance and repair works is not limited to "minor"	Delete "minor" where it appears before "maintenance and repairs to roads". Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.005	General comments	General comments - definitions	Amend	Notes the definition of 'property' would include the entire state highway as a single property and subsequently rule P.R22(c) would apply the earthworks limitations (3000m ² over 12 months) to the entire state highway network. Notes other examples include WH.P14(a)(i) and P.R17.	Delete the reference to 'property' relative to all state highways. Replace it with reference to 'project' or similar. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.006	5.1 Air quality rules	Rule R34: Mobile source emissions - permitted activity.	Amend	Notes the s32 assessment indicates that this rule along with others are permitted activities within the coastal marine area but are inappropriate and there is no precedent or demand. Notes that marine transport operates within the coastal environment and is a 'mobile discharge' and there is a 'demand' for this as a permitted activity.	Reinstate the 'coastal icon' to Rule 5.1.10 Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.007	9 Te Awarua-o-Porirua Whatua	8.2.1 Discharges to water	Amend	Considers it unclear if Policy P.P5 and Policy P.P6 are intended to apply to stormwater network discharge points noting that Policy WH.P6 specifically excludes stormwater networks.	Specifically exclude stormwater networks from consideration under WH.P5, P.P5 and P.P6 and related provisions (to be consistent with WH.P6).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers that stormwater networks are subject to a range of other controls which would address issues identified in P.P5 and P.P6 so should be specifically excluded from these provisions.	Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.008	8 Whaitua Te Whanganui-a-Tara	8.3.2 Stormwater	Amend	<p>Considers the provisions would benefit from amendments to improve clarity of application and provide a revised policy and consenting structure. Suggests clarification as the term "new and redeveloped impervious surfaces" and "new greenfield development" are used frequently and both could be interpreted to include new or redeveloped state highways. Suggests explanatory notes could assist. Notes the rule frame also does not anticipate single point discharge locations which are otherwise 'disconnected from' the primary piped network.</p> <p>Suggests discharges to a (defined) stormwater network are not a direct discharge to land or water and do not require a consent and are to be managed by the network operator.</p> <p>Seeks reference to discharges to a stormwater network requiring consent be deleted.</p>	<p>Relief sought:</p> <p>Clarify that provisions relating to "new and redeveloped impervious surfaces" or "new greenfields developments" do not apply to state highways.</p> <p>Clarify the term "urban development"</p> <p>Confine provisions relating to point sources and cumulative effects of point sources to discharges which are not part of a stormwater network.</p> <p>Modify the rule structure for stormwater networks to reflect permitted and restricted discretionary activity status (with permitted activity standards and appropriate matters of discretion/assessment).</p> <p>Modify notification status to reflect statutory tests.</p> <p>Amend so stormwater networks (state highways) provide for:</p> <ol style="list-style-type: none"> i. Permitted activity for existing (at notification date) state highway network subject to a Stormwater Management Strategy (regional or sub-regional) being provided within 5 years of date of plan operative date. ii. small areas of permitted increase in road impervious area (eg. to cater for safety or intersection improvements where specific treatment is provided (to be specified as a permitted activity standard). iii. provide for areas ancillary to "live traffic lanes" eg. police parking pads, storage areas, access roads to stormwater treatment devices as a permitted activity iv. apply consent requirements only to higher volume roads. v. larger improvements or new roads as restricted discretionary activities. vi. No discretionary or non-complying activities. vii. notification subject to statutory notification tests (eg WH.R9 and P.RA). Schedule 31 Strategic Actions (b) sets out mana whenua and community engagement requirements and the S32A indicates this should preclude the need for notification.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S275.014	9 Te Awarua-o-Porirua Whaitua	Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	While NZTA supports the intent behind the reduction in contaminant loads proposed, it is unclear if and how the reduction can be sustained and further information should be provided before such targets are adopted. The Section 32 assessment states "...the economic costs to communities are likely to be significant due to infrastructure upgrade costs [when compared to 'status quo'] (page 162). It is also noted that cost assessments (page 151 and 152) focus on local authority costs, not NZTA costs which seem to have been omitted. The value of investment/forward planning which has already been made through the consent process under the Operative Plan is also not explicitly recognised in the section 32.	Further consideration of the feasibility and costs of these targets. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.015	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges .	Amend	Considers it is outside of the direct control of NZTA to deliver source control for its stormwater network. Notes Schedule 27 requirements requires Work with the Ministers for the Environment and Transport, Waka Kotahi NZ Transport Agency and the territorial authorities to promote source control for copper from vehicles . Considers more flexibility is required in whether the stormwater network operator does not have full mandate over the contaminant source.	Modify WH.P10(a) to provide for flexibility where the stormwater network operator does not have full mandate over the contaminant source. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.016	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater discharges .	Amend	Considers it is outside of the direct control of NZTA to deliver source control for its stormwater network. Notes Schedule 27 requirements requires Work with the Ministers for the Environment and Transport, Waka Kotahi NZ Transport Agency and the territorial authorities to promote source control for copper from vehicles . Considers more flexibility is required in WH.P10(a) whether the stormwater network operator does not have full mandate over the contaminant source.	Modify P.P10(a) to provide for flexibility where the stormwater network operator does not have full mandate over the contaminant source. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.017	9 Te Awarua-	Policy P.P12:	Amend	Notes policy P.P12(a) specifies numeric limits but has no time frame and applies equally to local	Delete P.P12(a). Modify P.P12 (e) and (f) to reflect varying consent

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		nts - prohibited activity.		potentially more harmful substances may have to be used instead.	
S275.021	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Neutral	Considers the rule does not take into account the state highway network given that the highway network and worksites use the local authority network. Considers the rule needs to provide for the discharge where the water does not contain contaminants.	Delete this rule and provide for areas of the transport network which do not accommodate vehicle traffic as a permitted activity Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.022	9 Te Awarua-o-Porirua Whaitua	Rule P.R2: Stormwater to land - permitted activity.	Amend	Considers the rule does not take into account the state highway network given that the highway network and worksites use the local authority network. Considers the rule needs to provide for the discharge where the water does not contain contaminants.	Delete this rule and provide for areas of the transport network which do not accommodate vehicle traffic as a permitted activity Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.023	9 Te Awarua-o-Porirua Whaitua	Rule P.R8: Stormwater from a local authority or state highway network-restricted discretionary activity.	Amend	Considers it unclear if this rule applies to existing (consented) or unconsented networks and if it applies to existing consented networks, whether a further consent is now also required.	Clarify the intent of the rule and amend if required to only apply to unconsented works Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.024	8 Whaitua Te Whanganui-a-Tara	Rule P.R9: Stormwater from new state highways-discretionary activity.	Amend	Considers it unclear if this rule applies to existing (consented) or unconsented networks and if it applies to existing consented networks, whether a further consent is now also required.	Clarify the intent of the rule and amend if required to only apply to unconsented works Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.025	9 Te Awarua-o-Porirua Whaitua	Rule P.R9: Stormwater from new state highways-	Amend	Considers the activity status does not reflect the known effects and specificity of specific management methods contained within the plan change. Considers a restricted discretionary activity status is appropriate.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.			
S275.026	8 Whaitua Te Whanganui-a-Tara	Rule WH.R10: Stormwater from new state highways- discretionary activity.	Amend	Considers the activity status does not reflect the known effects and specificity of specific management methods contained within the plan change.	Change WH.R10: Stormwater from new state highways - to restricted discretionary activity Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.027	8 Whaitua Te Whanganui-a-Tara	Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.	Amend	Notes that NZTA need to remove vegetation to provide for a safe transport network and the requirement to obtain a consent for any removal on high erosion risk land is overly onerous and would give rise to unacceptable safety effects. Suggests a permitted activity status for limited removals subject to appropriate performance standards would achieve safe outcomes as was provided for under the operative provisions. Considers a restricted discretionary activity should be provided.	Provide for vegetation removal as a permitted activity when associated with the maintenance of a transport network. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.028	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	Notes that NZTA need to remove vegetation to provide for a safe transport network and the requirement to obtain a consent for any removal on high erosion risk land is overly onerous and would give rise to unacceptable safety effects. Suggests a permitted activity status for limited removals subject to appropriate performance standards would achieve safe outcomes as was provided for under the operative provisions.	Provide for vegetation removal as a permitted activity when associated with the maintenance of a transport network. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.029	9 Te Awarua-o-Porirua Whaitua	Rule P.R16: Vegetation clearance on highest erosion risk land-	Amend	Notes that NZTA need to remove vegetation to provide for a safe transport network and the requirement to obtain a consent for any removal on high erosion risk land is overly onerous and would give rise to unacceptable safety effects. Suggests a permitted activity status for limited removals subject to appropriate performance	Provide for vegetation removal as a permitted activity when associated with the maintenance of a transport network. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.		standards would achieve safe outcomes as was provided for under the operative provisions.	
S275.030	9 Te Awarua-o-Porirua Whaitua	Rule P.R17: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	Notes that NZTA need to remove vegetation to provide for a safe transport network and the requirement to obtain a consent for any removal on high erosion risk land is overly onerous and would give rise to unacceptable safety effects. Suggests a permitted activity status for limited removals subject to appropriate performance standards would achieve safe outcomes as was provided for under the operative provisions.	Provide for vegetation removal as a permitted activity when associated with the maintenance of a transport network. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.031	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Notes the notified version of this rule contained errors which have now been corrected. Considers the rule also needs to be amended to provide for the ability of some sediment and/or flocculant the stormwater network. Considers a limit of no discharge is unworkable without completely isolating the site from the network and treating all sediment / flocculant discharge to 100% is not feasible.	Amend the rules to provide for some sediment and/or flocculant discharge where appropriate sediment control methods are in place. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.032	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Notes the notified version of this rule contained errors which have now been corrected. Considers the rule also needs to be amended to provide for the ability of some sediment and/or flocculant the stormwater network. Considers a limit of no discharge is unworkable without completely isolating the site from the network and treating all sediment / flocculant discharge to 100% is not feasible.	Amend the rule to provide for some sediment and/or flocculant discharge where appropriate sediment control methods are in place. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.033	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Amend	Notes the notified version of this rule contained errors which have now been corrected. Considers the rule also needs to be amended to provide for the ability of some sediment and/or flocculant the stormwater network. Considers a limit of no discharge is unworkable without completely isolating the site from the network and treating all sediment / flocculant discharge to 100% is not feasible.	Amend the rule to provide for some sediment and/or flocculant discharge where appropriate sediment control methods are in place. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S275.034	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Notes the notified version of this rule contained errors which have now been corrected. Considers the rule also needs to be amended to provide for the ability of some sediment and/or flocculant the stormwater network. Considers a limit of no discharge is unworkable without completely isolating the site from the network and treating all sediment / flocculant discharge to 100% is not feasible.	Amend the rule to provide for some sediment and/or flocculant discharge where appropriate sediment control methods are in place. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.035	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Amend	Notes the notified version of this rule contained errors which have now been corrected. Considers the rule also needs to be amended to provide for the ability of some sediment and/or flocculant the stormwater network. Considers a limit of no discharge is unworkable without completely isolating the site from the network and treating all sediment / flocculant discharge to 100% is not feasible.	Amend the rule to provide for some sediment and/or flocculant discharge where appropriate sediment control methods are in place. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.036	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Considers prohibiting earthworks between the 1st of June and the 30th of September would impose significant constraints on the construction programme for NZTA's essential works to provide for a safe transport network. Suggests instead of blanket rules and non-complying activity status for winter works, a permitted level to provide for maintenance and minor upgrade activity (subject to appropriate controls as a performance standard) combined with a restricted discretionary status for larger scale works can address any potential issues with winter works.	Remove the control on winter works or, at a minimum, provide for a process for 'winter works' approval without the need for a further resource consent. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.037	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Considers prohibiting earthworks between the 1st of June and the 30th of September would impose significant constraints on the construction programme for NZTA's essential works to provide for a safe transport network. Suggests instead of blanket rules and non-complying activity status for winter works, a	Remove the control on winter works or, at a minimum, provide for a process for 'winter works' approval without the need for a further resource consent. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				permitted level to provide for maintenance and minor upgrade activity (subject to appropriate controls as a performance standard) combined with a restricted discretionary status for larger scale works can address any potential issues with winter works.	
S275.038	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Amend	Notes these provisions contain specific numeric standards for discharge of sediment which does not allow for a site by site assessment to determine if the standard set is appropriate for the receiving environment. Concerned that determining activity status will be based on a predicted level of performance and it is unclear if a further consent (under Rule P.R24) would be required if P.R.23(a) was not met. Considers the 100g/m3 and associated 20% and 30% visual clarity requirements would be better placed as matters of discretion/assessment and set in a policy framework which indicates this is a desired outcome, to allow for different parameters to be set based on the detail of the receiving environment.	Modify rules to provide for 100g/m3 and associated 20% and 30% visual clarity as matters of discretion/assessment. Adjust policy framework to set 100g/m3 and associated 20% and 30% visual clarity as outcomes to be achieved unless an alternative, receiving environment specific, outcome is agreed. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.039	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	Notes these provisions contain specific numeric standards for discharge of sediment which does not allow for a site by site assessment to determine if the standard set is appropriate for the receiving environment. Concerned that determining activity status will be based on a predicted level of performance and it is unclear if a further consent (under Rule P.R24) would be required if P.R.23(a) was not met. Considers the 100g/m3 and associated 20% and 30% visual clarity requirements would be better placed as matters of discretion/assessment and set in a policy framework which indicates this is a desired outcome, to allow for different parameters to be set based on the detail of the receiving environment.	Modify rules to provide for 100g/m3 and associated 20% and 30% visual clarity as matters of discretion/assessment. Adjust policy framework to set 100g/m3 and associated 20% and 30% visual clarity as outcomes to be achieved unless an alternative, receiving environment specific, outcome is agreed. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S275.040	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Amend	Supports the intent behind the reduction in contaminant loads proposed but is unclear if and how the reduction can be sustained. Suggests further information should be provided before targets are adopted. Considers the Section 32 assessment focuses on local authority costs, not NZTA costs and the value of investment/forward planning which has already been made through the consent process under the Operative Plan is also not explicitly recognised.	Further consideration of the feasibility and costs of these targets Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.041	12 Schedules	Schedule 28: Stormwater Contaminant Treatment.	Amend	Notes that schedule 28 specifies that it applies only to WH.R6, WH.R7, P.R6 and P.R7 but schedule 29(6) requires an assessment under Schedule 28. Generally supports provision of guidance on treatment methods concerned with the content of Schedule 28. Notes it provides for only a limited range of treatment options but other proprietary devices are available which could be utilised and there is not detail as to the time over which the percentage treatment is to be achieved.	Broaden the methods and outcomes to provide flexibility. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought. Seeks additional clarification that compliance is to be achieved in the long term and that rainfall events that exceed the capacity of the treatment are simply discharged without causing nuisance or alternatively an adjustment to the percentage outcomes sought
S275.042	12 Schedules	Schedule 29: Stormwater Impact Assessments.	Amend	Suggests Schedule 29 should be prefaced with a statement which reflects Schedule 4 of the RMA "...must be specified in sufficient detail to satisfy the purpose for which it is required"	Add prefacing text which indicates that the Stormwater Impact Assessment should be of a scale which reflects the application to which it relates. For example: A stormwater impact assessment shall include the following analysis in sufficient detail to satisfy the purpose for which it is required: Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.043	12 Schedules	Schedule 30: Financial Contributions.	Oppose	Concerned about the philosophy and methodology for the proposed financial contributions for new state highways as set out below. Notes that NZTA invests significant sums in stormwater treatment and seeks to progressively improve treatment in highly constrained environments and is concerned that a contribution on top of these investments is unreasonable and	Remove the provisions for financial contributions for state highways. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>could make some projects unviable. Suggests the level of adverse effect from state highway discharges has not been quantified nor have a reasonable range of measures been investigated to determine the most appropriate action in a section 32 analysis. Notes the proposal if implemented would require significant amounts of public money to be expended and suggests the 32 analysis does not acknowledge these costs, nor does it clearly outline how the \$360 per 100m² figures have been derived. Considers in the absence of this information, it is not clear that the charges are fair, reasonable nor proportionate; Notes that funding for projects is allocated in advance and any current project applying for consent will not have budgeted for these contributions. If a financial contribution were to be proposed it would need to be implemented on phased basis and/or have an exemption for essential infrastructure such as state highways. Notes there is no differentiation for state highway areas which are not 'live traffic' lanes i.e.. not vehicle contaminant generating (eg. police parking areas, maintained areas/access, shoulders).</p>	
S275.044	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o- Porirua.	Amend	Notes the prefacing text implies (but is not specific) that a single network stormwater management strategy (SMS) will be provided but notes this may not be the case and catchment or area based SMSs may be provided	<p>Modify prefacing text: A stormwater management strategy (or strategies) for the local authority or state highway stormwater networks shall be prepared and implemented that</p> <p>Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S275.045	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o- Porirua.	Amend	Suggests schedule 31 should be modified to reflect Schedule 4 of the RMA "...must be specified in sufficient detail to satisfy the purpose for which it is required". Notes a range of times would not apply to the state highway network (eg. wastewater) so the use of "shall" is inappropriate	Modify text following point 11: As a minimum, a stormwater management strategy shall be provided the following in sufficient detail to satisfy the purpose for which it is required: Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.046	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o- Porirua.	Amend	Point 1 Considers it is not appropriate to require the stormwater network to be "in accordance" with the objectives and policies as this requires a literal compliance with higher level wording. Notes the SMS is prepared under the Regional Plan and must therefore align with the objectives and policies.	Delete Point 1 Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.047	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te	Amend	Point 4 Considers this point foresees an unrealistic degree of monitoring for the state highway network which has numerous discharge points	Remove state highways from this point. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Awarua-o-Porirua.			
S275.048	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	Point 8 Notes it may not always be possible to identify locations for stormwater retention and detention in the state highway network and the wording should provide for this.	Reword as follows: identifies locations and opportunities (if any) for the retention or detention of stormwater flows or volumes, and Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.
S275.049	12 Schedule s	Schedule 33: Vegetation Clearance Erosion and Sediment Management Plan.	Amend	Supports the general principle of a management plan but considers the range of detailed matter is overly prescriptive, especially where combined with rules (eg WH.R18) that are required to be prepared in accordance with Schedule 33 (ie. suggesting non-compliance with the detail of Schedule 33 may lead to a change in activity status). Suggests a range of matters appear to be overly onus or uncertain. Notes B Management Objectives (b) requires pre-development levels of discharge, regardless of current land use. Notes B Management Objectives (d) assumes land use will be revegetated but this may not be the case where new infrastructure or buildings are proposed. Notes Operating systems and practices (c) appears to be mor focused on forestry activities. Considers Maps (b) (viii) an inappropriately high level of detail for (eg) 300m ² of vegetation clearance but is perhaps suitable for large scale clearance.	Move to a guideline and/or reassess the detail within Schedule 33 with inclusion of prefacing statements indicating that the Management Plan should reflect likely effects of the proposal. Any further alternative or consequential relief as may be necessary to fully achieve the relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S218 Tim Moody

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S218.001	General comments	General comments - overall	Not Stated	Endorses the submission of Robert James Anker	Endorses the relief sought in the submission of Robert James Anker
S218.002	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Opposes the inclusion of farms between 4-20 due to the requirements placed on small lifestyle block owners and considers the proposed changes make the land incapable of reasonable use.	Exclude lifestyle blocks of circa 4 hectares, with the minimum inclusion size being 10 hectares. Ensure PC1 does not make land incapable of reasonable use.

S283 Todd Henry

		- water bodies			
S175.004	General comments	General comments - freshwater	Not Stated	Considers there is not enough water quality information to confirm where sediment is originating from and that more monitoring stations/points and more data are required to establish the source of any quality reduction.	Withdraw the Plan Change
S175.005	12 Schedules	Schedule 35: Small farm registration.	Oppose	Concerns about the range of data required and the expertise required to produce the amount of data required. Concerns that GWRC has not yet developed its own systems to receive this data.	Withdraw the Plan Change

S177 Transpower New Zealand Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S177.001	General comments	General comments - current legislation	Not Stated	Notes PC1 should give effect to the NPS-FM whilst also giving effect to all other national policy statements including the NPSET and NESETA but the s32 report does not reference the NPSET and NESETA and appears that they have not been considered in the PC1 preparation. Seeks to ensure the objective of the NPSET is given effect to through provisions of PC1 while also giving effect to the NPS-FM.	Ensure the objective of the NPSET is given effect to through provisions of PC1 while also giving effect to the NPS-FM.
S177.002	General comments	General comments - overall	Not Stated	The submitter recognises the objectives and policies of the RRPS and NRP for regionally significant infrastructure will continue to apply under PC1. Considers it is not evident from the provisions of PC1, or s32 Report, that consideration has been given to providing for the RPS and NRP objectives and policies related to regionally significant infrastructure when developing provisions for the whaitua.	Ensure that higher-order direction on regionally significant infrastructure continues to be provided for through PC1 while also giving effect to the NPS-FM.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S177.003	General comments	General comments - unplanned greenfield development	Not Stated	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas".</p> <p>Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET.</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation) on the management of development in "unplanned greenfield development areas". Concerns with Councils stance that an overlap will be addressed through "concurrent plan change processes" but any process would be ad-hoc and without any overarching legislation to give structure and certainty to submitters, applicants, and the local authorities.</p> <p>Concerned about the concurrent process anticipated to manage "unplanned greenfield development" areas, noting decisions on separate plan changes must be made separately. Notes Territorial authorities and the regional council have a duty to avoid unreasonable delay, which may result in concurrent plan changes becoming unsynchronised. Consider ad-hoc process is likely to be inefficient and frustrating, and risks inconsistent decision making. Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA.</p>	Define the term "greenfield development", and that this term must exclude the operation, maintenance, upgrading, or development of regionally significant infrastructure'.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S177.004	General comments	General comments - definitions	Not Stated	Notes significant changes to Policy 7 of the RPS through Proposed Change 1 as recommended through the S42A officer right of reply.	Redevelopment of existing or the creation of new impervious surfaces at high-risk industrial or trade premises should be a permitted or controlled activity, subject to appropriate conditions.
S177.005	General comments	General comments - earthworks	Not Stated	<p>Notes the NESETA does not regulate earthworks subject to a regional rule and therefore the earthworks rules apply to National Grid activities. Considers the earthworks policies and rules in PC1 do not provide for a reasonable level of earthworks with no permitted activity standards for earthworks at any scale.</p> <p>Submitter notes above notified rule framework is an error which has been corrected by GWRC under clause 16 Schedule 1 to RMA as a memo on December 6th 2023. Submitter notes their submission is made on PC1 as notified with legal effect of provisions.</p> <p>Considers it inefficient for almost all earthworks to require resource consent as this will create an administrative burden with little clear environmental benefits and adverse effects can be managed through permitted activity conditions. Opposes the blanket shutdown of earthworks between June-October as instances may occur where this is unavoidable and can be carefully managed mitigate adverse effects on stability and run-off. Notes the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021) provides a pathway for earthworks to be undertaken in winter months and is referred to in the earthwork provisions.</p> <p>Concerns the activity status pathway for earthworks insufficient to facilitate upgrading or development of the National Grid, consistent with NPSET. Concerns of uncertainty as to whether consents will be granted under s104D of the RMA, even when effects triggers can be sufficiently mitigated through consent conditions.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S177.006	General comments	General comments - definitions	Not Stated	<p>Concerns the vegetation clearance provisions on 'high erosion risk land' do not recognise need to undertake vegetation clearance to prevent encroachment of woody vegetation on National Grid transmission lines and support structures.</p> <p>Submitter is not opposed to revegetation generally, but considers revegetation should not be promoted underneath or near to National Grid transmission lines and support structures, as this may compromise future safe operation of the National Grid.</p> <p>Questions appropriateness of mapping used to identify where resource consent is required for vegetation clearance. Notes mapping includes small and incohesive areas of vegetation, and questions efficiency or effectiveness of regulating these. Considers maps should be amended to only identify cohesive areas of vegetation being subject to rules. Seeks specific reference to NESETA at start of chapter to highlight NESETA regulations to plan users.</p>	<p>Amend maps to only identify cohesive areas of vegetation being subject to rules.</p> <p>Include specific reference to NESETA at start of chapter to highlight NESETA regulations to plan users.</p>
S177.007	General comments	General comments - stormwater management	Not Stated	<p>Concerns PC1 promotes mandatory financial contributions as a method of offsetting residual adverse effects of contaminants from impervious surface runoff that are considered to be impractical to treat on site, but treatment methods incorporated into the stormwater discharge rules. Considers approach taken by PC1 requiring financial contributions to offset all residual adverse effects regardless of scale is inconsistent with the NPS-FM, which only requires residual adverse effects that are more than minor be offset (or compensated). Considers applicants should be given reasonable opportunity to avoid, minimise or remedy adverse effects associated with contaminants in stormwater runoff and only circumstances where residual adverse effects are</p>	<p>Remove the mandatory requirement for financial contributions as a condition of rules, but the financial contributions regime proposed by PC1 continues to be provided for through PC1's policies, as an optional method alongside other offsetting or compensation methods provided for by the NPS-FM.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>more than minor should offsetting or compensated. Considers circumstances where offsetting or compensation is required, applicants should not be bound to financial contributions, and should have an option to propose offsetting or compensation in line with Appendix 6 and Appendix 7 of the NPS-FM. Considers financial contributions method could be an effective method of offsetting and should remain open as an option, but will only be effective if used to deliver appropriate offsetting projects.</p> <p>For consistency between financial contributions provisions proposed by PC1 and NPS-FM, submission seeks the mandatory requirement for financial contributions as a condition of the rules is removed, but the financial contributions regime proposed by PC1 continues to be provided for through PC1's policies, as an optional method alongside other offsetting or compensation methods provided for by the NPS-FM.</p>	
S177.008	General comments	General comments - fresh water	Not Stated	<p>Considers it inappropriate that provisions for vegetation clearance and the permitted activity rule for earthworks have been included in the freshwater planning instrument, as the principal purpose of these provisions is to control the use of land for the purpose of soil conservation. In addition to this, these rules do not manage discharges to freshwater. Considers provisions must be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>Reallocate vegetation clearance and the permitted activity rule for earthworks to Part 1 Schedule 1 planning instrument.</p>
S177.009	2 Interpretation	Earthworks	Amend	<p>Considers the rules for earthworks do not give effect to NPSET, as they do not provide for the reasonable maintenance, upgrading or development of the National Grid. Considers the operative definition exclusion for electricity lines and support structures (including the National Grid) should also apply to the proposed definition for a consistent approach. Considers the definition would be clearer by providing exclusions as a disjunctive list below</p>	<p>Amend provision as follows:</p> <p>For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only:</p> <p>The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening,</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the definition rather than embedded within definition as a conjunctive list.	<p>cultivation, and disturbance of land for the installation of fence posts. Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017.</p> <p>Earthworks do not include:</p> <p>(a) gardening (b) cultivation (c) disturbance of the land for the installation of fenceposts (d) the construction, repair, upgrade or maintenance of electricity lines and their support structures, including the National Grid (e) ...</p> <p>For all other whaitua: [...]</p>
S177.010	2 Interpretation	High risk industrial or trade premise	Amend	<p>Considers term "contaminant" is too broad to be used in definition. Considers all industrial or trade premises could potentially fall under definition (not just those storing, generating or using hazardous substances). Considers the scope of activities covered by definition unclear.</p> <p>Notes focus of provisions the definition relates to is risk management of hazardous substances from high risk industrial or trade premises being entrained in stormwater, then definition should be amended to delete reference to "contaminants" and focus only on hazardous substances. Considers this would provide greater clarity to plan users on the scope of activities under the definition.</p>	<p>Amend as follows:</p> <p>High risk industrial or trade premise</p> <p>An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include:</p>
S177.011	2 Interpretation	Highest erosion risk land (woody vegetation)	Neutral	Not stated	Retain as notified (noting the submission points on the maps and provision).

Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S177.012	2 Interpretation	Impervious surfaces	Neutral	Notes access to National Grid transmission lines and structures in rural areas is by vehicular access tracks which if considered to be impervious surfaces, could lead to a requirement for resource consent for routine reconditioning of existing access tracks and create an impediment to the operation and maintenance of the National Grid, contrary to policy 2 and policy 5 of NPSET. Considers for the avoidance of doubt, access tracks (including vehicular access tracks) should be excluded from definition of impervious surfaces.	<p>Impervious surfaces</p> <p>Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes:</p> <p>roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios,</p> <p>and excludes:</p> <p>grassed areas, gardens and other vegetated areas access tracks (including vehicular access tracks) porous or permeable paving slatted decks which allow water to drain through to a permeable surface porous or permeable paving and living roofs roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)</p>
S177.013	2 Interpretation	Redevelopment	Amend	<p>Seeks reference to redevelopment of existing urbanised property is removed from chapeau, as the definition also applies to rules that are not exclusively limited to redevelopment of urbanised property (see for example rule WH.R11). Considers reference to "addition (new)" should be replaced with "addition of new" to improve clarity of provision.</p> <p>Seeks reference to "minor" be removed as it adds uncertainty to definition scope. Considers activity status for redevelopment of impervious surfaces associated with National Grid assets is overly onerous in context of policy 2 and policy 5 of NPSET. Considers that to give effect to policy 2 and policy 5 of the NPSET, as well as policies 13 and 14 in the NRP it is appropriate to exclude redevelopment of existing impervious surfaces for</p>	<p>Amend as follows:</p> <p>Redevelopment For the purpose of assessment of a proposal involving the redevelopment of an existing urbanised property (i.e. brownfield development, upgrades to existing roads etc.) in relation to stormwater effects, this includes is the replacement, reconstruction, or addition (new) of new impervious surfaces. Excludes: minor maintenance or repairs to roads, carparking areas, driveways and paving installation, maintenance or repair of underground infrastructure or network utilities requiring trenching and resurfacing redevelopment of existing impervious surfaces for the purposes of operating, maintaining, or upgrading the National Grid activities that only involve the re-roofing of existing buildings.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the purposes of operating, maintaining, or upgrading the National Grid from the definition.	
S177.014	2 Interpretation	Unplanned greenfield development	Oppose	<p>Notes "greenfield development" is undefined and there is a high degree of uncertainty about which developments are prohibited under the rules. Considers level of uncertainty inappropriate for a definition that determines the scope of prohibited activity rules. Notes if the term "greenfield development" is interpreted as development on greenfield land, it include all types of development, including the development of National Grid lines, structures, substations, and access.</p> <p>Notes prohibiting development of National Grid is contrary to objectives of the NPSET and could prohibit the development of other regionally significant infrastructure that provide social, economic, cultural, and environmental benefits to the region, and provide for the safe and efficient functioning of the region and beyond. Considers that the term "greenfield development" must be defined.</p> <p>and the term "urban development" should also be defined.</p> <p>Considers it necessary to exclude the maintenance, upgrading or development of regionally significant infrastructure from any definition of "greenfield development". Considers this package of amendments to definitions will provide sufficient certainty about scope of the term "greenfield development", provide for RPS integration, and ensure regionally significant infrastructure is not prohibited in "unplanned greenfield development" areas.</p>	<p>Amend the definition of "unplanned greenfield development" as follows:</p> <p>Unplanned greenfield development Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023.</p> <p>Provide a definition of "greenfield development" as follows: Greenfield development Urban development on land that has not been previously developed for urban land uses.</p> <p>Greenfield development excludes:</p> <p>operation, maintenance, upgrading or development of regionally significant infrastructure</p> <p>As a consequential amendment, provide a definition of "urban development" to match the Regional Policy Statement definition as follows: Urban development</p> <p>Urban development is subdivision, use and development that is characterised by its planned reliance on reticulated services (such as water supply and drainage) by its generation of traffic, and would include activities (such as manufacturing), which are usually provided for in urban areas. It also typically has lots sizes of less than 3000 square metres.</p>
S177.015	5.2 and 5.3 Discharge	Rule R101: Earthwork	Oppose	Seeks the operative permitted activity rule for earthworks continues to apply within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua	Retain rule R101 so that it continues to apply in Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	s to land and water and land use rules	s - permitted activity.		Whaitua, as rules WH.R23 and P.R22 do not provide any permitted activity threshold for earthworks smaller than 3,000m2 per property, and the operative rule provides reasonable conditions for undertaking all other earthworks that are less than 3,000m2 that are not otherwise permitted by WH.R23 and P.R22.	
S177.016	5.4 Beds of lakes and rivers	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Seeks reference to NESETA to highlight to plan users and assist with plan interpretation. Considers it relevant given the potential difference in standards and activity status.	Insert the following to the Interpretation section of the chapter: Many activities relating to the operation, maintenance, upgrading, relocation or removal of an electricity transmission line and ancillary structures that existed prior to 14 January 2010 are controlled by the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA), separate to this Plan. Where the provisions of this Plan conflict with the requirements of the NESETA, the provisions of the NESETA apply.
S177.017	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Amend	Considers removal of reference to "structure" from chapeau significantly reduces range of structures permitted and it is unclear whether National Grid transmission lines traversing rivers or lakes will be permitted under rule. Considers reference to "cable" in rule is not sufficient to provide for National Grid, as National Grid cables are generally transmission lines located below ground (not those lines above ground). Seeks either the reference to "new structure" in chapeau is retained, or specific reference to National Grid transmission lines is provided for in rule, wherever the term "cable" is mentioned. Alternatively, considers matter would be addressed by reinstating words "structure, including" to chapeau of rule. Notes minor error in chapeau, where "structure associated with vegetative bank edge protection" should be amended to refer to structure in singular (rather than plural).	Reinstating the words "structure, including" to the chapeau of the rule. Alternatively, amend the rule as follows: Rule R128: New structures - permitted activity The placement of a new structure, including sediment retention weirs, pipelines (such as a natural gas pipeline), ducts, cables, National Grid transmission line , hydrological and water quality monitoring equipment, fences, erosion protection structures, debris arrestor structures or a and structures associated with vegetative bank edge protection except a structure permitted by Rules R125, R126 and R127 and passive flap gates, that is fixed in, on, under, or over the bed of any river or lake, excluding activities regulated by the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017 except general condition 5.4.4(n), including any associated:

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					controls remain in place and are maintained until the land is stabilised against erosion.
S177.026	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Support	Considers standards set out in the policy to be reasonable.	Retain as notified
S177.027	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	<p>Considers a policy requiring all earthworks over 3,000m² to be shut down over the winter months is inappropriate, as it does not recognise there may be circumstances where earthworks need to occur over those months in order to provide for safe and efficient operation, maintenance, upgrading, or development of regionally significant infrastructure.</p> <p>Considers there are instances where earthworks are unavoidable at this time, and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff. Notes GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), which is referred to in the policy, provides a pathway for earthworks to be undertaken during the winter months subject to careful management and considers pathway should continue to be available to applicants through consent process.</p>	Delete policy.
S177.028	8 Whaitua Te Whanganui-a-Tara	8.3 Rules	Amend	<p>Seeks reference to NESETA to highlight to plan users and assist with plan interpretation.</p> <p>Considers it relevant given the potential difference in standards and activity status.</p>	<p>Insert the following to the Interpretation section of the chapter:</p> <p>Many activities relating to the operation, maintenance, upgrading, relocation or removal of an electricity transmission line and ancillary structures that existed prior to 14 January 2010 are controlled by the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA), separate to this Plan. Where the provisions</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>WH.R2, WH.R3, or WH.R4 can be appropriately addressed through consent conditions. Considers this does not appropriately give effect to policy 2 of NPSET.</p> <p>Considers non-complying activity rule is not sufficiently justified in section 32 report and does not appropriately provide for activities that do not meet permitted activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity. Submitter does consider that non-complying activity status should be retained for proposals that do not provide a Stormwater Impact Assessment under rule WH.R11, as this would clearly be contrary to objectives and policies of the Plan.</p>	<p>does not meet the conditions of Rule WH.R11, or (d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater into water or onto or into land where it may enter water, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or WH.R7, or a discretionary activity under Rule WH.R10 or WH.R11, or a prohibited activity under WH.R13, is a non-complying discretionary activity.</p> <p>As a consequential amendment, provide a new non-complying activity rule for stormwater discharges that are not a discretionary activity under rule WH.R11.</p>
S177.037	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas".</p> <p>Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET.</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation) on the management of development in "unplanned greenfield development areas". Noting decisions on separate plan changes must be made separately and considers this will be highly inefficient for applicants and submitters and applicants and risks inconsistency. Considers the appropriate means of providing for a combined regulatory approach is</p>	Delete rule.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>through a combined planning document to address the issue, as per section 80 of the RMA.</p> <p>Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on rule.</p>	
<p>S177.038</p>	<p>8 Whaitua Te Whanganui-a-Tara</p>	<p>Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.</p>	<p>Amend</p>	<p>Notwithstanding concerns raised in this submission regarding the mapping of 'highest erosion risk land (woody vegetation)', submitter seeks amendment to R17.</p> <p>Regular vegetation clearance to prevent vegetation from encroaching on National Grid transmission lines and structures (beyond that provided in Electricity (Hazards from Trees) Regulations 2003) is a necessary part of maintaining safe and efficient operations of electricity transmission network. Providing for vegetation clearance underneath or near National Grid transmission lines or structures as a permitted activity is necessary in order to give effect to policy 5 of NPSET, which requires that the reasonable operational and maintenance requirements of the National Grid are provided for, and policy 10 of NPSET, which requires operation and maintenance of electricity transmission network is not compromised.</p> <p>Seeks to add a subclause to clause (a) to clarify that vegetation clearance of less than 200m² per property per year is permitted activity (on the basis that clearance of more than 200m² is a controlled activity under rule WH.R18). Considers it necessary to avoid clearance of less than 200m² becoming an innominate activity (and therefore discretionary).</p>	<p>Amend rule as follows:</p> <p>Rule WH.R17: Vegetation clearance on highest erosion risk land</p> <p>Vegetation clearance on highest erosion risk land (woody vegetation) and any associated discharge of sediment to a surface water body is a permitted activity provided the following conditions are met:</p> <p>(a) the vegetation clearance is: (i) for no more than a total area of 200m² per property in any consecutive 12-month period, or (ii) to implement an action in the erosion risk treatment plan for the farm, or (iii) for the control of pest plants, and or (iv) for the purposes of operating or maintaining the National Grid, and (b) debris from the vegetation clearance is not placed where it can enter a surface water body.</p> <p>In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Clarification is sought as to how the 200m2 is calculated - is it the identified woody vegetation or on a site which contains an area of woody vegetation.</p> <p>Opposes rule being included within freshwater planning instrument, as the purpose of rule is to manage land use for purposes of soil conservation and seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	
S177.039	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	<p>Subject to submitters relief being granted on rule WH.R17 (submission point 42) submitter is neutral on rule, noting NESETA regulation 32 would apply (and prevail) where works are not permitted.</p> <p>Considers the rehabilitation of areas of cleared vegetation (under matter of control 3) should not be undertaken in a manner or in locations where vegetation would encroach on National Grid lines or structures. Considers that an additional matter of control is necessary to address this matter.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation and seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R18: Vegetation clearance on highest erosion risk land</p> <p>Vegetation clearance on highest erosion risk land (woody vegetation), of more than a total area of 200m2 per property in any consecutive 12-month period, and any associated discharge of sediment to a surface water body is a controlled activity provided an erosion and sediment management plan has been prepared in accordance with Schedule 33 (vegetation clearance plan) and submitted with the application for resource consent under this Rule.</p> <p>Matters of control</p> <ol style="list-style-type: none"> 1. The content of the erosion and sediment management plan, including the actions, management practices and mitigation measures necessary to ensure that discharge of sediment will not exceed that which occurred from the land prior to the vegetation clearance occurring 2. The area, location and method of vegetation clearance 3. Stabilisation and rehabilitation of the area cleared 4. The monitoring, record keeping, reporting and information provision requirements for the holder of the resource consent (including auditing of information) to demonstrate and/or monitor compliance with the resource consent and the erosion and sediment management plan 5. The timing, frequency and requirements for review, audit

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>and amendment of the erosion and sediment management plan</p> <p>6. The time and circumstances under which the resource consent conditions may be reviewed 7. The need for any rehabilitated areas of vegetation to be clear of National Grid transmission lines and support structures.</p> <p>In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S177.040	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Oppose	<p>Subject to Transpower's relief being granted on rule WH.R17 (submission point 44) submitter is neutral on rule, noting NESETA regulation 32 would apply (and prevail) where works are not permitted.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation and seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	Reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.
S177.041	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	<p>Notes effect of use of "and" at the end of condition (b) is to exclude all earthworks not related to implementing farm erosion risk treatment plans or farm environmental plans from the permitted activity rule. As a result, all other earthworks, regardless of size or whether they meet conditions (c) to (h) will be a restricted discretionary activity under rule WH.R24. Considers this is an error and acknowledges Council have corrected this under clause 16 of Schedule 1 to the RMA by way of a memo published on 6 December 2023. Submitter has submitted on the rule as notified.</p> <p>Notes Council's proposed approach is to remove associated discharges from earthworks rule, and instead, discharges associated with earthworks are permitted under separate "minor discharges" rule (R91). Given that rule WH.R23 is not a discharge</p>	<p>Amend rule as follows:</p> <p>Rule WH.R23: Earthworks</p> <p>Earthworks is a permitted activity, provided the following conditions are met:</p> <p>(a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or</p> <p>(b) the earthworks are to implement an action in the farm environment plan for the farm, and or</p> <p>(c) the area of earthworks does not exceed 3,000m² per property in any consecutive 12-month period, and</p> <p>(d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and</p> <p>(e) soil or debris from earthworks is not placed where it can</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>rule, submitter considers it should not include condition (g), which is a discharge condition. Considers condition (g) inappropriate as it is not consistent with the minor discharges rule, which permits a minor discharge of suspended solids to surface water bodies or coastal water. Considers that given minor discharges rule provides for discharge of suspended solids, condition (h) be amended to reflect purpose of erosion and sediment control is to prevent uncontrolled discharge of sediment, rather than all discharge of sediment.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation. As rule does not provide for discharges associated with earthworks, there is no justification for including it in freshwater planning instrument, seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a the uncontrolled discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).</p> <p>In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S177.042	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	<p>Considers chapeau of rule be restructured to locate "associated discharge" element of rule to follow on from "Earthworks that do not comply with Rule WH.R23" as discharges associated with permitted earthworks are not provided for under rule WH.R23 (which only permits earthworks). Discharges from permitted earthworks are instead provided for under the "minor discharges" rule R91.</p> <p>Considers a condition requiring earthworks be shut down over the winter months is inappropriate, as it does not recognise circumstances where earthworks need to occur over those months in order to provide for safe and efficient operation, maintenance, upgrading, or development of</p>	<p>Amend rule as follows:</p> <p>Rule WH.R24: Earthworks</p> <p>Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23, and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, is a restricted discretionary activity, provided the following conditions are met:</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>regionally significant infrastructure (including the National Grid).</p> <p>Recognises earthworks should be planned so majority of bulk earthworks occur outside of winter months. Considers instances where earthworks are unavoidable and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff.</p> <p>Notes GWRC Erosion and Sediment Control Guideline for Wellington Region (2021), which is referred to in policy WH.P31 (and in the note to permitted activity rule WH.R23), provides a pathway for earthworks to be undertaken during winter months subject to careful management. Considers rather than a blanket restriction on all earthworks over this period, reference is made to matters set out under section G5.0 of guideline as a matter of discretion for earthworks.</p> <p>Considers this will ensure consistency between the rules and the Council's technical guidance for the management of earthworks, and provide for appropriate conditions to manage works over the winter period to be included in resource consents. Considers the note directing Plan users to GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021) that is included under permitted activity rule WH.R23 also be provided for under this rule.</p>	<p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>(ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.</p> <p>Matters for discretion</p> <ol style="list-style-type: none"> 1. The location, area, scale, volume, duration and staging and timing of works 2. The design and suitability of erosion of sediment control measures including consideration of hazard mitigation and the risk of accelerated soil erosion associated the staging of works and progressive stabilisation 3. The placement and treatment of stockpiled materials on the site, including requirements to remove material if it is not to be reused on the site 4. The proportion of unstabilised land in the catchment 5. The adequacy and efficiency of stabilisation devices for sediment control 6. Any adverse effects on: <ul style="list-style-type: none"> (i) groundwater, surface water bodies and their margins, particularly surface water bodies within sites identified in Schedule A (outstanding water bodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (mana whenua), Schedule F (ecosystems and habitats with indigenous biodiversity), Schedule H (contact recreation and Māori customary use) or Schedule I (important trout fishery rivers and spawning waters) (ii) group drinking water supplies and community drinking water supplies (iii) mauri, water quality (including water quality in the coastal marine area), aquatic and marine ecosystem health, aquatic

	o-Porirua Whaitua	Discharge standard for earthworks sites.			
S177.053	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	<p>Considers a policy requiring all earthworks over 3,000m² to be shut down over the winter months is inappropriate, as it does not recognise there may be circumstances where earthworks need to occur over those months in order to provide for safe and efficient operation, maintenance, upgrading, or development of regionally significant infrastructure.</p> <p>Considers there are instances where earthworks are unavoidable at this time, and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff. Notes GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), which is referred to in the policy, provides a pathway for earthworks to be undertaken during the winter months subject to careful management and considers pathway should continue to be available to applicants through consent process.</p>	Delete policy.
S177.054	9 Te Awarua-o-Porirua Whaitua	9.3 Rules	Amend	<p>Seeks reference to NESETA to highlight to plan users and assist with plan interpretation. Considers it relevant given the potential difference in standards and activity status.</p>	<p>Insert the following to the Interpretation section of the chapter:</p> <p>Many activities relating to the operation, maintenance, upgrading, relocation or removal of an electricity transmission line and ancillary structures that existed prior to 14 January 2010 are controlled by the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA), separate to this Plan. Where the provisions of this Plan conflict with the requirements of the NESETA, the provisions of the NESETA apply.</p>
S177.055	9 Te Awarua-	Rule P.R2: Stormwater	Amend	<p>Considers permitted activity conditions reasonable on the basis they are consistent with conditions for</p>	Amend rule as follows:

S177.057	9 Te Awarua-	Rule P.R4: Stormwate	Amend	Limiting application of rule to only existing high risk industrial or trade premises would result in new	Amend as follows:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	r from an existing high risk industrial or trade premise - permitted activity.		<p>substations or switchyards for National Grid being a discretionary activity under rule P.R10. Considers this inappropriate as it does not give effect to policy 2 of NPSET. Subject to amendments to condition (d), considers the conditions are appropriate to manage the potential adverse effects associated with stormwater discharges from existing or new high risk industrial or trade premises, and considers both should be provided for under same rule.</p> <p>Considers condition (d) of rule should be amended to remove reference to contaminants and retain a focus on hazardous substances. The term "contaminants" is too broad and given purpose of managing high risk industrial or trade premises is to manage potential adverse effects associated with discharge hazardous substances, it is appropriate condition (d) manages only hazardous substances, rather than contaminants more broadly (which are managed under the remainder of the conditions).</p> <p>Considers note at the end of rule be deleted as part of giving effect to relief sought in this submission, as well as relief sought by submitter in relation to rules for new or redeveloped impervious surfaces.</p>	<p>Rule P.R4: Stormwater from an existing high risk industrial or trade premise</p> <p>The discharge of stormwater from an existing high risk industrial or trade premise, into water, or onto or into land where it may enter water, including via an existing local authority stormwater network, is a permitted activity, provided the following conditions are met:</p> <p>(a) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(b) the discharge does not contain wastewater, and</p> <p>(c) if the discharge is to land where it may enter groundwater,</p> <p>(i) the discharge cannot cause or exacerbate the flooding of any other property, and</p> <p>(ii) the discharge is not located within 20m of a bore used for water abstraction for potable supply or stock water, and</p> <p>(d) any contaminants stored or used on site, or hazardous substances stored or used on site, cannot be entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or</p> <p>(i) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or</p> <p>(ii) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, and</p> <p>(e) if the discharge is into a surface water body, coastal water or via an existing local authority stormwater network, the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m³ where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>(coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m3 where the discharge enters any other water, and where the discharge is not via an existing local authority stormwater network the discharge shall also not: (f) cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and (g) give rise to the following effects beyond the zone of reasonable mixing: (i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (ii) any conspicuous change in the colour, or (iii) a decrease in water clarity of more than 1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or 2. 30% in any other river, or (iv) any emission of objectionable odour, or (v) the freshwater is unsuitable for consumption by farm animals, or (vi) any significant adverse effects on aquatic life. Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to P.R10.</p>
S177.058	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	Notes rule makes new impervious surfaces at high risk industrial or trade premises a discretionary activity under rule WH.R11. Considers this inappropriate in context of policy 2 and policy 5 of NPSET. Considers it could lead to perverse environmental outcomes, where impervious surfaces are left to degrade as redevelopment of the surface would require a discretionary activity consent. Considers it necessary to provide for new and redeveloped impervious surfaces as permitted or controlled activity under rules WH.R5, WH.R6 and WH.R7, subject to appropriate conditions. Considers additional conditions under (d) of rule	<p>Amend rule as follows:</p> <p>Rule P.R5: Stormwater from new and redeveloped impervious surfaces</p> <p>The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment activities of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing or new local authority stormwater network, that is not a high risk industrial or trade premise or unplanned</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>WH.R4 are appropriate to manage potential adverse effects associated with hazardous substances and considers these be incorporated into rule WH.R5.</p> <p>Considers a fixed baseline in condition (a) would be unworkable as it could result in consecutive redevelopment of same impervious surfaces being a controlled or discretionary activity, even where surface is less than 1,000m2. Concerns how compliance with fixed baseline will be monitored with respect to redevelopment (as this cannot be readily measured). Considers a 12-month time period, similar to that used for earthworks, would be more appropriate as it provides greater certainty to applicants, is more readily implementable, and is able to be effectively monitored.</p> <p>Considers Condition (c)(ii) Should be amended so hydrological control is only required for new impervious surfaces, as redevelopment of existing impervious surfaces will not change quantity of runoff from impervious surfaces.</p> <p>Seeks references to "impervious areas" (undefined) in conditions (c)(i) and (ii) be replaced with "impervious surfaces" (defined) and minor amendments made to condition (c)(ii) to improve the clarity of condition.</p>	<p>greenfield development, is a permitted activity, provided the following conditions are met:</p> <p>(a) the proposal involves the creation of new, or redevelopment of existing impervious areas of less than 1,000m2 (baseline property existing impervious area as at 30 October 2023) per property in any consecutive 12-month period and</p> <p>(b) all new building materials associated with the development shall not include exposed zinc (including galvanised steel) or copper roof, cladding and spouting materials and</p> <p>(c) the proposal provides hydrological control measures (for example rain tanks) onsite or offsite, where discharges will enter a surface water body (including via an existing local authority stormwater network):</p> <p>(i) for all impervious areas impervious surfaces associated with a greenfield development, or</p> <p>(ii) for all redeveloped and new impervious areas impervious surfaces involving greater than 30m2 of impervious area of a associated with redevelopment (of an existing urbanised property), and</p> <p>(d) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(e) the discharge does not contain wastewater, and</p> <p>(f) the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m3 where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or (ii) 100g/m3 where the discharge enters any other water, and where the discharge is not via an existing or new local authority stormwater network:</p> <p>(g) the discharge shall not cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and</p>

Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>(h) the discharge shall not give rise to the following effects beyond the zone of reasonable mixing:</p> <p>(i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or</p> <p>(ii) any conspicuous change in the colour, or</p> <p>(iii) a decrease in water clarity of more than</p> <p>1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>2. 30% in any other river, or</p> <p>(iv) any emission of objectionable odour, or</p> <p>(v) the freshwater is unsuitable for consumption by farm animals, or</p> <p>(vi) any significant adverse effects on aquatic life. and where the new or redeveloped impervious surface is for a high risk industrial or trade premise:</p> <p>(i) any hazardous substances stored or used on site cannot be entrained in stormwater and enter a surface water body or coastal water, including via the stormwater network, or (i) there is a containment system in place to intercept and contain any spillage of hazardous substances for storage and removal, or</p> <p>(ii) the stormwater contains no hazardous substances except petroleum hydrocarbons, and in that situation, the stormwater is treated by an interceptor and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons.</p> <p>Note Where a property connects to a local authority stormwater network, additional connection requirements and authorisations may be required by the network utility operator. For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to Rule P.R10.</p>
S177.059	9 Te Awarua-	Rule P.R6: Stormwate	Amend	Notes the rule makes new impervious surfaces at high risk industrial or trade premises a discretionary	Amend rule as follows:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	r from new greenfield impervious surfaces - controlled activity.		<p>activity under rule WH.R11. Considers this inappropriate in the context of policy 2 of NPSET. Considers it necessary to provide for new and redeveloped impervious surfaces as permitted or controlled activity under rules WH.R5, WH.R6 and WH.R7, subject to appropriate conditions. Considers additional conditions under (d) of rule WH.R4 are appropriate to manage potential adverse effects associated with hazardous substances and considers these be incorporated into rule WH.R5.</p> <p>As per submission on policy WH.P15, submitter considers it not consistent with the NPS-FM to require mandatory financial contributions for purposes of aquatic offsetting, as the effects management hierarchy in NPS-FM only requires offsetting in circumstances where residual adverse effects are more than minor. Where residual adverse effects are more than minor, applicants should have opportunity to propose aquatic offsetting or compensation in accordance with Appendix 6 or 7 of NPS-FM. Considers it is inappropriate to require financial contributions as a condition, and instead, matter of control 6 should be amended to refer to policy WH.P15. This ensures appropriate aquatic offsetting or compensation (which may include financial contributions under Schedule 30) can be considered on a case by case basis, where required.</p> <p>Considers a fixed baseline in condition (a) would be unworkable as it could result in consecutive redevelopment of same impervious surfaces being a controlled or discretionary activity, even where surface is less than 1,000m2. Concerns how compliance with fixed baseline will be monitored with respect to redevelopment (as this cannot be readily measured). Considers a 12-month time period, similar to that used for earthworks, would be</p>	<p>Rule P.R6: Stormwater from new greenfield impervious surfaces</p> <p>The use of land for the creation of new impervious surfaces for greenfield development and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through an existing local authority stormwater network, that is not a high risk industrial or trade premise or unplanned greenfield development, is a controlled activity, provided the following conditions are met:</p> <p>(a) the proposal involves the creation of new impervious surfaces of between 1,000m2 and 3,000m2 (baseline property existing impervious area as at 30 October 2023) per property in any consecutive 12-month period or,</p> <p>(b) the proposal involves the creation new impervious surfaces of less than 1,000m2, but is not permitted under the conditions of Rule P.R6,</p> <p>and, (c) a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions), and</p> <p>(d) where stormwater directly or indirectly (through an existing local authority stormwater network) discharges to a river, hydrological control is provided either:</p> <p>(i) on-site, or</p> <p>(ii) off-site through an existing local authority stormwater network or privately owned stormwater network that has been sized to accommodate the proposed stormwater discharges, and</p> <p>(e) stormwater contaminant treatment is provided that captures 85% of the mean annual runoff and directs it to a stormwater treatment system that treats in accordance with Schedule 28 (contaminant treatment) and is provided either:</p> <p>(i) on-site, or</p> <p>(ii) off-site through an existing local authority stormwater</p>

S177.061	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-discretionary activity.	Amend	<p>Opposes default discretionary activity status for new or redeveloped impervious surfaces at high risk industrial or trade premises (including National Grid substations), for reasons set out in its submissions of rules P.R5, P.R6 and P.R7 (submission points 62-64). Considers a reasonable level of new or redeveloped impervious surfaces should be provided for as a permitted or controlled activity under rules P.R5, P.R6 and P.R7, subject to appropriate conditions to manage the potential adverse effects associated with hazardous substances.</p> <p>As per submission on policy P.P14, it is not consistent with NPS-FM to require mandatory financial contributions for purposes of aquatic offsetting, as the effects management hierarchy in</p>	<p>Amend rule as follows:</p> <p>Rule P.R10: Stormwater from new and redeveloped impervious surfaces</p> <p>The use of land for the creation of new or redevelopment of existing impervious surfaces (including greenfield development and redevelopment of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including via an existing local authority stormwater network, that is not permitted by Rule P.R5, or a controlled activity under Rule P.R6 or Rule P.R7, or prohibited under P.R12 is a discretionary activity provided the following conditions are is met:</p> <p>(a) the resource consent application includes a Stormwater</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>NPS-FM only requires offsetting in circumstances where residual adverse effects are more than minor.</p> <p>Where residual adverse effects are more than minor, applicants should have opportunity to propose aquatic offsetting or compensation in accordance with Appendix 6 or 7 of the NPS-FM. Considers it inappropriate to require financial contributions as a condition. Where aquatic offsetting or compensation (which may include financial contributions under Schedule 30) is considered to be necessary, this can be provided for as a condition of consent with reference to requirements of policy P.P14.</p>	<p>Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and.</p> <p>(b) if the proposal is for greenfield development, a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).</p>
S177.062	9 Te Awarua-o-Porirua Whaitua	Rule P.R11: All other stormwater discharges - non-complying activity.	Amend	<p>Considers that the move to non-complying activity status for all other stormwater discharges is not clearly explained or justified in section 32 report. Concerned with the jump between permitted activity status for stormwater discharges under rules P.R2, P.R3, and P.R4, and non-complying activity status under this rule. Minor non-compliances with conditions under these rules will trigger the non-complying activity rule.</p> <p>Non-complying activity status for minor breaches of rule conditions can be a particular issue for development or upgrading of the National Grid, which due to the linear nature of the Grid can involve complex, bundled consents for a broad range of activities, some of which may have adverse effects that are more than minor (for example, visual effects). This leads to a high degree of uncertainty as to whether consents for development or upgrading of the National Grid will be granted under section 104D of RMA, even where minor non-compliances with stormwater conditions under rules P.R2, P.R3, or P.R4 can be appropriately addressed through consent conditions. Regarding</p>	<p>Amend rule as follows:</p> <p>Rule P.R11: All other stormwater discharges - non-complying discretionary activity</p> <p>The:</p> <p>(a) discharge of stormwater onto or into land, including where contaminants may enter groundwater, that is not permitted by Rule P.R2, or (b) discharge of stormwater into water or onto or into land where it may enter water, that is not permitted by Rule P.R3, or a restricted discretionary activity under Rule P.R8, or</p> <p>(c) discharge of stormwater from a high risk industrial or trade premise that is not permitted by Rule P.R4, or the use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater from a high risk industrial or trade premise that does not meet the conditions of Rule P.R10, or</p> <p>(d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater water or onto or into land where it may enter water, that is not permitted by Rule P.R5, or a controlled activity under Rules P.R6 or P.R7, or a discretionary activity under Rule P.R9, or a prohibited activity under Rule P.R12,</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>the National Grid, this does not appropriately give effect to policy 2 of NPSET, as it does not provide for effective upgrading and development of electricity transmission networks.</p> <p>Considers non-complying activity rule is not sufficiently justified in section 32 report and does not appropriately provide for activities that do not meet permitted activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity. Non-complying activity status should be reserved for activities that are clearly contrary to the objectives and policies of the Plan (as they relate to stormwater discharges), rather than all discharges that do not meet permitted activity standards. Submitter does consider that non-complying activity status should be retained for proposals that do not provide a Stormwater Impact Assessment under rule P.R10, as this would clearly be contrary to objectives and policies of the Plan.</p>	<p>is a non-complying discretionary activity.</p> <p>As a consequential amendment, provide a new non-complying activity rule for stormwater discharges that are not a discretionary activity under rule P.R10.</p>
S177.063	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Oppose	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas".</p> <p>Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET.</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation)on the management of development in "unplanned greenfield development areas". Noting decisions on</p>	Delete rule.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>separate plan changes must be made separately and considers this will be highly inefficient for applicants and submitters and applicants and risks inconsistency. Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA.</p> <p>Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on rule.</p>	
S177.064	9 Te Awarua-o-Porirua Whaitua	Rule P.R16: Vegetation clearance on highest erosion risk land-permitted activity.	Oppose	<p>Notwithstanding concerns raised in this submission regarding the mapping of 'highest erosion risk land (woody vegetation)', submitter seeks amendment to R17.</p> <p>Acknowledging operative definition of Vegetation Clearance applies to rule, considers several amendments are necessary to the rule.</p> <p>Regular vegetation clearance to prevent vegetation from encroaching on National Grid transmission lines and structures (beyond that provided in Electricity (Hazards from Trees) Regulations 2003) is a necessary part of maintaining safe and efficient operations of electricity transmission network. Providing for vegetation clearance underneath or near National Grid transmission lines or structures as a permitted activity is necessary in order to give effect to policy 5 of NPSET, which requires that the reasonable operational and maintenance requirements of the National Grid are provided for, and policy 10 of NPSET, which requires operation and maintenance of electricity transmission network is not compromised.</p>	<p>Amend rule as follows:</p> <p>Rule P.R16: Vegetation clearance on highest erosion risk land</p> <p>Vegetation clearance on highest erosion risk land (woody vegetation) and any associated discharge of sediment to a surface water body is a permitted activity provided the following conditions are met:</p> <p>(a) the vegetation clearance is: (i) for no more than a total area of 200m² per property in any consecutive 12-month period, or (ii) to implement an action in the erosion risk treatment plan for the farm, or (iii) for the control of pest plants, and or (iv) for the purposes of operating or maintaining the National Grid, and (b) debris from the vegetation clearance is not placed where it can enter a surface water body.</p> <p>In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Seeks to add a subclause to clause (a) to clarify that vegetation clearance of less than 200m² per property per year is permitted activity (on the basis that clearance of more than 200m² is a controlled activity under rule P.R17). Considers it necessary to avoid clearance of less than 200m² becoming an innominate activity (and therefore discretionary).</p> <p>Clarification is sought as to how the 200m² is calculated - is it the identified woody vegetation or on a site which contains an area of woody vegetation.</p> <p>Opposes rule being included within freshwater planning instrument, as the purpose of rule is to manage land use for purposes of soil conservation and seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	
S177.065	9 Te Awarua-o-Porirua Whaitua	Rule P.R17: Vegetation clearance on highest erosion risk land - controlled activity.	Amend	<p>Subject to Transpower's relief being granted on rule P.R6 (providing for vegetation clearance for the purposes of operating or maintaining the National Grid as a permitted activity) submitter is neutral on rule, noting NESETA regulation 32 would apply (and prevail) where works are not permitted.</p> <p>Considers the rehabilitation of areas of cleared vegetation (under matter of control 3) should not be undertaken in a manner or in locations where vegetation would encroach on National Grid lines or structures. Considers that an additional matter of control is necessary to address this matter.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation and seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>Amend rule as follows:</p> <p>Rule P.R17: Vegetation clearance on highest erosion risk land</p> <p>Vegetation clearance on highest erosion risk land (woody vegetation), of more than a total area of 200 m² per property in any consecutive 12-month period, and any associated discharge of sediment to a surface water body, is a controlled activity provided an erosion and sediment management plan has been prepared in accordance with Schedule 33 (vegetation clearance plan) and submitted with the application for resource consent under this rule.</p> <p>Matters of control</p> <p>1. The content of the erosion and sediment management plan, including the actions, management practices and mitigation measures necessary to ensure that discharge of sediment will not exceed that which occurred from the land</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>prior to the vegetation clearance occurring</p> <p>2. The area, location and method of vegetation clearance</p> <p>3. Stabilisation and rehabilitation of the area cleared</p> <p>4. The monitoring, record keeping, reporting and information provision requirements for the holder of the resource consent (including auditing of information) to demonstrate and/or monitor compliance with the resource consent and the erosion and sediment management plan</p> <p>5. The timing, frequency and requirements for review, audit and amendment of the erosion and sediment management plan</p> <p>6. The time and circumstances under which the resource consent conditions may be reviewed</p> <p>7. The need for any rehabilitated areas of vegetation to be clear of National Grid transmission lines and support structures</p> <p>In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S177.066	9 Te Awarua-o-Porirua Whaitua	Rule P.R18: Vegetation clearance - discretionary activity.	Oppose	<p>Subject to Transpower's relief being granted on rule WH.R17 submitter is neutral on rule, noting NESETA regulation 32 would apply (and prevail) where works are not permitted.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation and seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>Reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S177.067	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	<p>Notes effect of use of "and" at the end of condition (b) is to exclude all earthworks not related to implementing farm erosion risk treatment plans or farm environmental plans from the permitted activity rule. As a result, all other earthworks, regardless of size or whether they meet conditions (c) to (h) will be a restricted discretionary activity under rule P.R23. Considers this is an error and acknowledges Council have corrected this under clause 16 of</p>	<p>Amend rule as follows:</p> <p>Rule P.R22: Earthworks Earthworks is a permitted activity, provided the following conditions are met:</p> <p>(a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Schedule 1 to the RMA by way of a memo published on 6 December 2023. Submitter has submitted on the rule as notified.</p> <p>Notes Council's proposed approach is to remove associated discharges from earthworks rule, and instead, discharges associated with earthworks are permitted under separate "minor discharges" rule (R91). Given that rule P.R22 is not a discharge rule, submitter considers it should not include condition (g), which is a discharge condition. Considers condition (g) inappropriate as it is not consistent with the minor discharges rule, which permits a minor discharge of suspended solids to surface water bodies or coastal water. Considers that given minor discharges rule provides for discharge of suspended solids, condition (h) be amended to reflect purpose of erosion and sediment control is to prevent uncontrolled discharge of sediment, rather than all discharge of sediment.</p> <p>Opposes rule being included within freshwater planning instrument, as purpose of rule is to manage land use for purposes of soil conservation. As rule does not provide for discharges associated with earthworks, there is no justification for including it in freshwater planning instrument, seeks that it be reallocated to Part 1 Schedule 1 planning instrument.</p>	<p>environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent the uncontrolled discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network.</p> <p>Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021). In addition to this, reallocate the rule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.</p>
S177.068	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	<p>Considers chapeau of rule be restructured to locate "associated discharge" element of rule to follow on from "Earthworks that do not comply with Rule P.R22" as discharges associated with permitted earthworks are not provided for under rule P.R22 (which only permits earthworks). Discharges from permitted earthworks are instead provided for under the "minor discharges" rule R91.</p>	<p>Rule P.R23: Earthworks Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule P.R22, and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water,</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers a condition requiring earthworks be shut down over the winter months is inappropriate, as it does not recognise circumstances where earthworks need to occur over those months in order to provide for safe and efficient operation, maintenance, upgrading, or development of regionally significant infrastructure (including the National Grid).</p> <p>Recognises earthworks should be planned so majority of bulk earthworks occur outside of winter months. Considers instances where earthworks are unavoidable and with careful management can be undertaken in a manner that avoids, remedies, or mitigates adverse effects on land stability and runoff.</p> <p>Notes GWRC Erosion and Sediment Control Guideline for Wellington Region (2021), which is referred to in policy P.P29 (and in the note to permitted activity rule P.R22), provides a pathway for earthworks to be undertaken during winter months subject to careful management. Considers rather than a blanket restriction on all earthworks over this period, reference is made to matters set out under section G5.0 of guideline as a matter of discretion for earthworks.</p> <p>Considers that the note directing Plan users to GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021) that is included under permitted activity rule P.R22 also be provided for under this rule.</p>	<p>including via a stormwater network, is a restricted discretionary activity, provided the following conditions are met:</p> <p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.</p> <p>Matters for discretion</p> <ol style="list-style-type: none"> 1. The location, area, scale, volume, duration and staging and timing of works 2. The design and suitability of erosion of sediment control measures including consideration of hazard mitigation and the risk of accelerated soil erosion associated the staging of works and progressive stabilisation 3. The placement and treatment of stockpiled materials on the site, including requirements to remove material if it is not to be reused on the site 4. The proportion of un stabilised land in the catchment 5. The adequacy and efficiency of stabilisation devices for sediment control 6. Any adverse effects on: <ul style="list-style-type: none"> (i) groundwater, surface water bodies and their margins, particularly surface water bodies within sites identified in Schedule A (outstanding water bodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (mana whenua), Schedule F (ecosystems and habitats with indigenous biodiversity), Schedule H (contact recreation and Māori customary use) or Schedule I (important trout fishery rivers and spawning waters)

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>(ii) group drinking water supplies and community drinking water supplies (iii) mauri, water quality (including water quality in the coastal marine area), aquatic and marine ecosystem health, aquatic and riparian habitat quality, indigenous biodiversity values, mahinga kai and critical life cycle periods for indigenous aquatic species (iv) the natural character of lakes, rivers, natural wetlands and their margins and the coastal environment (v) natural hazards, land stability, soil erosion, sedimentation and flood hazard management including the use of natural buffers 7. Duration of the consent 8. Preparation required for the close down period (from 1st June to 30th September each year) and any maintenance activities required during this period Where earthworks will be undertaken within the period from 1 June to 30 September, the matters set out under section G5.0 of the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021) 9. Monitoring and reporting requirements Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).</p>
S177.069	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Amend	<p>Considers that the move to non-complying activity status for all other earthworks is not clearly explained or justified in the section 32 evaluation report. Non-compliance with conditions under rule P.R24 will trigger the non-complying activity rule.</p> <p>Non-complying activity status for minor breaches of rule conditions can be a particular issue for development or upgrading of the National Grid, which due to the linear nature of the Grid can</p>	<p>Amend rule as follows:</p> <p>Rule P.R24: Earthworks - non-complying discretionary activity</p> <p>Earthworks, and the associated discharge of sediment into a surface water body or coastal water or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule P.R23 is a non-complying discretionary activity.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>involve complex, bundled consents for a broad range of activities, some of which may have adverse effects that are more than minor (for example, visual effects). This leads to a high degree of uncertainty as to whether consents for development or upgrading of the National Grid will be granted under section 104D of RMA, even where adverse effects of the part of the proposal that triggered non-complying activity status can be appropriately addressed through consent conditions. This does not appropriately give effect to policy 2 of NPSET, as it does not provide for the effective upgrading and development of the electricity transmission network.</p> <p>Considers the non-complying activity rule is not sufficiently justified in section 32 report and does not appropriately provide for activities that do not meet restricted discretionary activity conditions, but which can otherwise be managed through consent conditions as a discretionary activity.</p>	
S177.070	12 Schedule s	Schedule 28: Stormwater Contaminant Treatment.	Amend	<p>Considers an amendment to first sentence under heading "Target Load Reductions" is necessary to clarify that rules require stormwater discharges from impervious surfaces to be treated (as distinct from the surfaces themselves being treated).</p>	<p>Amend schedule as follows:</p> <p>Schedule 28: Stormwater Contaminant Treatment</p> <p>This schedule relates to Rules WH.R6, WH.R7, P.R6 and P.R7</p> <p>Target Load Reductions All Stormwater discharges from new and redeveloped impervious surfaces are to be treated to meet an equivalent target load reduction for copper and zinc to those set out for a raingarden/bioretention device, as per Table 1. Table 1: Target Load Reductions for Copper and Zinc Treatment Device Copper Zinc Bioretention (rain garden) 90% 90%</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>Equivalent Target Load Reduction A treatment train approach may be used to achieve an Equivalent Target Load Reduction set out in Table 1. The equation below provides an example of how the total load reduction factor of a given treatment chain can be calculated: $R = A + B - [(A \times B)/100]$ Where: R = Total load reduction factor A = Load reduction factor or the first or upstream treatment device B = Load reduction factor or the second or downstream treatment device Additional Device Load Reductions be used to determine whether an Equivalent Target Load Reduction (i.e inputs for A and B) is achieved to that of the Target Load Reduction specified in Table 1. Table 2: Additional Devices and Specified Load Reductions for Copper and Zinc Treatment Device Copper Zinc Constructed Wetland 80% 80% Swales 50% 65% Where alternative treatment devices to that of a bioretention/raingarden device are utilised, the specified load reduction factors set out in Table 2 must be used to determine whether an Equivalent Target Load Reduction (i.e inputs for A and B) is achieved to that of the Target Load Reduction specified in Table 1. [...]</p>
S177.071	12 Schedule s	Schedule 29: Stormwater Impact Assessments.	Amend	Seeks amendment to bullet point 3 to remove reference to redeveloped impervious surfaces. No benefit in calculating volume and flow rate of discharges from redeveloped impervious surfaces, as there will be no change to discharge volume and flow rate (when compared to existing).	Amend schedule as follows: Schedule 29: Stormwater Impact Assessments A stormwater impact assessment shall include the following analysis:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Seeks amendment to bullet point 5 to remove references to wording that is extraneous and difficult to interpret. Wording sought to be deleted is generally covered by definition of "water sensitive urban design".</p> <p>Seeks amendment to bullet point 2 under list of matters specific to high risk industrial and trade premises to replace term "contaminants" with "hazardous substances", on as the purpose of the rules is to manage potential entrainment of hazardous substances within stormwater (rather than contaminants generally).</p> <p>Considering cultural considerations under bullet point 8, supports engagement with mana whenua, but seeks clarity about what is anticipated and required by the Council.</p> <p>Supports engagement with mana whenua, but is mindful of the burden this can place on the resources of mana whenua and applicants particularly when engagement is not appropriately targeted or responsive to scale and significance of proposal. While submitter generally supports bullet point 8, also supports improved clarity on Council's expectations with respect to these matters.</p>	<ol style="list-style-type: none"> 1. Site evaluation: the site must be assessed for its topography, soil type, land use, drainage patterns (including wetlands/water courses), natural features, topographical and geotechnical constraints and potential flood areas. 2. Catchment evaluation: analyse catchment wide characteristics and requirements (utilising existing local authority stormwater management strategies where available) to consider the proposed development in a broader stormwater discharge and receiving environment context to understand relevant catchment issues, including flooding, climate change projections (frequency and volume), water quality and any additional design or mitigation measures required to address wider catchment matters. 3. Stormwater discharge calculation: calculation of stormwater discharge volumes and flow rates along with analysis of stormwater contaminant generation from and new and/or redeveloped impervious surfaces. 4. Identification of actual and potential stormwater impacts: undertake evaluation of the actual and potential impacts on the receiving environment, including water quality, natural flow regimes of waterways, soil erosion, flooding, changes in hydrology and climate change (frequency and volume). 5. Implementation of Water Sensitive Urban Design principles: provide an analysis of how Water Sensitive Urban Design measures have been identified and incorporated into the site design and layout, building and road/paving materials and features and how existing natural features and new stormwater treatment systems have been enhanced and integrated to mimic natural processes. 6. Mitigation measures: Assessment of proposed mitigations to reduce the effect of stormwater discharges on water quantity and quality, including the approach to treat in accordance with Schedule 28 (contaminant treatment) and implement hydrological control. Measures must support achieving relevant target attribute states (beyond zinc and copper) for ecosystem health, including nutrients, visual clarity and E. coli or enterococci. 7. Operation and maintenance of stormwater management systems: analyse the long-term (life-cycle) operational and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>maintenance requirements including funding mechanisms and identification of persons responsible for ongoing maintenance.</p> <p>8. Cultural considerations: to be informed by engagement with mana whenua.</p> <p>Where the application includes a high risk industrial or trade premise the stormwater impact assessment analysis must also consider the following:</p> <ol style="list-style-type: none"> 1. Procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, to ensure these are not entrained in stormwater, and 2. Management practices proposed to avoid or minimise entrainment of contaminants hazardous substances into stormwater, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring.
S177.072	12 Schedule s	A Context	Amend	<p>References to offsetting should be accompanied by references to compensation as there is insufficient certainty about whether the financial contribution will be used (as set out in section E) to address residual stormwater contaminants from new impervious surfaces discharged within catchment (which is offsetting), or whether it will be used to improve water quality across a range of values, not limited to impervious surface contaminants, in whaitua generally (which is compensation).</p> <p>As per submissions on policies WH.P15 and P.P14, considers applicants should be given a reasonable opportunity to undertake their own aquatic offsetting or compensation to address more than minor residual adverse effects, in line with effects management hierarchy provided for under NPS-FM. Considers that "is required" be replaced with "may be required" in final paragraph of section.</p>	<p>Amend schedule as follows:</p> <p>A Context</p> <p>Under section 108(2)(a) and (10) of the Resource Management Act 1991, a consent authority may impose a condition on a resource consent requiring a financial contribution to be made for the purpose of offsetting, or compensating for, an environmental adverse effect.</p> <p>The creation of impervious surfaces through new greenfield development, new roads (not directly associated with a greenfield development) and state highways will result in an increase of stormwater contaminants entering freshwater receiving environments. Stormwater contaminant treatment will be required of new development proposals, however, treatment of contaminants is only practicable for a portion of the contaminant load received from the site.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				As per submissions on policies WH.P15 and P.P14, considers that amendment to final paragraph is necessary to reflect that NPS-FM only requires offsetting or compensation in circumstances where residual adverse effects are more than minor.	<p>This results in a residual contaminant load still entering freshwater and coastal water receiving environments.</p> <p>The National Policy Statement for Freshwater Management 2020 requires freshwater quality to be maintained or improved. A financial contribution is may be required to offset or compensate for the adverse environmental effects (where they are more than minor) of the residual stormwater contaminants entering freshwater receiving environments where policy WH.P15 and P.P13 anticipates a deterioration of water quality could arise.</p>
S177.073	12 Schedule s	B Purpose	Amend	<p>As per submissions on policies WH.P15 and P.P14, considers applicants should be given a reasonable opportunity to undertake their own aquatic offsetting or compensation to address more than minor residual adverse effects, in line with effects management hierarchy provided for under NPS-FM. Considers that "is required" be replaced with "may be required" in final paragraph of section.</p> <p>Considers amendments necessary to clarify the financial contribution is not for greenfield development generally, but new impervious surfaces created as part of greenfield development.</p> <p>Seeks references to offsetting be accompanied by references to compensation as there is insufficient certainty about whether the financial contribution will be used (as set out in section E) to address residual stormwater contaminants from new impervious surfaces discharged within catchment (which is offsetting), or whether it will be used to improve water quality across a range of values, not limited to impervious surface contaminants, in whitua generally (which is compensation).</p> <p>As per submissions on policies WH.P15 and P.P14, considers amendment to paragraph is necessary to</p>	<p>Amend schedule as follows: B Purpose A financial contribution is may be required for all the creation of new impervious surfaces as part of new greenfield development, new roads and state highways requiring a resource consent to offset or compensate for more than minor residual contaminant load from stormwater discharges entering freshwater and coastal water receiving environments to ensure the maintenance or improvement of water quality within the affected whitua. Financial contributions collected will be utilised to fund and construct new, or upgrade existing, catchment scale stormwater treatment systems serving existing urban development, within the same whitua and if practicable, the same part Freshwater Management Unit.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				reflect that NPS-FM only requires offsetting or compensation in circumstances where residual adverse effects are more than minor.	
S177.074	12 Schedule s	C Definition of an Equivalent Household Unit	Amend	Considers consistent terminology should be used across policies, rules and Schedule 30 when referring to impervious surfaces. As such the terms "roofing or roading/hardstand area" should be replaced with "new impervious surfaces". The term "new" is important, as financial contributions should be calculated on the basis of new surfaces, not redeveloped ones. Considers the term "dramatically" unnecessary and should be removed.	Amend schedule as follows: C Definition of an Equivalent Household Unit An Equivalent Household Unit (EHU) is the basis for assessing the residual environmental impact (measured for copper and zinc contaminants in this instance) of the development of an average-sized residential unit for the purposes of calculating a financial contribution. Each average-sized new residential unit is deemed to create one unit of impact (one EHU). Because non-residential developments and new roads/state highways (not in direct support of a greenfield development) also impact contaminant levels, but can vary dramatically in size, every 100m2 of roofing or roading/hardstand area new impervious surface is deemed to create one unit of impact, rather than using the EHU unit of measure used for residential development. Financial contributions are calculated based on the number of EHUs expected to be delivered in greenfield areas in the two whitua. Non-residential and new road/state highway financial contributions are calculated based on the amount of roofing and roading/hardstand new impervious surface expected.
S177.075	12 Schedule s	D Calculatio n of level of contributio n	Amend	Considers section D of schedule be amended to clarify the financial contribution is based on area of new impervious surface, not total area of development.	Amend schedule as follows: D Calculation of level of contribution Financial contributions shall be calculated per EHU for residential greenfield development (Table D1), or per 100m2 of new impervious surface area for non-residential greenfield development and new roads/state highways (not in direct support of a greenfield development) (Table D2).

S177.076	12 Schedules	Schedule 33: Vegetation	Oppose	Opposes schedule being included within freshwater planning instrument, as purpose of the schedule is to manage land use for the purposes of soil	Reallocate the schedule so that it is part of the Part 1 Schedule 1 planning instrument, and not part of the freshwater planning instrument.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Clearance Erosion and Sediment Management Plan.		conservation. Seeks schedule be reallocated to the Part 1 Schedule 1 planning instrument.	
S177.077	12 Schedules	B Management objectives	Amend	Providing for revegetation of land below or near National Grid transmission lines or structures could compromise safe operation of National Grid, and considers this should be acknowledged in objective (d) in order to give effect to Policy 10 of NPSET.	Amend schedule as follows: B Management objectives The Erosion and Sediment Management Plan must demonstrate that the measures adopted to address the identified risks will: (a) minimise sediment loss from the vegetation clearance by adopting, as a minimum, good management practice, and (b) avoid an increase in risk of loss of sediment to water relative to the risk of loss that exists from the land in a natural state, and (c) minimise the discharge of water and sediment resulting from the vegetation clearance into a surface water body, and (d) provide for the land to be restored and revegetated with appropriate species (except below or near National Grid transmission lines and structures, where revegetation is not appropriate).
S177.078	12 Schedules	C Requirements of the Erosion and Sediment Management Plan	Amend	As per submission on management objectives, considers clause (c)(v) of section C1 be amended to recognise it is inappropriate to undertake revegetation on land located underneath or near National Grid transmission lines or support structures. Considers terms "critical source areas" and "hotspots for sediment loss to surface water" under clause (b)(ix) are unclear, and should be defined so that it is clear to plan users what these terms mean, and what is sought to be mapped under this clause.	Amend schedule as follows: C Requirements of the Erosion and Sediment Management Plan C1 Contents of the Erosion and Sediment Management Plan The Erosion and Sediment Management Plan shall contain as a minimum: (a) The following details that describe the land where the vegetation clearance is proposed: (i) The full name, postal and physical address and contact details (including email addresses and telephone numbers)

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>of the person responsible for vegetation clearance on the land, including the name of and contact details for the managers or contractors, and</p> <p>(ii) The property location identifier, the cadastral and map references and GIS polygon reference, and</p> <p>(iii) The legal description and ownership of each parcel of land if different from the person responsible for vegetation clearance on the land, and</p> <p>(iv) The full name, postal and physical address and contact details (including email addresses and telephone numbers), qualifications and relevant experience of the person responsible for preparing the Erosion and Sediment Management Plan.</p> <p>Maps (b) The Erosion and Sediment Management Plan must include maps at a scale not less than 1:10000 that include and show:</p> <p>(i) the computer freehold register, the date, and a north arrow, and</p> <p>(ii) the vegetation clearance and operational area boundaries, and</p> <p>(iii) the public road(s) used for access, entry points to the land and rural number(s) of entry point(s), and</p> <p>(iv) the external property boundaries within 200 m of the vegetation clearance areas, and</p> <p>(v) the catchment and sub-catchment that the vegetation clearance area is within and a map showing the location of the vegetation clearance area within the catchment and sub-catchment, and</p> <p>(vi) the location (and for named waterbodies, the names) of waterbodies on the property, including permanently or intermittently flowing including rivers, streams, drains; wetlands, lakes and springs, and specifically identifying any waterbodies where vegetation clearance activities are subject to Resource Management (National Environmental Standards for Freshwater) Regulations 2020 or rules in the Plan, and</p> <p>(vii) the location of any site or river included in Schedules B, C, F1 and F3 of this Plan that is within, or adjacent to, the vegetation clearance area, and (viii) a 1m digital elevation</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>model overlay of the terrain of the vegetation clearance area, and</p> <p>(ix) the location of land with highest erosion risk land (woody vegetation), any other critical source areas, and hotspots for sediment loss to surface water, and</p> <p>(x) location of the proposed vegetation clearance operations including earthworks, land preparation, roads and formed tracks and access ways, water body entry or crossing, harvesting methods, skid and landing sites.</p> <p>Operating systems and practices</p> <p>(c) A description of the planned vegetation clearance operations and management practices. This shall be in sufficient detail to reflect the scale of any environmental risk and the measures in place, or to be undertaken, that will mitigate the risk of sediment loss from the land as a result of vegetation clearance activity. At a minimum, this shall include a description of management practices to be used, including specific practices identified in relevant guidelines for:</p> <p>(i) Planning and design for construction, maintenance and rehabilitation of roads, tracks, skid sites and landings; clearing and stripping of land; bulk earthworks; and fill placement and compaction, and</p> <p>(ii) Erosion and sediment control measures, including structures and vegetation to manage erosion and minimise sediment loss, and</p> <p>(iii) Vegetation clearance techniques and practices with particular regard for highest erosion risk land (woody vegetation), and</p> <p>(iv) Managing debris and slash, and</p> <p>(v) Rehabilitation and revegetation of highest erosion risk land (woody vegetation), except where the land is located underneath or near National Grid transmission lines or structures, and</p> <p>(vi) Recording and monitoring of management practices and performance of mitigation measures, and</p> <p>(vii) Monitoring of effects of activities on land stability and water quality,</p> <p>(viii) Other practices necessary to assess and mitigate the</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					risk of sediment loss. (d) The Erosion and Sediment Management Plan shall set out the time period over which the good management practices and mitigation measures will be implemented and the methods by which their implementation will be recorded and performance and effects monitored.
S177.079	13 Maps	Map 77: Habitats of nationally threatened freshwater species - Te Awarua-o-Porirua and Te Whanganu i-a-Tara (Schedule F1).	Amend	Considers GIS mapping of riverine habitats described in Map 77 and Schedule F1 does not appear to accurately align with actual river extents. Refers to GIS mapping of riverine habitat adjacent to Pauatahanui Substation. Plan users will rely on the mapping of scheduled riverine habitats to interpret spatial application of Schedule F1. To ensure certainty with respect to application of the rules that relate to scheduled riverine habitats, habitats to which rules apply to should be accurately mapped.	Amend GIS mapping of riverine environments described in Map 77 to accurately reflect the habitat extents covered by Schedule F1.
S177.080	13 Maps	Map 86: Unplanned greenfield areas - Porirua City Council.	Oppose	Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas". Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET. Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation)on the management of development in "unplanned greenfield development areas". Noting decisions on separate plan changes must be made separately	Delete map.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and considers this will be highly inefficient for applicants and submitters and applicants and risks inconsistency. Considers the appropriate means of providing for a combined regulatory approach is through a combined planning document to address the issue, as per section 80 of the RMA.</p> <p>Notes if it is Council's position this issue requires a combined approach with territorial authorities, then the appropriate means of providing for this is through a combined planning document (and the Council is obliged to consider this under section 80(7) of the RMA).</p> <p>Submitter notes its principal concern with this approach is it is unclear whether it would prohibit the upgrading or development of its assets. If the relief sought by submitter on definition of "unplanned greenfield development" is granted in full, submitter would consider adopting a neutral position on this map.</p>	
S177.081	13 Maps	Map 87: Unplanned greenfield areas - Wellington City Council.	Oppose	<p>Considers the definition of unplanned greenfield development is too broad and uncertain. Unclear if all development is prohibited or just specific kinds of urban development. Concerns the approach could prohibit works on regionally significant infrastructure (including the National Grid) in areas identified as "unplanned greenfield development areas".</p> <p>Concerned that the policies and rules of "unplanned greenfield development areas" may capture works on the national grid which would be contrary to Policy 14 and the objective of the NPSET.</p> <p>Questions the efficiency and practicability of the proposed approach which creates jurisdictional overlap between territorial authorities, the regional council, and the Minister of Conservation)on the management of development in "unplanned greenfield development areas". 		Whanganu i-a-Tara.		areas smaller than 200m2 should be removed from the maps to be consistent with rules.	

S225 Upper Hutt City Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.001	General comments	General comments - maps	Not Stated	In GWRCs data, there are various overlaps and gaps between some of the neighbouring TAs polygons, the submitter suggests that this is likely due to the different TAs using different iterations of the StatsNZ Territorial Authorities layer.	Not stated
S225.002	General comments	General comments - current legislation	Not Stated	Not stated	That GWRC undertakes a full legal and natural justice review of the provisions in light of the evolving national direction;
S225.003	General comments	General comments - current legislation	Not Stated	Not stated	Amend to remove actions that conflict with or are more onerous than the 2023 National led government direction included in the Incoming Government Coalition agreements, November 2023 and letter from Chris Bishop dated 13 December 2023 which identifies changes to RMA, NPSFM, NESFW and NPS-IB prior to end of 2023.
S225.004	General comments	General comments - consultation	Not Stated	Not stated	Seek further work and consultation is undertaken in partnership with territorial authorities to accurately reflect roles and function in achieving outcomes and aspirations of Waitua documents;
S225.005	General comments	General comments - maps	Amend	Not stated	Amend maps to provide more accurate information that is able to be considered at a property scale and compared with publicly available local authority data, particularly in relation to Map 88
S225.006	General comments	General comments - current legislation	Amend	Not stated	Amend to correctly implement national planning standards;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.007	General comments	General comments - current legislation	Amend	Not stated	Delete or significantly amend provisions which have a lack of higher order document direction or evidentiary support;
S225.008	General comments	General comments - current legislation	Amend	Not stated	Delete or significantly amend provisions which lack of any consideration of scale and significance and apply to all development without appropriate thresholds;
S225.009	General comments	General comments - overall	Oppose	Not stated	Delete the addition of onerous requirements for existing consents;
S225.010	General comments	General comments - overall	Amend	Considers where there is a lack of clarity in definitions and policies, these fail section 32 tests	Delete or significantly amend use of definitions and policies where there is a lack of clarity.
S225.011	General comments	General comments - overall	Amend	Not stated	Delete or significantly amend policies and definitions which read as rules or conditions of consent;
S225.012	General comments	General comments - rural	Oppose	Not stated	Delete unnecessary requirements for rural properties, particularly smaller properties (between 4-20 ha);
S225.013	General comments	General comments - overall	Amend	Not stated	Amend timeframes in NRP to give reasonable timeframes to implement new direction for landowners, ensure these are reasonable and achievable and where practicable, funded from external sources;
S225.014	General comments	General comments - urban development	Oppose	Not stated	Delete provisions prohibiting urban expansion beyond existing urban zoned land, particularly where this does not align with recent rezoning notified before this plan change;
S225.015	General comments	General comments - stormwater management	Oppose	Not stated	Delete or significantly amend hydrological controls for all development, which are going beyond hydraulic neutrality, as these are unclear and seem to be overly onerous;

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.016	General comments	General comments - earthworks	Amend	Considers this removal will result in significant issues for territorial authorities and landowners carrying out everyday activities, with no scale included in any provisions and no rules addressing this issue.	Amend and reintroduce exclusions for "repair, sealing or resealing of a road, footpath, driveway" from definition of earthworks.
S225.017	General comments	General comments - plantation forestry	Amend	Not stated	Delete or significantly amend provisions circumventing and not giving effect to, higher order documents without clear reasoning or supporting evidence within the section 32a assessment, i.e. rules surrounding plantation forestry trying to provide a higher level of protection than is allowed under the National Environmental Standards Commercial Forestry.
S225.018	General comments	General comments - water quality improvements	Oppose	Not stated	Delete additional requirements for three waters infrastructure consents which add significant costs to upgrading infrastructure;
S225.019	General comments	General comments - definitions	Amend	Not stated	Amend proposed definition of a 'drain' that would result in all drains being considered 'modified streams';
S225.020	General comments	General comments - stormwater management	Amend	Not stated	Delete or significantly amend the addition of financial contributions, without clear justification and an understanding of how these funds and projects being delivered monitored for effectiveness to address these issues
S225.021	General comments	General comments - overall	Amend	Not stated	Seek amendment to delete references to Wellington Water throughout plan change and refer instead to water entities.
S225.022	General comments	General comments - overall	Amend	Not stated	Seek that 'and/or' used throughout this document be amended to clarify whether it is inclusive or not as 'and/or' is inappropriate.
S225.023	General comments	General comments - overall	Oppose	Considers fundamental issues with provisions requiring revision or deletion to ensure PC1 is reasonable, legally robust and practical to implement.	Seeks GWRC undertake a full legal and planning review of proposed provisions and amend PC1 to address concerns. Seeks any other consequential amendments to remedy errors and address relief sought.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.024	General comments	General comments - overall	Support	Supports intent to develop regional provisions to achieve water quality and ecological health objectives within Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.	Not stated
S225.025	General comments	General comments - overall	Oppose	Concerns with process, timing, and sequencing of aspects of the notified provisions of PC1 require significant amendments. Notes numerous instances throughout PC1 where little regard to national policy direction and principles of natural justice have been considered and reasonableness /evidence base and practical implementation of provisions has been inconsistently applied. Concerned with real-world financial and resource implications, particularly for territorial authority policy and road controlling authority functions.	Not stated
S225.026	General comments	General comments - urban development	Not Stated	<p>Considers PC1 circumvents or undermines national directives. Concerned provisions will make urban development required by NPS-UD potentially impossible to deliver, through wrapping constraints around housing intensification direction.</p> <p>Notes that despite the joint plan change pathway identified for 'unplanned greenfield developments', the prohibition laden objective and policy framework (both in NRP and RPS) would render future plan change an impossibility due to not implementing the higher order documents, and any section 32 analysis would be at risk of identifying development as being contrary to objectives and policies in these plans.</p>	Not stated
S225.027	General comments	General comments - overall	Oppose	Considers GWRC has not learned from previous feedback provided by the submitter and has repeated structural problems that hamper the progress of the region. Questions the lawfulness and natural justice of the process in light of the signalled change in policy direction by the government. Concerned about practical implementation of the provisions - including the	Seeks plan change is amended or paused to remove problematic provisions identified in submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				ability for territorial authorities to conduct business as usual plan-making and road controlling authorities activities.	
S225.028	2 Interpretation	Afforestation	Support	Not stated	Retain as notified
S225.029	2 Interpretation	Catchment management unit	Support	Not stated	Retain as notified
S225.030	2 Interpretation	Core allocation	Amend	Supports the intent of a maintaining water resources but considers clause (c) unclear and questions relevance of July 1st 2029 date.	Seek clarity on clause C) and relevance of 1 July 2029.
S225.031	2 Interpretation	Dry weather discharges	Support	Not stated	Retain as notified
S225.032	2 Interpretation	Earthworks	Oppose	<p>Concerns with amended definition of earthworks. Considers definition incorrectly implements national planning standards, through having "except that for the purposes of".</p> <p>Consider removal of other exclusions (e.g. the 'repair and maintenance of existing roads, footpaths, driveways' etc.) is fundamentally unreasonable and an issue of impracticality and cost for ongoing functions of submitter - particularly in relation to business as usual road maintenance and repair activities.</p>	Seek amendments to correctly apply national planning standards or reintroduce all exclusions.
S225.033	2 Interpretation	Erosion and sediment management plan	Amend	Notes reference to "Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region" is identified in stabilisation definition but not in this definition or the schedules.	Seeks inclusion reference to "Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region" for consistency across plan.
S225.034	2 Interpretation	Erosion risk treatment plan	Support	Not stated	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.035	2 Interpretation	Existing wastewater discharge	Amend	Not stated	Retain as notified, updating date to reflect a decision date for PC1, not notification date.
S225.036	2 Interpretation	Highest erosion risk land (pasture)	Amend	Support as mapped areas are consistent with areas identified as high slope in Council's Proposed Plan Change 47.	Seek consistency with District Council hazard mapping.
S225.037	2 Interpretation	High erosion risk land (pasture)	Amend	Support as mapped areas are consistent with areas identified as high slope in Council's Proposed Plan Change 47.	Seek consistency with District Council hazard mapping.
S225.038	2 Interpretation	Highest erosion risk land (woody vegetation)	Amend	Support as mapped areas are consistent with areas identified as high slope in Council's Proposed Plan Change 47.	Seek consistency with District Council hazard mapping.
S225.039	2 Interpretation	Hydrological control	Support	Not stated	Retain as notified
S225.040	2 Interpretation	Part Freshwater Management Unit	Support	Not stated	Retain as notified
S225.041	2 Interpretation	Redevelopment	Oppose	<p>Concerned about implications definition may have on business-as-usual activities undertaken by territorial authorities and infrastructure providers.</p> <p>Concerned inclusion of existing roads and 'replacement' or 'reconstruction' is overly onerous given end state of the environment and effects remaining the same. Considers it egregious to require 'like for like' replacements and renewals, which are often required for ongoing function of</p>	Seek that more than minor maintenance and renewals activities are a permitted or controlled activity and this is effectively reflected in definition of redevelopment.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				public goods, to be considered in the same vein as full redevelopments of brownfield sites.	
S225.042	2 Interpretation	Stabilisation	Support	Not stated	Retain as notified
S225.043	2 Interpretation	Stormwater catchment or sub-catchment	Support	Not stated	Retain as notified
S225.044	2 Interpretation	Stormwater management strategy	Support	Not stated	Retain as notified
S225.045	2 Interpretation	Stormwater network	Support	Not stated	Retain as notified
S225.046	2 Interpretation	Stormwater treatment system	Amend	<p>Supports intent but none of items listed in this definition appear to be defined, e.g., what proprietary device would form part of the stormwater treatment system.</p> <p>Considers more flexibility and clarity if the list was not included. Also would provide clarity about whether system needs to achieve both removal of contaminants and reduce volume or only one of these.</p>	<p>Amend to read as follows:</p> <p>Stormwater treatment System</p> <p>A device, structure or system used to remove stormwater contaminants and/or to reduce stormwater volume and flows prior to discharge. These include (but are not limited to):</p> <ul style="list-style-type: none"> -rain gardens -green infrastructure -infiltration trenches -bioretention devices -vegetated swales -sand filters -green roofs -constructed wetlands -proprietary devices.
S225.047	2 Interpretation	Stock unit	Amend	Concerned no consistent stock unit numbers used across New Zealand. Notes importance that numbers selected have a clear basis relating to the region that justifies differences to numbers used	Seek justification for rationalisation of stock unit numbers to make this easier for landowners.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				elsewhere e.g., the Waikato Region. Considers it easier for land owners and managers if stock units were simplified to recognise these numbers will change as stock ages. Concerns it is more of an issue for smaller properties, which are likely to have more stock variability.	
S225.048	2 Interpretation	Unplanned greenfield development	Oppose	<p>Opposes extent of Map 88 as does not accurately reflect Council plan change 50 notified on 4 October 2023 and is inconsistent around proposed settlement zone land.</p> <p>Considers provision should apply from date of PC1 decision and not date of notification. Considers it gives landowners and developers ability to complete planning processes (such as in train resource consents or plan changes). Current date as notified, would circumvent ongoing planning process and prevent rezoning submissions on active plan changes.</p>	Amend definition to relate to corrected map provided as Attachment 2 to submission and update to date of decision not date of notification.
S225.049	2 Interpretation	Whaitua	Support	Supports implementation of Whaitua areas within NRP to align with Whaitua implementation process.	Retain definition as notified.
S225.050	5.4 Beds of lakes and rivers	Beds of lakes and rivers general conditions.	Oppose	Concerned with significant change to activities in (n). Amended wording implies that at no point are works able to be undertaken if identified birds are roosting and nesting even outside the critical period. Notes there are some birds which may nest year-round, on potentially significant infrastructure such as bridges which require maintenance.	Retain as operative, do not amend as proposed.
S225.051	6 Other methods	Method M36: Freshwater Action Plan programme.	Amend	Supports intent of method but considers timeframes ambitious and may be amended noting government has indicated timescales are likely to change.	Amend as required to align with new government led direction on freshwater. Seeks a pause to consider new national direction may be prudent. Seeks that "and/or" used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.
S225.052	6 Other methods	Method 39:	Amend	Supports intent, but considers territorial authorities be included in partnership especially since territorial	Seek amendments so territorial authorities are also included as partners.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.		authorities are identified in Whaitua implementation documents.	
S225.053	6 Other methods	Method M40: Fish passage action programme for Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Supports intent, but considers territorial authorities be included in partnership especially since territorial authorities are identified in Whaitua implementation documents.	Seek amendments so territorial authorities are also included as partners.
S225.054	6 Other methods	Method M41: Identifying and responding to degradation	Amend	Supports intent but notes ongoing discussions around the Mangaroa Peatlands, which could be an issue if Mangaroa Peatlands are identified as degraded wetland.	Seeks that areas identified go through a robust process, including consultation with affected landowners before any actions are identified. Seek that "and/or" used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		n in freshwater bodies within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.			
S225.055	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	Concerns with unknown registration process, noting it will be too onerous for owners of small lifestyle blocks undertaking this level of assessment with limited time and financial resources.	Delete this method in its entirety and for provisions in this plan change to relate solely to farms over 20ha.
S225.056	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Amend	Supports intent but not the reference to Wellington Water as future of water delivery model in the region is unclear. Notes clause 3(c) appears to point to a regulatory response in a non-regulatory method, considers this to be inappropriate.	Seek amendment to delete references to Wellington Water throughout the plan change and refer instead to water entities.
S225.057	6 Other methods	Method M44: Supporting the health of rural	Support	Not stated	Delete clause 3(c) or amend so that this is a non-regulatory method.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		waterbodies.			
S225.058	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Amend	Concerned that this is unclear if territorial authorities are being consulted on funding opportunities or expected to financially contribute.	Amend for clarity noting that territorial authority's already have stretched budgets that are unlikely to be able to fund works not already anticipated in the long term plan processes.
S225.059	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Support	Not stated	Retain as notified acknowledging that this is an aspirational objective that would be difficult to measure.
S225.060	8 Whaitua Te Whanganui-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's	Support	Supports in principle but may have specific comments on policies and rules that implement this objective.	Retain as notified

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.			
S225.061	8 Whaitua Te Whanganui-a-Tara	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives	Support	Supports in principle but may have specific comments on policies and rules that implement this objective.	Retain as notified

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		set out in Table 8.1.			
S225.062	8 Whaitua Te Whanganui-a-Tara	Objective WH.O4: The extent, condition, and connectivity of habitats of nationally threatened freshwater species are increased and the long-term population numbers of these species and the area over which they occur are increased, improving their threat classification status.	Support	Supports in principle but may have specific comments on policies and rules that implement this objective.	Retain as notified
S225.063	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water	Amend	Supports intent but concerned salt water intrusion may not be fully avoided. Considers salt water intrusion is occurring in many areas and all that can often be done is to manage and mitigate.	Amend to read:(a) ensure base flows or levels in surface water bodies and springs are supported and salt-water intrusion is minimised avoided , and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		quality, are maintained.			
S225.064	8 Whaitua Te Whanganui-a-Tara	Objective WH.08: Primary contact sites within Te Awa Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.	Support	Supports in principle but may have specific comments on policies and rules that implement this objective.	Retain as notified
S225.065	8 Whaitua Te Whanganui-a-Tara	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Support	Supports in principle but may have specific comments on policies and rules that implement this objective.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.066	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Concerned about practicality of working on reducing contaminants all at once.	Seek clarification on whether (a) to (c) is achievable within the ten-year planning cycle or whether some contaminants should be prioritised.
S225.067	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Opposes prohibition of development, as it limits options to give effect to NPS-UD and overrides District Plan changes and reviews currently underway or proposed in future.</p> <p>Considers greenfield development has more opportunity to address effects, particularly given space available to incorporate design and infrastructure solutions when compared to constrained urban environments.</p> <p>Notes prohibition in policy, and direction in objective above it, would render a future plan change an impossibility as it wouldn't implement higher order documents. Considers the section 32 analysis would need to consider provisions PC1 and recent changes to NRP and therefore would be at risk of being contrary to objectives and policies in these plans.</p>	<p>Seek that the policy is amended to read:</p> <p>...</p> <p>"(a) prohibiting managing unplanned greenfield development and for other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and"</p>
S225.068	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Amend	Supports intent, but considers territorial authorities be included in partnership especially since territorial authorities are identified in Whaitua implementation documents.	Seek amendments so that territorial authorities are also included as partners.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.069	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity target attribute states.	Amend	Supports intent but considers it overly ambitious to achieve	Introduce interim targets rather than trying to achieve this in a short timescale.
S225.070	8 Whaitua Te Whanganui-a-Tara	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	Concerned current drafting is unclear and requires redrafting.	Amend to read: "... The localised adverse effects of point source discharges to freshwater and coastal water beyond the zone of reasonable mixing are avoided or minimised, including by avoiding : (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (b) ..."
S225.071	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point source discharges.	Amend	Supports intent of managing cumulative adverse effects but notes wording of (b)(i) is unclear as "upgrading the discharge" could mean increasing discharge. Considers this is not intent of policy.	Clarify what is meant by (b)(i).
S225.072	8 Whaitua Te Whanganui-a-Tara	Policy WH.P7: Discharges to groundwater.	Oppose	Concerned drafting of "All activities on land" ultimately leads to discharges to ground water, including animal effluent, sprays and other common activities. Considers policy not specific and does not identify clearly which discharges are being addressed. Notes this is a significant change for any existing discharges i.e. all existing land use which may or not have required consents under district plans and needs to be much more clear, directive and measurable. Appears policy has not been well	Amend to clarify which discharges this policy relates.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				considered and is unclear as to what is trying to be achieved.	
S225.073	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Oppose	<p>Concerned high level policy relating to storm water network where consents already exist. Questions whether responsibility of consent holder to manage and monitor?</p> <p>Notes no specific thresholds so questions if washing cars and houses, animals confined in a paddocks, or driveways require a consent. Notes no consideration for environmentally friendly cleaning products. Considers scale for wet cement unclear, and questions if it relates to larger scale developments or small scale activities where cement pads are constructed for heat pump fans or sheds etc. Latter would be unworkable and unenforceable. Appears policy has not been well considered and is unclear what it is trying to achieve.</p>	Seek clarity on what animal effluent and what chemical cleaner as it is impossible to manage back yard cats and dogs for example, and not all chemical cleaners are the same. Identify scale for wet cement provision. Amend to clarify which discharges this policy relates.
S225.074	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Not Stated	Concerned there are no thresholds applied to policy and is unclear if this relates to stormwater network consents or other stormwater consents and in rural areas where it is likely water will go to ground eventually.	Seek clarification on what is being addressed in this policy and associated thresholds.
S225.075	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater	Amend	<p>Concerned chapeau of policy is too broad and questions whether, in relation to (c)(ii), is it also appropriate to include attenuation?</p> <p>Unclear what is meant by "load reduction factor" and concerned this might not be practical at an individual scale where discharge from site is into a stormwater network such as an individual house.</p>	The scope of this policy should be narrowed to apply only to stormwater networks not individual developments within a network, except for point source discharges to surface water. This should not apply to one house or rural scenarios which discharge directly to land via soak pits or other similar systems.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges		Notes may be inappropriate for rural properties where a small discharge to land after rainwater collection, for example. Maintenance required for these types of stormwater treatment systems to be effective is inappropriate for individual properties and likely to result in failure.	
S225.076	8 Whaitua Te Whanganui-a-Tara	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Supports intent to improve water quality through managing stormwater contaminants, however, considers cost implication of policy needs to be funded.	Retain as notified except seek that "and/or" used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate. Support councils with funding.
S225.077	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Supports intent of improving water quality by managing stormwater contaminants, but considers thresholds for application must be reviewed and clarified. Concerned with application of definition for 'redevelopment' in policy, particularly in case of resurfacing, or 'like for like' replacement of surfaces where there is no change to end state water run-off. Considers it inappropriate and unjust to require onsite stormwater systems to be installed, due to the 'like for like' replacement of impervious surfaces. Considers this places unnecessary burden on land owners seeking to undertake maintenance of their properties.	Amend the definition of redevelopment and review the practicality of thresholds where this policy applies.
S225.078	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant	Oppose	Concerned with financial implications on Requiring Authorities (particularly territorial authorities). Refer to comments on new financial contributions provisions in Schedule 30.	Delete the policy or amend substantially so that this does not place an unrealistic burden on greenfield development that is needed to meet the higher order national direction of the NPS-UD.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		offsetting for new greenfield development.			
S225.079	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Concerns with implications and practicality of policy.	Delete policy or amend significantly to change from 'avoid' to 'minimise' and specifically this should not apply to developments that feed into an existing stormwater network that will have an existing stormwater consent.
S225.080	8 Whaitua Te Whanganui-a-Tara	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Amend	Supports intent to meet E.coli Target Attribute States, but considers it unclear who will be expected to undertake this work, and who will fund projects. Notes improving these will require significant investment in wastewater infrastructure and land owners to exclude stock and manage septic tank discharges. Considers lack of clarity in provision and others throughout PC1, fails to follow basic section 32 processes in development of the plan change, which require identification of implications of provisions, and whether they are more appropriate provisions to achieve outcomes, including an identification of who would be responsible for the implementation of requirements and the implications on those parties.	Seek clarity on who will be the delivery agency and who is responsible for funding.
S225.081	8 Whaitua Te Whanganui-a-Tara	Policy WH.P19: Managing wastewater network catchment discharges.	Amend	Supports intent, but is concerned the cost will fall on ratepayers. Considers this requires significant thought and consultation with territorial authorities and their communities around costs. Considers lack of clarity in provision and others throughout PC1 fails to follow basic section 32 processes in development of PC1, which require identification of implications of provisions, a thorough cost and	Seek that consultation is undertaken with territorial authorities and their communities, and that the timeframes are realistic and achievable within the resource constraints of Councils and their communities. Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				benefit analysis of provisions, and whether these are the more appropriate provisions to achieve outcomes, including an identification of who would be responsible for the implementation of requirements and the implications on those parties.	
S225.082	8 Whaitua Te Whanganui-a-Tara	Policy WH.P20: Managing existing wastewater treatment plant discharges.	Amend	Supports intent, but is concerned the cost will fall on ratepayers. Considers this requires significant thought and consultation with territorial authorities and their communities around costs.	Seek that consultation is undertaken with territorial authorities and their communities, and that the timeframes are realistic and achievable within the resource constraints of Councils and their communities.
S225.083	8 Whaitua Te Whanganui-a-Tara	Policy WH.P21: Managing diffuse discharges of nutrients and Escherichia coli from farming activities.	Amend	Concerned this is a substantial change for livestock farmers and horticulture and will result in need for them to change practices significantly at great cost in a time when they are suffering from a cost of living crisis and New Zealand is struggling with a food security issue. Notes need to be supported by funding and guidance.	Seek clarity on how this will be implemented and funded, and the support that will be provided to achieve this.
S225.084	8 Whaitua Te Whanganui-a-Tara	Policy WH.P22: Capping, minimising and reducing diffuse discharges of nitrogen from farming activities.	Oppose	Considers it unclear what is meant by "smaller rural properties", questions if intended is to be captured by thresholds under (c)? Note it appears to duplicate much of policy WH.P21 and WH.P23, see comments on WH.P21.	Delete this policy and combine with policy WH.P21 and provide clarity on what is meant by 'smaller farms'.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.085	8 Whaitua Te Whanganui-a-Tara	Policy WH.P23: Achieving reductions in sediment discharges from farming activities on land with high risk of erosion.	Amend	Considers policy is going to incur significant costs for landowners and could mean retirement of large areas of land which will reduce productive capacity on site with consequential economic effects. Refer to previous comments on cost of living and food security.	Retain largely as notified, with particular emphasis on clause (d) to support implementation for landowners, including funding and guidance to assist them through the transition.
S225.086	8 Whaitua Te Whanganui-a-Tara	Policy WH.P24: Phasing of farm environment plans.	Amend	Policy is supported in principle but considers given the large number of landowners in the district, this is overly ambitious, particularly if plan change is not operative by then, which is entirely possible given timeframe over which the operative NRP took to develop. Considers use of and/or is inappropriate.	Seek that extended timeframes for implementation are considered and that the policy is amended to read: Farm environment plans required in accordance with Policy WH.P22 and Policy WH.P23 shall be provided according to a phased timetable that prioritises those part Freshwater Management Units where Table 8.4 shows that suspended fine sediment has a baseline state of D and/or where dissolved inorganic nitrogen is shown as being in need of improvement, and so that, in all cases, farm environment plans are prepared and certified by 30 June 2027 32 .
S225.087	8 Whaitua Te Whanganui-a-Tara	Policy WH.P25: Managing rural land use change.	Oppose	Considers this overly onerous on small properties and considers other policies will apply that already impose significant costs to landowners and regional ratepayers to fund this work for a marginal level of improvement above other mandatory requirements proposed in this plan change. Numerous smaller properties have limited production occurring on them and the registration process set out in Schedule 35 appears particularly onerous for smaller properties.	Delete this policy and associated provisions, such as Schedule 35, and focus on larger properties where more meaningful outcomes can be achieved.
S225.088	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock	Amend	Supports intent to exclude livestock to streams where water quality is poor. Considers stock exclusions should be flexible enough to not require fencing in steep areas where stock are not	Seek acknowledgement of pest species contribution to e.coli in these areas and management of these pests within the regional parks and forests which surround the Mangaroa River catchment.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		access to small rivers.		anticipated to go. Seeks acknowledgment that pest species including deer, pigs and goats are a substantial issue in these areas - particularly in Mangaroa valley, these pest species have flourished. Considers the most practicable options should be considered for exclusion of access to these streams.	
S225.089	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Support	Not stated	Retain as notified
S225.090	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Oppose	Considers policy appears to conflict with requirements of NES-CF.	Delete policy.
S225.091	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Amend	Considers these are all reasonable things to include as conditions of consents for larger projects, but may not be reasonable for small scale projects such as the maintenance of driveways and footpaths, which are now considered earthworks, in accordance with amended definition.	Amend to clearly identify scale or threshold this policy should apply at.
S225.092	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Oppose	Concerned policy reads more like a rule or standard rather than outlining how an objective will be implemented.	Delete policy or amend to be a policy rather than a rule or standard.
S225.093	8 Whaitua Te	Policy WH.P31: Winter	Oppose	Concerned policy reads more like a rule or standard rather than outlining how an objective will be implemented.	Delete policy or amend to be a policy rather than a rule or standard.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	shut down of earthworks.			
S225.094	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Oppose	<p>Concerned with:</p> <ul style="list-style-type: none"> - lack of thresholds or scope of rule application - lack of specificity - some vehicle cleaning products are biodegradable and less harmful to the environment than others - fundamental inability to monitor against this rule - some of these in small quantities may be suitable for discharging to land, e.g. biodegradable cleaning products, cooking oil. <p>As written, means that washing any car or washing house windows or walls would be a prohibited activity. Should a car fail, such as a boiled radiator or oil leak, this would also be a prohibited activity. Considers prohibited activities need to be clear and measurable without any need for interpretations and appears this rule has not been fully considered - particularly as to its purpose, applicability and practical (and reasonable) implementation.</p>	Delete or significantly rewrite to a more specific and reasonable approach. If a rule like this is retained, seek a more permissive activity status such as restricted discretionary. However, we note that it is impractical to require consent for these small scale activities, such as washing windows. If retained, this rule needs further consideration.
S225.095	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Support	Not stated	Retain as notified
S225.096	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal	Support	Not stated	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		water - permitted activity.			
S225.097	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Support	Not stated	Retain as notified
S225.098	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	<p>Concerns with application of the definition of 'redevelopment'.</p> <p>Concerns the 1000m2 threshold will result in fairly small developments including upgrading and maintenance activities requiring a consent, which is overly onerous particularly for Council's business as usual functions.</p> <p>Calculations have identified that should Councils want to maintain or renew over 50 linear metres of road, this would require a resource consent.</p> <p>Considers this would result in an arduous, costly and inefficient process that will place a great burden on existing resources (both financial and staff), and has no consideration or recognition of roles and functions of territorial authorities as road controlling authorities.</p>	Amend to remove the 1000m2 threshold in relation to upgrading, maintaining and renewing of existing roads, footpaths/cyclepath and driveways.
S225.099	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces -	Oppose	<p>Concerned implications of this rule would mean application of financial contributions and costly significant upgrades, given requirements to both include costly stormwater systems within developments, as well as pay financial contributions under schedule 30 (i.e. double dipping of cost).</p>	<p>Delete or amend to remove thresholds and financial contributions.</p> <p>Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		controlled activity.			
S225.100	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity.	Oppose	Concerned implications of this rule would mean application of financial contributions and costly significant upgrades, given requirements to both include costly stormwater systems within developments, as well as pay financial contributions under schedule 30 (i.e. double dipping of cost).	Delete or amend to remove thresholds and financial contributions. Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.
S225.101	8 Whaitua Te Whanganui-a-Tara	Rule WH.R9: Stormwater from a local authority or state highway network-restricted discretionary activity.	Oppose	Opposed to requirement for every maintenance and renewal project, being required to apply for restricted discretionary activity status for stormwater from road. Provision identifies a fundamental lack of understanding about roles and functions of Council's (and other territorial authorities' within the region) as a road controlling authority and practicalities and implementation costs associated with provision. Considers discharges would be entering an existing stormwater network, which has an existing management strategy, and it is not appropriate to require additional management of discharges which are managed by Network discharge consents.	Delete rule or amend to remove local authority roads where these are already addressed through the stormwater network discharge consent. Seek that 'and/or' used throughout this document be amended to clarify whether it is inclusive or not as 'and/or' is inappropriate.
S225.102	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious	Oppose	Concerned with implications of the 'redevelopment' definition and lack of thresholds both in Policy WH.P14 and this rule. Refer to comments on the 'redevelopment' definition and WH.P14.	Review definition of redevelopment and consider application of thresholds where both Policy WH.P14 and this rule apply.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		surfaces - discretionary activity.			
S225.103	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Amend	Submitter refers to other rules which default into this non-complying rule.	Seek that this rule is reviewed and any consequential amendments made in relation to concerns raised in submission, in respect of other inter-related provisions.
S225.104	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Concerns with the implications and practicality of this rule and identifies that prohibition in policy, and the direction in objective above it, would effectively render a future plan change an impossibility because it would not be implementing higher order documents. Section 32 analysis for such a plan change would need to consider provisions in PC1 and recent changes to NRP and therefore would be at risk of being contrary to objectives and policies in these plans.	Delete rule or amend significantly to change from prohibited and provide a consenting pathway for unplanned greenfield developments. Seek this specifically should not apply to developments feeding into existing stormwater networks that will have an existing stormwater network discharge consent.
S225.105	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Oppose	Considers this does not appear to align with requirements of NESCF.	Delete rule.
S225.106	8 Whaitua Te Whanganui-a-Tara	Rule WH.R21: Plantation forestry - discretionary activity.	Oppose	Considers this does not appear to align with requirements of NESCF.	Delete rule.
S225.107	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks -	Oppose	Concerns with implications of amending earthworks definition, and implications for this rule. Considers clause 16 changes to the provision significantly improve outcomes for landowners and public, but	Amend provisions to address the following key functions of territorial authorities as road controlling authorities: 1. need to cover road maintenance and upgrading, including reseal

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.		submitter remains of the opinion the removal of exclusions from definitions of earthworks, significantly affect submitters ability to undertake business as usual maintenance and renewals particularly for local authority roads, footpaths and cycle paths. Considers it more appropriate to include these activities as permitted activities, given their effects are well understood, and can be managed by permitted activity standards.	<p>2. upgrading of underground networks 3. replacement of signs and traffic/speed management 4. repair, maintenance and upgrading of pedestrian and cycle facilities</p> <p>Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.</p>
S225.108	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Concerns with application of amended earthworks definition and implications for this rule. Concerns resource consent would be required for every 150 linear metres of road, based on an average 20 m road width. Scale at which resource consents would apply for every territorial authority in the region, would be an extremely onerous. Considers amended permitted activity standards are a far more appropriate way to manage sediment run-off concerns.	<p>Amend suite of provisions to address and reflect the requirements and functions of territorial authorities as road controlling authorities, which appropriate permitted activity standards to manage effects.</p> <p>Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.</p>
S225.109	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Amend	Submitter refers to other rules which default into this non-complying rule.	Seek rule is reviewed and any consequential amendments made in relation to concerns raised in submission, in respect of other inter-related provisions.
S225.110	8 Whaitua Te Whanganui-a-Tara	Rule WH.R26: Farming activities on a property of between 4 hectares and 20 hectares - permitted activity.	Oppose	Opposed to additional burden this will place on small landowners. Notes a different threshold throughout PC1 where properties over 5 ha are identified rather than 4 ha. Considers many of these smaller properties have limited production occurring on them and registration process set out in Schedule 35 appears to be particularly onerous for smaller properties.	Delete rule and associated provisions, such as Schedule 35, and focus on larger properties where more can be achieved.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.111	8 Whaitua Te Whanganui-a-Tara	Rule WH.R27: Farming activities on 20 hectares or more of land - permitted activity.	Support	Not stated	Retain as notified
S225.112	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Concerned this could potentially burden landowners, date could also give people no time especially if the NRP Plan Change 1 takes a while to go through the process. Seeks acknowledgment that Pest species including deer, pigs and goats that are a substantial issue in these areas - particularly in the Mangarua valley. Consider that the most practicable options should be considered for the exclusion of access to these streams.	Seek acknowledgment that pest species including deer, pigs and goats are a substantial issue in areas - particularly in Mangarua Valley.
S225.113	8 Whaitua Te Whanganui-a-Tara	Rule WH.R29: Livestock access to a small river - discretionary activity.	Amend	Supports intent but concerned timeframe identified is unrealistic given this goes beyond regulations in the NESFW, and due to costs it is unrealistic to ask landowners to go that fast, especially given the focus on current NES requirements first and streams may be in steep areas which are harder to fence. Seeks acknowledgment pest species including deer, pigs and goats are a substantial issue in these areas - particularly in Mangarua valley. Seeks this provision is supported by pest management on GW land to prevent pest species entering landowners properties.	Seek timeframe amended to end of 2026 so relevant landowners are able to understand it prior to being required to comply with rule. Seek flexibility on how stock exclusion is managed. Seek provision supported by pest management on GW land to prevent pest species entering land owners properties.
S225.114	8 Whaitua Te Whanganui-a-Tara	Rule WH.R30: The use of land for farming activities -	Amend	Concern related to affordability and achievability of provisions are expressed in relation to policies which are related to this rule.	Seek that consultation is undertaken affected landowners, and timeframes are realistic and achievable within resource constraints of communities.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.			
S225.115	8 Whaitua Te Whanganui-a-Tara	Rule WH.R31: Change of rural land use - discretionary activity.	Amend	Concern related to affordability and achievability of provisions are expressed in relation to policies which are related to this rule.	Seek plan change process is paused and direct consultation is undertaken with affected landowners, and timeframes are realistic and achievable within resource constraints of communities.
S225.116	8 Whaitua Te Whanganui-a-Tara	Rule WH.R32: Farming activities - non-complying activity.	Amend	Submitter refers to other rules which default into this non-complying rule.	Seek rule is reviewed and any consequential amendments made in relation to concerns raised in submission, in respect of other inter-related provisions.
S225.117	12 Schedules	Schedule 27: Freshwater Action Plan requirements.	Amend	Notes these are non-regulatory and broadly supports their intent but notes local authorities should also be a partner not just a consultee. Notes regulatory requirements that might come out of the actions in B3 should go through an appropriate process.	Seek freshwater action plans are developed in partnership with local authorities and any regulatory actions identified under B3 go through appropriate process. Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.
S225.118	12 Schedules	Schedule 28: Stormwater Contaminant Treatment.	Amend	Supports intent of policy, but detail requirements may be inappropriate for individual small scale developments. Supports this for new impervious surfaces of a certain size, such as over 1000m ² but for redeveloped surfaces, considers it overly onerous and inappropriate.	Seek a scale and significance assessment is undertaken for the application of schedule. Seek that a threshold be applied to schedule. Seek that redevelopment is excluded from schedule.
S225.119	12 Schedules	Schedule 29: Stormwater Impact Assessments.	Amend	Supports intent of schedule but is concerned 3,000m ² is a low trigger for a discretionary activity if redevelopment and road maintenance continue to be included.	Seek more appropriate threshold is identified for redevelopment, or relief sought in relation to definition of redevelopment may address relief sought by submitter.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S225.120	12 Schedules	Schedule 30: Financial Contributions.	Oppose	<p>Concerned this will place increased burden on infrastructure providers and landowners. Considers the Section 32 analysis and economic analysis for the level of contribution appears to focus on greenfield development and not implications this will have on requiring authorities. Notes it does not assess whether this, and the associated provision framework, including WH.R26 is the most efficient and appropriate way to achieve the purpose of the act. Instead, this specific requirement is assessed as an options package alongside other unrelated provisions.</p> <p>The section 32 assessment does not consider this schedule leads to double dipping, because rule WH.R26 (e) only appears to require that 85% of annual mean runoff is captured but we consider that this is a step too far and unrealistic. Does not appear to be justification that GWRC can achieve meaningful further reductions beyond 85% at source to provide sufficient rational for the financial contributions to be levied. Does not appear to acknowledge requirements in schedule 31 and costs of meeting those requirements including point 2 of schedule 31"....how the stormwater network will be managed through time, to improve the adverse acute, chronic and cumulative effects of stormwater discharges on surface water bodies, groundwater and coastal water...".</p> <p>Concerned the contributions could be used outside of Freshwater Management Unit from where the contribution was collected. Also appears to be a lack of justification for the roading charges in the economic assessment.</p>	<p>Review rationale and justified basis for proposed financial contributions, as it appears these provisions have not fully been considered.</p> <p>Remove requirements to pay financial contributions for further treatment where people are already providing treatment as part of their development.</p>
S225.121	12 Schedules	Schedule 31: Stormwater Management	Amend	<p>Intent is supported but it is unclear in the schedule who is expected to develop and implement a stormwater management strategy under schedule 31 within context of existing uncertainties around three waters reform, or how this will be funded.</p>	<p>Provide clarity on who will develop, fund and implement stormwater management strategy.</p> <p>Seek that and/or used throughout this document be amended to clarify whether it is inclusive or not as and/or is inappropriate.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.			
S225.122	12 Schedules	Schedule 33: Vegetation Clearance Erosion and Sediment Management Plan.	Amend	Considers this should also refer to Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021).	Include reference to Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021) for consistency across plan.
S225.123	12 Schedules	Schedule 34: Plantation Forestry Erosion and Sediment Management Plan.	Amend	Considers this should also refer to Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021).	Include reference to Greater Wellington Regional Council Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Wellington Region (2021) for consistency across plan.
S225.124	12 Schedules	Schedule 35: Small farm registration.	Oppose	Concerned about increased burden on landowners. Considers Section 32 analysis does not assess if this, and the associated provision framework, including WH.R26 is the most efficient and appropriate way to achieve purpose of act. Instead, this specific requirement is assessed as an options package alongside other unrelated provisions.	Remove the requirement for small farm registration and address relief sought in rule WH.R26
S225.125	12 Schedules	Schedule 36: Additional requirements for Farm	Amend	Supports intent of Schedule 36 but is concerned timeframe is unachievable, particularly as this could involve slower techniques, since slopes can be difficult to access and very costly to plant and manage. Notes requirement is going to incur significant costs for landowners and could mean	Seek timeframes are achievable. Seek support for implementation for landowners, including funding and guidance to assist them through transition.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Environment Plans in Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.		retirement of large areas of land that will reduce the productive capacity on site with consequential economic effects.	
S225.126	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Not Stated	Opposes extent of Map 88 as this does not accurately reflect UHCC Plan Change 50 notified on 4 October 2023, and is inconsistent around settlement zone land. Considers it also does not reflect UHCC Plan Change 49, notified on 11 August 2021. Provision should apply from the date of PC1 decision and not date of notification. This would give landowners and developers ability to complete planning processes (such as in train resource consents or plan changes). Current date as it is notified, would circumvent these ongoing planning process and prevent rezoning submissions on active plan changes.	Amend map to reflect Map 1 attached to our submission to include all land rezoned under PC49 and PC50, including all settlement zone, as 'planned' and reflect other active plan changes within the Wellington Region. Updating date to reflect a decision date for PC1, not notification date.
S225.127	13 Maps	Map 93: Highest and high erosion risk land (Pasture) - Te Whanganu i-a-Tara.	Oppose	Not stated	Not stated
S225.128	13 Maps	Map 94: Highest erosion risk land (Woody	Oppose	Not stated	Not stated

		vegetation clearance) - Te Whanganu i-a-Tara.			

S072 Upper Hutt Rural Communities - Angela Marie Greig

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
72.001	General comments	General comments - consultation	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community heard of PC1 through word of mouth.	Withdraw PC1 and undertake further consultation
72.002	General comments	General comments - current legislation	Not Stated	Considers PC1 to be lacking supporting evidence. Considers rules and methods classifying streams, drains, ditches, and ephemeral flows as rivers in PC1 should be struck out. States these rules were developed to get around the GWRC v UHCC ruling	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
72.003	General comments	General comments - current legislation	Not Stated	Concerned that PC1 is proposing sanctions on property owners for factors that they cannot control. Considers within any catchment there are upstream and downstream properties and very few indicative monitoring sites, such as the Mangaroa and Akatarawa Valley catchments. Concerned properties will be assessed based on downstream results from a single monitoring point	Remove clauses where there is an insufficient network of water quality monitoring sites.
72.004	General comments	General comments - current legislation	Not Stated	Questions the decision to prioritise freshwater management over other National Policy Statements such as the National Policy Statement for Indigenous Biodiversity and the National Policy Statement for Urban Development. Concerned GWRC has erroneously decided to regard the Te Mana o te Wai hierarchy of obligations (a)-(c) as	Give equal weight to all government legislation and disregard regulation by committee.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				mutually exclusive rather than equally weighted and interdependent. Concerned the decision to give maximum weight to one piece of legislation was exacerbated by the decision to take into account the opinion of one Whaitua with regard to copper and zinc levels. Levels of copper and zinc are not recognised in NPS-FM. Determines that this is a case of legislation by committee.	
72.005	General comments	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.
72.006	General comments	General comments - rural	Not Stated	Considers there to be no data on water quality gathered within the Mangaroa catchment and the Akatarawa catchment. States that the headwaters of the catchments are located 20km from the monitoring points. Considers there to be a lack of understanding on how and where contaminants are entering water and that GWRC is assuming the source of contamination is farming activities/human activity. Considers GWRC need to understand where and how sediment and contaminants are entering water bodies. Recommended the Mangaroa and Akatarawa catchments, at least 3 monitoring points should be established to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.
72.007	General comments	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing
72.008	General comments	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost- benefit exercise be completed to ensure the concept of financial accountability is followed .

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
72.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
72.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
72.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.
72.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river -	Amend	Considers animals, excluding cattle deer and pigs, to be exempt from Rule WH.R28.	Request confirmation that cattle, deer, and pigs are exempt from Rule WH.R28

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.			
72.013	12 Schedule s	Schedule 35: Small farm registration.	Not Stated	Concerned the level of information required to register small farms is complex and farm owners may not have the expertise to produce the data required and GWRC does not have the systems to receive the data. Also concerned about the costs and uncertainty associated with resource consent requirements	Delete the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating a regulation that will not function appropriately without those systems. Confirm whether GWRC have the authority to commit to a course of action which may be at variance to the drafted regulations.

79.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
79.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	
79.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Considers animals, excluding cattle deer and pigs, to be exempt from Rule WH.R28.	Request confirmation that cattle, deer, and pigs are exempt from Rule WH.R28
79.013	12 Schedules	Schedule 35: Small farm registration.	Not Stated	Concerned the level of information required to register small farms is complex and farm owners may not have the expertise to produce the data required and GWRC does not have the systems to receive the data. Also concerned about the costs and uncertainty associated with resource consent requirements	Delete the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating a regulation that will not function appropriately without those systems. Confirm whether GWRC have the authority to commit to a course of action which may be at variance to the drafted regulations.

S071 Upper Hutt Rural Communities - Brendon Allen Greig

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
71.001	General comments	General comments - consultation	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community heard of PC1 through word of mouth.	Withdraw PC1 and undertake further consultation
71.002	General comments	General comments - current legislation	Not Stated	Considers PC1 to be lacking supporting evidence. Considers rules and methods classifying streams, drains, ditches, and ephemeral flows as rivers in PC1 should be struck out. States these rules were developed to get around the GWRC v UHCC ruling	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
71.003	General comments	General comments - current legislation	Not Stated	Concerned that PC1 is proposing sanctions on property owners for factors that they cannot control. Considers within any catchment there are upstream and downstream properties and very few indicative monitoring sites, such as the Mangaroa and Akatarawa Valley catchments. Concerned properties will be assessed based on downstream results from a single monitoring point	Remove clauses where there is an insufficient network of water quality monitoring sites.
71.004	General comments	General comments - current legislation	Not Stated	Questions the decision to prioritise freshwater management over other National Policy Statements such as the National Policy Statement for Indigenous Biodiversity and the National Policy Statement for Urban Development. Concerned GWRC has erroneously decided to regard the Te Mana o te Wai hierarchy of obligations (a)-(c) as mutually exclusive rather than equally weighted and interdependent. Concerned the decision to give maximum weight to one piece of legislation was exacerbated by the decision to take into account the opinion of one Whaitua with regard to copper and zinc levels. Levels of copper and zinc are not recognised in NPS-FM. Determines that this is a case of legislation by committee.	Give equal weight to all government legislation and disregard regulation by committee.
71.005	General comments	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.
71.006	General comments	General comments - rural	Not Stated	Considers there to be no data on water quality gathered within the Mangaroa catchment and the Akatarawa catchment. States that the headwaters of the catchments are located 20km from the monitoring points. Considers there to be a lack of understanding on how and where contaminants are entering water and that GWRC is assuming the	Defer any further action on PC1 pending gathering an effective database.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				source of contamination is farming activities/human activity. Considers GWRC need to understand where and how sediment and contaminants are entering water bodies. Recommended the Mangaroa and Akatarawa catchments, at least 3 monitoring points should be established to identify the source of any quality reduction.	
71.007	General comments	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing
71.008	General comments	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost-benefit exercise be completed to ensure the concept of financial accountability is followed.
71.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
71.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
71.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		programme			
60.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
60.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.
60.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Considers animals, excluding cattle deer and pigs, to be exempt from Rule WH.R28.	Request confirmation that cattle, deer, and pigs are exempt from Rule WH.R28

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
60.013	12 Schedule s	Schedule 35: Small farm registratio n.	Not Stated	Concerned the level of information required to register small farms is complex and farm owners may not have the expertise to produce the data required and GWRC does not have the systems to receive the data. Also concerned about the costs and uncertainty associated with resource consent requirements	Delete the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating a regulation that will not function appropriately without those systems. Confirm whether GWRC have the authority to commit to a course of action which may be at variance to thee drafted regulations.

S081 Upper Hutt Rural Communities - David McCready

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
81.001	General comment s	General comments - consultatio n	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community heard of PC1 through word of mouth.	Withdraw PC1 and undertake further consultation
81.002	General comment s	General comments - current legislation	Not Stated	Considers PC1 to be lacking supporting evidence. Considers rules and methods classifying streams, drains, ditches, and ephemeral flows as rivers in PC1 should be struck out. States these rules were developed to get around the GWRC v UHCC ruling	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
81.003	General comment s	General comments - current legislation	Not Stated	Concerned that PC1 is proposing sanctions on property owners for factors that they cannot control. Considers within any catchment there are upstream and downstream properties and very few indicative monitoring sites, such as the Mangaroa and Akatarawa Valley catchments. Concerned properties will be assessed based on downstream results from a single monitoring point	Remove clauses where there is an insufficient network of water quality monitoring sites.
81.004	General comment s	General comments - current legislation	Not Stated	Questions the decision to prioritise freshwater management over other National Policy Statements such as the National Policy Statement for Indigenous Biodiversity and the National Policy Statement for Urban Development. Concerned	Give equal weight to all government legislation and disregard regulation by committee.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				GWRC has erroneously decided to regard the Te Mana o te Wai hierarchy of obligations (a)-(c) as mutually exclusive rather than equally weighted and interdependent. Concerned the decision to give maximum weight to one piece of legislation was exacerbated by the decision to take into account the opinion of one Whaitua with regard to copper and zinc levels. Levels of copper and zinc are not recognised in NPS-FM. Determines that this is a case of legislation by committee.	
81.005	General comments	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.
81.006	General comments	General comments - rural	Not Stated	Considers there to be no data on water quality gathered within the Mangaroa catchment and the Akatarawa catchment. States that the headwaters of the catchments are located 20km from the monitoring points. Considers there to be a lack of understanding on how and where contaminants are entering water and that GWRC is assuming the source of contamination is farming activities/human activity. Considers GWRC need to understand where and how sediment and contaminants are entering water bodies. Recommended the Mangaroa and Akatarawa catchments, at least 3 monitoring points should be established to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.
81.007	General comments	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing
81.008	General comments	General comments - economic	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost- benefit exercise be completed to ensure the concept of financial accountability is followed .

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

66.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
66.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
66.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.
66.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small	Amend	Considers animals, excluding cattle deer and pigs, to be exempt from Rule WH.R28.	Request confirmation that cattle, deer, and pigs are exempt from Rule WH.R28

		river - permitted activity.			
66.013	12 Schedule s	Schedule 35: Small farm registration.	Not Stated	Concerned the level of information required to register small farms is complex and farm owners may not have the expertise to produce the data required and GWRC does not have the systems to receive the data. Also concerned about the costs and uncertainty associated with resource consent requirements	Delete the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating a regulation that will not function appropriately without those systems. Confirm whether GWRC have the authority to commit to a course of action which may be at variance to the drafted regulations.

S084 Upper Hutt Rural Communities - Karen Nash

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
84.001	General comments	General comments - consultation	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community heard of PC1 through word of mouth.	Withdraw PC1 and undertake further consultation
84.002	General comments	General comments - current legislation	Not Stated	Considers PC1 to be lacking supporting evidence. Considers rules and methods classifying streams, drains, ditches, and ephemeral flows as rivers in PC1 should be struck out. States these rules were developed to get around the GWRC v UHCC ruling	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
84.003	General comments	General comments - current legislation	Not Stated	Concerned that PC1 is proposing sanctions on property owners for factors that they cannot control. Considers within any catchment there are upstream and downstream properties and very few indicative monitoring sites, such as the Mangaroa and Akatarawa Valley catchments. Concerned properties will be assessed based on downstream results from a single monitoring point	Remove clauses where there is an insufficient network of water quality monitoring sites.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
84.004	General comments	General comments - current legislation	Not Stated	Questions the decision to prioritise freshwater management over other National Policy Statements such as the National Policy Statement for Indigenous Biodiversity and the National Policy Statement for Urban Development. Concerned GWRC has erroneously decided to regard the Te Mana o te Wai hierarchy of obligations (a)-(c) as mutually exclusive rather than equally weighted and interdependent. Concerned the decision to give maximum weight to one piece of legislation was exacerbated by the decision to take into account the opinion of one Whaitua with regard to copper and zinc levels. Levels of copper and zinc are not recognised in NPS-FM. Determines that this is a case of legislation by committee.	Give equal weight to all government legislation and disregard regulation by committee.
84.005	General comments	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.
84.006	General comments	General comments - rural	Not Stated	Considers there to be no data on water quality gathered within the Mangaroa catchment and the Akatarawa catchment. States that the headwaters of the catchments are located 20km from the monitoring points. Considers there to be a lack of understanding on how and where contaminants are entering water and that GWRC is assuming the source of contamination is farming activities/human activity. Considers GWRC need to understand where and how sediment and contaminants are entering water bodies. Recommended the Mangaroa and Akatarawa catchments, at least 3 monitoring points should be established to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.
84.007	General comments	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
84.008	General comments	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost- benefit exercise be completed to ensure the concept of financial accountability is followed .
84.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
84.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. 75.008	General comments	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost- benefit exercise be completed to ensure the concept of financial accountability is followed .
75.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
75.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
75.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	
75.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Considers animals, excluding cattle deer and pigs, to be exempt from Rule WH.R28.	Request confirmation that cattle, deer, and pigs are exempt from Rule WH.R28
75.013	12 Schedules	Schedule 35: Small farm registration.	Not Stated	Concerned the level of information required to register small farms is complex and farm owners may not have the expertise to produce the data required and GWRC does not have the systems to receive the data. Also concerned about the costs and uncertainty associated with resource consent requirements	Delete the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating a regulation that will not function appropriately without those systems. Confirm whether GWRC have the authority to commit to a course of action which may be at variance to the drafted regulations.

S082 Upper Hutt Rural Communities - Meaghan Fitzgerald

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
82.001	General comments	General comments - consultation	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community heard of PC1 through word of mouth.	Withdraw PC1 and undertake further consultation

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
82.002	General comments	General comments - current legislation	Not Stated	Considers PC1 to be lacking supporting evidence. Considers rules and methods classifying streams, drains, ditches, and ephemeral flows as rivers in PC1 should be struck out. States these rules were developed to get around the GWRC v UHCC ruling	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
82.003	General comments	General comments - current legislation	Not Stated	Concerned that PC1 is proposing sanctions on property owners for factors that they cannot control. Considers within any catchment there are upstream and downstream properties and very few indicative monitoring sites, such as the Mangaroa and Akatarawa Valley catchments. Concerned properties will be assessed based on downstream results from a single monitoring point	Remove clauses where there is an insufficient network of water quality monitoring sites.
82.004	General comments	General comments - current legislation	Not Stated	Questions the decision to prioritise freshwater management over other National Policy Statements such as the National Policy Statement for Indigenous Biodiversity and the National Policy Statement for Urban Development. Concerned GWRC has erroneously decided to regard the Te Mana o te Wai hierarchy of obligations (a)-(c) as mutually exclusive rather than equally weighted and interdependent. Concerned the decision to give maximum weight to one piece of legislation was exacerbated by the decision to take into account the opinion of one Whaitua with regard to copper and zinc levels. Levels of copper and zinc are not recognised in NPS-FM. Determines that this is a case of legislation by committee.	Give equal weight to all government legislation and disregard regulation by committee.
82.005	General comments	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
65.008	General comments	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost- benefit exercise be completed to ensure the concept of financial accountability is followed .
65.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
65.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
65.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. Gorse fixes nitrogen and has been found to leach as much nitrogen as a dairy farm. Highlights that proposed measures will have substantial costs and may result in minimal water quality improvements.	Withdraw measures in PC1 targeted towards the Upper Hutt farming community.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
65.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R28: Livestock access to a small river - permitted activity.	Amend	Considers animals, excluding cattle deer and pigs, to be exempt from Rule WH.R28.	Request confirmation that cattle, deer, and pigs are exempt from Rule WH.R28
65.013	12 Schedule s	Schedule 35: Small farm registration.	Not Stated	Concerned the level of information required to register small farms is complex and farm owners may not have the expertise to produce the data required and GWRC does not have the systems to receive the data. Also concerned about the costs and uncertainty associated with resource consent requirements	Delete the requirement for farms of 4 ha to register with GWRC. Require GWRC to have the necessary systems and applications in place prior to promulgating a regulation that will not function appropriately without those systems. Confirm whether GWRC have the authority to commit to a course of action which may be at variance to the drafted regulations.

S076 Upper Hutt Rural Communities - Richard Charles Bialy

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
76.001	General comments	General comments - consultation	Not Stated	Concerned there was virtually no consultation completed on PC1 with those most affected. Notes the rural community heard of PC1 through word of mouth.	Withdraw PC1 and undertake further consultation
76.002	General comments	General comments - current legislation	Not Stated	Considers PC1 to be lacking supporting evidence. Considers rules and methods classifying streams, drains, ditches, and ephemeral flows as rivers in PC1 should be struck out. States these rules were developed to get around the GWRC v UHCC ruling	Remove clauses that are demonstrably regulating by fiat. Demonstrate respect for the rule of law.
76.003	General comments	General comments - current legislation	Not Stated	Concerned that PC1 is proposing sanctions on property owners for factors that they cannot control. Considers within any catchment there are upstream and downstream properties and very few indicative monitoring sites, such as the Mangaroa and	Remove clauses where there is an insufficient network of water quality monitoring sites.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Akatarawa Valley catchments. Concerned properties will be assessed based on downstream results from a single monitoring point	
76.004	General comments	General comments - current legislation	Not Stated	Questions the decision to prioritise freshwater management over other National Policy Statements such as the National Policy Statement for Indigenous Biodiversity and the National Policy Statement for Urban Development. Concerned GWRC has erroneously decided to regard the Te Mana o te Wai hierarchy of obligations (a)-(c) as mutually exclusive rather than equally weighted and interdependent. Concerned the decision to give maximum weight to one piece of legislation was exacerbated by the decision to take into account the opinion of one Whaitua with regard to copper and zinc levels. Levels of copper and zinc are not recognised in NPS-FM. Determines that this is a case of legislation by committee.	Give equal weight to all government legislation and disregard regulation by committee.
76.005	General comments	General comments - overall	Not Stated	Questions whether staff have been advised of the inclusion of the statement that all rules in PC1 will have immediate legal effect as they meet the requirements of section 86B. Concerned about differing requirements for riparian margins outlined in PC1 and supporting information for PC1.	Delete the 'immediate legal effect' statement in the Section 32 report to indicate that PC1 rules will attain legal effect upon PC1 becoming fully operative.
76.006	General comments	General comments - rural	Not Stated	Considers there to be no data on water quality gathered within the Mangaroa catchment and the Akatarawa catchment. States that the headwaters of the catchments are located 20km from the monitoring points. Considers there to be a lack of understanding on how and where contaminants are entering water and that GWRC is assuming the source of contamination is farming activities/human activity. Considers GWRC need to understand where and how sediment and contaminants are entering water bodies. Recommended the Mangaroa and Akatarawa catchments, at least 3 monitoring points should be established to identify the source of any quality reduction.	Defer any further action on PC1 pending gathering an effective database.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
76.007	General comments	General comments - overall	Not Stated	Identifies drafting errors in PC1 that alter the intended meanings of sections and render the second paragraph meaningless.	Subject PC1 to further editing
76.008	General comments	General comments - economic cost/impact	Not Stated	Concerned the section 32 does not adequately quantify the economic, environmental, and cultural costs and benefits through an economic impact assessment.	Requests a cost-benefit exercise be completed to ensure the concept of financial accountability is followed.
76.009	2 Interpretation	Small stream riparian programme	Not Stated	Questions what the minimum width of a small streams is.	Clarify the definition of small rivers upon which other regulations rely e.g. Stock exclusion and fencing rules.
76.010	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers available data identifying the origin of contaminants in water to be insufficient. Considers for the Hutt River, indicators from primary contact sites indicate that contamination is not originating from the farming communities of Akatarawa and Mangaroa but rather downstream of Taita Gorge. States a disproportionate amount of effort has been put into trying to solve a problem that does not exist. Also states that as the farming communities of Upper Hutt have moved away from dairy farming, prior problems have been resolved.	Requests GWRC move away from attributing contamination problems to farming and re-focus on urban sources.
76.011	General comments	General comments - rural	Not Stated	Questions the justification for measures targeting Mangaroa Valley, Akatarawa Valley, and other farming communities due to a lack of supporting evidence. States that the s32 report identified that stocking rates and stock numbers are low, amounts of nitrogen fertiliser used are low, there is a low opportunity to reduce nitrogen discharges, and recommendations that gorse fixes nitrogen leaching are incorrect. Also states that there is no evidence to support statements that on-site wastewater systems can be a source of nitrogen losses. 		Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.			
S194.023	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Neutral	Neutral stance taken by submitter is conditional on the unplanned greenfield areas identified in Map 88 not applying to rural based development within a Rural Lifestyle Zone. If this interpretation is incorrect, the submitter would oppose the identified extent of unplanned greenfield areas.	Ensure the areas identified in Map 88 relating to unplanned greenfield development do not relate to development occurring in the rural environment, including the Rural Lifestyle Zone. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.

S097 Urban Edge Planning Ltd on behalf of Coronation Real Estate Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S97.001	General comments	General comments - unplanned greenfield development	Oppose	Opposes the site at 9 Comber Place as being identified as unplanned greenfield area or subject to the relevant provisions; Chapter 13- Map 87, and Chapter 8 - Policy WH.P16 and Rule WH.R13	Not stated
S97.002	8 Whaitua Te Whanganu i-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Concerned the policy is too narrow as it does not provide a pathway or guidance other than avoidance. Questions why stormwater discharge from unplanned development differs from stormwater discharge from planned development with the underlying effects-based approach. Submitter considers the effects the same and potentially manageable (e.g. through an effects management hierarchy)	Amend policy to provide a pathway where the effects from additional stormwater discharges can be managed appropriately. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S97.003	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	<p>Opposes the prohibited activity status as it does not allow an effects assessment which means the effects are considered too significant and cannot be managed. Submitter questions how these effects can then be managed through a plan change process. Prohibited activity status does not recognise opportunities to undertake catchment-based stormwater management and environmental enhancement, particularly those already in degrading states. Considers the rule does not differentiate between the use of land and the associated stormwater discharge. Considers the prevention of increased contaminant load from new development can be managed through the RC process without needing a plan change process. Changing the status from unplanned greenfield development to planned greenfield development requires consideration for wider effects which could be considered an attempt to widen the scope and result in duplication with the District Plan change. Considers a discretionary or non-complying activity status would provide two avenues, either apply for a resource consent in the knowledge that future additions or amendments may require further consents or apply for a plan change to achieve the long-term change to the NRP that would potentially provide an easier pathway for future development. The main differences are longer time frames, wider scope and the additional further submission phase for a plan change. Considers a plan change is therefore not an efficient or effective response and a prohibited activity status is not adequately reconciled in the context of other national direction, including the NPS-UD.</p>	Replace the prohibited activity status with a discretionary or non-complying activity status. Any consequential changes or alternative relief required to achieve the intended outcomes sought within this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S97.004	13 Maps	Map 87: Unplanned greenfield areas - Wellington City Council.	Oppose	Oppose the identification of the site at 9 Comber Place, Johnsonville as an unplanned greenfield area on Map 87 due to the latest subdivision and land use consent decision report (SR515059) describing the proposed zoning of the site as an error. Due to the ongoing process delays for the PDP, this error has not been corrected yet and has subsequently been incorrectly identified on Map 87 of PC1. Considers reliance on the proposed zoning maps of the PDP for identification of unplanned greenfield areas is inappropriate given the immediate legal effect and wide-reaching consequences of this identification. This approach does not reflect the possibility and likelihood of future changes to the zones in response to submissions. It is unclear how any changes to the spatial extent of the proposed zones can be carried over into the NRP maps. Meanwhile, the impending prohibitive activity status for any future development as well as temporary discretionary activity status under s87B of the RMA creates significant risk and uncertainty for the landowner and threatens the ongoing and consented development of the site.	Amend Map 87 to show the site at 9 Comber Place, Johnsonville as Planned/Existing Urban Area.

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S193.001	General comments	General comments - overall	Support	Generally agrees with the long-term overarching objectives for both whatua. Considers 2100 is a realistic timeframe for those objectives, as many of the target attribute states (TASs) will take multiple generations and much planning and investment to achieve	Not Stated
S193.002	General comments	General comments - overall	Not Stated	<p>Considers quality data is needed to inform models that are free of uncertainty and error to the extent that they can be used to underpin policies that drive system change.</p> <p>Concerned that model outputs used for PC1 are inadequate for this purpose. Considers insufficient effort was put into ground-truthing the modelled data for PC1, and this should be a focus for the Council before some policies and rules can be proposed.</p>	Not Stated
S193.003	General comments	General comments - rural	Not Stated	<p>Concerned to see 'blanket' policies and rules proposed that will be implemented at property level with severe implications for rural landowners, including requiring them to retire certain classes of land from pastoral and plantation forestry use and undertake expensive riparian management measures.</p> <p>Considers there is insufficient evidence supporting these policies and rules, and the proposed policies and rules will not get us any closer to achieving the TASs.</p>	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S193.004	General comments	General comments - economic cost/impact	Not Stated	Considers the direct and opportunity costs of the proposed policies and rules are too high for rural landowners and amount to a form of 'managed retreat' for public good, with no compensation.	Not Stated
S193.005	General comments	General comments - overall	Not Stated	Considers the Council could be an "exemplar" on its own land in partnering with landowners and rural communities to get the smart data needed to inform cost-effective policies that will achieve its long-term objectives.	Not Stated
S193.006	General comments	General comments - fresh water	Not Stated	Supports an integrated catchment approach to the management of sediment and nutrient loss, supported by the Council and underpinned by non-regulatory methods such as FAPs and Regional Forest Spatial Plan. Considers this approach allows the Council to demonstrate best practice regarding the management and protection of natural ecosystems including freshwater ecosystems.	Not Stated
S193.007	General comments	General comments - target attribute states	Not Stated	<p>Supports progressive improvement towards the health and well-being of waterbodies in Te Awarua-o-Porirua Whaitua and Whaitua Te Whanganui-a-Tara (the whaitua).</p> <p>Generally agrees with the overarching objectives in chapters 8 (WH.O1) and 9 (P.01) but seeks a provision for a thriving primary production sector.</p> <p>Considers Objectives WH.02 and P.02 clearly outline a trajectory of measurable improvement towards the health and well-being of waterbodies and their margins in the whaitua so by 2040 listed processes or states have improved or have been reached. Considers these objectives recognise the system change needed to meet the overarching objectives of WH.01 and P.01 will take time, knowledge, and significant financial investment to</p>	<p>Seeks the reference to 2040 be removed from Tables 8.4 and 9.2.</p> <p>Seeks TASs and/or sites where there is limited or 'insufficient data' be removed from Tables 8.4 and 9.2.</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>achieve.</p> <p>Supports an interim timeframe of 2040 to 'check in' and see whether water quality is improving.</p> <p>Does not consider all TASs will be achievable by 2040 partly because there is a lack of quality data to establish baseline positions for all TASs. Suggests more work needs to be done to gather and collate this data so it can be used to inform the freshwater action plans (FAPs) that will set out the pathway to achieving the TASs.</p> <p>Considers 2040 is an unrealistic timeframe to meet all the proposed TASs set out in Tables 8.4 and 9.2 of PC1. Considers the notes in Tables 8.4 and 9.2 indicate the Council has insufficient data on baseline states for some attributes and further monitoring and modelling is required to develop attribute state frameworks.</p> <p>Considers further work is required by the Council, with mana whenua and communities, to develop and implement FAPs to address how TASs will be achieved. Notes it will take time to establish a robust body of evidence for the TAS baselines, and the plans on how to achieve TASs where they need to be improved.</p> <p>Considers the TASs met should be maintained. Where they need to be improved, the tables should reflect realistic dates by which the TASs can be achieved</p> <p>Considers milestone target dates do not have to be the same for all TASs and all part FMUs. Suggests prioritising part-FMUs where the Council can achieve 'easy-wins' or where human health is most likely to be impacted by poor water quality.</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers realistic timeframes can be determined when preparing FAPs and carried into the NRP through a variation.</p> <p>Seeks relief that TASs and/or sites where there is limited or 'insufficient data' should be removed from Tables 8.4 and 9.2 as the baseline state cannot be reliably determined, and therefore it is not known whether the attribute and/or site needs to be maintained or improved.</p>	
S193.008	General comments	General comments - earthworks	Oppose	<p>Considers the operative NRP earthworks and vegetation clearance rules should remain so the changes are given time to take effect. Considers the rules were a significant shift on the previous plan and it is too soon to unravel the positions discussed and agreed upon through Environment Court-assisted mediation.</p> <p>Opposes removing the permitted and controlled activity rules (Rule R102 and Rule R103) for the construction of new farm tracks. Questions why Rules R102 and R103 have been removed as the conditions for both rules were prescriptive in terms of managing environmental effects. Concerned farm track works that cannot meet the proposed permitted activity rule will now require consent for a restricted discretionary or non-complying activity.</p> <p>Notes earthworks in winter, unless anticipated in a certified farm environment plan (FEP), now require consent for a non-complying activity irrespective of whether the effects of the earthworks can be managed to meet the discharge standards. Concerned to see the implementation of a 'blanket ban' on earthworks for four months of the year as it reduces a farmer's ability to manage and operate their business without additional cost and administrative burden and respond to events in a</p>	<p>Seeks to have Rules R102 and R103 reinstated. Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>timely manner. Notes Farmers need the flexibility to be able to restore access if tracks are washed out without having to wait for resource consent to be granted.</p> <p>Opposes the earthworks and vegetation clearance policies and rules in the proposed NRP and seeks relief that the policies and rules in the operative NRP remain.</p>	
S193.009	General comments	General comments - rural	Oppose	<p>Concerned about the erosion risk land modelling and how the Council intends to use it to underpin policies to retire land from pasture and plantation forest. Agrees with Easton et al that site-specific assessments must be undertaken to ground-truth the model.</p> <p>Considers the policy requiring the establishment of permanent woody vegetation cover on at least 50% of highest erosion land (pasture) within 10 years and 100% by 2040 to be overly onerous to landowners and impractical to implement. Considers this a policy of managed retreat to attain a public good and is an intrusion into private property rights.</p> <p>Considers the policy creates an equity issue, as proposed policies and rules in urban areas of the whitua generally apply at a municipal level (they don't directly impact individual households or businesses), and costs can be debt funded across multiple generations of ratepayers. In comparison, policies and rules proposed for rural areas of the whitua impact individual landowners with considerable costs being incurred within the next 17 years.</p> <p>Consider the policy may be palatable if the timeframes were extended to a reasonable period</p>	Not Stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and landowners, in a voluntary capacity, could receive full compensation for areas of their land that would no longer be available for farming. Concerned the adoption of this policy will affect the on-farm income of landowners as it reduces options for economic use for landowners and will likely impact property values, making it harder for these properties to be sold and reducing their sale price.</p> <p>Submitter references Evans et al who argue that a change in government policy that denies property owners the ability to make an economically viable use of that property in the use for which it was purchased represents a de-facto taking that requires compensation.</p> <p>Concerned the cost of fencing, pre-planting preparation of land, purchase of seedstock, planting, watering, fertilising and weed and pest control will be picked up by farmers. Identifies there will be challenges sourcing sufficient seedstock for planting, finding labour to plant native seedstock and sourcing and paying for specialist advice to ensure new plantings occur in a way that is consistent with the Emissions Trading Scheme (ETS) eligibility criteria so as to avoid plantings being ineligible for New Zealand Units (NZUs).</p> <p>Notes the policy vaguely mentions that WRC will provide 'support' to landowners and if this support will be comprehensive it is likely to be costly for ratepayers. Considers the support of landowners (i.e. financial compensation for the loss of production, the costs associated with planting land in permanent forest, and ongoing maintenance of those areas) is of such importance that a policy is required that is explicit in the extent, timing and delivery of such assistance and includes a full buy-out option.</p>	

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers the statement in the s32 report that the separation of highest erosion risk land and soil conservation treatment of high erosion risk land may provide for minor increases in farm productivity has no rational basis and ignores the Council's other policies which cap nutrient discharges from farming activities, effectively limiting further intensification.</p> <p>Considers the area (ha) of land within the highest erosion risk land map at a farm scale is significant for some properties. Some members estimate they could lose a third of their property under this policy.</p>	
S193.010	General comments	General comments - rural	Oppose	<p>Opposes policies and rules that require the 'blanket' mandatory retirement of private land to manage potential sediment loss. Suggests non-regulatory incentives and support should be used to achieve the restoration and enhancement of the natural ecosystems as discussed in Hearing Stream 3 for the RPS. References comments in the s42A report that regional plans cannot require landowners or others to plant forest or restore and extend wetlands, the recommended amendment to Method CC.4 to use a partnership approach, with mana whenua and other key stakeholders, and specific recommendations in relation to the Regional Forest Spatial Plan.</p> <p>Supports an integrated catchment approach to the management of sediment loss, supported by the Council and underpinned by non-regulatory methods such as FAPs and Regional Forest Spatial Plans. Considers this approach provides an opportunity for the Council to demonstrate best practice regarding the management and protection of natural ecosystems including freshwater</p>	Not Stated

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				ecosystems. Suggests Council can use their own farmland as an exemplar to communities and develop, in partnership with private landowners, innovative solutions to targeted at-risk areas.	
S193.011	General comments	General comments - rural	Oppose	<p>Concerned about the dSedNet modelling to estimate the sediment load reductions required from catchments to meet the TASs for visual clarity. Considers there is too much uncertainty and error for the model output to be used as a basis for policy decisions that will impact farming businesses. References Greer et al 2023 to support concerns regarding the limitation of modelling and data collected.</p> <p>Considers the sediment load reduction modelling relies on data that is spatially and temporally limited. In particular, water quality monitoring sites were noted as being limited. Notes that the proportional change in sediment load required to meet visual clarity targets in Te Awarua-o-Porirua was estimated using data from three sites.</p> <p>States that one monitoring site can not yield data that is representative of all water bodies in a catchment. For example, the Mākara Stream at Kennels monitoring site is used to determine water quality for 7203 ha and Mangaroa River at Te Marua is used to determine water quality for 10,370 ha.</p> <p>Notes the 'MFE Guidance for Implementing the NPS-FM Sediment Requirements' comments that within the modelling process, a small error in input data can result in a substantial error in outputs and that there are errors in load estimations from monitored water quality and flow data particularly, when it's restricted to monthly grab samples. Notes that MFE's advice is to improve the current level of</p>	Requests council improves the quality and quantity of their monitoring data to inform the dSedNet modelling before any changes to policies and rules in the NRP are made.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>sediment monitoring and to collect flow data concurrently at sediment monitoring sites. Also cites Whaitua-Te-Whanganui-a-Tara-Water-Quality-and-Ecology-Scenario-Assessment a 2020 by Aquanet which was part of the information considered by the Te Awarua-o-Porirua whaitua committee and the uncertainties in the information available.</p> <p>Notes that clause 1.6(2)(b) of the NPS-FM requires councils to take all practicable steps to reduce uncertainty and clause 1.6(1) requires councils to use, if practicable, complete and scientifically robust data. Concerned the data used to model the sediment load reductions is neither complete nor scientifically robust and is inadequate to underpin significant shifts in policy that have severe consequences for rural landowners.</p> <p>References the Whaitua-Te-Whanganui-a-Tara-Water-Quality-and-Ecology-Scenario-Assessment as evidence of the uncertainties in the information available on the effectiveness of erosion control measures to reduce sediment loads and modelling of this completed.</p> <p>Contends that the data used to model the sediment load reductions is neither complete nor scientifically robust (contrary to clauses 1.6(1) and 1.6(2)(b) of the NPS-FM) and is inadequate to underpin significant policy shifts that have severe consequences for rural landowners.</p>	
S193.012	General comments	General comments - plantation forestry	Amend	<p>Considers Policy WH.P28 and Rule WH.R22 (requiring plantation forestry is not established or continued beyond the harvest of existing plantation forests on highest erosion risk land) to be a draconian approach that ignores technological advances forestry harvesters have made to harvest</p>	<p>Amend policy to enable the replanting of production forests so long as landowners can identify (through a consent application) how the management and harvest of the forest will be achieved without adverse effects on sediment in water bodies.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>practices.</p> <p>Considers the policy an example of managed retreat' for the public good, with all the cost borne by the landowner. Identifies there will be challenges sourcing sufficient seed stock for planting, finding labour to plant native seed stock and sourcing, and paying for specialist advice to ensure new plantings occur in a way that is consistent with the Emissions Trading Scheme (ETS) eligibility criteria to avoid plantings being ineligible for New Zealand Units (NZUs).</p> <p>Considers the conversion of exotic forest to permanent forest presents several difficulties about the ETS as outlined below:</p> <p>Uncertainty around how the ETS treats the transition of registered exotic forests to native forest species,</p> <p>Uncertainty around how averaging accounting would address a new planting rotation occurring on a very different basis to when the forested area was originally registered in the ETS</p> <p>Uncertainty around the sequestration rates of native species (this work is still in its infancy and may need 5-6 more years to produce anything of any use)</p> <p>Uncertainty around the possibility of needing to first de-register the exotic forest (and paying back all the NZUs earned from it) before registering the native forest as a new forest.</p> <p>Request this policy be amended to enable the replanting of production forests so long as landowners can identify (through a consent application) how the management and harvest of</p>	<p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the forest will be achieved without adverse effects on sediment in water bodies.	
S193.013	General comments	General comments - fresh water	Amend	<p>Supportive of efforts to promote the progressive shading of streams, providing landowners are supported with financial assistance to fence, plant, and maintain plantings and the width of the plantings is reasonable.</p> <p>Suggests stream shading may not assist the Council in meeting proposed TASs because shade from dense planting can cause the loss of undergrowth and bank-armouring vegetation, such as grasses, leading to a transient phase of increased bank erosion in small streams as the stream channel widens. The loss of undergrowth can also lead to sheetwash and rolling, which can further increase sediment loads (MFE Guidance for implementing the NPS-FM sediment requirements). Sediment-related water quality following riparian planting is likely to get worse before it gets better as stream banks erode and channels widen in response to increased tree shade (cites Rob Davies-Colley & Andrew Hughes (2020): Sediment-related water).</p> <p>Considers it's not practical or feasible to plant every stream, river, lake, wetland and spring margin.</p> <p>Considers whilst stock exclusion from small streams (<1m) within the Mangaroa River and Mākara Stream catchments can make a contribution to addressing water quality issues there is little research on riparian management measures to reduce stream bank erosion. Cites Hugh (2016) which states that a one-size-fits-all approach to riparian management measures to reduce stream bank erosion is unlikely to be appropriate or effective. Considers this knowledge should be</p>	Undertake further monitoring to understand periphyton growth characteristics in the region.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>considered in FAPs to address interim and long-term priorities, including attaining the national bottom lines for TASs, and what can be achieved by interventionist policies.</p> <p>Notes the s32 report links stream shading policies to the management of periphyton growth. Considers in nearly all part FMUs the Council has insufficient data on periphyton biomass. Suggests the Council undertake further monitoring to understand periphyton growth characteristics in the region. Supports the Council's intention to address periphyton growth in specific 'hot spots' through FAPs.</p>	
S193.014	6 Other methods	Method M42: Small farm property registration within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Oppose	<p>Opposes Method M42 as there is no sound evidence that there is any issue with nutrient losses from small farms, or that the recommended policies and rules are necessary.</p> <p>Considers registration requirements and assessments of N loss will create an administrative burden for small property holders and the Council. Considers any consent requirements resulting from a failure to comply with assessment requirement will have associated costs for landowners and burden for the Council, for little or no environmental benefit. Notes the quality of data from the annual assessments may be low, and have limited use, without a full range of relevant input data and interpretation.</p> <p>Considers N loss management to be unnecessary as nitrogen is not a significant problem in the region's freshwater bodies. Notes the Council's own attribute state baselines show that river and stream surface water bodies are almost all within the NOF 'A' Band for nitrate and ammonia toxicity under the NPS-FM with a small number of sites in the 'B'</p>	Delete

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Band and lakes in the 'B' and 'C' Bands. States there are no freshwater bodies in rural areas with attribute states in the 'D' or 'E' Bands for nitrogen-related attributes.</p> <p>Opposes the requirement for all small farms between 4ha and 20 ha to register with the Council, and to prepare an annual nitrogen risk loss assessment. Considers these requirements provide no environmental benefit, are an unnecessary burden for small block owners, and provide little or no meaningful data for the Council.</p>	
S193.015	General comments	General comments - rural	Amend	<p>Considers the generally low N concentrations throughout the rural areas of the two whaitua are partly due to the type of farming completed in the catchments (mixed sheep and beef farms that are not intensively farmed). Considers these properties typically have a lower N footprint than other types of farming and the risk of dissolved inorganic nitrogen (DIN) polluting waterways is very low.</p> <p>Notes the s32 report articulates that hill country farms in the two whaitua apply little if any nitrogen and overall, stocking rates are very low. Questions why the proposed policies are to manage N loss reductions by land retirement and destocking (as a response to the need to reduce sediment loss), even though monitoring shows that river and stream surface water bodies are almost all within the NOF 'A' Band for nitrate toxicity and ammonia toxicity.</p>	Not Stated
S193.016	General comments	General comments - water bodies	Amend	<p>Considers Council has limited information on what proportion of water abstraction is taken under the current permitted activity rules or is authorised under s14(3)(b) of the RMA. Supports the recommendation of Thompson in the Water quantity and allocation technical report that periodic surveys be conducted to gather more information on these</p>	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				takes as and when required (for example, to coincide with catchment-wide expiry of consented takes). Considers this is a more pragmatic approach than requiring metering for every permitted water take, which would be unduly costly for water users to implement and for the Council to administer.	
S193.017	General comments	General comments - water bodies	Oppose	<p>In the Porirua, Pāuatahanui, and Horokiri catchment management units, the submitter supports expressing the allocation limits and minimum flows as specific numbers rather than default percentages of mean annual low flow (MALF). Considers this change makes it clearer for water users and Council staff what the limits are.</p> <p>Considers in the Porirua, Pāuatahanui, and Horokiri catchment management units, water takes that meet minimum flow requirements and are within allocation limits should be assessed under a Controlled Activity rule rather than a Restricted Discretionary rule. Considers this will provide more certainty for water users and would be less expensive for the Council to administer.</p> <p>Supports the recommendation of the whitua committee that the 90 + 30 freshwater management framework would protect ecosystem health whilst providing for the needs of the community.</p>	<p>That the allocation limit for freshwater bodies in Te Awarua-o-Porirua Whitua be returned to 30% of MALF.</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>
S193.018	General comments	General comments - fresh water	Amend	<p>Supports the development and use of Freshwater Action Plans in principle.</p> <p>Acknowledges the importance of the Council's partnership with mana whenua/tangata whenua but considers the involvement of communities, stakeholders and territorial authorities is also important in the development of FAPs and this is recognised in the NPS-FM. References the reporting officer recommendations in PC1 of the</p>	<p>That urban FAPs are completed by the end of 2026 and rural FAPs be completed by the end of 2027.</p> <p>Make any consequential amendment(s) necessary to give effect to the relief sought.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>RPS Hearing Stream 5 (Freshwater) to amend Method FW1 of the RPS to include engagement with communities, stakeholders and territorial authorities in the development of FAPs. The submitter supported this recommendation and considers the RPS wording should align with the wording in Methods M36-41 of the proposed NRP.</p> <p>Considers the involvement of communities, stakeholders, and territorial authorities in the development of FAPs is important as the s32 report acknowledges that achieving 12 of the 321 TASs across the two whaitua will require actions in addition to those currently contemplated and that the nature and scale of these additional methods will be determined through the action planning processes after the plan-making process has been completed.</p> <p>Notes there are 72 triggers for FAPs across both whaitua and addressing these through FAPs will be a lot of work for the Council, mana whenua and communities. Submitter seeks relief that the urban FAPs be completed by the end of 2026 and that rural FAPs be completed by the end of 2027.</p> <p>Considers the FAPs should be targeted to catchment-scale actions. Concerned that the boundaries for the part-FMUs may need refining for the purposes of managing water quality in both rivers and receiving environments (e.g. harbours). For example, the submitter understands that some part-FMUs have catchments that drain in different directions..</p>	
S193.019	General comments	General comments - rural	Not Stated	Concerned the term FEP is being used interchangeably with the nationally mandated FWFP. Recommends references to FEPs in the proposed NRP are amended to FWFPs for	Remove Tables 8.6 and 9.5 from the proposed NRP. Amend the timing for the nationally mandated FWFPs to be as determined in the national roll-out timeline.

S256 Waste Management NZ Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S256.001	General comment	General comments - overall	Not Stated	Supports maintaining and improving water quality in the Wellington Region, but considers PC1 goes beyond the control of land for the purpose of maintaining the quantity and quality of water bodies and coastal waters, and steps into strategic planning and controlling the location of land use development.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers without the amendments proposed by the submitter to PC1, the provisions will not:</p> <ul style="list-style-type: none"> a) promote the sustainable management of resources or achieve the purchase of the RMA and are contrary to Part 2 and other provisions of the RMA; b) enable the social and economic wellbeing of the community; c) meet the reasonably foreseeable needs of future generations; d) achieve integrated management of the effects of use, development or protection of land and resources in the Wellington Region; e) enable the efficient use and development of Waste Management's assets and operations, and of those resources; and f) appropriately achieve the objectives of the Regional Policy Statement, in terms of section 32 of the RMA. 	
S256.002	2 Interpretation	High risk industrial or trade premise	Oppose	<p>Considers the definition is ambiguous and should instead refer to 'high risk industrial and trade areas'. Considers the definition should specifically exclude sites (or parts of a site) where industrial and trade activities are undertaken but there is no discharge from these activities to stormwater. Notes various consequential amendments may be required throughout PC1 to address this submission point.</p>	<p>Amend definition as follows: High risk industrial and trade premise areas: Areas of a site where industrial or trade activities are undertaken that drain to a stormwater network, or private stormwater management system that discharges to water or to land where there is potential for the discharge to enter water. Industrial and trade activities: Industrial and trade activities in the high risk industrial and trade areas definition are those that store, use or generate contaminants or hazardous substances on site that are exposed to rain and could become entrained in stormwater. Any other relief or consequential amendments necessary to address the concerns set out in this submission.</p>
S256.003	2 Interpretation	Impervious surfaces	Amend	<p>Supports the inclusion of a definition of impervious surfaces but seeks amendment to the list of surfaces excluded from the definition. Considers the exclusion relating to 'roof areas with rainwater collection and reuse' requires clarification</p>	<p>Amend definition of 'Impervious Surface' as follows: Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs paved areas (including sealed/compacted metal) such as roads, driveways, parking areas, sidewalks/foot paths or patios, and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				to note that 100% retention is not required as this would cover instances where there are overflows from retention tanks.	excludes: grassed areas, gardens and other vegetated areas, porous or permeable paving or concrete (including driveways, roads and parking areas) , slatted decks which allow water to drain through to a permeable surface, porous or permeable paving and living roofs, roof areas with rainwater collection and reuse, any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed, and excluding any overflows), any impervious surfaces where water is directed to living walls. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.004	2 Interpretation	Stormwater	Support	Support definition as it is consistent with the National Planning Standards	Retain as notified.
S256.005	2 Interpretation	Stormwater network	Amend	Notes a stormwater network is commonly understood to be that controlled by a network utility operator and not assets (such as ponds) which remain in private ownership.	Amend the definition of 'Stormwater Network' as follows: The network of devices designed to capture, detain, treat, transport and/or discharge stormwater, including but not limited to stormwater treatment systems, kerbs, intake structures, pipes, soak pits, sumps, swales and constructed ponds and wetlands, and that serves a road or more than one property. Stormwater assets which have not been vested and remain in private ownership do not form part of the stormwater network for the purposes of this definition. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.006	2 Interpretation	Unplanned greenfield development	Oppose	Considers the definition is ambiguous and will unduly restrict development because it refers to "Greenfield Development" which is not a defined term and it refers to Greenfield Development which "requires an underlying zone change". Notes that no activity "requires an underlying zone change" unless it is already identified as a prohibited activity, as consent can be sought in relation to all other activity statuses.	Amend the definition of 'Unplanned Greenfield Development' as follows: Greenfield Development of sites within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) through a District Plan change to enable the development. that rely on the construction of public infrastructure. Public infrastructure is any wastewater, stormwater, water supply pipe or road that is not in private ownership. Unplanned greenfield development excludes: -sites where consents have been lodged with a Territorial Authority for urban activities prior to 30th October 2023.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>-Sites where land use consents have been granted for urban activities, including where those consents have not yet been implemented and have not lapsed. - Development that requires upgrades or modification of existing infrastructure, including road widening. - Development within any mapped unplanned development area that has an urban zone. -Waste management facilities, including resource recovery parks, refuse transfer and recycling facilities. Note: Unplanned greenfield areas are those areas shown on maps 86, 87, 88 and 89. these areas that do not have an urban or future urban zone at the time of Plan Change 1 notification, 30th October 2023. Any other relief or consequential amendments necessary to address the concerns set out in this submission.</p>
S256.007	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces – discretionary activity.	Oppose	Concerned the stormwater provisions do not appropriately provide for industrial and trade activities.	Amend to provide for industrial and trade activities. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.008	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk industrial or trade premise – permitted activity.	Oppose	Concerned the stormwater provisions do not appropriately provide for industrial and trade activities.	Amend to provide for industrial and trade activities. Any other relief or consequential amendments necessary to address the concerns set out in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S256.009	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	Opposes the policy direction to prohibit unplanned greenfield development. Considers discharges from unplanned greenfield development may be able to be managed and have an acceptable effect and not all discharges from unplanned greenfield development areas need to be avoided to achieve target attribute states. Considers each proposal requires assessment on a case by-case basis. Considers 'restricting' discharged would better achieve the intent of higher order documents.	Amend Policy WH.P2(a) as follows: Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) restricting-avoiding discharges from unplanned greenfield development and for other greenfield developments minimising the contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.010	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	Seeks consequential amendment to refer to 'high risk industrial and trade area'.	Consequential amendment to refer to 'high risk industrial and trade area'. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.011	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers the definition of 'unplanned greenfield development' is ambiguous. Considers avoiding all stormwater discharges is not practicable with stormwater discharges still likely in higher intensity rainfall events. Considers the policy may have the consequence of restricting or preventing individual land use developments in the rural zone.	Amend Policy WH.P16 as follows: Avoid Minimise all new stormwater discharges from unplanned greenfield development where the discharge will enter a surface water body or coastal water, including through an existing local authority stormwater network. Any other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.012	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new	Oppose	Notes use of prohibited activity status must be subject of a robust section 32 analysis demonstrating that it is the most appropriate of the options available. Considers the circumstances	Delete Rule WH.R13 or if retained amend the activity status to discretionary or non complying and revise the definitions and intent of the rule for clarity of intent and application. Any

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		unplanned greenfield development – prohibited activity.		<p>where prohibited activity status might be considered appropriate are not present.</p> <p>Considers there is no evidence that the discharge of stormwater from impervious surfaces from unplanned greenfield development will have an unacceptable effect in all cases. and suggests adverse effects associated with the establishment of new impervious surfaces can be appropriately identified and managed through the resource consent process, including through the decline of resource consent.</p> <p>Considers the rule is ambiguous as it will not always be clear that new impervious surfaces are associated with 'unplanned greenfield development', given the ambiguity of that defined term, and has the potential to restrict land use activities that can appropriately be undertaken in the rural zone with resource consent or as a permitted activity.</p>	other relief or consequential amendments necessary to address the concerns set out in this submission.
S256.013	5.1 Air quality rules	Rule R35: Water and wastewater processes – permitted activity.	Support	Support Rule R35	Retain as notified.
S256.014	13 Maps	Map 89: Unplanned greenfield areas – Hutt City Council.	Oppose	Opposes the inclusion of 30 Benmore Crescent within the 'unplanned greenfield development area' as shown on Map 89. Notes that planning for the site to be used for a resource recovery park is well advanced, with several expert assessments undertaken that demonstrate the use is suitable and environmental effects and as such it should be considered part of the 'planned / existing urban area'.	30 Benmore Crescent be deleted from the 'unplanned greenfield development' overlay on Map 89. Any other relief or consequential amendments necessary to address the concerns set out in this submission.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S246 Water New Zealand

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S246.001	General comments	General comments - overall	Support	Broadly supports PPC1 and its focus on water quality and ecological health objectives to implement the NPS-FM.	Not stated
S246.002	General comments	General comments - freshwater	Amend	Notes the NPS-FM requires regional plans and policy statements to embed Te Mana o te Wai into decision making and considers requiring local kaupapa Māori in decision-making structures will ensure that Te Mana o te Wai, the spiritual wellbeing and whakapapa of Te Hurihanga Wai (the water cycle) is prioritised, respected, protected and enhanced.	Te Mana o te Wai hierarchy of obligations are made clearer in the definitions and objectives, including prioritising mana whenua, their whakapapa and tikanga, in freshwater management and decision making. PC1 instils an integrated catchment approach that recognises the interconnected nature of a catchment, the receiving environments and Te Hurihanga Wai, and that includes wastewater, stormwater and drinking water supply, rather than individual plans or strategies for each network. PC1 states clearly that Te Mana o te Wai guides all policy, plans and consents that impact on three waters, from the earliest stage of consideration and before options are presented to regional council, planning committee or consulted on with communities.
S246.003	General comments	General comments - definitions	Amend	Notes the term [community] drinking water is used extensively through PC1 but the definitions do not include drinking water, or drinking water source.	Include definitions for [community] drinking water and drinking water
S246.004	General comments	General comments - stormwater management	Not Stated	Considers new developments are increasingly being required to include stormwater capture and retention but these systems can become a public health risk if not managed properly, including ponding and flooding. Notes some councils have developed performance criteria and identified acceptable solutions, such as Wellington Water's Water Sensitive Design for Stormwater: Treatment Device Guideline (2019) and Auckland Council's guideline document Stormwater Management Devices in the Auckland region, GD2017/001.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S246.005	General comments	General comments - stormwater management	Support	<p>Commends the proactive approach on addressing zinc and copper from human activities for ecological health for the region. Notes Water NZ have recommended to MBIE that the building consent system should put in place methods to manage water quality, including controls on cladding and/or roofing materials (including guttering and spouting). Such conditions could include;</p> <p>Building materials are sealed or otherwise finished to prevent water runoff which contains copper or zinc.</p> <p>Buildings shall avoid the use of unpainted roofing or spouting materials containing zinc or copper to minimise contaminant runoff.</p> <p>Any development will need to treat these surfaces or the stormwater from these surfaces to avoid copper or zinc from entering stormwater.</p> <p>Stormwater from copper or zinc surfaces is to be collected and treated. Notes that district and regional plans now require avoiding the use of inert materials such as unpainted roofing or spouting materials containing copper or zinc to minimise contaminant runoff.</p>	Recommends GWRC include similar provisions for zinc and copper in the changes to the NRP to those in other district and regional plans.
S246.006	General comments	General comments - wastewater	Amend	<p>Supports the wastewater rules but is concerned with the lack of provisions for biosolids and minimal recognition of onsite wastewater systems. Notes Water NZ have been working in partnership with other industry stakeholders to update the Safe Application of Biosolids to Land in New Zealand, 2003 and are hoping to have a version published in early 2024.</p>	Make reference and make use of the forthcoming Guidelines for Beneficial Use of Organic Materials on Productive Land, 2024.
S246.007	General comments	General comments - current legislation	Not Stated	<p>Notes NRP must also be consistent with the Water Services Entities Act 2022 (section 253) provisions for a transport corridor manager that owns or operates a transport stormwater system.</p>	Not stated
S246.008	General comments	General comments -	Not Stated	Not stated	PC1 gives greater emphasis to prioritising Te Hurihanga Wai (the water cycle), recognising the value and necessity of circularity, and integrated management planning and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		wastewater			delivery. Amend so any wastewater reduction strategy must be part of an integrated catchment planning approach and include building community awareness of the true value of water.
S246.009	General comments	General comments - fresh water	Not Stated	Supports the cumulative and localised impact of stormwater and wastewater discharges on drinking water supplies and community drinking water supplies given consideration but considers that drinking water, the sources, protection, allocation and efficient use of water need more consideration though the plan, as part of the second obligation of Te Mana o Te Wai.	Provide more consideration of drinking water, the sources, protection, allocation and efficient use of need more consideration though the plan, as part of the second obligation of Te Mana o Te Wai.
S246.010	General comments	General comments - earthworks	Support	Supports the Earthworks rules in both Whaitua chapters.	Not stated
S246.011	General comments	General comments - stormwater management	Oppose	Generally supports the new policy and rule framework for stormwater. Is concerned about the resource intensive, multi-layer requirements, conflict and complete duplication of requirements under the Water Services Entities Act 2022. Notes PC1 requires a Stormwater Management Strategy, Stormwater Management Plans and Stormwater Impact Assessments to be produced for networks and catchments and consider this to be replication of effort. Notes there are many other key plans to be prepared under the Water Services Entities Act 2022 including, but not limited to, asset management plans, infrastructure strategies, Te Mana o Te Wai statements and statement of intent. These are all relevant to, and would add value and efficiency to, PC1 requirements. Notes opportunities to consolidate or rationalise regulatory planning, monitoring and reporting, and that these requirements can apply across legislative regimes. Notes PC1 policy, rules and consents must also	Amend PC1 requirements for stormwater and wastewater strategies into an integrated Catchment Planning approach, which is informed by and appends asset management plans and stormwater and wastewater network plans. The regulatory reporting requirements under PC1, must support, be consistent with, and not duplicate, the approach taken in the Water Services Entities Act 2022 and by other industry regulators (e.g. Taumata Arowai and the Commission). PC1 is assessed for consistency and integration, including reviewing all terms, definitions and policy outcomes in the Water Services Entity Act 2022.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				reflect the economic regulator's information disclosure and price-quality standards monitoring of water services provision.	
S246.012	General comments	General comments - current legislation	Not Stated	The Water Services Act 2021 introduces new mandatory requirements to monitor and report on the environmental performance of drinking water, wastewater and stormwater networks and their operators. Environmental limits and targets that affect three waters infrastructure need to align with the environmental performance measures, targets and standards set by Taumata Arowai in accordance with the Water Services Act 2021, specifically the Network Environmental Performance Measures. Taumata Arowai are currently drafting standards and consent conditions for wastewater networks, overflows and treatment plants and intend to introduce wastewater and stormwater measures at a future date. GWRC should consult with them on any proposed measures, for example the requirements in Schedule 32: Wastewater Improvement Strategy, to ensure consistency in requirements.	GWRC consult with Taumata Arowai on any proposed measures, for example the requirements in Schedule 32: Wastewater Improvement Strategy, to ensure consistency in requirements.
S246.013	General comments	General comments - current legislation	Not Stated	Notes inconsistencies in the requirements and the consent and compliance process across consent authorities creates inefficiencies, increases the regulatory burden for designers, technology providers and service providers.	Reduce inconsistencies to avoid situations where applicants receive substantially different requests for information, or even different decisions, when making applications for the same type of system.
S246.014	General comments	General comments - current legislation	Not Stated	Notes Regional councils will remain responsible for regulation, compliance, and enforcement of fresh, waste and storm water quality and natural hazards policy and planning under new regulatory tools from new economic and quality water regulators.	Council must enforce rules and plans in place and proposed - this includes, but not limited to, wastewater treatment plant consenting, sediment and erosion control, and land-use planning restrictions on high-risk susceptible land.
S246.015	General comments	General comments - wastewater	Not Stated	Considers more regulatory improvements are necessary for onsite wastewater systems as if not adequately managed or regulated can lead to in system failures, or worse, significant public or environmental health risk. Notes current policies and practices applying to the design and	Amend so policy and rules for onsite wastewater systems consider all stages of a systems design life - design, construction, inspection, maintenance, and compliance inspections. GWRC through Te Ura Kahika, with the Ministry for Building, Innovation and Employment, and the water quality regulator,

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>maintenance of onsite wastewater management systems vary.</p> <p>Notes considering the relevance of the National Objective Framework, and identifying baseline state and set target attribute states, it would be appropriate for PC1 to consider onsite wastewater systems and their potential risk to drinking water supplies, waterbody health and the wider environment. We request policy and rules for onsite wastewater systems consider all stages of a systems design life - design, construction, inspection, maintenance, and compliance inspections. This might include;</p> <ul style="list-style-type: none"> -Setting minimum design, performance standards and maintenance standards. Such conditions or verification methods could be similar to Verification Method G13/VM4 Foul Water: On-Site Disposal which requires on-site systems to be designed and installed to AS/NZS 1547:2012 On-site Domestic-Wastewater Management. -Establishing GIS based recording portal of all systems, including those currently considered to be permitted activities. ECAN in collaboration ESR undertook GIS mapping and assessment of risks posed by systems. Employing consistent approaches for GIS mapping amongst regional councils will help us develop nationally consistent approaches for managing risks over time. 	Taumata Arowai, draft standard consent conditions or verification methods for ongoing maintenance, performance, and compliance of on-site wastewater systems.
S246.016	General comments	General comments - consultation	Not Stated	Considers engagement is important for all stages of the water sector- from Te Mana o Te Wai practitioners, to treatment plant designers and operators, to on-site contractors managing sediment and erosion control conditions.	Engage further with utility operators as plan users to ensure what is proposed in the plans is workable.
S246.017	General comments	General comments - definitions	Not Stated	Supports inclusion of terms of terms such as containment standard, core allocation, hydrological control, impervious surfaces, stormwater catchment, stormwater treatment system, wastewater network catchment and wet weather overflows.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S246.018	2 Interpretation	Containment standard	Support	Considers enforcing the wastewater wet weather containment provisions in PC1, progressively reducing the frequency and/or volume of wet weather overflows is a priority in terms of the intent of the NPS-FM and meet the community values and objectives of PC1.	Replace "achieved" with "be less than".
S246.019	3 Objectives	Amendments to Chapter 3 - Objectives	Support	Is pleased to see the amendments to Chapter 3 (Objectives) includes tables listing quantifiable measures for contact recreation, Māori customary use, aquatic ecosystem health and mahinga kai objectives. Considers including numerical values for macrophytes, periphyton, biomass, invertebrate, fish and mahinga kai species in rivers, streams and lakes is a smart way of demonstrating achievement of the first priority of Te Mana o te Wai.	Not stated
S246.020	3 Objectives	Objective O18: Rivers, lakes, natural wetlands and coastal water are suitable for contact recreation and Māori customary use.	Support	Support the changes to expressly list the type of water body (rivers, lakes, natural wetlands and coastal water) and the activities these are suitable for (contact recreation, Māori customary use, mahinga kai, biodiversity, and aquatic ecosystem health).	Not stated
S246.021	3 Objectives	Objective O19: Biodiversity, aquatic ecosystem health and mahinga kai in fresh	Not Stated	Support the changes to expressly list the type of water body (rivers, lakes, natural wetlands and coastal water) and the activities these are suitable for (contact recreation, Māori customary use, mahinga kai, biodiversity, and aquatic ecosystem health).	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		water bodies and the coastal marine area are safeguarded.			
S246.022	3 Objectives	Objective O25: Outstanding water bodies identified in Schedule A (outstanding water bodies) and their significant values are protected and restored.	Not Stated	Support the changes to expressly list the type of water body (rivers, lakes, natural wetlands and coastal water) and the activities these are suitable for (contact recreation, Māori customary use, mahinga kai, biodiversity, and aquatic ecosystem health).	Not stated
S246.023	4 Policies	4.9.1 Discharges to land and water.	Amend	Not stated	Include a bullet requiring reticulated networks to be compliant with the DIA's National Transition Unit's National Engineering Design Standard.
S246.024	5.4 Beds of lakes and rivers	5.4.4 Uses of beds of lakes and rivers general conditions.	Amend	Questions whether this should be re-written to allow ponding above an intake and encourage a making room for rivers approach. Notes such an approach is only encouraged where appropriate and doesn't increase flood inundation risk to people, property or infrastructure. Considers making room for water allows land to flood safely, while providing a range of benefits such as aquatic and riparian habitat,	Amend to allow ponding above an intake and encourage a making room for rivers approach.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				wetland restoration, carbon sequestration and increased groundwater recharge. It also offers to restore mana whenua connections with their local water. Where streams, wetland and floodplain remain in natural state, they should be prioritised for protection and providing natural hazard mitigation.	
S246.025	6 Other methods	Method M36: Freshwater Action Programme.	Support	Welcomes that FAP must recognise the value and necessity of integrated management planning and delivery but suggest it is unfortunate that the first iteration of Freshwater Action Plans, to cover all rivers and lakes in the Whaitua Te Whanganui-a-Tara, will only be completed by December 2026.	Adopt the process Northland Regional and Auckland Councils have taken to include costed actions plan programmes in the consultation documents for the Long-term Plan process. Amend the FAP Necessary action 4 (a) to include Ministers for Building Innovation and Employment to promote source control for copper and zinc from buildings.
S246.026	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Not Stated	Notes PC1 rules and policy must be aligned with national direction and standards and there is work going on across legislative programmes, regulatory frameworks and infrastructure planning which will influence GWRC plans, compliance and enforcement. Supports the partnership with Wellington Water Limited approach in Method M43. Notes, in relation to clauses (b)(i)(2) and (b)(iii) that new developments are increasingly being required to include stormwater capture and retention but these systems can become a public health risk if not managed properly, and poorly designed systems can cause ponding and flooding. Notes some councils have developed performance criteria and identified acceptable solutions, such as Wellington Water and Auckland Council. Considers a standardised approach would lead to certainty for designers, planners and inspectors and significant cost and resource savings all round.	Recommends that GWRC engage with, but not limited to the water regulators, Taumata Arowai and Commerce Commission, and Te Waihangā Infrastructure Commission Recommends that GWRC through Te Ura Kahika, with Taumata Arowai, the Ministry for Building, Innovation and Employment and Ministry for the Environment develop draft standard consent conditions or verification methods for on-site stormwater device design, construction, maintenance and on going compliance and a good practice stormwater storage volume or device sizing calculation tool
S246.027	6 Other methods	Method M45: Funding of wastewater and stormwater	Support	Supports the addition of Method M45. Appreciates that a new, financially sustainable, funding model for water services delivery is needed and arrangements which avoid an investment hiatus, and enable a well-defined, committed, and funded	Add the economic and Taumata Arowai and the Commerce Commission into this method.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		r network upgrades		pipeline of work will help the delivery of safe and environmentally appropriate water services.	
S246.028	8 Whaitua Te Whanganui-a-Tara	Rule WH.R14: Wastewater network catchment discharges - restricted discretionary activity.	Support	Supports the general intent of the rule but makes suggestions regarding the approach to progressively reduce and remove wastewater network catchment discharges. Notes reducing wastewater volume must be in accordance with the principles of the waste hierarchy (avoid, reduce, reuse, recycle) limiting the amount of water taken at source, how water and by products are used -and reused- within a catchment, targeted water loss strategy and the wastewater, and by products, reuse. Considers clause 6 should include population decrease as a matter for discretion not just growth as there are public and environmental health risks to wastewater from decreasing population. A decreasing rating base also impacts the ability to deliver or fund planned infrastructure programmes and meet new environmental regulations.	Amend clause 6 to include population decrease as a matter for discretion
S246.029	8 Whaitua Te Whanganui-a-Tara	Rule WH.R16: All other discharges of wastewater - non-complying activity.	Oppose	Notes concerns with Rule as interpreted as preventing any new WWTP to be built, and not just those that discharge to water. Considers this will have implications for urban growth in a catchment, which would be contrary to the Wellington Regional Growth Framework (WRGF) spatial plan for an additional 200,000 people in the next three decades.	Reconsider this rule.
S246.030	8 Whaitua Te Whanganui-a-Tara	8.3.7 Take and use of water	Support	Generally support the rules in Schedule P (Efficient use). Notes any directions for freshwater allocation need to be aligned with the Te Mana o Te Wai hierarchy of obligations and water allocation needs to consider water use in the catchment as water leaks and unaccounted for water can increase the water take, which will affect the health and wellbeing of a river or aquifer and the first obligation of Te Mana o Te Wai.	Include an enabling framework for allocating freshwater in the PC1, that incentivises efficient water use within a catchment.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S246.031	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Support	Generally supportive of policy and the clauses to achieve the policy.	Not stated
S246.032	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Not Stated	Generally supportive of policy and the clauses to achieve the policy.	Not stated
S246.033	9 Te Awarua-o-Porirua Whaitua	Policy P.P8 Avoiding discharges of specific products and waste.	Amend	Supports controlled discharges to land, but notes swimming and spa pool water can contain chemicals such as chlorine and copper to kill bacteria and/or algae and if discharged into stormwater systems or freshwater, this treated water has the potential to harm, even kill, fish and other aquatic life.	Add a provision "Wherever possible, a swimming or spa pool, should drain to the public wastewater system" .
S246.034	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater	Support	Welcomes that the lifecycle management and funding requirements of water infrastructure to maintain operability is taken into account in P10 (iv). Concerned as to how GWRC will monitor and ensure compliance with this clause, including whether they require regular and ongoing inspection	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges .		reports and funding plans demonstrating compliance.	
S246.035	8 Whaitua Te Whanganui-a-Tara	Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy.	Not Stated	Notes copper and zinc are introduced from building materials as well as the use of roads and it will be extremely difficult to separate out different contributing land uses introducing contaminant load into a stormwater system. Considering transport networks as a discrete system will be challenging in terms of design standards, operations and managing and consenting.	Not stated
S246.036	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Not Stated	Notes copper and zinc are introduced from building materials as well as the use of roads and it will be extremely difficult to separate out different contributing land uses introducing contaminant load into a stormwater system. Considering transport networks as a discrete system will be challenging in terms of design standards, operations and managing and consenting.	Not stated
S246.037	12 Schedules	Schedule 30: Financial Contributions.	Support	Supports the approach proposed for financial contributions. Considers this is a smart way to mobilise the transformation and transition to water sensitive, nature based water management, and there are interrelated benefits including for mana whenua values, quality of urban life, freshwater rules compliance, adaptation to climate crisis, sequestration and affordability to the community.	Clarify if consideration been given for the contributions to fund ongoing operation and maintenance and depreciation of these stormwater treatment systems. Clarify if the relevant stormwater network utility operator will undertake the capital expenditure work and inherit the treatment systems.
S246.038	12 Schedules	Schedule 32: Wastewater Network Catchment	Oppose	Considers the requirement for 'a proactive programme of maintenance and renewals of the public wastewater network infrastructure to improve pipe condition, inflow and infiltration management, and reduces pipe failures as a result of blockages	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Improvement Strategy.		within the network or due to aging infrastructure" describes an asset management plan (AMP). The information to be included by the PC1 objectives in schedule 32 are integral parts of AMPs, generally produced in accordance with ISO 55000:2014 Asset management. AMPs are required by the Local Government Act 2002, and which are audited by Audit New Zealand, and shortly will be required by Commerce Commission, under the Water Services Entities Act 2022.	
S246.039	6 Other methods	Method M36: Freshwater Action Plan programme.	Support	Supports in terms of giving effect to Te Mana o te Wai, notes an error in the numbering, and believes this clause 6.16 should be 6.18.	Not stated
S246.040	12 Schedule s	Schedule 27: Freshwater Action Plan requirements.	Not Stated	Welcomes that FAP must recognise the value and necessity of integrated management planning and delivery but suggest it is unfortunate that the first iteration of Freshwater Action Plans, to cover all rivers and lakes in the Whaitua Te Whanganui-a-Tara, will only be completed by December 2026.	Adopt the process Northland Regional and Auckland Councils have taken to include costed actions plan programmes in the consultation documents for the Long-term Plan process. Amend the FAP Necessary action 4 (a) to include Ministers for Building Innovation and Employment to promote source control for copper and zinc from buildings.

S198 Wayne Bettjeman

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S198.001	General comments	General comments - overall	Not Stated	Supports the submissions of the New Zealand Farm Forestry Association Inc, and the Wellington Branch of the New Zealand Farm Forestry Association.	Not Stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S118 Wayne Robert Pettersson and Maureen Pettersson

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S118.001	General comments	General comments - overall	Not Stated	Considers language used in Whāita The Whanganui-a-Tara and the 14 Avarua-o-Porirua Whāita documents is difficult to understand.	Not stated.
S118.002	General comments	General comments - consultation	Not Stated	Considers the consultation with affected parties regarding the plan change has been poor. Concerned the proposed plan is aimed at small block owners and there is no evidence or proof they are a problem.	Not stated.
S118.003	General comments	General comments - overall	Not Stated	Considers the problems leading to the plan change result from large intensive farming and logging operations carried out within catchment areas not small blocks.	Not stated.
S118.004	General comments	General comments - overall	Not Stated	Considers the stream on personal property has not had any erosion problems.	Not stated.
S118.005	General comments	General comments - overall	Not Stated	Concerned about costs and practicalities of having to fence off streams.	Not stated.
S118.006	General comments	General comments - overall	Not Stated	Submitter strongly opposes PC1.	Suggests GW provide financial help for fencing, water troughs, pipe and fittings and a water tank. Suggests GW be responsible for maintenance of the fenced off stream area.

S036 Wellington Branch of New Zealand Farm Forestry Association

S36.001	General comments	General comments - overall	Not Stated	Supports submission from the national body of NZFFA.	Not stated
S36.002	General comments	General comments	Not Stated	Notes the new government has announced intentions to review the NPS-FM and related	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		- current legislation		legislation and the plan change needs to maintain consistency with revised objectives.	
S36.003	13 Maps	Map 90: Highest and high erosion risk land (Pasture) - Te Awarua-o-Porirua.	Not Stated	Considers the identified risk is relative and does not address the objective risk of sediment reaching water bodies. Considers the maps should not be used as a criterion to prohibit plantation forestry.	Not stated
S36.004	13 Maps	Map 93: Highest and high erosion risk land (Pasture) - Te Whanganu i-a-Tara.	Not Stated	Considers the identified risk is relative and does not address the objective risk of sediment reaching water bodies. Considers the maps should not be used as a criterion to prohibit plantation forestry.	Not stated
S36.005	General comments	General comments - overall	Not Stated	Notes the proposed approach to prohibit production forestry from 10% of the steepest forestry land is based on catchment modelling, on the assumption that the steepest land delivers the most sediment to waterways via landslides. Concerned this approach is not based on objective evidence, does not consider other sources of sediment, and the approach is inconsistent with forestry best practice guidelines and scientific literature on forestry erosion.	Not stated
S36.006	General comments	General comments - plantation forestry	Not Stated	Considers the prohibition of plantation forestry from the highest 10% relative Risk of Erosion Prone Forestry Land does not stack up and may not reduce sediment levels in water bodies.	Not stated
S36.007	General comments	General comments -	Oppose	Considers making all forestry operations a controlled activity is draconian and is not supported by evidence.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		plantation forestry			
S36.008	General comments	General comments - current legislation	Not Stated	Notes a new version of the NES-CF is in force and has stronger environmental controls.	Not stated
S36.009	General comments	General comments - target attribute states	Oppose	Concerned the TAS erroneous and have been propagated throughout PC1 as justification of the need for more control over plantation forestry, noting that pastoral farming is not subject to controlled activity.	Not stated
S36.010	General comments	General comments - current legislation	Not Stated	Considers GW should allow the new NES-CF to bed in and actively monitor compliance and land performance (commission research) and withdraw the prohibition on harvest in the meantime. Failing this, the submitter considers GW should exempt forestry under 20ha as a Controlled Activity.	Withdraw the prohibition on harvest. Should the above relief not be granted, exempt forestry under 20ha as a controlled activity.
S36.011	General comments	General comments - plantation forestry	Not Stated	Considers GWRC should ask for ESC data used by NES-CF to be reviewed and make a technical case if Wellington, Hutt Valley and Porirua have an erosion risk severe enough to warrant banning plantation forestry (red zoned land). Notes national consistency on this matter is desirable.	Not stated
S36.012	General comments	General comments - overall	Not Stated	Concerned PC1 lacks input from experienced soil conservators and questions why they were not consulted. Considers a tunnel-view solution is proposed for a problem that may not exist.	Rather than prohibit Plantation Forestry from the steepest slopes, explore other ways of mitigating the risk of erosion from steep slopes after harvesting.
S36.013	General comments	General comments - current legislation	Not Stated	Considers the regulations in the NES-CF are sufficient to minimise negative environmental effects of plantation forestry on water bodies, noting the NES-CF has sound scientific backing. Considers conditions that are more stringent than the NES-CF should be based on compelling evidence about the scale of the problem, including the source of pollutants and that current rules are not working.	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S36.014	General comments	General comments - plantation forestry	Not Stated	Concerned about aspirational targets becoming regulation in PC1 and questions whether this is fair and reasonable. Notes plantation forestry historically does not compete for highly productive land used for food production, but rather occupies low fertility and more erosion prone hill country and the avoided erosion, carbon services and other ecosystem services provided by plantation forestry are highly valued. Considers the requirement under the NPS-FM for plantation forestry to release no more sediment to water bodies than existed in the natural state is unrealistic. Notes erosion events will be more frequent and intense due to climate change. Concerned PC1 will set a precedent in NZ and the proposed peak sediment discharges of only 100g/m ³ , high compliance costs, certification of plans, auditing, and the inability of current forestry best practice and technology to deliver desired outcomes, the regulations could put plantation forestry in hill country out of business. Concerned clause 1.3.5(c) of the NPS-FM is being overlooked in favour of an unrealistic vision for the health and wellbeing of waterbodies.	Not stated
S36.015	General comments	General comments - plantation forestry	Oppose	Considers PC1 proposals are naïve about the implications for plantation forestry, ill thought out and subject to unintended consequences. States there is no evidence presented that retiring out the steepest ('most erosion prone') plantation forest land will improve sediment outcomes in waterways and leakage of sediment could get worse if management practices have to change.	Not stated
S36.016	General comments	General comments - plantation forestry	Not Stated	Considers most sediment arising from plantation forestry operations in Wellington is from roading, skid sites/track making and skidding logs, and stream/river scouring, despite contractors following best practice guidelines. Notes the region has few landslides in forested areas, even after harvesting. Notes larger operations using haulers are designed	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>and operated in accordance with best practice guidelines, and earthworks are minimised on steepest slopes.</p> <p>Considers "high risk erosion prone" slopes do not contribute much sediment to water bodies in well managed forests. Considers under extreme weather events, and time averaged over the life cycle of the forest, steep slopes are comparable to those under continuous native bush cover.</p>	
S36.017	General comments	General comments - plantation forestry	Not Stated	<p>Notes there are no studies that measure the amount of sediment from forestry operations in the Whaitua Te Whanganui-Tara or Te Awarua-o-Porirua Whaitua. Modelling that has occurred is based on broad assumptions. Considers Wellington forests have minimal erosion problems and therefore have not been closely studied, and science work has been focused on highly erosion prone land in other areas, which are subject to orange and red zoning under the NES-CF. Notes no such land classes are present in the Whaitua Te Whanganui-a-Tara or Te Awarua-o-Porirua Whaitua. Notes GW have not sought professional forestry or soil conservator advice. Considers some policies are based on models of erosion risk rather than real data. Considers it is not possible to allocate equitable contributions to reducing sediment loads without data on the relative contributions of sediment from natural sources, forestry, pastoral farming and urban/roading development.</p>	Not stated
S36.018	General comments	General comments - water quality improvements	Not Stated	<p>Considers there is no indication in GW's water quality data of increased sediment in catchments with a high proportion of plantation forestry. Notes the water clarity of Mangaroa River exceeds guidelines, the TAS set by the NPS-FM, but the test result in this case is an inappropriate surrogate measure for suspended solids and the test failure was due to a natural source of brown water.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Disputes the values for required sediment load reductions in Table 8.5 for Mangaroa River, and suggests the data interpretation for Wainuiomata/Black Creek is incorrect. Notes the NPS-FM acknowledges that natural sources of brown water exist and allows different TAS to be set accordingly, which has not been done for Mangaroa and potentially Wainuiomata/Black Creek, although it has been done for Hulls Creek. Concerned that the TAS values listed for Hulls Creek, Mangaroa and Black Creek appear to be default values from the tables and not adjusted to baseline values or reset by GW. In the case of Hulls Creek, the submitter is not aware that this drains a peat swamp and suggests buried iron adjacent to the railways activities is the source of the opalescent water (references photo in original submission).	
S36.019	General comments	General comments - plantation forestry	Not Stated	Notes a report commissioned by Whaitua Te Whanganui-a-Tara which indicates that deposited fine sediment levels was low in some rivers with extensive plantation forestry, and that fine sediment was not significantly impacting ecosystem health. Suggests relatively high levels of fine sediment downstream in the Hutt River are a result of bulldozer activity from flood protection works, rather than from upstream farming, urban earthworks or forestry activity. Notes current GW data for the Hutt Valley sub-catchments with high levels of plantation forest do not indicate elevated levels of deposit fine sediment.	Not stated
S36.020	General comments	General comments - maps	Not Stated	Concerned the maps (based on mapping by Easton) identifying the highest risk erodible land for pastoral, woody vegetation and plantation forestry land are based on an assumption that bare land after clear-felling will have a risk of erosion similar to pasture and there is a significant window of vulnerability after harvest. Considers this risk is	Commission a technical review of the mapping by Easton et al.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>overstated as roots and minor debris armour the slope for a period and there are ways of mitigation erosion risk after harvest. Notes forestry land is only in a more vulnerable state (after harvest) about 10% of the time and should be regarded as if it was permanents woody vegetation, not pasture or bare soil.</p> <p>Considers the mapped erosion risk is relative rather than absolute, and does not account for underlying geology/lithology, roadworks, soil disturbance and forestry related activities as a potential source of sediment. Notes the mapping uses a 5m resolution, which is higher than the NES-CF and much of the highest risk erosion prone areas identified by Easton are so large that, had they qualified as Red Zone, the NES-CF/ESC resolution would have picked them up.</p> <p>Notes the C factor identified for the maps, and disagrees that pasture is only twice as susceptible to erosion as woody vegetation and that otherwise undisturbed bare earth (with or without roots) should not be 10 times worse than pasture. Considers the Risk of Erosion model is not nearly as sophisticated as that used to calculate Erosion Susceptibility Classes (ESC) for the NES-CF.</p> <p>References earlier mapping (2012) that considered the risk of pastureland slipping into water bodies. References Stats NZ Highly Erodible Land maps. Notes several researchers who state that shallow landslides often do not reach waterbodies and most of the material is retained on site as talus, particularly on sites with woody vegetation. Considers the mapping contracted to Easton et al did not consider the risk of sediment actually getting into waterbodies.</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Concerned the identified land parcels do not take into account the underlying lithology and Land Use Class Categories as is done for Erosion Susceptibility Classification used by NES-CF, which is intended to reflect an absolute risk of erosion.</p> <p>Considers the approach used by Easton et al, and data produced should be subjected to expert technical review.</p>	
S36.021	General comments	General comments - plantation forestry	Not Stated	Notes NZ literature which indicates Wellington has relatively stable hill country soils which are desirable for forestry operators. Considers the risk of landslide for Wellington, Porirua, and Hutt Valley soils is lower than for unreinforced bare soil.	Not stated
S36.022	General comments	General comments - plantation forestry	Not Stated	Notes bare land in a harvested pine forest, whilst not having a canopy to intercept rainfall, does not behave like unprotected bare soil. Notes there is no specific data differentiating various sources of sediment in Wellington water bodies. Considers to understand the implications of potential solutions for forestry, there should be breakdown of sediment yields between soil disturbance factors, at different stages of the forestry cycle. Considers urban and pastoral land cover classes are worse than predominantly plantation forestry catchments and native catchments.	Not stated
S36.023	General comments	General comments - plantation forestry	Not Stated	Notes a Hawke's Bay study which suggests forestry performed better than adjacent pasture, and that earthworks including road making was a substantial contributor to sediment in the stream. Suggests that slips on steep land under periodic forestry cover are not a major source of suspended sediment. Notes another study that risk of shallow slips on non-wooded greywacke steep slopes is less than for other soil types. Suggests GW obtain data on shallow landslide incidence after harvest from their own forests to determine if retiring steepest slopes from forestry impacts sediment in water bodies.	GW commission or obtain live data about shallow landslide incidence after harvest from their own extensive forests to see if retiring out steepest slopes from forestry could actually make a significant difference to sediment in water bodies.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S36.024	General comments	General comments - plantation forestry	Not Stated	<p>Considers the expectation in PC1 for plantation forestry to produce little more sediment than the same catchment would under natural cover is unrealistic with current land-based harvesting and stem/log transport technology. Notes pastoral, intensive farming, horticulture and arable/market gardening do not seem to be held to the same expectation.</p> <p>Considers sediment production from the natural state is not well quantified and achieving sediment rates close to the natural state is an unrealistic goal that does not take into account climate change, effects of earthquakes and volcanic eruptions, land use changes and clearance and other natural dynamics over the last 1000 or more years.</p> <p>Considers there is little awareness of recent 'natural' sedimentation dynamics (e.g. influence of feral animals, deer, goats, pigs) or increases in sediment from unmodified natural catchments. Notes natural sediment levels of any particular waterway will depend on stream size and water volume, steepness, state of vegetation cover, input from mineral rich seepages and iron and other mineral oxides can be a major portion of sediment and turbidity near the sources of these seepages.</p> <p>Notes water quality is only routinely monitored at a few readily accessible sites low down in the catchment.</p> <p>Questions what 'natural state' means in relation to managing forestry sediment loss. Is it a waterway in the foothills surrounded by climax bush (undisturbed by ungulates), a water body flowing from a recently regenerating seral forest as covers much of the Wellington hill country and heavily browsed by pest ungulates (goats, deer,</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>pigs), or is it only defined at the few official monitoring points low down in a catchment area?</p> <p>Questions how individual land managers up-stream can be individually be held accountable if natural state and TAS can only be determined at defined regular monitoring sites.</p> <p>Questions whether TAS are realistic and if they take into account dynamics of natural systems including increased erosion caused by climate change or earthquakes.</p>	
S36.025	General comments	General comments - plantation forestry	Not Stated	<p>Considers it unreasonable to set worst case stormwater sediment discharges for forestry cycles as if they operate at the same frequency each year, or with every rain event. Considers it more equitable to time-average discharge limits for forestry over a 25-35 year period. Considers insufficient understanding is demonstrated in PC1 of sediment loss to waterways within a cyclic forestry environment. Considers the peak point source sediment limits of 100g/m3 is unrealistic. Considers it better to define forestry best practice and audit to those standards.</p>	Not stated
S36.026	General comments	General comments - plantation forestry	Not Stated	<p>Notes data is needed to determine where sediment is coming from. However, considers forestry earthworks, including roading and associated batters, culverts, stream crossings, use of skidders, for plantation forestry near Upper Hutt are much more frequent and significant sources of sediment than shallow land slide and surficial erosion from steep slopes after tree harvest. States this view is supported by the Hawkes Bay Pakuratahi Paired catchment report, (Eyles). Notes Natural State sediment contributions can be significant. Considers forestry roadworks and associated harvesting earthworks can generally be managed to minimise but not eliminate sediment loss to</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>waterways, but rather than focus on extremely conservative peak discharge limits, the sediment losses over the whole forestry cycle need to be factored in.</p> <p>The submitter has not observed evidence that steep slopes are producing significant areas of shallow landslides (Upper Hutt area). Suggests Greater Wellington produce evidence from their own forests (rather than rely on dubious modelling).</p>	
S36.027	General comments	General comments - plantation forestry	Not Stated	<p>Considers that if plantation forestry were prohibited from "highest risk erosion prone" slopes, that after harvesting, regeneration of pine, gorse and other weeds would be likely, and that regeneration of native vegetation is unlikely. Notes the potential for large scale wilding pines. Notes tree toppling on managed sites could generate sediment. Considers retiring of steepest land will affect the viability of current forestry operations. Noting that if cable harvesting can no longer be undertaken due to mid-slopes no longer having plantation forestry, then machine access must be along low-lying territory with more crossings of streams and seepages, thereby exacerbating sediment and erosion issues.</p>	Not stated
S36.028	General comments	General comments - plantation forestry	Not Stated	<p>Considers the performance requirements for woody vegetation replacing pastoral land is a low expectation compared to performance of exotic timber species in managed plantations, and does not meet ETS performance standard for pre-1990 forestry succession. Considers there is potential to improve carbon sequestration by encouraging managed exotic forestry species. Suggests rather than banning production forestry from steepest slopes, consider alternative timber species, permanent forestry, carbon forestry continuous cover forestry / close to nature forestry to reduce risk of sediment loss.</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S36.029	General comments	General comments - plantation forestry	Not Stated	<p>Considers there will be unintended consequences from prohibiting plantation forestry from steep slopes as it will alter the forestry management plans as production forests may then be restricted to broad ridge lines and lower slopes/valley floors. Sediment discharges from forestry roading and tracks may also get worse.</p> <p>Notes if cable logging cannot be undertaken, there may be an increased use of ground-based log transport which uses heavy machines on soft temporary tracks rather than on engineered and metalled roads creating more soil disturbance and soil compaction than that caused by cable logging. Considers more stream crossing and seepage crossing, and faster and heavier runoff flows from the upper slopes will also impact earthworks and in the narrow valleys there is often limited space available to install structures to manage sediment near waterways.</p> <p>Concerned larger areas of land than mapped will become uneconomic to grow and harvest trees from, individual parcels will not longer be able to operate and may not be eligible to join an ETS which could trigger claims for compensation or a RMA section 85 claim.</p> <p>Notes pastoral farmers have been encouraged to use plantation forestry (as well as permanent forestry and native revegetation) for Government sponsored Hill Country Erosion programmes, other subsidised planting schemes (e.g. Billion Trees) as well as offsetting livestock GHG emissions. Concerned the prohibition of plantation forestry on steep slopes will significantly reduce their options.</p> <p>Considers it is likely after harvesting erosion prone land landowners will allow natural regeneration to</p>	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>occur rather than replanting which will invariably be dense groves of pine seedlings which quickly achieve canopy coverage, but will grow tall and thin and be subject to disease, stem breakage and toppling in storms. Notes as wilding pines get older, they will produce large amounts of seed and there is likely to be a public backlash about a perceived wilding pine problem. Questions who will be accountable for this problem. Cites former GW soil conservator assertion that radiata pine needs active management and is not a suitable species for unmanaged stands.</p>	
S36.030	General comments	General comments - plantation forestry	Not Stated	<p>Considers there are many alternative solutions to mitigate the risk of sediment loss from steep slopes and the production forestry ban will undermine research into improved technologies for harvesting and silviculture on steep slopes. Cites the following examples of alternatives:</p> <ul style="list-style-type: none"> - Panpac's method of re-grassing or sowing a cover crop immediately after harvest which greatly reduces surficial runoff and would enable use of selective herbicides to reduce woody regrowth (pines/gorse etc) later and prior to replanting in crop trees. - immediate replanting of crop trees in some situations - replanting at higher than usual planting density - lower final stocking rates - impose restrictions on tracking/earthworks on steepest slopes (and/or additional safeguards to prevent sediment moving offsite. - use of coppicing timber crop species such as poplars, acacia, oak, redwoods and eucalypts. - extend rotation length - alternative harvesting strategies e.g. small coup, strip harvest, selection harvesting. - close to nature (Pro Silva) or Continuous Cover Canopy regimes. 	<p>Amend the definition of 'highest risk erodible forest land' by increasing the slope angle to above 30 degrees and taking into account underlying lithology.</p> <p>That the criteria used are technically peer reviewed by industry recognised experts and aligned to observed field data.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Suggests the definition of highest risk erodible forest land can be adjusted by increasing the slope angle to above 30 degrees and taking into account underlying lithology. Considers the criteria used should be technically peer reviewed by industry recognised experts and aligned to observed field data. Prefers the provisions of the NES-CF prevail.	
S36.031	General comments	General comments - plantation forestry	Not Stated	Notes the NES-CF already requires forests have a full cycle plan, including erosion and sediment control plan, available on request, whereas GW are requiring an erosion control plan certified at an early stage, and for the whole forestry cycle to be controlled and consented. Considers the requirement to prepare and consent an erosion plan 30 years ahead of soil disturbance is unreasonable and the NES-CF rules are sufficient. Notes the cost to prepare and certify an erosion plan will not be affordable at a small scale and many years ahead of forestry income, as well as additional burden of preparing a freshwater plan for livestock operations. Considers the cost of certification and prohibition of plantation forestry on steep slopes will disincentivise pastoral farms wishing to use plantation forestry for offsetting for greenhouse gas emissions. Notes NES-freshwater part 2 provisions only apply to pastoral or arable land operations larger than 20 ha.	That forests under 20ha be subject only to NES-CF rules (permitted activities) and be exempt from GW controlled activity consenting, noting GW can still be notified of harvesting or soil disturbance near water bodies as allowed for in the NES-CF.
S36.032	General comments	General comments - plantation forestry	Not Stated	Considers the s32 report cost/benefit assessment lacks logic and underestimates financial impacts. Considers the greater than 10% of land taken out of production forestry will have long-term impact, undermine confidence in plantation forestry, and will reduce the benefits of plantation forestry. Notes the desire for equitable processes to achieve the TAS and this should not be about everyone adjusting by an equal amount but about quantifying the problem and minimising environmental risk by targeting the highest contributors of sediment. Questions the	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				equitability of the TAS, noting forestry is a controlled activity but not pastoral farming when the literature indicates pastoral farming activities are far more likely than forestry to release sediment and other contaminants into waterbodies.	
S36.033	General comments	General comments - plantation forestry	Not Stated	<p>Considers the majority of published evidence shows plantation forestry is much better than pastoral farming in highly erodible zones in relation to soil disturbance and sediment runoff.</p> <p>Notes some sensitive harbours and estuaries are silting up but we don't know the relative contributions from Wellington area forestry vs natural or other land activities.</p> <p>Considers the case put forward by GW is weak, based on a false premise that steepest forestry land will deliver most of the sediment and some of the evidence (visual clarity and sediment yields) is factually incorrect.</p> <p>Notes the NES-CF has been revised with tighter controls and has only just been implemented. Concerned there are serious errors in the assigned TAS values. Considers the gravity of the situation does not warrant overriding the NES-CF and it is unknown whether the original NES-PF had any effect. Notes available data suggests deposited fine sediment in some forestry catchments has improved since 2013-2015. Concerned the rules are being tightened instead of undertaking enforcement.</p>	Not stated
S36.034	General comments	General comments - plantation forestry	Not Stated	Considers the concern that increasing forestry operations will worsen sediment does not account for a number of factors, including: earthworks are often one-off and done at the end of the forest cycle; improvements in harvesting technology; reductions in manual tree falling; the potential for airship assisted harvesting; and improved tools to	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				identify and manage sensitive areas. Suggests sensitive erosion prone areas should be identified and micromanaged.	
S36.035	6 Other methods	Method M44: Supporting the health of rural waterbodies.	Support	Not stated	Not stated
S36.036	8 Whaitua Te Whanganui-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.	Amend	Considers use of baseline data or other agreed TAS, rather than natural state, is more realistic.	That GW and others find a better way of defining natural levels.
S36.037	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute	Not Stated	Notes the use of the suspended fine sediment/visual clarity/black disc test for Mangaroa River does not take into account that Black Stream (natural brown water) drains into Mangaroa River.	Confirm different TAS have been set where there are natural sources of brown water.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		states for rivers.		Seeks confirmation that different TAS have been set where there are natural sources of brown water. Notes the Total Suspended Solids and suspended fine sediment and deposited fine sediment results are high quality, so are at odds with the Visual Clarity result (refers to table in original submission). Seeks confirmation that Wainuiomata/Black Creek has an appropriate TAS set for visual clarity.	Check Wainuiomata/Black Creek has appropriate TAS set for visual clarity.
S36.038	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity target attribute states.	Not Stated	Considers the target for Mangaroa is based on inappropriate TAS, noting the clarity required is affected by naturally occurring input from a major peat swamp. Challenges the value for Wainuiomata urban stream/Black Creek, noting it may also be subject to Natural Brown Water.	Alter the TAS
S36.039	8 Whaitua Te Whanganui-a-Tara	Policy WH.P26: Managing livestock access to small rivers.	Amend	Considers the clarity test for Mangaroa is affected by stream from a major peat swamp.	Alter the TAS. Move the water monitoring site to above the confluence with Black Stream or reset TAS value; and/or remove mention of Mangaroa River.
S36.040	8 Whaitua Te Whanganui-a-Tara	Policy WH.P28: Achieving reductions in sediment discharges from plantation forestry.	Oppose	Considers policy is misguided, noting Wellington, Hutt Valley and Porirua hills are greywacke, with low risk of shallow landslide. Considers no evidence is provided which suggests steepest slopes are a significant source of sediment after forest harvest. Considers earthworks before and during harvest are a more likely source of sediment. Considers withdrawing plantation forestry from steepest slopes could have unintended consequences and increase risk of sediment loss. Notes alternative ways to mitigate risk of sediment loss from steep land.	Delete policy
S36.041	8 Whaitua Te	Policy WH.P30: Discharge	Amend	Notes the rule does not apply to forestry. Considers the peak discharge limit too low and barely colours water. Considers a vehicle driving on a gravel road,	Raise discharge limits to 1000g/m3

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	standard for earthworks.		even with small scale sediment raps in place by a culvert (as per NES-CF) and walking tracks in the Oronogorongo Valley would fail this test.	
S36.042	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Amend	Considers references to Resource Management (National Environmental Standards for Freshwater) Regulations 2020 should instead refer to NES Commercial Forestry or NES Plantation Forestry.	Replace references to Resource Management (National Environmental Standards for Freshwater) Regulations 2020 with references to NES Commercial Forestry or NES Plantation Forestry.
S36.043	8 Whaitua Te Whanganui-a-Tara	Rule WH.R20: Plantation forestry - controlled activity.	Amend	<p>Regarding clause (a), questions why high erosion risk pasture does not go straight into plantation forestry, noting that only highest risk slopes were proposed to prohibit plantation forestry.</p> <p>Regarding clause (b), considers it costly to prepare an erosion and sediment control plan, even if no steep erosion prone land is involved or proximity to water bodies.</p> <p>Regarding clause (c), considers the discharge limit of 100g/m³ is impractical for forestry, particularly if landslides are involved. Considers it unreasonable to expect recently cleared slopes to produce no more sediment in water than that emerging from an intact canopy catchment upstream, even with sophisticated sediment controls.</p> <p>Regarding clause (d), considers visual clarity an invalid surrogate measure for suspended solids, noting visual clarity can be affected by peat colour. Seeks the TAS is reviewed and reset to allow for a natural brown water input. Considers it unreasonable to penalise based on visual clarity test results outside of a forestry operator's control. Considers it unclear the effect of escalating plantation forestry to a discretionary activity.</p>	<p>Clause (a): Delete 'high erosion risk pasture'</p> <p>Amend clause (b) to exclude forests less than 20ha and not in red zoned land.</p> <p>Delete clause (c) and use best practise guidelines to control sediment.</p> <p>Delete clause (d).</p> <p>Amend matter of control (1): Do not increase average sediment load between forest lifecycles.</p> <p>Delete matter of control (2).</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Regarding matter of control (1), notes forest activities with potential to release sediment are not the same every year, and that whole catchments are likely to be harvested concurrently.</p> <p>Regarding matter of control (2), concerned GW officials will determine area, location and methods used. Concerned the clause may prohibit forestry from otherwise suitable land and create health and safety concerns. Concerned GW officials may override appropriate contractor operations.</p>	
S36.044	8 Whaitua Te Whanganui-a-Tara	Rule WH.R21: Plantation forestry - discretionary activity.	Amend	Considers references to Resource Management (National Environmental Standards for Freshwater) Regulations 2020 should instead refer to NES Commercial Forestry or NES Plantation Forestry.	Replace references to Resource Management (National Environmental Standards for Freshwater) Regulations 2020 with references to NES Commercial Forestry or NES Plantation Forestry.
S36.045	8 Whaitua Te Whanganui-a-Tara	Rule WH.R22: Plantation forestry on highest erosion risk land - prohibited activity.	Amend	Considers the clause is too far reaching and is misguided. Concerned the clause assumes that surficial erosion and shallow landslide from the most erosion prone slopes after harvest are the major cause of sediment loss into water bodies, with no evidence to support this. Notes "afforestation" is different from "replanting". Prefers the NES-CF prevails. Suggests a number of other methods to mitigate the risk of sediment loss to water bodies in original submission. Considers a working threshold relating to use of highest risk erosion prone land is required as the grid resolution is only 5m (=25m ²) which is not a practical unit for management.	<p>That the NES-CF provisions prevail.</p> <p>Failing that:</p> <ul style="list-style-type: none"> - remove the word "afforestation" until more research data is available. - Change the clause title to not indicate that plantation forestry is prohibited. - Review policy and engage with forest industry and forest experts. - Land areas with contiguous 'pixels' need to be larger than 1000m² for the regulations to apply.
S36.046	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	Notes the rule does not apply to forestry. Considers the peak discharge limit too low and barely colours water. Considers a vehicle driving on a gravel road, even with small scale sediment traps in place by a culvert (as per NES-CF) and walking tracks in the Oronogorongo Valley would fail this test.	Raise discharge limits to 1000g/m ³

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S36.047	12 Schedule s	A2 Freshwater Action Plans required in Whaitua Te Whanganu i-a-Tara.	Support	Supports the strategy.	Retain as notified
S36.048	12 Schedule s	Schedule 33: Vegetation Clearance Erosion and Sediment Management Plan.	Oppose	Considers objective clause Bb unrealistic, noting the NPS-FW defines natural state as about 1000 years ago.	Delete clause Bb
S36.049	12 Schedule s	B Management objectives	Support	Considers the objectives unrealistic, noting the natural state is not measurable at a forest or small catchment level. Notes Increased intensity of storm events and feral animals contribute to sediment loss, as well as landslides. Notes forestry harvests typically have a 30-year cycle, with major earthworks being a one-off event. Considers it unreasonable to treat peak sediment loadings as if they occur at the same rate every year. Considers forestry harvest could not achieve the standards without sediment control measures of similar sophistication and scale to state highway roading, noting that rural land uses are not subject to the same expectations. Notes studies which suggest that a full forestry cycle on highly erodible land releases less sediment than pastoral farming. Considers arbitrary limits and unrealistic standards for compliance threatens hill country forestry. Welcomes input from GW on design of sediment control structures that are practical and affordable	Delete Objectives B2 and B3. If the above relief is not implemented: - raise peak discharge standard to 1000g/m ³ - amend so forestry sediment discharge is time averaged over the life cycle of the forest.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				and that can be assessed alongside existing Best Practise Guidelines.	
S36.050	12 Schedule s	C1 Contents of the Erosion and Sediment Managem ent Plan	Oppose	Considers larger forestry operators with professional advisors may be able to comply with the requirements, but not smaller operators, especially if highest risk or erosion prone land does not exist in their forest. Considers no justification is provided that the NES-CF will not deliver satisfactory outcomes. References the alternative methods set out elsewhere in submission to mitigate sediment loss from steepest slopes within forestry. Notes potential amendments to address alternative species, alternatives harvest techniques, and variations on permanent forest where partial harvesting is allowed.	Withdraw Schedule 34. Failing that: Amend clause to not exclude afforestation/plantation forestry from steep land. Exclude woodlots covered by NES-CF, less than 20ha, and not containing red zoned land from controlled activity status; or default to NES-CF provisions. Provide exemptions from registering a full cycle plan and certified erosion control plan where: -small remnants of forest remain to be harvested, but where replanting is not intended e.g. for harvest operations to wind up within 30 years; or -where forest operations are less than 20ha.

S033 Wellington City Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S33.001	General comment s	General comments - overall	Not Stated	WCC has practical constraints in managing its three waters network. Funding constraints will make it difficult to achieve significant improvements quickly, and the target attribute timeframe of 2040 is unlikely to be practicably achievable. Considers a 2060 target is more realistic but this would also be challenging to achieve due to financial constraints and limited capacity within the infrastructure sector to deliver upgrades.	Not stated
S33.002	General comment s	General comments - urban developm ent	Not Stated	Significant infrastructure upgrades are required to meet projected urban growth demand. These upgrades will be expensive and take years to complete. A long-term approach will be required to	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				renew existing assets and achieve both urban growth and water quality outcomes.	
S33.003	General comments	General comments - water quality improvements	Not Stated	WCC is already engaging in multiple statutory and non-statutory processes in processes to achieve water quality improvements. Water quality improvements will be difficult to achieve due to design and construction of existing three waters infrastructure, and constrained resources of local government. Concerned that NRPC1 would require all brownfield development to seek consent for stormwater discharges from both District and Regional Councils, which is an unnecessary duplication.	Not stated
S33.004	General comments	General comments - unplanned greenfield development	Not Stated	Concerned about the practical implications and unintended consequences of unplanned greenfield development being a prohibited activity. Considers this will affect WCC's ability to make strategic decisions on growth and development without a change to the District and Regional Plan, and difficulties with minor changes to urban zoning. Considers the prohibited status has not been reasonably justified, and that alternatives that could achieve the strategic intent of the rule without requiring a dual plan change process, such as a Discretionary Activity status, should be considered.	Not stated
S33.005	General comments	General comments – stormwater management	Not Stated	Concerned the proposed framework for managing the effects of stormwater runoff from development is already regulated through the PDP, and this would lead to applicants going through two different consenting processes. Suggest stormwater runoff from development is better regulated at the District level.	Not stated
S33.006	2 Interpretation	Dry weather discharges	Neutral	Consistent with Wellington Water definition.	Retain as notified
S33.007	2 Interpretation	Earthworks	Support	Consistent with the WCC PDP definition of earthworks	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S33.008	2 Interpretation	Environmental outcomes	Support	Support the requirements for environmental outcomes	Retain as notified
S33.009	2 Interpretation	Existing wastewater discharge	Oppose	Consider the definition confusing and recommend refining the definition and referencing s124 of the RMA.	Amend to clarify definition
S33.010	2 Interpretation	High risk industrial or trade premise	Amend	Considers that the lack of metrics associated with the subclauses means it is unclear what would be captured by the associated rule framework i.e. it is unclear what 'bulk storage' could be considered as.	Amend to clarify scale or metric thresholds where regulation of activities would be triggered.
S33.011	2 Interpretation	Hydrological control	Oppose	Consider the proposed definition describes discharges, as set out under s15 of the RMA, and does not demonstrate how hydrological controls manage stormwater runoff.	Amend definition as follows: Hydrological control: means the management of a range of stormwater flows and volumes, and the frequency and timing of those flows and volumes, from a site or sites through on site management processes for the purpose of reducing bank erosion, slumping, or scour, to protect fresh water ecosystem health and well being.
S33.012	2 Interpretation	Impervious surfaces	Oppose	Definition is complex and difficult to implement. The use of impermeable surfaces (permeability) is also a matter of consideration for District Plans as set out in 80E of the RMA and 3.5(4) of the NPS-FM.	Delete definition
S33.013	2 Interpretation	Redevelopment	Oppose	The proposed definition is unreasonable and is not taking into consideration the environmental pressure of the urban environment. Overlaps with the functions of territorial authorities and the consideration for stormwater management as set out in 80E of the RMA and 3.5(4) of the NPS-FM. Does not promote integrated management.	Delete definition
S33.014	2 Interpretation	Stormwater catchment or sub-catchment	Support	Supports the use of stormwater catchments into rivers, lakes, wetlands, springs, riparian margins, and other receiving environments	Retain as notified
S33.015	2 Interpretation	Stormwater management	Support	Support stormwater management strategies and considers them the most appropriate tool for the management of stormwater contaminants for local authority or state highway stormwater networks.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ent strategy			
S33.016	2 Interpretation	Stormwater network	Support	Considers it appropriate to consider stormwater treatment systems that serve more than one property.	Retain as notified
S33.017	2 Interpretation	Stormwater treatment system	Amend	Support the definition in principle but considers the definition allows the application to be too broad and overlapping with territorial authority provisions.	Amend so it only applies to discharge outside a local authority or state highway stormwater network.
S33.018	2 Interpretation	Unplanned greenfield development	Oppose	Concerns regarding the prohibitive provisions framework and if it the most appropriate to achieve the objectives and policies of the NPS-FM 2020. Concerned the policy will hinder the rezoning of land with inappropriate 'legacy' zoning , including sites that could be converted to housing, community facilities, education facilities and not expand the current urban boundary. Notes that s3.5(4) NPS-FM only sets direction for District Plans to manage urban development, not regional plans. Considers the prohibited activity status is not justified through the s32 report as the most appropriate option to achieve the objectives of the plan, and that a Discretionary Activity status is more appropriate.	Amend definition to take into account smaller sites within the existing urban boundary or delete definition.
S33.019	2 Interpretation	Wastewater network catchment or sub-catchment	Support	Consistent with Wellington Water definition.	Retain as notified
S33.020	2 Interpretation	Wet weather overflows	Support	Consistent with Wellington Water definition.	Retain as notified
S33.021	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Amend	Considers it appropriate to develop framework with Territorial Authorities given the District Plan manages urban activities.	Amend as follows: ... Wellington Regional Council will work with Territorial Authorities to undertake programme(s) to support the health of waterbodies, including rivers and streams, estuaries and harbours, impacted by urban activities, including to:

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S33.022	6 Other methods	Method M45: Funding of wastewater and stormwater network upgrades	Support	Support funding opportunities for stormwater network upgrades.	Retain as notified
S33.023	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Support	Support the goals set out in the objective and consider the 2100 timeframe appropriate.	Retain as notified
S33.024	8 Whaitua Te Whanganui-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganui-a-Tara's groundwater, rivers	Amend	Considers the 2040 timeframe will be difficult to achieve and does not take into account the environmental and financial constraints of Wellington City Council. Suggests the 2060 timeframe is consistent with WCC's spatial planning framework, and more consistent with the long-term plan and strategic financing of upgrades and expansions to the three waters network.	Amend timeframe from 2040 to 2060.

**Proposed Change 1 to the Natural Resources Plan –

Suggests the 2060 timeframe is consistent with WCC's spatial planning framework, and more consistent with the long-term	Amend timeframe from 2040 to 2060.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				plan and strategic financing of upgrades and expansions to the three waters network.	
S33.034	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Support	Consider the policy is reasonable to achieve the improvements to ecosystem health progressively.	Retain as notified.
S33.035	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Concerns regarding the prohibitive provisions framework and if it the most appropriate to achieve the objectives and policies of the NPS-FM 2020. Considers the prohibited activity status is not demonstrated through the s32 report as the most appropriate option to achieve the objectives of the plan, and that a Discretionary Activity status is more appropriate. Notes that as per case law prohibited activity class should not be used to defer an evaluation of a particular activity until such time as a plan change is lodged to allow undertaking the activity in question. Considers the District Plan is the most appropriate tool to manage urban development as set out in s3.5(4) of the NPS-FM 2020. Recommends that for development connected to the local authority stormwater networks, GWRC sets out the reduction requirements in the s15 global stormwater discharge consent via the stormwater management strategy and Territorial Authorities then implement the regulatory aspects of the stormwater management strategy through land use consents in the District Plan.	Amend as follows: Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by: (a) prohibiting unplanned greenfield development for other greenfield developments minimising the contaminants and requiring contaminants and requiring financial contributions as to offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, through stormwater management strategies and...
S33.036	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the	Amend	Support in part. Consider it appropriate for Freshwater Action Plans to be developed cooperatively with Mana Whenua and territorial authorities to give effect to 3.5(3) of the NPS-FM 2020.	Amend as follows: Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways The Wellington Regional Council shall, in partnership with mana whenua and local territorial authorities, to prepare and deliver Freshwater

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

		controlled activity.		land uses which includes both water quality and water quantity management. Considers that the regional plan rule framework duplicates consenting requirements and recommends the NRP stays silent on this and GWRC focus on higher-level management of discharge consents, including stormwater not connected to a local authority stormwater network.	
S33.062	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity.	Oppose	Considers proposed framework does not promote integrated management and will result in consenting overlap without evidence of improved resource management outcomes. Identifies that development discharges are already managed via a global stormwater discharge consent, and that the WCC PDP proposes to manage on-site stormwater for s9 land uses which includes both water quality and water quantity management. Considers that the regional plan rule framework duplicates consenting requirements and recommends the NRP stays silent on this and GWRC focus on higher-level management of discharge consents, including stormwater not connected to a local authority stormwater network.	Delete rule in its entirety OR amend to limit the applicability of the rule to development that is not connected to local authority stormwater networks.
S33.063	8 Whaitua Te Whanganui-a-Tara	Rule WH.R9: Stormwater from a local authority or state highway network-restricted discretionary activity.	Support	Support the management of Local Authority or State Highway network through a restricted discretionary activity status.	Retain as notified
S33.064	8 Whaitua Te	Rule WH.R10: Stormwater	Amend	Opposes the double-up in contributions being made for development and considers this confuses the process for Territorial Authorities contributions	Delete requirement for financial contributions.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	r from new state highways-discretionary activity.		which would go to the same water services entity to go towards catchment scale stormwater infrastructure management Considers there is a high risk of duplication, which does not promote integrated management.	
S33.065	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Not Stated	Considers proposed framework does not promote integrated management and will result in consenting overlap without evidence of improved resource management outcomes. Identifies that development discharges are already managed via a global stormwater discharge consent, and that the WCC PDP proposes to manage on-site stormwater for s9 land uses which includes both water quality and water quantity management. Considers that the regional plan rule framework duplicates consenting requirements and recommends the NRP stays silent on this and GWRC focus on higher-level management of discharge consents, including stormwater not connected to a local authority stormwater network.	Delete rule in its entirety OR amend to limit the applicability of the rule to development that is not connected to local authority stormwater networks.
S33.066	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Support	Support 'All other stormwater discharge' rule.	Retain as notified
S33.067	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development -	Amend	Concerns regarding the prohibitive provisions framework and if it the most appropriate to achieve the objectives and policies of the NPS-FM 2020. Concerned the policy will hinder the rezoning of land with inappropriate 'legacy' zoning , including sites that could be converted to housing, community facilities, education facilities and not expand the current urban boundary. Considers the prohibited activity status is not demonstrated through the s32	Amend rule to Discretionary activity status OR delete rule.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		prohibited activity.		report as the most appropriate option to achieve the objectives of the plan, and that a Discretionary Activity status is more appropriate. Notes that as per case law prohibited activity class should not be used to defer an evaluation of a particular activity until such time as a plan change is lodged to allow undertaking the activity in question.	
S33.068	8 Whaitua Te Whanganui-a-Tara	Rule WH.R14: Wastewater network catchment discharges - restricted discretionary activity.	Amend	Support in part. Considers the rule to be difficult to understand, recommends amending the rule for clarity and succinctness.	Amend to clarify rule and give effect to the proposed amendment to the definition of 'existing wastewater discharge'
S33.069	8 Whaitua Te Whanganui-a-Tara	Rule WH.R15: Existing wastewater discharges from a treatment plant - discretionary activity.	Amend	Support in part. Considers the rule to be difficult to understand. Recommends amending the rule for clarity and succinctness.	Amend to clarify rule and give effect to the proposed amendment to the definition of 'existing wastewater discharge'
S33.070	8 Whaitua Te Whanganui-a-Tara	Rule WH.R16: All other discharges of wastewater - non-complying activity.	Amend	Considers non-complying status to be onerous and does not reflect that new treatment plants are often required to prevent both wet and dry weather overflow events. Considers the activity status increases infrastructure costs and can impede the staged upgrades of wastewater infrastructure.	Amend activity status from non-complying to Discretionary.
S33.071	8 Whaitua Te	Rule WH.R23:	Amend	Supports in-part but considers subclause (g) cannot be met as you cannot guarantee that no sediment	Rule WH.R23: Earthworks - permitted activity Earthworks is a permitted activity, provided the following

S33.148	13 Maps	Map 86: Unplanned greenfield areas - Porirua City Council.	Neutral	Concerns regarding the provision framework associated with the mapping of unplanned greenfields and whether it is the most appropriate way to achieve the objectives and policies of the NPS-FM 2020. Encourages GWRC to reconsider the appropriateness and legality of the proposed prohibited provisions.	Amend boundaries to include all open space zones within the urban boundary.
S33.149	13 Maps	Map 87: Unplanned greenfield areas - Wellington City Council.	Oppose	Concerns regarding the provision framework associated with the mapping of unplanned greenfields and whether it is the most appropriate way to achieve the objectives and policies of the NPS-FM 2020. Encourages GWRC to reconsider the appropriateness and legality of the proposed prohibited provisions.	Amend boundaries to include all open space zones within the urban boundary.
S33.150	13 Maps	Map 88: Unplanned greenfield areas - Upper Hutt City Council.	Oppose	Concerns regarding the provision framework associated with the mapping of unplanned greenfields and whether it is the most appropriate way to achieve the objectives and policies of the NPS-FM 2020. Encourages GWRC to reconsider the appropriateness and legality of the proposed prohibited provisions.	Amend boundaries to include all open space zones within the urban boundary.
S33.151	13 Maps	Map 89: Unplanned greenfield areas - Hutt City Council.	Oppose	Concerns regarding the provision framework associated with the mapping of unplanned greenfields and whether it is the most appropriate way to achieve the objectives and policies of the NPS-FM 2020. Encourages GWRC to reconsider the appropriateness and legality of the proposed prohibited provisions.	Amend boundaries to include all open space zones within the urban boundary.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S188 Wellington Fish and Game Regional Council

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S188.001	General comments	General comments - overall	Support	Seeks environmental outcomes set for the ecosystem health value	Seeks environmental outcomes set for the ecosystem health value
S188.002	General comments	General comments - target attribute states	Support	Seeks Target Attribute States be set to allow for maintenance and/or restoration of this level of ecosystem health, which may involve setting limits and bottom lines well above the national bottom lines.	Not stated
S188.003	General comments	General comments - water bodies	Amend	Considers all waterbodies should have Target Attribute States including estuaries, wetlands and groundwater. Considers wetlands have been excluded in the NRP PC1 from having Target Attribute States set.	Seeks all waterbodies (including wetlands) have Target Attribute States.
S188.004	General comments	General comments - consultation	Not Stated	Considers it important to include stakeholders like Wellington Fish and Game Council who have statutory responsibilities in consultation and management planning	Not stated
S188.005	General comments	General comments - overall	Not Stated	Suggests regular assessments and evaluations of Schedule I important to trout spawning and trout fishery rivers.	Not stated
S188.006	General comments	General comments - fresh water	Not Stated	Seeks regular, meaningful updates and reports to statutory managers and collaborators on outcomes of management and action plans. Considers them important to maintain collaboration and achieve environmental targets.	Seeks regular, meaningful updates and reports to statutory managers and collaborators on outcomes of management and action plan
S188.007	General comments	General comments - water bodies	Support	Considers it vital to address/ minimise the cumulative impacts of water takes and core allocation on waterbodies and aquatic ecosystem health.	Seeks reduced takes where rivers are suffering loss of natural form and character, and ecosystem degradation due to insufficient water flow.
S188.008	General comments	General comments - stormwater	Support	Considers it vital to manage stormwater, wastewater network catchment, and wastewater treatment plant discharges. Considers management and action plans should be SMART: Specific, Measurable,	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		r management		Ambitious but reasonable, Relevant, and Time-bound.	
S188.009	General comments	General comments - rural	Not Stated	Considers aquatic ecosystem health and wellbeing depends on managing diffuse discharges of nutrients and E. coli from farming activities. If current land use inputs of nutrients are not known, more conservative limits will need to be set to ensure the target reductions are achieved. Outcomes for Dissolved Inorganic Nitrogen concentrations should be set around 0.3 - 0.6 mg/L, and median Dissolved Reactive Phosphorus concentrations should be set at around 0.01 - 0.02 mg/L (Canning et al 2021), supported by a monitoring programme.	Seeks Dissolved Inorganic Nitrogen concentrations be set at 0.3 - 0.6 mg/L, and median Dissolved Reactive Phosphorus concentrations be set at 0.01 - 0.02 mg/L (Canning et al 2021). Seeks a comprehensive, regular, and frequent monitoring programme needed to assess concentrations of nutrients throughout catchment.
S188.010	General comments	General comments - water bodies	Not Stated	Notes research indicates that ~2% of New Zealand waterways are naturally soft-bottomed, but due to sediment inputs into waterways, currently ~ 20% of New Zealand rivers and streams now have soft sediment beds, rather than natural hard-bottomed, stony beds they historically displayed (Clapcott et al, 2011). Considers restoring silted streams should be a priority and restoration/monitoring should show this restoration over time.	Not stated
S188.011	General comments	General comments - target attribute states	Not Stated	Long-term target attribute timeframes require interim target attribute state timeframes also. Short-term milestones are useful for maintaining momentum over the lifetime of a vision, and minimising the likelihood of delays.	Interim target attribute state timeframes set for intervals of not more than 10 years with baselines which need to be achieved by the interim target date set.
S188.012	General comments	General comments - stormwater management	Not Stated	Considers policies governing adverse effects of stormwater discharges (e.g., policies P.P10, and WH. P10) contain multiple clauses giving reasons to not put good management practices into effect. Considers in accordance with national legislation, financial and economic reasons are not given precedence over restoration of degraded freshwater ecosystems.	Requirement for demonstrating functional need, and the effects management hierarchy should be included to bring the Plan into alignment with current national directives.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S188.013	General comments	General comments - stormwater management	Not Stated	Considers when plan change addresses adverse environmental impacts of stormwater or wastewater discharges, it is also important to weight ecosystem health as dictated by the RMA 1991, NPS-FM 2020, and Te Mana o te Wai. Therefore, wherever adverse environmental effects are to be "avoided where practicable", then the NPS-FM 2020 Section 3.21 to 3.24 requires a demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied.	Not stated
S188.014	General comments	General comments - wastewater	Not Stated	Considers when plan change addresses adverse environmental impacts of stormwater or wastewater discharges, it is also important to weight ecosystem health as dictated by the RMA 1991, NPS-FM 2020, and Te Mana o te Wai. Therefore, wherever adverse environmental effects are to be "avoided where practicable", then the NPS-FM 2020 Section 3.21 to 3.24 requires a demonstration of a functional need for that activity, and if there is a functional need, then the effects management hierarchy must be applied.	Not stated
S188.015	General comments	General comments - fresh water	Not Stated	Considers if sports fish or game bird habitats and interactions are considered to potentially impact on nationally threatened freshwater species, Wellington Fish and Game Council as statutory managers are required to be involved in any management plans and actions.	Not stated
S188.016	General comments	General comments - consultation	Not Stated	Concerned with a lack of consultation and questions if the NPSFM process has been followed correctly, particularly Section 3.2 (b), which requires every regional council to engage with communities and tangata whenua to identify long-term visions, environmental outcomes, and other elements of the NOF.	Not stated
S188.017	General comments	General comments -	Not Stated	Concern that lack of communication with Wellington Fish and Game Council during PC1 development has led to omission acknowledging the requirement	Not stated

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		consultation		to protect habitat for trout and salmon insofar as this is consistent with protections of the habitats of indigenous freshwater species (Policies 10 and Policies 9 of the NPSFM). Also, Appendix 1B requires that where FMUs or parts thereof have fishing values, attributes associated with this fishing value (for both indigenous and introduced freshwater fish) need to be specifically targeted to allow the numbers of fish to be sufficient and suitable for human consumption. Concerned limited engagement with community and no engagement with submitter potentially circumvented important aspects of NPSFM and allows for Plan to continue to not fulfil national level legislative obligations for freshwater health in key areas.	
S188.018	3 Objectives	Objective O18: Rivers, lakes, natural wetlands and coastal water are suitable for contact recreation and Māori customary use.	Support	Not stated	Not stated
S188.019	3 Objectives	Objective O19: Biodiversity, aquatic ecosystem health and mahinga kai in fresh	Amend	Considers clause c) requires strengthening: restoration of a degraded system or ecosystem is necessary under the NPS-FM, rather than merely encouraged.	Amend Clause (c) as follows: c) restoration of aquatic ecosystem health and mahinga kai is encouraged. Aquatic ecosystem health and mahinga kai values are maintained where in good health and restored where degraded.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		water bodies and the coastal marine area are safeguarded.			
S188.020	4 Policies	Policy P30: Biodiversity, aquatic ecosystem health and mahinga kai.	Support	Not stated	Not stated
S188.021	4 Policies	Policy P45: Protecting trout habitat.	Support	Not stated	Not stated
S188.022	5.4 Beds of lakes and rivers	5.4.4 Uses of beds of lakes and rivers general conditions.	Support	Not stated	Not stated
S188.023	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river - permitted activity.	Oppose	Concerns permitted activity status for permanent diversions over 10 years risks resulting in inappropriate structures creating potential adverse effects to waterbody flow, form, and character, as well as potential fish passage issues, which are contrary to Te Mana o te Wai, NPS-FM, and RMA.	Retain river diversions as discretionary or restricted activities to allow for uptake of new river management systems, ideas, and materials as knowledge and technologies progress.
S188.024	6 Other methods	6.16 Freshwater Action Plan	Support	Not stated	Not stated

S101 Wellington International Airport Limited

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S101.001	General comments	General comments - water quality improvements	Oppose	Policy P30(b) Should the relief sought by the submitter with respect to Chapter 8 of the NRP not be accepted, the submitter opposes the proposed exclusion of these provisions as they relate to Whaitua Te Whanganui-a-Tara.	Retain application of these provisions to Whaitua Te Whanganui-a-Tara (by removing the symbol).
S101.002	General comments	General comments - water quality improvements	Amend	Notes new freshwater related objectives and policies within the Proposed NRP seek to give effect to the National Policy Statement for Freshwater Management 2020 ("NPSFM") but some of the provisions also refer to the coastal marine area / coastal environment. Concerned that this will result in the management of the coastal resources in a way that is inconsistent with the New Zealand	Delete any reference to the coastal marine area from those provisions which seek to directly give effect to the NPSFM.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Coastal Policy Statement ("NZCPS") and the remaining sections of the Operative NRP which are not subject to the Proposed NRPM, and will apply freshwater management concepts to the coastal marine area and the coastal environment which is not appropriate.	
S101.003	General comments	General comments - fresh water	Amend	Does not oppose amendments to schedule F2(C), F4 and F5, and understands that a consenting pathway remains available through the operative NRP provisions for regionally significant infrastructure to continue to operate in these areas. Provided this pathway remains available, supports the identification of the additional scheduled items (namely Horse mussels and Adamsiella beds within Evans Bay), subject to the identification of these particular features being accurately identified and mapped.	Not stated
S101.004	General comments	General comments - unplanned greenfield development	Oppose	Notes significant concerns with the approach to unplanned greenfield development areas and considers that a more sophisticated approach is required. Considers it is unclear whether the term "unplanned greenfield development" and associated terms would include activities undertaken in relation to regionally significant infrastructure, such as the Airport. Considers prohibiting development based on underlying land use zoning does not recognise or account for the ability for requiring authorities to utilise a designation. Considers the strong policy directive to prohibit unplanned greenfield development could be used as the rationale for declining resource consent or recommending the withdrawal of a notice of requirement for nationally and regionally significant infrastructure projects. Considers the proposed new "unplanned greenfield development" provisions will potentially curtail	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>proposed development projects despite the significant benefits that will accrue.</p> <p>Considers the approach to unplanned greenfield development warrants significant rework to ensure that regionally significant infrastructure providers can continue to meet the needs of the region's community</p>	
S101.005	General comments	General comments - stormwater management	Oppose	<p>Notes that the submitter has secured a site wide stormwater discharge permit which provides for all stormwater discharges from activities and areas within the Airport boundary, and has prepared a comprehensive stormwater management plan as part of the consent.</p> <p>The stormwater discharge permit was granted under Rule R54 of the Operative NRP, which the submitter considers is effective in that it encourages WIAL to actively manage its stormwater discharges in an integrated and comprehensive way.</p> <p>The submitter therefore supports the retention of the Operative approach in the Proposed NRP and considers that further amendments are required to various rules within the Proposed NRP to reflect the Operative NRP approach.</p>	Not stated
S101.006	General comments	General comments - earthworks	Oppose	<p>Considers regular maintenance and repair of the roads, runways, taxiways and aprons at the Airport to ensure their safety and functionality is maintained should be excluded from the proposed new earthworks provisions. Considers that in the absence of this change, the submitter will be subject to an inefficient and unnecessary consenting burden for activities that form part of its ongoing operational requirements.</p> <p>Opposes the winter shutdown provisions as it fails to provide a consenting pathway for large scale infrastructure projects that often span months to years in duration and will add significant cost and time to infrastructure projects undertaken by WIAL and likely other infrastructure providers, and will</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				constrain infrastructure providers ability to meet the ongoing needs of the community. Considers the approach fails to recognise that some earthworks activities must avoid certain breeding, spawning or nesting periods if significant indigenous fauna are located on site.	
S101.007	General comments	General comments - stormwater management	Oppose	Notes the operational and functional requirements of some regionally significant infrastructure necessitate large areas of impermeable surfaces which stormwater management systems are typically included into. Notes submitter has recently secured a site wide stormwater discharge permit and given the measures being implemented by the submitter and its contribution to reducing the overall effect it is having on (ultimately) coastal water quality, it does not seem reasonable or equitable to require financial contributions for any "residual effect". Considers the contribution in Schedule 30 is payable for an effect that does not necessarily arise as a result of the activity that resource consent is being sought for and this is inappropriate and unlawful. WIAL opposes the proposed introduction of financial contributions and considers they should be deleted in their entirety.	Delete financial contributions provisions in their entirety.
S101.008	General comments	General comments - current legislation	Amend	Considers GWRC should postpone any hearings on the Proposed NRP until such a time that decisions on the Proposed RPS are issued and any appeals resolved.	Postpone any hearings on the Proposed NRP until such a time that decisions on the Proposed RPS are issued and any appeals resolved.
S101.009	General comments	General comments - overall	Amend	Considers as notified, the Proposed NRP was unduly complex and difficult to follow. Considers the numbering of the schedules used in the Proposed NRP also gives rise to potential confusion. Submitter assumes that Schedules A to Z will be renumbered 1 to 26, or Schedules 27 to 34 will be alphanumerically numbered. Opposes the	Issue a tracked change version of the Proposed NRP, both electronic and hard copy, prior to any directions requiring the preparation of s42A reports and evidence to ensure that it is clear which provisions are changing, where and how they sit within the wider context of the Operative NRP. This should include, as anticipated by the New Zealand Planning Standards, appropriate links to cross reference rules or

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				schedules to the extent that it is not clear what comprises Schedules 1 to 26.	provisions, or other documents. Reformat to provide appropriate links and a contents page.
S101.010	General comments	General comments - overall	Oppose	Considers that in the absence of amendments to the Proposed NRP to address and give effect to the submission, the Proposal will not promote the sustainable management or efficient use and development of natural and physical resources, is not the most appropriate way to achieve the purpose of the RMA, particularly when having regard to the efficiency and effectiveness of the provisions relative to other means, and does not appropriately fulfil the requirements of section 32 of the RMA, particularly in terms of evaluation the costs of implementing the provisions under section 32(2)(a); Considers the Proposal does not represent sound resource management practice particularly with respect to planning for Wellington Airport, as regionally significant infrastructure.	That the submission points contained in this submission be accepted, or that the Proposed NRP be amended in a similar or such other way as may be appropriate to address the submission points; and Any alternative, consequential changes (including to objectives, policies, methods and anticipated environmental results or other provisions), amendments or decisions that may be required to give effect to the matters raised in the submission. Where any submission point seeks to amend a provision, should that relief not be granted, delete that provision and revert to the Operative NRP.
S101.011	2 Interpretation	Coastal water management units	Amend	To ensure consistent interpretation and application of the objectives, policies and rules. considers a new map be should be included which clearly delineates the boundaries of each Whaitua, including both coastal and landward areas.	Insert a new planning map that clearly identifies Whaitua Te Whanganui-a-Tara, including both the coastal and landward areas.
S101.012	2 Interpretation	Earthworks	Oppose	In order to facilitate the ongoing and timely maintenance and repair of WIAL assets, considers that the existing earthworks exclusion for activities relating to the repair or maintenance of existing roads and tracks, airfield runways, taxiways and parking aprons for aircraft should be included in the proposed new earthworks definition. Considers without the exclusion the submitter will be subject to an inefficient and unnecessary consenting burden for activities that form part of its ongoing operational requirements. Notes that WIAL actively manages all earthworks undertaken at the airport due to the potentially	Retain the operative definition of earthworks insofar as it relates to the Airport or exclude the repair or maintenance of existing roads and tracks, airfield runways, taxiways and parking aprons for aircraft at the Airport from the earthworks definition for Whaitua Te Whanganui-a-Tara.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				significant effects that poorly managed earthworks can have on aircraft operations and safety.	
S101.013	2 Interpretation	High risk industrial or trade premise	Oppose	Considers the Airport should be excluded from this definition or the association provisions relating to high risk industrial or trade premises to avoid unnecessary duplication of the methods that relate to high risk industrial or trade premises where located at the Airport.	Amend the definition to exclude Airport activities. Or delete and revert to Operative NRP.
S101.014	2 Interpretation	Impervious surfaces	Oppose	Considers the Airport should therefore be excluded from this definition to avoid unnecessary duplication of the methods that relate to impervious surfaces where located at the Airport.	Amend the definition to exclude the Airport. Or delete and revert to Operative NRP.
S101.015	2 Interpretation	Redevelopment	Oppose	Considers it is not clear what is captured by the phrase of "existing urbanised property" and whether this is intended to apply to Wellington International Airport. Considers the Airport should therefore be excluded from this definition to avoid unnecessary duplication of the methods that relate to impervious surfaces where located at the Airport. Notes concerns with respect to the provisions relating to "greenfield development" (and associated terms). For the reasons expressed in submission points on Policy WH.P2 and WH.P14, seeks activities at Wellington International Airport be exempt from this definition.	Amend the definition to exclude the Airport. Or delete and revert to Operative NRP.
S101.016	2 Interpretation	Unplanned greenfield development	Oppose	Considers it is not clear what is captured by the term "greenfield development" and whether this is intended to apply to the Airport when proposing or carrying out activities as a network utility operator and regionally significant infrastructure provider. Notes concerns with respect to the provisions relating to "greenfield development" (and associated terms). For the reasons expressed in submission points on Policy WH.P2 and WH.P14, seeks activities at Wellington International Airport be exempt from this definition.	Amend the definition to exclude the Airport and/ or Network Utility Operators. Or delete and revert to Operative NRP.

S101.038	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine	Amend	Supports the intent to improve the health of freshwater bodies and coastal marine area but considers "wai ora", as expressed in the objectives, cannot be achieved at the Airport due to its operational and functional requirements. Notes as examples: protecting the seawall surrounding the Airport is critical to the ongoing operational of the Airport and reverting the coast to its "natural character" would not be practicable in	Amend the Objective after reviewing the extent to which the objective should apply to sites containing critical infrastructure and whether such an objective is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities. Or delete and revert to Operative NRP.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		area within Whaitua Te Whanganu i-a-Tara is progressively improved and is wai ora by 2100.		this location, and restoration of freshwater bodies where located within the Airport site will potentially affect the ongoing operation and development of the Airport. Notes higher order planning documents (such as the NPS-FM and the NPS-IB) provide a path for specified infrastructure to undertake activities within freshwater bodies in accordance with the effects management hierarchy. Considers that the objective to be wai ora by 2100 should be qualified rather than absolute.	
S101.039	8 Whaitua Te Whanganu i-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganu i-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement towards wai ora.	Amend	Supports the general intention of this objective but notes there are practical difficulties with an absolute requirement for wai ora to be achieved. Considers it important to recognise that the trajectory required by the objective is to be applied at a Whaitua or catchment wide level and that localised effects will not necessarily preclude the overall outcomes from being achieved. Note higher order planning documents (such as the NPS-FM and NPS-IB) provide a path for specified infrastructure to undertake activities within freshwater bodies (such as rivers and wetlands).	Amend the objective to clarify that the reference to the health and wellbeing of Te Whanganu i-a-Tara is at a broad, regional level (and thus recognising that there may be localised effects arising as a result of specified infrastructure undertaking activities in rivers and wetlands. Review the extent to which the objective should apply to sites containing critical infrastructure and amend accordingly. Review whether such an objective is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities and amend accordingly. Or delete and revert to Operative NRP.
S101.040	8 Whaitua Te	Objective WH.O3:	Amend	Supports the general intention of this objective. Concerned that (g) and (h) do not recognise that for	Amend the objective to recognise that physical access will not be appropriate in all situations.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.		health and safety reasons it may not be appropriate to provide a physical connection to the coast. Considers the phrase "the health and wellbeing of coastal water quality" is unclear and considers the chapeau would be better articulated by relating the "health and wellbeing" component of the objective to ecosystems and health.	Amend the chapeau of the objective as follows: The health and wellbeing of the e Coastal water quality, and the health and wellbeing of ecosystems and habitats in Te Whanganui-a-Tara is maintained and improved to achieve" At an overall level, review the extent to which the objective should apply to sites containing critical infrastructure and amend accordingly. Review whether such an objective is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities and amend accordingly. Or delete and revert to Operative NRP
S101.041	8 Whaitua Te Whanganui-a-Tara	Table 8.1 Coastal water objectives.	Support	Supports the coastal water objectives set out in Table 8.1.	Retain as notified.
S101.042	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Generally supports the intention of this policy but concerned that at an individual consent level, while endeavours are made to achieve (a) to (d), it may not always be practicable given the nature and scale of activities undertaken by regionally significant infrastructure. Considers the policy requires further amendment to recognise the operational and functional requirements of regionally significant infrastructure, consistent with Objective O9 of the NRP, and that as currently drafted the policy will limit the ability of infrastructure providers in the region to meet the needs of the regions communities.	Review the extent to which the policy should apply to sites containing critical infrastructure. Review whether such a policy is appropriate where it is also necessary to utilise natural and physical resources to meet the economic and social needs of Wellington's communities. In the alternative, amend the policy to ensure it considers the extent to which (a) to (d) is practicable in the context of regionally significant infrastructure. Or delete and revert to Operative NRP.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S101.043	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Considers the proposed policy is unduly onerous and blunt insofar as discharges and land use management are concerned and the chapeau of the policy needs to clarify that the target attribute states apply to freshwater only while the coastal water objectives apply to coastal water.</p> <p>Notes the definition of "unplanned greenfield development" makes reference to the undefined term "greenfield development" and "other greenfield development" and certainty is required around what is / is not captured by this policy.</p> <p>Considers it is not clear whether (a) would extend to infrastructure (such as Wellington Airport) or one-off developments for which resource consent can be sought.</p> <p>Considers if (a) were to apply to designations, it would render a well established and utilised tool under the RMA nugatory.</p> <p>Notes a proposal of WIAL to establish a small community precinct within an area of Open Space zoned land on Lyall Parade would effectively be prohibited under (a), despite the positive outcomes, including for the indigenous vegetation on site.</p> <p>Considers it is not clear what methods within the plan "encourage" redevelopment of existing urban areas.</p> <p>Considers it is not clear whether limb (c) relates to urban development which gives rise to stormwater discharges not otherwise discharging to rivers.</p>	Amend the policy to address the issues raised. Or delete and revert to Operative NRP.
S101.044	8 Whaitua Te Whanganui-a-Tara	Policy WH.P5: Localised adverse effects of point source discharge.	Support	<p>Considers the policy intent is generally consistent with restrictions on the grant of certain discharges under section 107 of the RMA.</p>	Retain as notified.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S101.045	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point source discharges	Amend	Supports the general intent of the policy but considers the policy is drafted in a problematic way in that it requires avoidance of cumulative adverse effects and then subsequently, for a range of other outcomes to be achieved, which are seemingly less than the outright avoidance "standard" imposed by the policy at the outset.	Amend the policy as follows: The cumulative adverse effects of point source discharges, excluding stormwater network and wastewater discharges, to water are avoided and managed such that: And redraft the subsequent part of the policy to properly link with this chapeau. Or delete and revert to Operative NRP .
S101.046	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Oppose	Notes there are instances where discharges associated with the activities listed in (a) to (d) may occur at the Airport for the purpose of ensuring safe airport operations and emergency readiness. Provides examples of activities within (a) to (d) that present operational difficulties for WIAL including the use of chemicals to finish the cleaning process for any accidental fuel spills on site, the use of chemicals to maintain the protective coating on vehicles (Fire Rescue), and the use of de-icing fluids which enable aircraft to operate safely in cold temperatures. Notes that WIAL takes steps to minimise and effectively treat discharges arising from the above sources but residual discharges from these sources will likely remain. Considers this needs to be recognised within the policy.	Provide a discrete exemption for Wellington International Airport, or delete and revert to Operative NRP.
S101.047	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges	Amend	Notes the current drafting in limb (b) appears to be more targeted at new, greenfield development. Notes that for the Airport it is not always practicable to implement water sensitive urban design or hydrological control measures and such measures can also lead to conflicts with the operational and regulatory requirements of the Airport. Notes that standing pools of water can provide a resting place or food source for birds and can pose a potential public health risk when located near a port of entry. Notes that International Civil Aviation Organisation ("ICAO") and the Civil Aviation Authority ("CAA")	Amend (b) as follows or include a similar reference that only applies to Wellington Airport or to regionally significant infrastructure. (b) using hydrological control and water sensitive urban design measures where practicable to avoid, remedy or mitigate adverse effects of stormwater quantity and maintain, to the extent practicable, natural stream flows, and Amend all limbs to use the term "where practicable". Consideration should be given to including this reference in the chapeau of the policy and removing it from the respective limbs (i.e. All stormwater discharges and associated land use activities shall be managed by, where

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				requirements require the Airport to undertake extensive wildlife management, including active management of birds and International Health Regulations 2005 require control of vector habitats around designated ports or entry, such as potential mosquito habitat.	practicable:) Or delete and revert to Operative NRP .
S101.048	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	Notes stormwater discharges emanating from the Airport are provided for by a specific policy and rule in the Proposed NRP and to ensure consistent application of the policies and methods relating to industrial and trade premises, the proposed definition of "high risk industrial or trade premise" should specifically exclude activities occurring at the Airport.	Exclude the Airport from the definition of "high risk industrial or trade premise" or from this policy. Or delete and revert to Operative NRP.
S101.049	8 Whaitua Te Whanganui-a-Tara	Policy WH.P12: Managing stormwater from a port or airport.	Not Stated	Supports the overall intent of the policy and notes it is broadly similar to the operative equivalent (Policy P89). Concerned the policy is not clear of the circumstances in which the addition of the new "avoidance" directive within the policy would be engaged and is not aware, insofar as the Airport is concerned, of any issues arising from its discharge activities that would warrant an effective cessation of its continuance. Notes WIAL actively manages its discharges and considers the addition of the avoidance clause is unnecessary and should be removed from the policy.	Amend the policy as follows: The adverse effects, including on aquatic ecosystem health and mahinga kai, contact recreation and Māori customary use, of the discharge of stormwater from a port, or airport, where the discharge will enter water, including via a local authority or state highway stormwater network, shall be avoided or managed by:.... Or delete and revert to Operative NRP.
S101.050	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new	Oppose	Refers to submission points raised with respect to Policy WH.P2: "new greenfield development", noting "existing urban areas" and "redevelopment" are not defined terms. Considers it is not clear how this policy is intended to interact and be applied in light of Policies such as	Specifically exclude application of the policy to Airports (and possibly Ports) as they are already captured by proposed Policy WH.P12 and Operative Policy 89. Amend the chapeau to read "... through implementing, as far as reasonably practicable ": to recognise that (a) and (b) do not fit well with other forms of development, such as

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and redeveloped impervious surfaces.		WH.P12 which relate to airports and the broader objectives applying to regionally significant infrastructure more broadly (such as Objective O9 and O10).	regionally significant infrastructure. Or delete and revert to Operative NRP.
S101.051	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	<p>Refers to submission on WH.P2 and Policy WH.P14 and the rationale for excluding the Airport from the definition of "new greenfield development" and related terms.</p> <p>Notes the operational and functional requirements of some regionally significant infrastructure necessitate large impermeable surfaces which stormwater management systems are designed into.</p> <p>Considers the policy will potentially result in "double dipping", with financial contributions already able to be considered by Wellington City Council via the resource consent, building consent and service connection process.</p> <p>Notes residual effects of an activity are typically considered during the resource consent process and if the effects on the environment are suitably managed, it is inappropriate to require all residual effects to be offset by financial contribution.</p> <p>Considers Schedule 30 financial contributions are payable for an effect that does not necessarily arise from the discharge consent is being sought for which is inappropriate and unlawful.</p> <p>Considers it is unduly onerous to require financial contributions for residual effects from the Airport given the significant contribution it makes towards the social and economic wellbeing of the community.</p> <p>Notes there is no definition of "new greenfield development" therefore application of this policy is unclear, uncertain and inappropriate.</p>	Expressly exclude the regionally significant infrastructure or other development of Open Space Zones that are generally consistent with the outcomes of the zone from the definition of "new greenfield development" and associated definitions. Exclude the Airport from any financial contributions set out in this policy and Schedule 30. Or delete and revert to Operative NRP.
S101.052	8 Whaitua Te	Policy WH.P16:	Oppose	Refers to submission on WH.P2 and WH.P14. Concerned that such a strong policy directive could	Amend the policy to address the issues raised. Or delete and revert to Operative NRP.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Stormwater discharges from new unplanned greenfield development.		be used as rationale by a territorial authority for declining plan changes and resource consents or for recommending that a Notice of Requirement is withdrawn, despite regionally significant infrastructure often being subject to a different consent/approval process than most activities.	
S101.053	8 Whaitua Te Whanganui-a-Tara	8.2.4 Rural land use and earthworks	Not Stated	Considers "Rural land use" and "earthworks" are distinctly different activities. Notes that if the provisions within this section are intended to only apply to earthworks associated with rural land use activities, consideration should be given to separating these provisions out into different sections of the NRP.	Not stated
S101.054	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of earthworks.	Oppose	Considers it is impractical to expect sediment discharges to be entirely retained on site given the nature and location of works on the WIAL site (ie. at the coastal interface).	Amend the policy to make it clear that it applies only to Rural land use in line with this section of the proposed RPS. Or establish a standalone policy (and rule) that provides for earthworks associated with the Airport or alternatively, regionally significant infrastructure more broadly. Or delete and revert to Operative NRP.
S101.055	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Opposes the policy as it does not provide a consenting pathway for large scale infrastructure projects that can span months to years in duration. Considers prohibiting earthworks for a four month period will add significant cost and time to infrastructure projects undertaken by WIAL and likely other infrastructure providers and fails to recognise that some earthworks activities have to avoid certain breeding, spawning or nesting periods if significant indigenous fauna are located on site. Considers that when such constraints are combined with the policy directive to avoid the period 1 June to 30 September, implementation of projects may become unworkable.	Establish a standalone policy (and rule) that provides for earthworks associated with the Airport or regionally significant infrastructure more broadly. Or delete and revert to Operative NRP.
S101.056	8 Whaitua Te	Rule WH.R1: Point	Oppose	Opposes the rule for the reasons set out in submission on Policy WH.P8. Notes WIAL has a site wide stormwater discharge permit which	Provide an exemption for activities occurring at the Airport. Or delete and revert to Operative NRP.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	source discharges of specific contaminants - prohibited activity.		requires activities on site to be managed in accordance with the site wide stormwater management plan and the effects arising as a result of such activities is therefore appropriately managed via that plan.	
S101.057	8 Whaitua Te Whanganui-a-Tara	Rule WH.R2: Stormwater to land - permitted activity.	Amend	Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.	Amend the rule as follows or similar: The discharge of stormwater onto or into land, including where contaminants may enter groundwater: (a) that is not from a high risk industrial or trade premise, or (b) that is not from a port, airport or state highway (c)Note In respect of a discharge from an existing high risk industrial or trade premise refer to Rule WH.R4, and for discharges from new or redeveloped premises refer to Rule WH.R11. For existing discharges from or into a local authority stormwater network refer to Rule WH.R9. Discharges from a port or airport refer to Rule WH.R8. Or delete and revert to Operative NRP.
S101.058	8 Whaitua Te Whanganui-a-Tara	Rule WH.R3: Stormwater from an existing individual property to surface water or coastal water - permitted activity.	Support	Notes Rule WH.R8 applies to stormwater discharges from Wellington International Airport and therefore supports the clarification provided by (b) and the related note.	Retain as notified.
S101.059	8 Whaitua Te Whanganui-a-Tara	Rule WH.R4: Stormwater from an existing high risk	Amend	Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.	Amend the rule as follows: For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		industrial or trade premise - permitted activity.			to WH.R11. Discharges from a port or airport refer to Rule WH.R8. Or delete and revert to Operative NRP.
S101.060	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Oppose	For the reasons set out in submission on Policy WH.P2 and Policy WH.P12, submitter opposes this rule. Considers that Rule WH.R8 applies to stormwater discharges from Wellington International Airport. Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.	Amend the rule to address the issues raised in the discussion regarding Policy WH.P2 and Policy WH.P12. Amend the note as set out below to address discharges from the Airport (and potentially the port): Note Where a property connects to a local authority stormwater network, additional connection requirements and authorisations may be required by the network utility operator. For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to WH.R11. Discharges from a port or airport refer to Rule WH.R8. Or delete and revert to Operative NRP.
S101.061	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Oppose	For the reasons set out in submission on Policy WH.P2 and Policy WH.P12, submitter opposes this rule. Considers that Rule WH.R8 applies to stormwater discharges from Wellington International Airport. Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.	Amend the rule to address the issues raised in the discussion regarding Policy WH.P2 and Policy WH.P12. Amend the note as set out below to address discharges from the Airport (and potentially the port): Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to WH.R11. Discharges from a port or airport refer to Rule WH.R8. Or delete and revert to Operative NRP.
S101.062	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas -	Oppose	For the reasons set out in submission on Policy WH.P2 and Policy WH.P12, submitter opposes this rule. Considers that Rule WH.R8 applies to stormwater discharges from Wellington International Airport. Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.	Amend the rule to address the issues raised in the discussion regarding Policy WH.P2 and Policy WH.P12. Amend the note as set out below to address discharges from the Airport (and potentially the port): Note For the creation of new or redevelopment of existing impervious surfaces for high risk industrial and trade premises and the associated discharge of stormwater, refer to Rule WH.R11. Discharges from a port or airport refer to Rule WH.R8. Or delete and revert to Operative NRP.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		controlled activity.			
S101.063	8 Whaitua Te Whanganui-a-Tara	Rule WH.R8: Stormwater from a port or airport - restricted discretionary activity.	Amend	<p>Considers it is appropriate for the Proposed NRP to retain a bespoke consenting pathway for the Airport as regionally significant infrastructure due to unique operational and functional requirements which mean that standard stormwater management measures are not practical in the operational context of an airport, nor given the land constraints at the Airport.</p> <p>Considers these constraints require further recognition within the matters of discretion, in particular paragraph 4 relating to hydrological controls and water sensitive design.</p>	<p>Retain the rule as notified, subject to the following amendments:</p> <p>Matters for discretion</p> <ol style="list-style-type: none"> 1. The management of the adverse effects of stormwater capture and discharge, including on aquatic ecosystem health and mahinga kai, contact recreation and Māori customary use, and as required by Policy WH.P12 2. The management of effects on sites identified in Schedule A (outstanding waterbodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (mana whenua), Schedule F (indigenous biodiversity) 3. Minimisation of the adverse effects of stormwater discharges. 4. Where practicable, the provision for hydrological control measures where discharges will enter a surface water body (including via an existing local authority stormwater network), and water sensitive urban design 5. Requirements of any relevant local authority stormwater network discharge consent 6. The operational and functional constraints of the port or airport that affect the stormwater management approach adopted on site. <p>Or delete and revert to Operative NRP.</p>
S101.064	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Oppose	<p>For the reasons set out in submission on Policy WH.P2 and Policy WH.P12, submitter opposes this rule. Considers that Rule WH.R8 applies to stormwater discharges from Wellington International Airport. Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.</p>	<p>Amend the rule to address the issues raised in the discussion regarding Policy WH.P2 and Policy WH.P12. In addition, amend the note as set out below to address discharges from the Airport (and potentially the port): Note Discharges from a port or airport refer to Rule WH.R8.</p> <p>Or delete and revert to Operative NRP.</p>
S101.065	8 Whaitua Te	Rule WH.R12: All other	Oppose	<p>For the reasons set out in submission on Policy WH.P2 and Policy WH.P12, submitter opposes this rule. Considers that Rule WH.R8 applies to</p>	<p>Amend the rule to address the issues raised in the discussion regarding Policy WH.P2 and Policy WH.P12. In addition, add a note as set out below to address</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	stormwater discharges - non-complying activity.		stormwater discharges from Wellington International Airport. Considers a clarification note should be included in this rule (as per Rule WH.R3) which clearly identifies that this rule does not apply to discharges from the Airport.	discharges from the Airport (and potentially the Port): Note Discharges from a port or airport refer to Rule WH.R8. Or delete and revert to Operative NRP.
S101.066	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	For the reasons set out in submission on Policy WH.P2, submitter opposes this rule.	Amend to address the issues raised in the discussion regarding Policy WH.P2 and Policy WH.P12. Or delete and revert to Operative NRP.
S101.067	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Oppose	Notes the rule may inadvertently be breached where an activity is not related to farming. Notes subparagraphs (d) and (e) appear to be addressing the same issue and could be combined. For the reasons set out with respect to Policy WH.P29 in the submission, submitter is concerned with the proposed drafting of subparagraph (g) and considers that it is impractical to require all discharges to be entirely retained on site.	Amend the rule as follow: Earthworks is a permitted activity, provided the following conditions are met: (a) where the earthworks are related to farming they to implement an action in the erosion risk treatment plan for the farm, or (b) where the earthworks are related to farming they to implement an action in the farm environment plan for the farm, or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					land that may enter a surface water body or the coastal marine area, including via a stormwater network, and-
S101.068	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Oppose	Considers it is not clear how (a) relates to coastal water when the visual clarity indicators only relate to freshwater bodies. For the reasons set out with respect to Policy WH.P31 in the submission, the submitter opposes subparagraph (b) and matter of discretion 8 and considers they should both be deleted in their entirety. Considers separate restricted discretionary earthworks rule should apply to large scale earthworks that provide for regionally significant infrastructure.	Include a new rule that specifically provides for earthworks associated with the establishment, operation or maintenance of regionally significant infrastructure. Or delete and revert to Operative NRP..
S101.069	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Notes most of submitters earthwork activities will be captured by this rule. For the reasons set out in submission on Policy WH.P31, the submitter opposes the rule and considers it should be deleted in its entirety. As an alternative, considers that a separate restricted discretionary earthworks rule should apply to large scale earthworks that provide for regionally significant infrastructure.	Develop a new restricted discretionary earthworks rule should apply to large scale earthworks that provide for the establishment, operation or maintenance of regionally significant infrastructure that does not include a close down period. Or delete and revert to Operative NRP.
S101.070	12 Schedules	Schedule F2c: Significant habitats for indigenous birds in the coastal marine area.	Oppose	Notes the "Habitat Extent" as described in the Schedule only excludes the Southern Seawall but the description should be updated to also exclude the Western Seawall. Notes the section 32 evaluation cites that the schedules relate to objectives that give effect to the NPS-FM but the NPS-FM does not apply to coastal waters. Submitter questions the rationale for the change to Schedule F2c, particularly with respect to Wellington Harbour - (Port Nicholson) foreshore; Palmer Head to Lyall Bay excluding the seawall at the southern end of the Wellington International Airport as shown on the NRP GIS maps and Wellington Harbour (Port Nicholson) - inland waters.	Amend Schedule F2(c) as follow: Wellington Harbour (Port Nicholson) foreshore; Palmer Head to Lyall Bay excluding the seawall at the southern and western end of the Wellington International Airport as shown on the NRP GIS maps. Delete proposed changes to the identifies species list within Schedule F2(c) and renotify with an accompanying evaluation that meets the requirements of section 32 of the RMA. Evidence should also be provided that the mapped areas are sufficiently accurate for inclusion the Proposed NRP. References to "the site" should be replaced with "Overall the Harbour provides" or "Part of the Harbour provides" to reflect the size of the area. Or delete the changes to Schedule F2(c) that relate to the CMA.
S101.071	12 Schedules	Schedule F4: Sites with	Amend	Acknowledges the presence of these indigenous species within Evans Bay and notes Policies 38, 39 and P41 of the Operative NRP provides a pathway	Amend the Schedule and associated planning map to accurately map the extent of the mussel beds. Reconsider

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		significant indigenous biodiversity values in the coastal marine area.		for regionally significant infrastructure to undertake works within these areas. Provided these operative provisions are not amended in any way as part of the Proposed NRP, submitter does not have any particular issue with the Horse mussel beds and Adamisella beds being identified in Schedule F4, subject to the mapping being sufficiently accurate.	the use of the NZCPS icon given the "regionally rare" status.
S101.072	12 Schedule s	Schedule F5: Habitats with significant indigenous biodiversity values in the coastal marine area.	Amend	Acknowledges the presence of these indigenous species within Evans Bay and notes Policies 38, 39 and P41 of the Operative NRP provides a pathway for regionally significant infrastructure to undertake works within these areas. Provided these operative provisions are not amended in any way as part of the Proposed NRP, submitter does not have any particular issue with the Horse mussel beds and Adamisella beds being identified in Schedule F4, subject to the mapping being sufficiently accurate.	Amend the Schedule and associated planning map to accurately map the extent of the habitats. Reconsider the use of the NZCPS icon given the "regionally rare" status.
S101.073	12 Schedule s	Schedule 29: Stormwater Impact Assessments.	Not Stated	Opposes this schedule to the extent that submitters relief sought for WH.R6 and WH.R7 are not granted.	Delete the schedule to the extent that it should not apply to the Airport. Amend the schedule to recognise that the measures identified will not always be practicable. For example A stormwater impact assessment shall include the following analysis where relevant: Implementation of Water Sensitive Urban Design principles to the extent reasonably practicable: Or delete and revert to Operative NRP.
S101.074	12 Schedule s	Schedule 30: Financial Contributions.	Oppose	For the reasons set out in submission on WH.P15, submitter opposes this schedule in its entirety.	Delete Schedule 30.

S151 Wellington Water Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.001	General comments	General comments - stormwater management	Amend	Concerned the PC1 policies and rules are not sufficiently enabling, and in some instances are not feasible to implement.	<p>Amend policies and rules to: Clearly provide for stormwater and wastewater discharges from local authority networks as a restricted discretionary activity, without this status being jeopardised by subjective assessments of the merits of the SMS or WNCIS, or non-complying activity rules in other parts of the NRP.</p> <p>Provide guidance on the matters to be considered in prioritising sub-catchments for improvement works, while also ensuring sufficient flexibility to take account of practical matters such as investment availability and efficiencies and alignment with other workstreams (including wastewater improvement works).</p> <p>Allow matters of detail to be specified in sub-catchment SMPs and SIPs, rather than in the initial SMS and WNCIS.</p> <p>Provide flexibility for determining the load reductions required in order to appropriately contribute to meeting the TAS (in light of our present concerns with the TAS, lack of information as to baseline states in many cases, and the uncertainty around the 'commensurate reduction' wording and whether this is realistic (i.e. properly within Wellington Water's control) for all attributes).</p> <p>Provide for dry weather discharges (such as dry weather overflows and exfiltration) to be managed via a 'responsive management approach' rather than with reference to the TAS (due to the current inability to forecast dry weather overflows or assess the correlation between dry weather discharges within the control of Wellington Water and TAS being achieved).</p> <p>Other relief as may be required to address the issues</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					identified, including relief that is alternative, additional or consequential.
S151.002	General comments	General comments - stormwater management	Amend	<p>Supports a restricted discretionary activity status and the preclusion of public notification for stormwater and wastewater discharges from the local authority networks. However, concerned with the current drafting of the rules which may undermine the Restricted Discretionary status and create uncertainty due to a pre-requisite or 'condition' requiring the activity be accompanied by a strategy prepared 'in accordance with' (as relevant) Schedules 31 or 32. Considers this framing and the subjective wording could invite debate as to whether the relevant strategy is 'in accordance' with them and whether Restricted Discretionary status applies. Also considers this approach is too uncertain for the activity status, and duplicates the substantive assessment of the applications</p> <p>Notes there are further rules in the NRP that should not apply to discharges (e.g. R93 and R120) from the local authority networks and that operative rules such as those relating to sites of significance and wetlands, and the National Environmental Standard for Freshwater, would continue to apply to any stormwater or wastewater discharge from the network.</p> <p>Considers these other less specific rules would undermine the restricted discretionary activity status proposed in PC1 for network discharges.</p> <p>Considers this cannot have been intended, noting the effects on sites of significance being included within the matters of discretion under the new restricted discretionary rules suggests this.</p>	<p>Amend rules for stormwater and wastewater discharges from the local authority networks (and/or the associated Schedules) so that they refer to objective information requirements rather than inviting a detailed assessment against the schedules to determine activity status; and All amendments necessary (including disapplying rules in other parts of the NRP) to ensure that the wastewater and stormwater from local authority networks remain a restricted discretionary activity, and the associated rules in PC1 function as a 'one stop shop' in the relevant whaitua. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.003	General comments	General comments - target attribute states	Oppose	<p>Opposes the provisions relating to TAS and Coastal Water Objectives (CWO) in full. Considers there is a general lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the TAS parameters and requirements are reasonable, appropriate and achievable.</p> <p>Considers the CWO in Table 8.1 are generally appropriate parameters for coastal environmental health, but concerned the lack of information relating to baseline states and timeframes to meet requirements makes it difficult to determine whether improvement is measurable. Considers it is unclear how the TAS and CWO provisions will be assessed and measured.</p> <p>Considers the provisions do not currently recognise the complexities and contributing factors for achieving TAS and that meeting TAS for network discharges cannot wholly sit with Wellington Water as there are many factors within catchments that contribute to water quality, and the provisions do not reflect the magnitude of work involved in delivering water quality improvement.</p> <p>Considers the uncertainty and lack of information in the provisions regarding the baseline state means that Wellington Water cannot undertake a full assessment of the potential impact that the TAS/CWO provisions will have on their discharge consent applications and the prioritisation and implementation of sub-catchment improvements.</p> <p>Considers it is likely that the TAS 2040 timeframe (particularly as it relates to E. coli), will result in the requirement for a large proportion of sub-catchments (or possibly all of them) to be upgraded in the short term. As such, undertaking a prioritisation exercise and implementing the sub-catchment management plans for stormwater and wastewater could be rendered meaningless. This is unlikely to allow for progressive improvement, or for</p>	<p>The plan change include guidance or provisions that outline how proportional contribution to meeting the TAS can be demonstrated, and more realistic timeframes in the relevant TAS tables.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>practicable implementation.</p> <p>Seeks further discussions with Greater Wellington on this matter, particularly around a more detailed assessment of the implications of the TAS and CWO provisions on a sub-catchment basis and a clear understanding of how these would be addressed in a resource consent application.</p>	
S151.004	General comments	General comments - target attribute states	Oppose	<p>Considers the scale and volume of work necessary between now and 2040 to achieve the necessary reduction in wet weather wastewater overflows, dry weather wastewater discharges and stormwater contamination is significant. Retrofitting the urban areas of four cities to also address environmental outcomes will take decades of planning, designing and construction. Acknowledges this work needs to be done but 17 years (between now and 2040) is insufficient to achieve this.</p> <p>Considers that delivery of the network discharges programme at such a fast pace will impact on delivery of other important work programmes for Te Mana o te Wai such as storage lakes for drinking water supply to support increased minimum flows, wastewater treatment plant upgrades and the renewals programmes for both wastewater and water supply.</p>	<p>Amend all timeframes associated with TAS from 2040 to 2060.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.005	General comments	General comments - earthworks	Oppose	<p>Considers the winter shutdown for earthworks will make delivery of any large-scale programme of work impracticable.</p>	<p>Seeks an exemption for regionally significant infrastructure from the winter shutdown for earthworks</p>
S151.006	General comments	General comments - water bodies	Support	<p>Generally supportive of the requirement to provide methodologies to prioritise sub-catchment upgrades or improvements as part of consent applications for stormwater network discharges and wastewater network discharges. Considers it appropriate that prioritisation methodologies, rather than the actual order of sub-catchments, are provided as part of the Wastewater Network Catchment Improvement</p>	<p>Matters to be considered when setting the prioritisation, or sequence, of sub-catchments should be listed (or cross-referred to) within:</p> <ul style="list-style-type: none"> -Policy WH.P13 (stormwater) -Policy WH.P19 (wastewater) -Policy P.P12 (stormwater) -Policy P.P18 (wastewater)

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Strategy (WNCIS) and Stormwater Management Strategy (SMS).</p> <p>Considers that the prioritisation should be done in an integrated manner considering both stormwater and wastewater discharges concurrently and would be done with investors and mana whenua in a collaborative manner. Considers the range of factors that should influence prioritisation is greater than currently indicated within the plan change provisions.</p> <p>Refers to figures that illustrate some of the matters identified within the plan change provisions that require prioritisation in respect of wastewater and stormwater network discharges on a sub-catchment basis, and the impact that the provisions as currently drafted may have in terms of requiring prioritisation. Notes this does not take into account broader matters that Wellington Water considers are necessary to ensure deliverability and implementation of sub-catchment upgrades and improvements.</p> <p>Considers prioritisation should be undertaken in a more integrated manner so wastewater and stormwater discharges are upgraded at the same time for each sub-catchment. Concerned the number of provisions that could influence the prioritisation of sub-catchments for improvements is overly complicated and lacks clear direction. Considers prioritisation requirements should be made clearer in the plan change.</p> <p>Considers matters such as efficiency of delivery, investment availability and allocation are considered during the process of prioritisation, to allow alignment with other work programmes and to ensure an integrated approach.</p>	<p>Provisions within the plan change that specifically use the terminology 'prioritise' or 'prioritisation', or otherwise speak to the relative urgency of improving or enhancing certain values (other than those mentioned above), are redrafted to make it clear that they do not apply to applications for stormwater and wastewater network discharges</p> <p>Consider the wording of provisions as they relate to varying levels of requirements such as 'avoid' or 'protect' in terms of the level of importance represented by the provisions, and how this could be considered to influence decision making on a prioritisation methodology. Ideally, these provisions would not apply to stormwater and wastewater network discharges either.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>Considers the TAS requirements in PC1 would render the process of prioritising sub-catchments for improvement or upgrade meaningless due to the requirements to meet 2040 targets, and the use of terminology such as 'reasonable timeframes' within other provisions of PC1 creates additional uncertainty in relation to the prioritisation exercise.</p> <p>Refers to Schedule C of submission where examples of provisions that may influence prioritisation methodologies have been identified.</p>	
S151.007	General comments	General comments - target attribute states	Oppose	<p>Acknowledges the need for improvements or reductions that are commensurate with or proportionate to the effects of the relevant discharge on the attribute state of the receiving environment.</p> <p>Concerned that as worded these requirements are ambiguous, because it is not clear whether they mean a reduction in contaminant load that reflects the effect of the discharge on the receiving environment (which would require modelling/technical assessment), or a percentage reduction in all cases that reflects the percentage difference between the TAS and the baseline state of the receiving environment. Notes the second interpretation may be unduly onerous where it does not reflect the actual contribution of the relevant discharge, while the first interpretation would require Wellington Water to acquire information or assessment tools that are not currently available.</p> <p>Notes that Wellington Water does not currently have access to the data or analytical tools required to assess the correlation between contaminant load out of a pipe and contaminant concentrations in the receiving environment, but is able to model the contaminant load (e.g. total kilograms of copper and</p>	<p>Seeks that:</p> <ul style="list-style-type: none"> -All requirements to determine 'commensurate' reductions at the application stage are removed, and that different wording is used to acknowledge that in some cases 'at source' reductions are not within the applicant's control (for example, the reduction of copper in stormwater, as acknowledged in the section 32 report) -The requirements to make reductions in order to contribute to meeting the TAS in relation to wastewater are confined to wet weather overflows (and then only the 95th percentile), with dry weather overflows and exfiltration subject to a separate responsive management regime; Amend PC1 is amended to either include load reduction targets for Te Whanganui-a-Tara and for other parameters, or to provide clear directions as to how Wellington Water (and other applicants) can demonstrate their contribution to achieving TAS; Amend the methods and/or Schedule 27 (Freshwater Action Plan requirements) are amended to confirm that the modelling and monitoring to facilitate the identification of load reduction targets in SMPs and SIPs will be undertaken by Greater Wellington; and/or -In the alternative, should the "commensurate" wording be retained in PC1, that this term is defined and/or guidance provided in the policies to ensure it reflects reductions that are both proportionate to the effects of the discharges on the TAS in question, as well as the extent to which reductions

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>zinc from the stormwater network). Notes concentrations in the receiving environment is dependent on factors such as stream flows and ocean currents (which affect dilution and therefore concentration).</p> <p>Subject to the targets being realistic, supports PC1 including clear targets for load reductions in the discharge, rather than unclear formulas such as "commensurate".</p> <p>Considers what is realistically achievable through stormwater network discharge mitigations is not reflected by the proposed references (in other parts of PC1) to reductions "commensurate to achieving" the TAS, which would suggest that Wellington Water needs to reduce copper by much more than 15%, for the TAS to be achieved.</p> <p>Seeks to understand what actions were considered to be realistically achievable through stormwater network discharge mitigations, which is not clear from Greer 2023, but is obviously a critical determinant for setting of the TAS. States that determining targets for load reductions both the extent to which the discharge load contributes to achieving (or not achieving) the TAS the extent to which this is realistically within Wellington Water's control need to be considered. Notes the analysis has not yet been undertaken for stormwater catchments beyond Porirua, or for E. coli or enterococci in relation to wastewater. Unless or until that work has been carried out and Wellington Water considers the outcomes reasonable, submitter does not support the "commensurate reductions" wording in PC1.</p> <p>Considers it is not realistic to require confirmation of load reduction targets as part of the application</p>	<p>are reasonably within the control of the applicant. A definition is proposed in Section B of this submission.</p> <p>A new method needs to be included in PC1 for Greater Wellington to provide the necessary analytical tools to determine the correlation between contaminant load out of a pipe and contaminant concentrations in the receiving environment if PC1 is reliant on this assessment.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>documentation. At most, this could be determined at the sub-catchment planning stage, with the high level strategies required under Schedules 31 and 32 instead specifying the intended methodology or approach for determining this.</p> <p>Considers these assessments will require state of the environment information and/or modelling that is not available to Wellington Water. Expectation is that Greater Wellington will be producing the modelling necessary for Wellington Water to determine the appropriate (or 'commensurate') load reduction targets.</p> <p>Considers it is not realistic to require confirmation of load reduction targets as part of the application documentation. At most, this could be determined at the sub-catchment planning stage, with the high level strategies required under Schedules 31 and 32 instead specifying the intended methodology or approach for determining this.</p> <p>Considers these assessments will require state of the environment information and/or modelling that is not available to Wellington Water and expects Greater Wellington will be producing the modelling necessary for Wellington Water to determine the appropriate (or 'commensurate') load reduction targets.</p> <p>Considers there are additional complexities in ascertaining the contribution of dry weather overflows and exfiltration to achieving the TAS as discharges can be from a private cross connection that are not a matter within Wellington Water's control and Wellington Water does not model cross connections because they are an aberration. Seeks that rather than a requirement to reduce dry weather overflows and exfiltration to contribute to</p>	

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				meeting the TAS they be subject to a separate 'responsive management' programme.	
S151.008	General comments	General comments - stormwater management	Amend	<p>Supports the recognition of the role of modelling in PC1 as an analytical tool, including to assess the performance of the wastewater and stormwater networks and compliance with associated consent requirements.</p> <p>Considers PC1 will require Wellington Water to undertake significantly more modelling than it already does which in some cases will be onerous with no additional benefit in predicting load reductions or E. coli reductions. Notes Schedule 32 appears to require the full wastewater network to be modelled as part of preparing the WNCIS but considers this will not improve the understanding of overflows beyond that provided by the current 'Strategic Model'.</p> <p>Concerned requiring SMS be guided by modelling and monitoring will place an unreasonably high burden on consent holders. Considers that any receiving environment modelling should be undertaken by Greater Wellington, including state of the environment modelling which is required to ascertain the baseline state for identified attributes.</p> <p>Notes PC1 repeatedly refers to modelling of load as well as concentration of contaminants (WH.P19 and P.P18)but concentration cannot be easily or accurately modelled, and would not provide valuable insight.</p> <p>Considers the focus should be on modelling and managing contaminant load, not concentrations. Notes Wellington Water can undertake modelling for contaminant loads and is looking into models such as the 'Contaminant Load Model' (CLM) and 'Medusa' for that purpose, but ascertaining the load</p>	<p>PC1 be amended to remove unnecessary modelling requirements which are currently to be undertaken by the consent holder;</p> <p>Greater Wellington be responsible for all state of the environment modelling; and</p> <p>Reference to modelling 'concentrations' are removed.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>reductions necessary to achieve (or contribute to achieving) the TAS will also require the use of receiving environment models such as the 'Fresh Water Management Tool' (FWMT), which is a project that should be undertaken by Greater Wellington.</p> <p>Notes Wellington Water is also not able to model E. coli or enterococci concentrations or load, and instead must use the wet weather discharge frequency as a proxy for this.</p>	
S151.009	General comments	General comments - stormwater management	Amend	<p>Supports a partnership between Greater Wellington and consent holders for monitoring stormwater and wastewater discharge effects but considers more definition is required about what each party is responsible for.</p> <p>Submitter is implementing a monitoring plan under their Stage 1 Global Stormwater consent to develop a baseline of information on effects of discharges from the network on receiving environments. The monitoring plan will then be revised to provide an integrated receiving environment approach for the network discharges. It is expected that any broader state of the environment monitoring will be undertaken by GWRC and this is the most appropriate approach to monitoring which should be reflected in PC1.</p> <p>Concerned that the PC1 provisions may envisage or require more monitoring to inform the wastewater and stormwater modelling than is actually necessary (or may be necessary in future).</p>	<p>Amend PC1 to:</p> <ul style="list-style-type: none"> -Clearly indicate what monitoring consent holders are responsible for; and -Clarify that Greater Wellington is responsible for all state of the environment monitoring. <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.010	General comments	General comments - fresh water	Amend	<p>Unclear on how the FAPs are intended to operate alongside other provisions within PC1, Wellington Water stormwater and wastewater network discharge consents, and in general Wellington Water's network operations.</p>	<p>Requests clarification on how the FAP provisions will work alongside existing TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Request clarification about what is intended in terms of the level of consideration or influence that any FAP could have</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers the current provisions for FAPs (cites Method 35 and Schedule 27 as examples), although a non-regulatory 'other method', could be read to have some level of influence in relation to wastewater and stormwater network discharge consents and prioritisation of sub-catchments.	on wastewater and stormwater network discharge consents. There should be no relationship between the contents of a FAP and the scheduled requirements for network discharge consents. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.011	General comments - stormwater management	General comments - stormwater management	Amend	<p>Supports the requirement for hydrological controls for land uses that create new, or redevelop existing, impervious surfaces.</p> <p>Supports a consistent definition for hydrological controls between the NRP and the Regional Policy Statement (RPS).</p> <p>Promotes a cascading approach to addressing hydrological control in the RPS and NPS; with the RPS setting a regional requirement for hydrological controls and the detail of hydrological control standards being set by the NRP.</p> <p>Considers the NRP provisions merely re-state the requirement for hydrological controls and are considerably less specific than corresponding provisions proposed for inclusion in the RPS PC1. Would support standards based on a specified depth of rainfall retention (e.g. retention of the first 5mm of rainfall depth).</p>	Amend relevant provisions in the NRP to contain clear, detailed and specific direction regarding the hydrological control standards to be met. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.012	General comments	General comments - definitions	Amend	<p>Generally supports the new definitions in PC1, and refinements have been sought for specific definitions. Specifically notes support for the intent of the following definitions:</p> <p>'Existing wastewater discharge' - it is important that this definition facilitates integrated management of the wastewater network (and discharges from it), but avoids a fragmented approach where additional consents need to be sought. The definition needs to remain broad enough to include new discharge locations created as part of improvement works or instances where an uncontrolled overflow point is</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>replaced with a new constructed overflow point. 'Containment standard' - the definition is consistent with the approach adopted in the submitter's wet weather overflow applications. Achievement of containment standards should be assessed by reference to average annual weather conditions (as simulated by a computer model) rather than by reference to the actual number of wet weather overflow events in a given year.</p>	
S151.013	General comments	General comments - stormwater management	Amend	<p>Considers provisions in PC1 to manage contaminants discharged to groundwater are inconsistent and unclear and place too much focus on stormwater. For example:</p> <ul style="list-style-type: none"> -Policy WH.P7 discharges to groundwater is a holistic policy, however it is not carried through to all relevant activities. -Rule R48 Stormwater from individual property - does not mention any effects on groundwater. -Rule WH.R3 Stormwater from individual property - does not mention any effects on groundwater. -Rule WH.R4 Stormwater from existing high risk premise - limits the effects on groundwater to potable water or stock water. -Rule R51 Stormwater to land permitted - limits the effects on groundwater to potable water or stock water. -Rule WH.R2 Stormwater to land - limits the effects on groundwater to potable water or stock water. -s5.1.13 general conditions - there is no mention of discharge to groundwater. -Policy P73 Farm plans - no mention of minimising contamination of groundwater even though farming is a known major contributor in many areas of Aotearoa New Zealand. -Rule R54 Stormwater from ports - does not include discharge to groundwater. -Schedule 31 - Local authorities need to address effects on groundwater as part of the SMS. Policy 	<p>Seeks greater clarity of the approach to managing groundwater, including increased focus on recognised and accepted effects from activities, rather than just activities. Alternatively, discharges of contaminants from the stormwater and wastewater network (other than from a Wastewater Treatment Plant (WWTP)) should be managed by capping, minimising and reducing loads so they do not increase over time and where TAS are exceeded, the reduction is to the extent reasonably practicable. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				WH.P21 and P22 refer to "capping, minimising and reducing", not increasing over time and where TAS are exceeded reductions are "to the extent reasonably practicable". This is very different to the expectations for stormwater and wastewater from local authority networks	
S151.014	General comments	General comments - overall	Amend	Where a position has not been expressed, and no alternative, additional or consequential changes have been sought to address an issue, the stormwater and wastewater provisions are supported as notified	Not stated
S151.015	General comments	General comments - current legislation	Not Stated	Notes the new coalition government has signalled a number of changes to national policy direction on freshwater including the replacement of the current National Policy Statement for Freshwater Management 2020 (NPS-FM).	Seeks all changes to PC1 that are necessary to give effect to changes to the NPS-FM or its application, should such changes be progressed while PC1 is being considered.
S151.016	2 Interpretation	Containment standard	Support	Supports the definition as it is consistent with the approach taken in Wellington Water's applications to date	Retain as drafted, or ensure that any changes preserve the approach of: 1) referring to each discharge location, rather than the whole network, and 2) assessing compliance by reference to average annual weather conditions (as simulated by a computer model) rather than by reference to the actual number of wet weather overflow events in a given year. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.017	2 Interpretation	Dry weather discharges	Amend	Broadly supports definition, but suggests minor changes to clarify that dry weather discharges and wet weather overflows are to be distinguished by their cause rather than whether it is raining. Considers it is technically possible to have a 'dry weather' overflow. Recommends that the cross connections aspect of this definition should be limited to those in public ownership.	Amend definition as follows: Constructed or uncontrolled discharges of wastewater from a wastewater network or stormwater network that are not attributable to wet occur during dry weather, often generally as a result of pipe blockage, pipe breakage, cross-connections in the publicly-owned network or mechanical or power failure, in a network during periods of dry weather. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.018	2 Interpretation	Earthworks	Oppose	<p>Supports the earthworks definition regarding the areas that fall outside Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.</p> <p>Considers the removal of exclusions for earthworks in Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua will result in a large number of consents for minor earthworks activities in these areas, including in relation to three waters infrastructure.</p> <p>Considers this is likely to have a significant and prohibitive impact on Wellington Water's ability to repair and maintain its network in a timely and cost effective manner.</p>	<p>Retain the proposed earthworks definition (outside Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua) across the full region and delete the earthworks definition which relates to Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua.</p> <p>Proposed definition revisions as follows:</p> <p>Earthworks For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only: The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of land for the installation of fence posts. Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017. For all other whaitua: The disturbance of a land surface from the time soil is first disturbed on a site until the time the site is stabilised. Earthworks includes blading, contouring, ripping, moving, removing, placing or replacing soil or earth, by excavation, or by cutting or filling operations, or by root raking. Earthworks do not include: (a) cultivation of the soil for the establishment of crops or pasture, and (b) the harvesting of crops, and (c) thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and (d) the construction, repair, upgrade or maintenance of: (i) pipelines, and (ii) electricity lines and their support structures, including the National Grid, and (iii) telecommunication structures or lines, and (iv) radio communication structures, and (v) firebreaks or fence lines, and (vi) a bore or geotechnical investigation bore, and (e) repair or maintenance of existing roads and tracks, and airfield runways, taxiways, and parking aprons for aircraft, and (f) maintenance of orchards and shelterbelts, and (g) domestic gardening, and (h) repair, sealing or</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>resealing of a road, footpath, driveway, and (i) discharge of cleanfill material to a cleanfill area"</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.019	2 Interpretation	Existing wastewater discharge	Support	Supports the approach in clause (b) of the new text.	<p>Retain as drafted, or ensure any changes to this definition keep it broad enough to include new (or newly identified) dry weather discharges from the existing wastewater network catchments, as well as wet weather discharge locations created as part of improvement works (e.g. new discharge points from attenuation tanks), or instances where an uncontrolled overflow point is replaced with a new constructed overflow point.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.020	2 Interpretation	High risk industrial or trade premise	Amend	Notes discharges from these premises are excluded from the local authority stormwater network rules (WH.R9 and P.R8) and seeks changed to better align with Wellington Water's areas of control.	<p>Amend this definition or add a note to ensure it includes: 1) sites in relation to which the relevant stormwater discharge consents have not been granted and/or applied for, and 2) sites that have been used for the listed purposes in the past, and still generate contaminants in stormwater, but which are not currently used for any of those purposes</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.021	2 Interpretation	Hydrological control	Oppose	Opposes this definition and notes it will need to reflect the outcomes of the RPS process. Refers to comments made in Section A of submission..	<p>Amend definition to ensure it is consistent with (or at least not inconsistent with) the RPS definition, and preserves flexibility for managing flows from small to large. Supports standards based on a specified depth of rainfall retention (e.g. retention of the first 5mm of rainfall depth).</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.022	2 Interpretation	Impervious surfaces	Amend	Broadly supports the definition, but reserves position as to the detail as some technical changes required. For example, the use of "stormwater" here is not consistent with how that term is defined in the NRP and some other terms are used inconsistently. Concerned about how the exemptions for tanks and rainwater collection will impact the applicability of the stormwater rules.	Replace the reference to "stormwater" with 'rainfall', 'water', 'precipitation', or similar. Review and refine the list of exclusions in light of their implications for the rules. Refer to aggregate rather than metal. Remove duplicate references to 'porous or permeable paving'. Reconsider the reference to "reuse" which should be for 'non-potable purposes' to align with RPS language rather than 'grey water'. The final two bullet points have different approaches to permanent plumbing and use different terms for the same outcome (non-potable water use); this needs to be reconsidered also. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.023	2 Interpretation	Primary contact sites	Amend	Suggests that these would be better managed as part of Schedule H as it is disjointed to separate these from the coastal recreation sites.	Consider combining the primary contact sites with the Schedule H recreation sites.
S151.024	2 Interpretation	Redevelopment	Amend	Questions the way the examples are provided, particularly the use of 'etc', and requests that the re-roofing of existing buildings exception does not apply to zinc or copper. Considers breaking the chapeau into two sentences would make it easier to read.	Exclude zinc or copper roofs from the final exception clause Insert a full stop following the closing bracket, so that the new sentence starts: In relation to stormwater... Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.025	2 Interpretation	Stormwater catchment or sub-catchment	Amend	Considers the definition is confusing as it is not clear whether the definition includes (or should expressly include) areas where stormwater is discharged to land or groundwater or what 'in the same vicinity' means. Questions whether reference to maps would be more effective.	Revise the definition for clarity. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.026	2 Interpretation	Stormwater management	Support	Broadly supports the definition, but suggests the new text specific to the two whitua could be reframed as a note or explanation as it is not worded as part of the definition.	Retain as notified but consider adding new definitions for "Water quality and quantity outcomes". Other relief as may be required to address the issues

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ent strategy		Considers it would be useful to define the phrase "water quality and quantity outcomes" to provide clarity	identified, including relief that is alternative, additional or consequential.
S151.027	2 Interpretation	Stormwater network	Support	Supports definition.	Retain as notified Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.028	2 Interpretation	Stormwater treatment system	Amend	Delete green infrastructure for clarity and refer to 'contamination in stormwater' rather than stormwater contaminants.	Delete reference to 'green infrastructure'. Refer to 'contamination in stormwater', rather than 'stormwater contaminants.' Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.029	2 Interpretation	Wastewater network catchment or sub-catchment	Support	Supports definition.	Retain as notified Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.030	2 Interpretation	Wet weather overflows	Amend	Generally supports definition, but considers the definition or the associated rules should distinguish between private and public networks.	Amend definition or associated rules to distinguish between private and public networks. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.031	3 Objectives	Objective O2	Oppose	Considers the benefits should be recognised regardless of the location	Retain the application of O2 in all locations. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.032	3 Objectives	Objective O5	Oppose	Considers this is important for source protection of drinking water.	Retain the application of O5 in all locations. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.033	3 Objectives	Objective O6	Oppose	Considers it is important that the social, economic, cultural and environmental benefits of taking and using water are recognised when managing water, and this position is not contrary to Te Mana o te Wai. Refers to comments in Section A of submission.	Retain the application of O6 in all locations and amend as follows: The social, economic, cultural and environmental benefits of: <ul style="list-style-type: none"> taking and using water are recognized managing stormwater for the safety of people

**Proposed Change 1 to the Natural Resources Plan –

		habitats with significant indigenous biodiversity values are protected from the adverse effects of use and development, and where appropriate restored to a healthy functioning state including as defined by Tables 3.4, 3.5, 3.6, 3.7 and 3.8.			
S151.046	5.1 Air quality rules	Rule R35: Water and wastewater processes - permitted activity.	Amend	Question whether the reference to water processes should be more specific, such as 'drinking water processes'	Consider referring to 'drinking water processes'. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.047	5.4 Beds of lakes and rivers	Beds of lakes and rivers	Amend	Supports the protection of native bird species habitat and the outcome general condition 5.4.4(n) seeks to achieve but is concerned the proposed amendment would require an ecologist to determine	Provide more certainty to plan users in general condition (n) so that a third party is not required to assess when named birds are identified as nesting, roosting and foraging, at the work site.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		general conditions.		when the named birds are roosting, nesting, or foraging and this work would take significant time which has the potential for adverse effects on the environment while this work is underway. Considers there needs to be more certainty to plan users as to when works can occur, and when they cannot, and less reliance on a third party to confirm if a condition can be met.	Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.048	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Amend	Notes the inclusion of 'pipeline' removes 'pipes' from this Rule, as they have different dictionary definitions. Considers pipes have lesser effects than pipelines and should be specifically mentioned.	Amend to refer to both pipes and pipelines Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.049	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river - permitted activity.	Support	Supports the rule, specifically the approach that the ongoing diversion can only be considered permitted if all of the conditions of the resource consent to lawfully establish the diversion have been complied with.	Retain as notified. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.050	6 Other methods	Method M36: Freshwater Action Plan programme.	Amend	Refers to Section A of submission	Provide clarification about interaction between local authority networks and the SMS and the matters raised in Section A of the submission. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.051	6 Other methods	Method M38: Freshwater Action Plan for the Rangituhi catchment.	Amend	Refers to Section A of submission	Provide clarification about interaction between local authority networks and the SMS and the matters raised in Section A of the submission. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.052	6 Other methods	Method 39: Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Refers to Section A of submission	Provide clarification about interaction between local authority networks and the SMS and the matters raised in Section A of the submission. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.053	6 Other methods	Method M43: Supporting the health of urban waterbodies.	Amend	Refers to Section A of submission. Supports the provision with amendments Notes the reference to Wellington Water Limited may not be appropriate in the future (or in all locations) and should be updated to ensure it remains relevant. Considers it inappropriate for the plan to include a method that commits other parties to 'incentivising' or 'research and development'. Considers a range of options should be provided for hydrological controls, not just tanks, and it would be helpful to confirm here the state of the environment monitoring and modelling that Greater Wellington will be undertaking.	Amend method as follows: Remove reference to Wellington Water Limited and replace with 'relevant water utility operator' or 'territorial authorities' or similar. Remove reference to incentivising and research and development by other parties. Provide further options than tanks for hydrological controls. Add confirmation that Greater Wellington will be undertaking all state of the environment monitoring and modelling. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.054	8 Whaitua Te Whanganu i-a-Tara	Objective WH.O1: The health of all freshwater	Amend	Considers achieving wai ora by 2100 is a significant task. Considers It unclear what the status of the note is and as currently drafted it creates duplication, noting the third bullet point is replicated in WH.O4.	Alter timeframe to 2123. Clarify the status of the note. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		bodies and the coastal marine area within Whaitua Te Whanganu i-a-Tara is progressively improved and is wai ora by 2100.			
S151.055	8 Whaitua Te Whanganu i-a-Tara	Objective WH.O2: The health and wellbeing of Te Whanganu i-a-Tara's groundwater, rivers and natural wetlands and their margins are on a trajectory of measurable improvement	Amend	Seeks the timeframe be altered to 2060 as the 2040 timeframe will render prioritisation of sub-catchments for improvement or upgrade meaningless and 17 years is considered insufficient to achieve required outcomes. Supports the intent of measurable progress in clause (a). Considers clause (b) should have a maintenance component, rather than just improvement and there should be a comma after 'stability'. Considers clauses (f) and (g) need to be combined or better distinguished.	Alter timeframe to 2060. Retain clause (a) Amend clause (b): the hydrology of rivers and erosion processes, including bank stability, are maintained and improved where degraded and sources of sediment are reduced to a more natural level, and Combine or better distinguish clauses (f) and (g). Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		towards wai ora.			
S151.056	8 Whaitua Te Whanganui-a-Tara	Objective WH.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained or improved to achieve the coastal water objectives set out in Table 8.1.	Oppose	Seeks the timeframe be altered to 2060 as the 2040 timeframe will render prioritisation of sub-catchments for improvement or upgrade meaningless and 17 years is considered insufficient to achieve required outcomes. Considers the CWO contained in Table 8.1 are generally appropriate parameters for coastal environmental health, but notes the lack of information relating to baseline states for Coastal Water Management Units and timeframes to meet the requirements makes it difficult to determine whether improvement can be measured (refer also Section A of submission). In clause (b) 'high contaminant concentrations' should be better defined to clarify the work involved and when this clause is relevant. Considers where improvement is required for the Coastal Water Objectives, the requirement should be that the Objective has been achieved or meaningful progress has been made - similar to clause WH.O2(a). Considers clauses (g) and (h) need to be combined or better distinguished.	Provide further detail in relation to the baseline states and required timeframes in both this objective and Table 8.1. Provide maps showing locations of high contaminant concentrations. Amend objective to provide this further detail. In addition to the above, amend as follows: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained, or improved or meaningful progress has been made towards improvement to achieve the coastal water objectives set out in Table 8.1, and by 2040 2060 . Define 'high contaminant concentrations' in clause (b) Combine or better distinguish clauses (g) and (h) Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.057	8 Whaitua Te Whanganui-a-Tara	Table 8.1 Coastal water objectives.	Oppose	Considers Table 8.1 lacks the required information to set baseline states for the Coastal Water Management Units to assess whether the state is being maintained or improved, and lacks timeframes for when the baseline will be determined.	Alter timeframe to 2060 and Withdraw table until further detail in relation to the baseline states and required timeframes can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.058	8 Whaitua Te Whanganui-a-Tara	Objective WH.O8: Primary contact sites within Te Awa	Amend	Seeks the timeframe be altered to 2060 as the 2040 timeframe will render prioritisation of sub-catchments for improvement or upgrade meaningless and 17 years is considered insufficient to achieve required outcomes.	Alter timeframe to 2060 Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Kairangi/Hutt River, Pākuratahi River, Akatarawa River and Wainuiomata River are suitable for primary contact.			
S151.059	8 Whaitua Te Whanganui-a-Tara	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Refers to Section A of submission for additional context regarding prioritisation and target attribute states, and comments on Table 8.4. Considers Clause (a) needs to refer to 'meaningful progress' as specified by WH.02(a). Considers Clause (d) Huangā needs to refer to Schedule B to provide certainty for applicants and notes there appears to be a typo .	Revise clause (a) as follows: 'where a target attribute state in Table 8.4 is not met, the state of that attribute is improved in all rivers and river reaches in the part Freshwater Management Unit so that the target attribute state is met within the timeframe indicated within Table 8.4, or meaningful progress has been made and' Link huangā with Schedule B and improve wording. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.060	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	Refers to Section A of submission. Notes a lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the TAS parameters and requirements are reasonable, appropriate and achievable. Considers the 2040 timeframe will result in the requirement for a large proportion of sub-catchments (or possibly all of them) to be upgraded in the short term, rendering prioritisation of sub-catchment upgrades meaningless.	Provide further information on the baseline state and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis. Alter timeframe to 2060. Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Refers to comments in relation to specific parameters within Table 8.4.	
S151.061	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	<p>Periphyton Biomass</p> <p>1) Notes Periphyton biomass is dependent on a range of environmental and human factors including shading, nutrient concentrations and sedimentation rates. Tackling these factors will require a process to identify the relevant factors and required actions further than those under WWL's control.</p> <p>2) Notes certain sites have a lack of data for the setting of baselines and there is uncertainty whether achieving the TAS by 2040 is realistic and achievable.</p> <p>3) Notes that natural conditions and land uses and activities within the catchment may prevent a TAS being achieved, including shading, stream bed type and channelisation.</p>	Provide further information on the baseline state, and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.062	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	<p>E coli</p> <p>Notes there will be other forms of faecal bacteria contamination within catchments, eg. rural inputs (managed through P.P20 & P.P24), on-site wastewater treatment and from birds or dogs.</p> <p>Recognise that WWL's assets will not be the only factor which determines if the TAS is met.</p>	Include guidance on how to measure the proportion from WWL's networks relative to inputs from other sources within the catchment. Provide further analysis to determine whether improvements are achievable. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.063	8 Whaitua Te Whanganui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	<p>Fish/Fish Community Health</p> <p>1) Notes the abundance and type of fish species is dependent on a range of environmental and human factors and tackling these factors requires a process to identify the relevant factors and required actions further than those under WWL's control.</p> <p>2) Considers at all sites there is a lack of data for the setting of baselines and the required improvements may be unrealistic for these sites by</p>	Provide further information on the baseline state, and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

	Whangan ui-a-Tara	states for rivers.		define the baseline state and develop the attribute state framework	Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.070	8 Whaitua Te Whangan ui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	Ammonia (toxicity) Notes that external factors, such as activities and land use in the catchments may lead to failure of TAS outside of WWL's control.	Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.071	8 Whaitua Te Whangan ui-a-Tara	Table 8.4: Target attribute states for rivers.	Oppose	Nitrate (toxicity) Notes that external factors, such as activities and land use in the catchments may lead to failure of TAS outside of WWL's control.	Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.072	8 Whaitua Te Whangan ui-a-Tara	Policy WH.P1: Improvement of aquatic ecosystem health.	Amend	Supports the reference in clause (a) to 'progressively reducing the load' as reflecting the volume of work that needs to be achieved. Notes that under clause (c) not all locations will require enhancement. Seeks that for clause (d), 'work programmes' is defined or a more specific term used to clarify that it does not relate to local authority networks.	Retain clause (a) Replace 'enhancing' with 'maintaining or improving' in clause (c) Define or use a more specific term for 'work programmes' in clause (d) Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.073	8 Whaitua Te Whangan ui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Amend	Refers to Section A of submission. Notes there is a lack of information relating to the baseline state to measure against so it is not possible to determine whether the TAS and CWO parameters and requirements are reasonable, appropriate and achievable. Considers it unclear how the TAS, CWO and Freshwater Action Plans will impact upon sub-catchment prioritisation of improvements required for stormwater and wastewater discharges. Considers clause (b) is too vague and should clearly state that redevelopment in existing urban	Clarify how the FAP provisions will work alongside existing TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Provide clarity over relationship between 'non-regulatory methods' and 'work programmes'. Amend policy to the extent necessary to appropriately reflect these interrelationships. Amend provision as follows: (b)encouraging and where appropriate, requiring that redevelopment activities within existing urban areas to shall reduce the existing urban contaminant load, and (e-) imposing hydrological controls on: (i) urban development and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				areas will be encouraged noting this provides opportunities to reduce the existing contaminant load, and redevelopment will be required to reduce the existing contaminant load. Considers clause (c) should make allowance for stormwater discharges that are not creating streambank erosion.	(ii) where appropriate and practicable , stormwater discharges to rivers in relation to streambank erosion Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.074	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways	Amend	Refers to Section A of submission. Considers it unclear how FAPs are intended to operate alongside other provisions within the plan change, Wellington Water stormwater and wastewater network discharge consents, and in general Wellington Water's network operations. Notes that the current provisions for FAPs, although a non-regulatory 'other method', could be read to have some level of influence in relation to wastewater and stormwater network discharge consents and prioritisation of sub-catchments. Considers that there should be no relationship between the contents of an FAP and the scheduled requirements for network discharge consents.	Clarify how the FAP provisions will work alongside existing TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Amend policy to the extent necessary to appropriately reflect these interrelationships. Clarify what is intended for the level of consideration or influence that any FAP could have on wastewater and stormwater network discharge consents. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.075	8 Whaitua Te Whanganui-a-Tara	Policy WH.P4: Achievement of the visual clarity target attribute states.	Amend	Refers to Section A of submission and submission points on Table 8.5. Considers a detailed assessment of the implications of the TAS provisions is required on a sub-catchment basis to determine appropriateness of the requirements and 2040 timeframes, and implications for sub-catchment prioritisation.	Amendments to address the issues identified in Section A and submission points in relation to Table 8.5. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.076	8 Whaitua Te Whanganui-a-Tara	Table 8.5: Sediment load reductions required to achieve the visual clarity	Amend	Refers to Section A of submission. Considers a detailed assessment of the implications of the TAS provisions is required on a sub-catchment basis to determine appropriateness of the requirements and 2040 timeframes, and implications for sub-catchment prioritisation. Considers further assessment is needed to address uncertainty regarding the modelled correlation	Refer to Section A overarching submission points. Amend timeframe to 2060 Set TAS for visual clarity and deposited sediment by taking into consideration all contributing sediment sources, and address the following points: 1. How sediment load reductions will be measured in the future

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		target attribute states.		between sediment loads and visual clarity. Notes that SedNet is a national scale model which has had to be adjusted to the scale of the target TAS locations and this may lead to higher levels of uncertainty. Notes that sediment loads, visual clarity and deposited sediment are influenced by factors within catchments outside of WWL's control including human land uses and natural factors.	2. How would proportionate contribution to sediment be measured and any reduction in this contribution be measured Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.077	8 Whaitua Te Whanganui-a-Tara	Policy WH.P6: Cumulative adverse effects of point source discharges	Amend	The exclusion of stormwater and wastewater needs to be very explicit.	Amend policy as follows: The cumulative adverse effects of For point source discharges to water, excluding other than stormwater network and wastewater discharges, to water cumulative adverse effects are avoided and: OR in the alternative, define "point source discharge" to clearly exclude discharges from wastewater and stormwater networks Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.078	8 Whaitua Te Whanganui-a-Tara	Policy WH.P8: Avoiding discharges of specific products and waste.	Amend	Supports the intent of this policy and associated rule but concerned about how it may impact on stormwater and wastewater discharges.	Amend policy as follows:.. Noting that this policy does not apply to contaminants collected as part of stormwater management in response to precipitation or part of the operation of the wastewater network. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.079	8 Whaitua Te Whanganui-a-Tara	Policy WH.P9: General stormwater policy to achieve the target attribute states and	Amend	Considers baseline states cannot be maintained if they are not clear. Considers the reference to table 8.1 should be deleted because it contains no relevant information. Notes the policy could be interpreted as stormwater discharges being the only cause of heavy metal targets not being met, which is not correct.	Amend policy as follows: Stormwater discharges to a surface water body or coastal water, or into or onto land in a manner that may enter freshwater or coastal water, are managed to support, in a commensurate manner , so that the baseline water quality state for copper and zinc is being maintained, or improved where degraded, including in the relevant part Freshwater Management Unit or coastal water management unit, in order for the coastal water objectives and target attribute

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		coastal water objectives.		The timeframes in Table 8.4 should refer to 2060 rather than 2040.	states to be met by the timeframes set out in Tables 8.4 and 8.4. Define "commensurate" as set out in definitions submission point (refer Section A of submission). Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.080	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Notes that for clause (a), 'maximise' already has a practicability component to it in the definitions.	Amend policy as follows: (a) using source control to minimise contaminants in the stormwater discharge and maximise, to the extent practicable, the removal of contaminants from stormwater, including through the use of water sensitive urban design measures, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.081	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Support	Supports this provision as achieving positive outcomes for water quality.	Retain as notified
S151.082	8 Whaitua Te Whanganui-a-Tara	Policy WH.P13: Managing stormwater network discharges through a Stormwater	Amend	Refers to overarching Section A of submission, particularly in relation to prioritisation, TAS, modelling and monitoring. Supports the focus on copper and zinc in clause (a) Considers the reference to concentrations in clause (b) should be deleted.	Amend policy as follows: Policy WH.P13: Managing stormwater network discharges through a Stormwater Management Strategy Stormwater discharges from local authority and state highway networks shall be managed by: (a) reducing the copper and zinc loads in discharges to coastal water management units to contribute to meeting the

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		r Managem ent Strategy.		<p>Considers the range of target attribute states in clause (c) is too wide and creates uncertainty.</p> <p>Considers clause (e) should focus on modelling to determine the necessary copper and zinc load reduction in stormwater discharges</p> <p>Opposes the stormwater network modelling component of clause (e), noting WWL will not model the network in its entirety ahead of starting work on subcatchments. Seeks the deletion of reference to concentrations. States there is no point running a CLM model after implementation because it will provide the same information as pre-implementation.</p> <p>Opposes the requirement in (e) to monitor concentrations in network discharge as concentrations are more relevant for receiving waters and loads are more appropriate for network discharges.</p> <p>Considers it unclear how the prioritisation component of (e) will align with clause (f).</p> <p>Considers the prioritisation in Clause (f) is meaningless and it is unclear how clauses (e) and (f) would interact.</p> <p>Notes the plan uses different terms that mean the same thing and it is unclear whether these terms are intended to be applied in the same way, for example, in this policy: (i) 'Contribute to' (ii) 'Supporting the achievement of'</p> <p>Considers the policy should be specific regarding</p>	<p>coastal water objectives to maintain or improve, and (b) reducing the concentration and contaminant loads of copper and zinc from discharges to surface water bodies in order to maintain, and in degraded part Freshwater Management Units improve, the water quality state for dissolved copper and zinc to contribute to meeting the target attribute states in those part Freshwater Management Units, and (c) supporting the achievement of any other relevant target attribute states or coastal water objectives including for ecosystem health, nutrients, visual clarity and Escherichia coli or enterococci, and (d) implementing a stormwater management strategy and stormwater management plans prepared in accordance with the information and requirements set out in Schedule 31 (stormwater strategy – whaitua), and (e) monitoring and modelling the stormwater network to identify catchments to be prioritised, the copper and zinc concentrations and loads in the discharge, and changes in discharge volume and quality over time following improvements in the network infrastructure, and (f) prioritising the reduction, removal, and/or treatment of stormwater discharges to Schedule A (outstanding water bodies) or Schedule C (mana whenua) sites, or mahinga kai.</p> <p>Stormwater discharges from local authority and state highway networks shall be managed by:</p> <p>(a) reducing the copper and zinc loads in discharges to coastal water management units to contribute to meeting the coastal water objectives to maintain or improve, and</p> <p>(b) reducing the contaminant loads of copper and zinc from discharges to surface water bodies in order to maintain, and in degraded part Freshwater Management Units improve, the water quality state for dissolved copper and zinc to contribute to meeting the target attribute states in those part Freshwater Management Units, and</p> <p>(c) supporting the achievement of relevant target attribute states or coastal water objectives for nutrients</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>which Target Attribute States need to be addressed by the SMS and so seeks clause (c) be deleted.</p>	<p>and E. coli or enterococci, and (d) implementing a stormwater management strategy and stormwater management plans prepared in accordance with the information and requirements set out in Schedule 31 (stormwater strategy - whaitua), and (e) modelling the copper and zinc loads in the discharge, and (f) in order to implement the objectives and policies of the Regional Plan, prioritising the improvement of discharges in stormwater sub-catchments using a methodology to be set out in a Stormwater Management Strategy prepared in accordance with Schedule 31, that will include engagement with mana whenua and take into account:</p> <ul style="list-style-type: none"> i. Schedule A (outstanding water bodies) ii. Schedule C (sites with significant mana whenua values) iii. Schedule F (Ecosystems and habitats with significant indigenous biodiversity) iv. Schedule H (contact recreation and Māori customary use) v. Map 85 (Primary contact sites - Te Whanganui-a-tara) vi. impacts on group drinking water supplies or community drinking water supplies vii. efficiency and alignment with other work programmes, including work in accordance with a wastewater network catchment improvement strategy or sub-catchment improvement plan; viii. investment availability ix. public health effects x. modelling results xi. effects on the environment. <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.083	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Supports the intent of this policy, but is unsure if a mean annual runoff target is the most appropriate measure. Queries whether this should be mean rather than median, and how easy this will be for developers or Wellington Water to assess compliance. Considers ready made 'acceptable solutions' may be easier to implement.	Review policy, in particular the reference to mean annual runoff, to ensure that the policy imposes targets that are readily measurable, able to be easily implemented, and clearly relate to the effects of runoff on the environment. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.084	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Support	Supports this provision as achieving freshwater quality outcomes	Not stated
S151.085	8 Whaitua Te Whanganui-a-Tara	Policy WH.P17: General wastewater policy to achieve target attribute states and coastal objectives.	Oppose	Refers to Section A of submission and submission points on Tables 8.1 and 8.4. Notes the policy could be interpreted as wastewater discharges being the only cause of E.Coli targets not being met, which is not correct.	Provide further information on the baseline state, and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis. Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. In addition to the further information requested above and incorporation of this information into the provisions, revise the policy to reflect the proportionate effect of discharges, as follows: Wastewater discharges to a surface water body or coastal water, or into or onto land in a manner that may enter freshwater or coastal water are managed to support, in a commensurate manner , so that the baseline water quality

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>state for Escherichia coli or enterococci is being maintained, or improved where degraded, including in the relevant part Freshwater Management Unit or coastal water management unit, in order for the target attribute states and coastal water objectives to be met by the timeframes set out in Tables 8.1 and 8.4.</p> <p>"Commensurate" as referred to in Wellington Water's proposed provision changes is defined as follows: Commensurate: In the context of reductions in contaminants in wastewater or stormwater discharges, means a level of reduction that is both proportionate to the effect of the discharge on the receiving environment, and reasonably within the control of the applicant.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.086	8 Whaitua Te Whanganui-a-Tara	Policy WH.P18: Progressing works to meet Escherichia coli target attribute states.	Oppose	Considers the purpose of policy is unclear and it implies that wastewater networks are the only source of e coli. Refers to comments on prioritisation in Section A of submission.	Delete Policy Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.087	8 Whaitua Te Whanganui-a-Tara	Policy WH.P19: Managing wastewater network catchment discharges	Amend	Refers to Section A overarching submission points on modelling and prioritisation. Considers the policy should only relate to discharges within the public network and privately owned wastewater pipes should not be included. Considers frequency is a more appropriate metric than volume for wastewater overflows in the network in clauses (a), (c), (g) and (h). Considers it unclear in clause (a) whether wet	Remove references to monitoring and modelling in this context. Amend provisions as follows: Policy WH.P19: Managing wastewater network catchment discharges All wastewater network catchment discharges, including those which discharge via a stormwater network, shall be managed by:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>weather overflows are related to target attribute states and coastal water objectives. Notes policies WH.P19 and P.P18 direct that wet weather overflows are reduced to meet or exceed the containment standard but other provisions (e.g. Schedule 32) suggest that wet weather overflows are relevant to target attribute states and coastal water objectives. Supports the focus on containment standard.</p> <p>Considers prioritisation in clause (b) as meaningless and it is not clear how this would work with clause (h).</p> <p>Considers the reference to 'potential' discharges in Clause (c) is unclear and so should be deleted.</p> <p>Considers clause (e): should also mention kaitiaki monitoring.</p> <p>Supports the intent of Clause (f) but is concerned it is not practicable.</p> <p>Notes that for clause (h) Wellington Water is not able to model E. coli or enterococci concentrations or load in network overflows, and instead must use the frequency as a proxy for this.</p>	<p>progressively reducing the frequency and/or volume of wet weather overflow events to meet or exceed the containment standard of no more than 2 per year through the implementation of the methodologies set out in a Wastewater Network Catchment Improvement Strategy prepared in accordance with Schedule 32 (wastewater strategy), and</p> <p>(a) — prioritising the removal of wet weather overflows in wastewater network sub-catchments where wet weather overflows are discharging to Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule H (contact recreation and Māori customary use) sites, and primary contact sites in Map 85, and mahinga kai, or where they may affect group drinking water supplies and community drinking water supplies, and</p> <p>(b) — progressively reducing the frequency and/or volume of dry weather discharges or the potential for these discharges through the implementation of a Wastewater Network Catchment Improvement Strategy prepared in accordance with Schedule 32 (wastewater strategy) to contribute to meeting the target attribute states for Escherichia coli in Table 8.4 and the coastal water objectives for enterococci in Table 8.1, and</p> <p>(c) — implementing an inflow and infiltration programme to proactively upgrade the pipe network to progressively reduce stormwater and groundwater infiltration and inflow into the wastewater network catchment, and</p> <p>(d) — engaging with mana whenua on their values and interests in relation to discharges and receiving waters, including adverse effects on Māori customary use and mahinga kai, and</p>

					<p>b) describes receiving waterbody catchment characteristics, and</p> <p>c) includes strategic actions and management options to support achievement of target attribute states for nutrients, and E. coli or enterococci, contained in Table 8.4 target attribute state and Table 8.1 coastal water objective.</p> <p>Matters for discretion</p> <ol style="list-style-type: none"> 1. The contents and implementation of a wastewater network catchment improvement strategy that includes the matters contained within Schedule 32 (wastewater strategy) 2. The reduction of frequency of dry weather discharges over time in accordance with a responsive management approach to be detailed in the wastewater network catchment improvement strategy, and/or the reduction of wet weather discharges in order for the containment standard to be met for the sub-catchment, as relevant to the consent sought 3. Measures to support meeting any other relevant target attribute states or coastal water objectives nutrients, and E. coli or enterococci 4. Adverse effects as a result of wastewater network catchment discharges, including cumulative and localised adverse effects on: <ul style="list-style-type: none"> (i) groundwater, surface water and coastal water, and particularly sites identified in Schedule A (outstanding water bodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (sites with significant mana whenua values), Schedule H (contact recreation and Māori customary use) (ii) mahinga kai, and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>(iii) group drinking water supplies and community drinking water supplies</p> <p>6. Measures to address potential effects of population growth and climate change on the network</p> <p>Notification In respect of Rule WH.R14, applications are precluded from public notification (unless special circumstances exist). Relevant iwi authorities shall be determined to be an affected party to an application under this rule.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.098	8 Whaitua Te Whanganui-a-Tara	Rule WH.R15: Existing wastewater discharges from a treatment plant - discretionary activity.	Amend	Considers condition limiting the load will be very challenging to satisfy, particularly at Moa Point.	Removal of references to load. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.099	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	<p>Notes earthworks activities undertaken by Wellington Water with minor effects would be unable to meet the permitted activity conditions of proposed Rule WH.R23 including minor repairs and maintenance of three waters infrastructure.</p> <p>Notes this proposed rule may mean that hundreds of resource consent applications would be required per annum for minor earthworks activities associated with burst pipe repairs.</p>	<p>Amend to reinstate the exemptions for certain earthworks activities as exist for 'other Whaitua', including for the thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and for the construction, repair, upgrade or maintenance of pipelines. Any consequential amendments, to other relevant provisions, which are in general accordance with this request.</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.100	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Provide an exemption for Regionally Significant Infrastructure to reflect the volume of work that needs to be undertaken for RSI	Provide an exemption to (b) for RSI. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.101	9 Te Awarua-o-Porirua Whaitua	Objective P.O1: The health of Te Awarua-o-Porirua's groundwater, rivers, lakes, natural wetlands, estuaries, harbours and coastal marine area is progressively improved and is wai ora by 2100.	Amend	Considers achieving wai ora by 2100 is a significant task. Considers It unclear what the status of the note is and as currently drafted it creates duplication, noting the last two bullet point are replicated in P.O2.	Alter timeframe to 2123. Clarify the status of the note. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.102	9 Te Awarua-o-Porirua Whaitua	Objective P.O2: Te Awarua-o-Porirua's groundwater, rivers, lakes and natural	Amend	Refer overarching submission points in Section A of submission. Concerned the meaningful improvement may not be achieved by 2040 despite meaningful progress having been made. Considers it likely that the 2040 timeframe will result in the requirement for a large proportion of sub-catchments (or possibly all of them) required to be	Alter timeframe to 2060. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		wetlands, and their margins are on a trajectory of measurable improvement towards wai ora.		upgraded in the short term, rendering prioritisation upgrades meaningless.	
S151.103	9 Te Awarua-o-Porirua Whaitua	Objective P.O3: The health and wellbeing of coastal water quality, ecosystems and habitats in Pāuatahanui Inlet, Onepoto Arm and the open coastal areas of Te Awarua-o-Porirua is maintained or improved to achieve the coastal water	Oppose	<p>Considers CWO contained in Table 9.1 are generally appropriate parameters for coastal environmental health but the lack of information relating to baseline states for Coastal Water Management Units and timeframes to meet the requirements makes it difficult to determine whether improvement can be measured. Unclear how 'maintain or improve' operates for the objectives that don't have a value. Suggests timeframe should refer to 2060 because many ecosystems or habitats will take a long time to recover. 2040 doesn't allow for that recovery time. Refer to Section A of submission regarding Target Attribute States, prioritisation and deliverability. i Suggests the wording 'meaningful progress' would be more appropriate.</p>	<p>Provide further detail in relation to the baseline states and required timeframes in both this objective and Table 8.1. Provide maps showing locations of high contaminant concentrations and amend objective to provide this further detail.</p> <p>In addition to the above, amend as follows: The health and wellbeing of coastal water quality, ecosystems and habitats in Te Whanganui-a-Tara is maintained, or meaningful progress has been made towards improvement or improved to achieve the coastal water objectives set out in Table 8.1, and by 2040 2060.</p> <p>Better define 'high contaminant concentrations' in clause (b) Combine or better distinguish clauses (g) and (h)</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		objectives set out in Table 9.1.			
S151.104	9 Te Awarua-o-Porirua Whaitua	Table 9.1: Coastal water objectives.	Oppose	Considers the table lacks the required information to set baseline states for the Coastal Water Management Units to assess whether the state is being maintained or improved and lacks timeframes for when the baseline will be determined. Refers to Section A overarching submission points.	Alter timeframe to 2060 and provide further detail is required in relation to the baseline states and required timeframes. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.105	9 Te Awarua-o-Porirua Whaitua	Objective P.O4: The extent, condition, and connectivity of habitats of nationally threatened freshwater species are increased, and the long-term population numbers of these species and the area over which they occur are increased, improving their threat	Amend	Not stated	Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		classification status.			
S151.106	9 Te Awarua-o-Porirua Whaitua	Objective P.O6: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Considers clause (a) needs to refer to 'meaningful progress' to reflect the reality of how long it will take to deliver improvements and for ecosystems to recover. Refers to submission points on prioritisation, Target Attribute State, and deliverability in Section A of submission, and submission points on Table 9.2 and submission points on Table 8.4. Suggests in clause (d), Huanga needs to refer to Schedule B to provide certainty for applicants.	Revise Clause (a) as follows: 'where a target attribute state in Table 9.2 is not met, the state of that attribute is improved in all rivers and river reaches in the part Freshwater Management Unit so that the target attribute state is met within the timeframe indicated within Table 9.2, or meaningful progress has been made, and ' Link huanga with Schedule B. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.107	9 Te Awarua-o-Porirua Whaitua	Table 9.2: Target attribute states for rivers.	Oppose	Refers to Section A overarching submission points. Considers there is a general lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the TAS parameters and requirements are reasonable, appropriate and achievable. Considers that the 2040 timeframe will result in the requirement for a large proportion of sub-catchments (or possibly all of them) to be upgraded in the short term, rendering prioritisation of sub-catchment upgrades meaningless. Refer also previous comments in relation to specific parameters under submission points on Table 8.4.	Provide further information on the baseline state, and a detailed assessment of the implications of the TAS provisions on a sub-catchment basis. Alter timeframe to 2060. Include guidance on how to measure the proportion from WWL's networks with inputs from other sources within the catchment. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.108	9 Te Awarua-o-Porirua Whaitua	Policy P.P1: Improvement of aquatic ecosystem health.	Amend	Supports the reference in clause (a) to 'progressively reducing the load' as reflecting the volume of work that needs to be achieved. Seeks replacement of 'enhancing' with 'maintaining or improving' in clause (c) as not all locations will require enhancement. Seeks a definition of 'work programmes' in clause	Retain clause (a) Replace 'enhancing' with 'maintaining or improving' in clause (b) Define or use a more specific term for 'work programmes' in clause (d) to clarify that it does not relate to local authority networks Other relief as may be required to address the issues

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				(d) or the use of a more specific term to clarify it does not relate to local authority networks.	identified, including relief that is alternative, additional or consequential.
S151.109	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Amend	Refers to Section A overarching submission points. Considers there is a general lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the TAS and CWO parameters and requirements are reasonable, appropriate and achievable. Considers it unclear how the TAS, CWO and Freshwater Action Plans will impact upon sub-catchment prioritisation of improvements required for stormwater and wastewater discharges. Questions how 'non-regulatory methods' relate to 'work programmes' in P.P1(d). Considers clause (b) is too vague and needs to clearly state that redevelopment in existing urban areas will be encouraged as that provides opportunities to reduce the existing contaminant load, and that redevelopment will be required to reduce the existing contaminant load. Considers clause (c) needs to make allowance for stormwater discharges that are not creating streambank erosion. Questions if 'networks' be in bold as a defined term in clause (d).	Provide clarification how the FAP provisions will work alongside existing TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Provide clarity over relationship between 'non-regulatory methods' and 'work programmes'. Amend policy to the extent necessary to appropriately reflect these interrelationships. In addition to the above, amend provision as follows: (b) encouraging and where appropriate, requiring that redevelopment activities within existing urban areas to shall reduce the existing urban contaminant load, and (c) imposing hydrological controls on: (i) urban development and (ii) where appropriate and practicable , stormwater discharges to rivers in relation to streambank erosion Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.110	9 Te Awarua-o-Porirua Whaitua	Policy P.P4: Contaminant load reductions	Oppose	Refers to Section A overarching submission points. Considers there is a general lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the CWO parameters and requirements are reasonable, appropriate and achievable. Considers the timeframe of 2040 is too ambitious for the scale of work that needs to be carried out.	Change the timeframe to 2060 and provide further detail in relation to the baseline states and required timeframes. Withdraw the table until the further detail can be added.
S151.111	9 Te Awarua-o-Porirua Whaitua	Table 9.3: Harbour arm catchment contamination	Oppose	Refers to Section A overarching submission points. Considers there is a general lack of information relating to the baseline state to measure against, meaning it is not possible to determine whether the CWO parameters and requirements are reasonable,	Change the timeframe to 2060 and provide further detail in relation to the baseline states and required timeframes. Withdraw the table until the further detail can be added. Other relief as may be required to address the issues

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		nt load reductions		appropriate and achievable. Considers the timeframe of 2040 is too ambitious for the scale of work that needs to be carried out.	identified, including relief that is alternative, additional or consequential.
S151.112	9 Te Awarua-o-Porirua Whaitua	Table 9.4: Part Freshwater Management Unit sediment load reductions required to achieve the visual clarity target attribute state.	Oppose	Refers to Section A overarching submission points. Considers a detailed assessment of the implications of the TAS provisions is required on a sub-catchment basis to determine appropriateness of the requirements and 2040 timeframes, and implications for sub-catchment prioritisation Considers there is uncertainty regarding the modelled correlation between sediment loads and visual clarity and further assessment is needed. SedNet is a national scale model which has had to be adjusted to the scale of the target TAS locations. This increased granularity may lead to higher levels of uncertainty. Furthermore, sediment loads, visual clarity and deposited sediment are influenced by factors within catchments outside of WWL's control including human land uses and activities and natural factors.	Set TAS for visual clarity and deposited sediment by taking into consideration all contributing sediment sources, and address the following points also need to be addressed: 1. How sediment load reductions will be measured in the future 2. How would proportionate contribution to sediment be measured and any reduction in this contribution be measured Withdraw the table until the further detail can be added. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.113	9 Te Awarua-o-Porirua Whaitua	Policy P.P6: Point source discharges	Amend	Considers the exclusion of stormwater and wastewater needs to be very explicit.	Amend policy as follows: For The cumulative adverse effects of point source discharges to water, excluding other than stormwater network and wastewater discharges, to water cumulative adverse effects are avoided and: Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.114	9 Te Awarua-o-Porirua Whaitua	Policy P.P9: General stormwater policy to achieve the target attribute	Amend	Considers baseline states cannot be maintained if it is not clear what they are and the reference to table 9.1 should be deleted because it contains no relevant information. Notes the policy could be interpreted as stormwater discharges being the only cause of heavy metal targets not being met, which is not correct and	Amend policy as follows: Stormwater discharges to a surface water body or coastal water, or into or onto land in a manner that may enter freshwater or coastal water, are managed to support, in a commensurate manner , so that the baseline water quality state for copper and zinc is being maintained, or improved where degraded, including in the relevant part Freshwater Management Unit or coastal water management unit, in

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		states and coastal water objectives.		seeks the timeframes in Table 9.2 should refer to 2060 rather than 2040.	order for the coastal water objectives and target attribute states to be met by the timeframes set out in Tables 9.1 and 9.2. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.115	9 Te Awarua-o-Porirua Whaitua	Policy P.P11: Discharges of a contaminant in stormwater from high risk industrial or trade premises.	Support	Supports this provision as achieving positive outcomes for water quality.	Retain as notified Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.116	9 Te Awarua-o-Porirua Whaitua	Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	<p>Supports the focus on copper and zinc in clause (a). Seeks the deletion of the reference to concentrations in clause (c).</p> <p>Considers the range of target attribute states in clause (d) is too wide and creates uncertainty.</p> <p>Opposes the stormwater network modelling component of clause (e), noting WWL will not model the network in its entirety ahead of starting work on subcatchments, and oppose the requirement to monitor concentrations in discharges, considers concentrations more relevant for receiving waters, and loads appropriate for discharges.</p> <p>Considers clause (f) should focus on modelling to determine the necessary copper and zinc load reduction in stormwater discharges and considers there is no point running a CLM model after</p>	<p>Amend policy as follows:</p> <p>Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy Stormwater discharges from local authority and state highway networks shall be managed by:</p> <p>(a) reducing the copper and zinc loads in discharges to the coastal water management units of Onepoto Arm and Pāuatahanui Inlet in Map 82 and the harbour arm catchments in Map 84 by 15% for copper and 40% for zinc to contribute to meeting the target attribute states and coastal water objectives for copper and zinc in the Onepoto Arm and Pāuatahanui Inlet of Te Awarua-o-Porirua, and</p> <p>(b) reducing the copper and zinc loads in discharges to the Open Coast coastal water management units to contribute to meeting the coastal water objectives to maintain or improve, and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>implementation because it will provide the same information as pre-implementation.</p> <p>Considers the plan sets many different priorities in different provisions making the prioritisation in clause (g) meaningless and it is unclear how clauses (f) and (g) would interact.</p> <p>Notes the plan uses different terms that mean the same thing and it is unclear whether these terms are intended to be applied in the same way, for example, in this policy: (i) 'Contribute to' (ii) 'Supporting the achievement of'</p> <p>Refers to overarching Section A of submission, particularly in relation to prioritisation, TAS, modelling and monitoring.</p>	<p>(c) reducing the concentration and contaminant loads of copper and zinc from discharges to surface water bodies in order to maintain, and in degraded part Freshwater Management Units improve, the water quality state for dissolved copper and zinc to contribute to meeting the target attribute states in those part Freshwater Management Units, and</p> <p>(d) supporting the achievement of any other relevant target attribute states or coastal water objectives including for ecosystem health, nutrients, visual clarity and Escherichia coli or enterococci, and</p> <p>(e) implementing a stormwater management strategy and stormwater management plans prepared in accordance with the information and requirements set out in Schedule 31 (stormwater strategy – whaitua), and</p> <p>(f) monitoring and modelling the stormwater network to identify catchments to be prioritised, the copper and zinc concentrations and loads in the discharge, and changes in discharge volume and quality over time following improvements in the network infrastructure, and</p> <p>(g) prioritising the reduction, removal, and/or treatment of stormwater discharges to Schedule A (outstanding water bodies) or Schedule C (mana whenua) sites, or mahinga kai.</p> <p>Stormwater discharges from local authority and state highway networks shall be managed by:</p> <p>(a) reducing the copper and zinc loads in discharges to the coastal water management units of Onepoto Arm and Pāuatahanui Inlet in Map 82 and the harbour arm catchments in Map 84 by 15% for copper and 40% for zinc to contribute to meeting the target attribute states and coastal water objectives for copper and zinc in the</p>

S151.129	9 Te Awarua-o-Porirua Whaitua	Rule P.R14: Existing wastewater r	Amend	Considers condition limiting the load will be very challenging to satisfy.	Removal of references to load. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discharges from a treatment plant to coastal and freshwater - discretionary activity.			
S151.130	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	<p>Notes earthworks activities undertaken by Wellington Water with minor effects would be unable to meet the permitted activity conditions of proposed Rule WH.R22 including minor repairs and maintenance of three waters infrastructure.</p> <p>Notes that this proposed rule may mean that hundreds of resource consent applications would be required per annum for minor earthworks activities associated with burst pipe repairs.</p>	Amend Rule to reinstate the exemptions for certain earthworks activities as exist for 'other Whaitua', including for the thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and for the construction, repair, upgrade or maintenance of pipelines. Any consequential amendments, to other relevant provisions, which are in general accordance with this request.
S151.131	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	Provide an exemption for Regionally Significant Infrastructure to reflect the volume of work that needs to be undertaken for RSI	Provide an exemption to (b) for RSI. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.132	12 Schedules	Schedule 27: Freshwater Action Plan requirements.	Amend	Seeks confirmation that actions in the Freshwater Action Plans will not be additional to the requirements of Schedules 31 and 32 for operation of the wastewater and stormwater networks. Considers the provisions are unclear as to how these align with other strategies/plans and how they will work with other regulatory provisions including the level of influence in relation to wastewater and stormwater network discharge consents and prioritisation of sub-catchments.	Amend to clarify how the FAP provisions will work alongside TAS provisions, network discharge consent provisions, and in particular Schedules 31 and 32. Amend to clarify what is intended for the level of consideration or influence that any FAP could have on wastewater and stormwater network discharge consents. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Considers it unclear how the proportion of pollution reduction from the Freshwater Action Plans will be calculated, so that other parties can calculate the commensurate reduction from their activities. Refers to overarching submission points in Section A of submission.	
S151.133	12 Schedules	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	In general the wording and contents of the schedule may have implications for prioritisation methodologies and implementation, which have been addressed in overarching submission points in Section A. Refers to the summary of relief sought in relation to Schedules 31 and 32.	Amend to address the submission points outlined in Section A of submission regarding prioritisation methodologies and implementation. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.134	12 Schedules	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	Considers the SMS should only provide high level information as it is to be submitted with the resource consent application and a number of the information requirements in Schedule 31 are too onerous and/or require too much detail for a strategy. Considers that it would be more appropriate to include specific information (for example, identifying locations for the retention or detention of stormwater flows or volumes) in the SCaMPs.	Not stated
S151.135	12 Schedules	Schedule 31: Stormwater Management	Oppose	Considers the reference to "in accordance with relevant objectives and policies of the Plan" in Clause 1 does not serve a clear purpose as schedules should be considered in the context of the overall Plan by default. Considers this reference invites second guessing	Reframe clause 1 as an information requirement., e.g., "describes how it responds to the relevant objectives and policies in the plan". Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.		and the exercise of subjective judgement from decision-makers (or submitters), which is not appropriate in a Schedule and could affect an application's activity status. Suggests clause is reframed as an information requirement to describe how the strategy responds to the relevant objectives and policies in the Plan.	
S151.136	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	Clause 2: groundwater Seeks clarity on the references to and requirements in relation to groundwater throughout PC1. Refers to overarching submission point on Groundwater in Section A of submission.	Clarify the references to and requirements in relation to groundwater throughout PC1. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.137	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	Clause 3: - Considers there is insufficient information to model first flush discharges and the clause needs to be rewritten so that this action is not responsible for achieving TAS.	Address the lack of information regarding first flush discharges and rewrite end of clause as follows: '... will be reduced in order for to support the target attribute state... Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.138	12 Schedule s	Schedule 31: Stormwater Management	Amend	Clause 4: Opposes the use of the term "concentration" as it is difficult to identify and establish what this means in real terms. Opposes the reference to contaminant	Amend Clause 4 as follows: identifies the contaminant load and concentrations for copper and zinc arising from the applicable local authority or state highway stormwater network discharges using modelling and monitoring, and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ent Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.		concentrations in clause 4 (and elsewhere throughout PC1). The "concentration" in the discharge effectively is meaningless as it is immediately diluted as it enters the receiving water. Considers identifying contaminant load in the discharge is more appropriate as it can be measured, modelled, and then reduced.	Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.139	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	<p>Clause 5: Considers that stormwater should be considered as part of the context of the wider environment. Notes Wellington Water can reduce loading, but cannot model how reduction will result in achieving the TAS without a larger, regional-scale model and that there is no common link across different catchments that can be used to correlate loading and TAS.</p> <p>Seeks the wording of "commensurate" be amended to improve clarity.</p> <p>Opposes the requirement to identify 'commensurate reductions' as discussed in Section A of their submission. Seeks alternative wording and acknowledgement that the details may not be able to be confirmed until the SCaMP (SMP) stage.</p>	<p>Amend Clause 5 as follows: identifies describes the approach to determining (through Stormwater Management Plans) the reduction of copper and zinc to be achieved needed in the stormwater network discharge that is commensurate with that required in the receiving environment to meet in order to contribute to meeting the target attribute state or coastal objective for the part Freshwater Management Unit or coastal water management unit in the receiving environment, and</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>
S151.140	12 Schedule s	Schedule 31: Stormwater Management Strategy - Te Whanganu i-a-Tara and Te Awarua-o-Porirua.	Amend	<p>Clause 7: Questions the use of the term "avoid" as avoiding the adverse effects of stormwater would include issues out of the control of Wellington Water, for example, flooding on properties. Considers it is not achievable for Wellington Water to actively maintain or re-establish natural flow regimes as there are too many factors outside their control.</p>	<p>Amend Clause 7 as follows: describes actions to maintain or re-establish natural flow regimes to avoid, to the extent practicable, including the use of hydrological controls to avoid adverse effects of stormwater quantity (flows and volumes) and maintain, to the extent practicable, natural stream flows, and</p> <p>Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.158	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	<p>Generally supports Schedule 32, including:</p> <ul style="list-style-type: none"> • the provision for the sub-catchment plans to be developed and implemented over time. • the requirement to provide a methodology for prioritisation in the WNCIS, rather than the actual prioritisation having to be specified in the Strategy at the time consent is sought. <p>Notes the requirements in rules WH.R14 and P.R13 for the WNCIS to be lodged with a resource consent application does not allow room for details to be added, once the consent has been granted. Considers that the level of detail required in Schedule 32 is difficult to achieve, and requirements for more specific details should be left to the Sub-catchment Improvement Plans.</p> <p>Supports the intent for individual sub-catchments to be able to set more or less ambitious containment standards but considers this should be decided after consent has been granted through the sub-catchment improvement plans and flexibility should be given to the consent holder to decide at a later date the exact methods and programme of works required to meet the overall outcome described in the Schedule. Considers Schedule 32 should reference a 35 year timeframe for achieving the containment standard(s).</p> <p>Does not support using volume as a metric and suggests the modelling the frequency of wastewater discharges is more appropriate.</p> <p>Considers the schedule should provide for dry weather discharges (such as dry weather overflows and exfiltration) to be managed via a 'responsive management approach' rather than with reference to the TAS. This is because of the current inability to forecast dry weather overflows or assess the</p>	Not stated

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				correlation between dry weather discharges within the control of Wellington Water and TAS being achieved	
S151.159	12 Schedules	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Considers the level of detail required is difficult to achieve given that this needs to be lodged with the consent application and that the reference to WH.R15 should be replaced by WH.R14	Reduce the level of detail required for the strategy and require it in the subcatchment reduction plans. Refer to WH.R14 and P.R13 rather than WH.R15 and P.R14. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.160	12 Schedules	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Considers clause 1 is too broad and will be impossible to satisfy. Notes that the policies make it clear that the focus for wet weather overflows is the containment standard, for which clause 2 is sufficient, and suggests clause 1 can be repurposed to focus on dry weather discharges.	Amend clause 1 as follows: manages the wastewater network catchment in accordance with the relevant objectives and policies of the Plan, provides a strategic and integrated management plan for reducing the frequency of dry weather discharges, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.161	12 Schedules	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Considers clause 2 should refer to wet weather overflows meeting the containment standard, not all wastewater overflows (which includes dry weather).	Limit to wet weather overflows. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.162	12 Schedules	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Clause 3: Seeks a rewrite to make it clear that management of the wastewater network is a contributing factor to the TAS rather than the only factor. Seeks the addition of new clause for f e. coli: blockages within the network	Amend clause 3 as follows: provides a strategy for how to progress towards achieving target attribute states for Escherichia coli and coastal objectives for enterococci will be achieved, including through reducing inflow, infiltration (groundwater into wastewater pipes), blockages and exfiltration (wastewater leakage), and Other relief as may be required to address the issues

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					identified, including relief that is alternative, additional or consequential.
S151.163	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Clause 4: Considers the clause requires something on the relevance of policy directions in the NRP. This does not sit easily with WH.P19(b) which outlines what has to be prioritised. Suggests 'frequency' is more technically appropriate than 'number and volume'. Seeks the deletion of reference to the community as Wellington Water is resolving this in other ways.	Amend clause 4 as follows: identifies the methodology, with reference to the prioritisation matters contained in Policy WH.P19(b) and Policy P.P18(b) , including engagement with mana whenua and the community , to prioritise wastewater network sub-catchments and/or waterbodies for implementation actions and/or mitigation measures in order to reduce the frequency number and volume of wet weather overflows and dry weather discharges, to improve water quality, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.164	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Oppose	Clause 5: Considers the requirement for a programme for increasing repairs and renewals is too onerous on top of other work programmes and risks placing the focus in the wrong work area.	Delete clause 5. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.165	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Clause 6: Suggests this should refer to overflows rather than failures	Amend clause 6 as follows: reduces pipe failures overflows as a result of blockages within the network or due to aging infrastructure, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.166	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement	Amend	Clause 7: Considers the reduced role of Wellington Water for nutrients should be reflected in the wording of this clause.	Amend clause 7 as follows: describes how it will supports working towards achieving the target attribute states for nitrate, ammonia, phosphorus, dissolved inorganic nitrogen (DIN) and dissolved reactive phosphorus (DRP), and Other relief as may be required to address the issues

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ent Strategy.			identified, including relief that is alternative, additional or consequential.
S151.167	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Considers the reference to managing in accordance with the objectives in the Wastewater Network Catchment management objective (a) would invite judgment, considers this requirement in the schedule should be reframed as an information requirement	Amend wastewater network objective (a) as follows: identify the relevant water quality objectives, target attribute states, and coastal objectives in this Plan that the wastewater network catchment strategy will respond to is to be managed in accordance with, Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.168	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Oppose	Considers Wastewater Network Catchment management objective (b) is too onerous given the highly variable nature of wastewater discharges and will provide very little, if any, benefit	Delete clause (b). Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.169	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	For Wastewater Network Catchment management objective (c), confirmation of the meaning of 'commensurate' is required. Refers to comments on this term in Section A of submission.	Amend wastewater network objective (c) as follows: describe the approach to determining (through sub-catchment improvement plans) identify the strategy to progress towards reduction reducing in the reductions in Escherichia coli to be achieved in order to contribute to needed commensurate with that required in the receiving environment to meet meeting the target attribute state for Escherichia coli for the affected part Freshwater Management Unit in the receiving environment , and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.170	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement	Amend	Wastewater Network Catchment management objective (d): Supports the intention for individual sub-catchments to be able to set more or less ambitious containment standards but this should be decided after consent has been granted though the sub-	Amend clause (d) as follows: (d) identify the methodology for determining (in sub-catchment improvement plans) the current and target containment standard for each wastewater network sub-catchment for each waterbody or sub-catchment, based on

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ent Strategy.		catchment improvement plans. Suggests that this clause could usefully provide guidance in terms of how the containment standard(s) are to be set, and seeks wording consistent with the approach that has been taken in its applications to date.	data from a network model, which may include consideration of: network performance, the high level costs and feasibility of achieving different containment standards, and the effects on the environment of the network performing in accordance with different containment standards (including contribution to achieving target attribute states), and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.171	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Receiving water body catchment characteristics (g)(iii): Considers 'annual mean overflow volume' and 'number' are not the key variables, frequency is the key variable.	Amend (g)(iii) as follows: the annual mean overflow volume, the number and/or frequency of wet weather overflows to a wastewater network sub-catchment or waterbody, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.172	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Strategic actions (i): Considers 'frequency' is a more appropriate metric to 'the number of'.	Amend strategic actions clause (i) as follows: Describe the actions to be taken to reduce the number frequency of wet weather overflows through time to meet the objectives of the Plan and the containment standard , and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.173	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Strategic actions (j): Considers the clause needs to reflect that Wellington Water's dry weather discharges are not the only source of E coli.	Amend strategic actions clause (j) as follows: Describe the actions responsive management approach to be taken- applied to reduce dry weather discharges through time, in order for- to support the target attribute states for Escherichia coli and coastal objectives for enterococci to be- being met, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.174	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Strategic actions (k): Seeks the deletion of reference to receiving environment monitoring as this will not be undertaken by the applicant.	Amend strategic actions clause (k) as follows: Describe the mātauranga monitoring, receiving environment monitoring , frequency of wet weather overflows monitoring, and monitoring to be undertaken to support the modelling, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.175	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Strategic actions (m): Considers referencing any activity as illegal is unusual in an RMA document and unnecessary so should be deleted. Considers listing locations is prioritisation is unhelpful given the scale of work that needs to be completed, the potential lack of alignment between these locations and Wellington Water's other activities and the lack of connectivity between these locations and other priorities in the Plan. Refers to Section A of submission for more detail.	Amend strategic actions clause (m) as follows: Describe the programme to investigate and reduce the number of illegal cross-connections in the public network, and in Whaitua Te Whanganui-a-Tara, prioritise audits for Kaiwharawhara Stream, Korokoro Stream, Wainuiomata River and Black Creek, and Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.176	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Oppose	Reporting of the Wastewater Network Catchment Improvement Strategy (s): Considers this should be deleted as this is a Greater Wellington responsibility and impossible for the applicant to implement without a Freshwater Management Tool	Delete clause (s). Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.177	12 Schedule s	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Subcatchment Improvement Plans: Supports the general approach towards subcatchment improvement plans, particularly that they can be developed and implemented over time. Considers dry weather discharges need to be managed so that they are reduced to contribute to meeting the standards, rather than being responsible for meeting the standards, and that schedule 32 should provide for dry weather	Amend Subcatchment Improvement Plans chapeau as follows: Sub-catchment Improvement Plans shall be prepared and implemented for each of the sub-catchments that make up the wastewater network catchment, or smaller geographical areas. They will be produced over time based on the prioritisation of sub-catchments and will set out how the frequency of:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				discharges to be managed via a 'responsive management approach'. Suggests an altered chapeau paragraph structure would make it easier to read.	(i) wet weather overflows will be reduced in sub-catchments or areas to meet the containment standard and/or (ii) dry weather discharges will be reduced in accordance with a responsive management approach reduced in order for the target attribute states or coastal objectives to be met Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.178	12 Schedules	Schedule 32: Wastewater Network Catchment Improvement Strategy.	Amend	Review of the Wastewater Network Catchment Improvement Strategy: Questions whether the maximum review timeframe of once every ten years correct, or whether it is intended to be a minimum. Considers this should refer to actions to 'support' rather than actions to 'meet' the TAS. Considers the reviews should also be able to build on environmental water quality modelling undertaken by GW.	Amend the Wastewater Networks Catchment Improvement Strategy chapeau as follows: The intention of the Wastewater Network Catchment Improvement Strategy is that it will be adaptive as updated catchment characteristics, monitoring data, and information and technology become available. The strategy shall be reviewed and certified by Greater Wellington on a regular basis and no more than once every 10 years. The actions needed to meet support the target attribute states will be defined as far as practicable in the first iteration of the strategy and refined through regular reviews. The reviews will be guided by the modelling and monitoring undertaken by the consent holder, and monitoring and modelling undertaken by the Wellington Regional Council in accordance with the National Policy Statement for Freshwater Management 2020. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.179	General comments	General comments - stormwater management	Amend	Considers rules R93 and R120 should be added to the list of provision that will no longer apply to Whaitua Te Whanganui-a-Tara or Te Awarua-o-Porirua Whaitua, as if they continued to apply, it would undermine the more permissive activity status proposed in PC1.	Insert 'Rule R93: All other discharges to sites of significance' and 'Rule R120: Activities in outstanding natural wetlands' to the list of provisions that will no longer apply to Whaitua Te Whanganui-a-Tara or Te Awarua-o-Porirua Whaitua. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S151.180	General comments	General comments - definitions	Amend	Notes the term "point source discharges" is used in a number of provisions that will continue to apply within the two whatua, and seeks confirmation that wastewater and stormwater discharges are not intended to fall within this definition.	Define "point source discharge" so that it clearly excludes discharges from wastewater and stormwater networks. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.181	General comments	General comments - definitions	Amend	Suggests it may be necessary to revisit the existing definition of 'new wastewater discharge' as it will apply differently within the two whatua given the different definition of 'existing wastewater discharge' that will apply within those areas.	Any amendments as necessary to reflect the corresponding definition of 'existing wastewater discharge', including as it may be modified through the plan change process. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.182	General comments	General comments - definitions	Amend	Submitter has opposed wording to require reductions in contaminants 'commensurate with what is required in the receiving environment' to meet TAS. If relief is not accepted submitter seeks that "commensurate" is defined in PC1.	Add new definition as follows: Commensurate In the context of reductions in contaminants in wastewater or stormwater discharges, means a level of reduction that is both proportionate to the effect of the discharge on the receiving environment, and reasonably within the control of the applicant. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.
S151.183	General comments	General comments - overall	Amend	Considers more specific objective and policy support is required in PC1 to ensure that the NRP gives effect to aspects of national and regional policy direction, and for consistency with Objective O10 of the NRP, specifically in relation to wastewater infrastructure. Considers policies should recognise that robust, cost-effective, and efficient wastewater and stormwater networks are essential to human health, human safety and social and cultural well-being. Refers to comments in Section A of submission.	Amend existing objective O9 as follows: The social, economic, cultural and environmental benefits of Regionally Significant Infrastructure, renewable energy generation activities and the utilisation of mineral resources are recognized and provided for. Reinstate and alter existing O6 as follows: The social, economic, cultural and environmental benefits of: Taking and using water are recognized managing stormwater for the safety of people and property disposing of wastewater to achieve public health outcomes are recognized and provided for when managing water. Other relief as may be required to address the issues identified, including relief that is alternative, additional or consequential.

S206 Winstone Aggregates

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S206.001	General comments	General comments - unplanned greenfield development	Amend	Notes that there is no definition for "greenfield development". Based on the s32 evaluation, considers "greenfield development" to be principally focused on urban development. Concerned the lack of a definition means that all activities may be considered "greenfield development". Seeks the provision of a definition which excludes activities that are not greenfield development, including quarrying activities.	Insert new definition of "greenfield development" as follows: Greenfield development Means any urban development undertaken within a site or sites that has not previously been used for urban land use. Greenfield development does not include: Quarrying activities
S206.002	General comments	General comments - urban development	Amend	Seeks the provision of a definition for "urban development", noting that the operative RPS definition can be used.	Insert new definition of "urban development" as follows: Urban development Urban development is subdivision, use and development that is characterised by its planned reliance on reticulated services (such as water supply and drainage) by its generation of traffic, and would include activities (such as manufacturing), which are usually provided for in urban areas. It also typically has lots sizes of less than 3000 square metres.
S206.003	General comments	General comments - definitions	Amend	Suggests the provision of a definition for "quarrying activities", derived from the NZ Planning Standards.	Insert new definition of "quarrying activities" as follows: Quarrying activities Has the same meaning as in the National Planning Standards (as set out below): means the extraction, processing (including crushing, screening, washing, and blending), transport, storage,

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					sale and recycling of aggregates (clay, silt, rock, sand), the deposition of overburden material, rehabilitation, landscaping and cleanfilling of the quarry, and the use of land and accessory buildings for offices, workshops and car parking areas associated with the operation of the quarry.
S206.004	General comments	General comments - definitions	Amend	Seeks the provision of a definition for "significant mineral resources", derived from the operative RPS. Notes Method 52 of the operative RPS, which requires significant mineral resources to be spatially identified. Seeks for this to be undertaken concurrently with PC1 and for the definition to reference the associated mapping.	Insert new definition of "significant mineral resources" as follows: Significant mineral resources Has the same meaning as in the Wellington Regional Policy Statement (as set out below): Deposits of minerals, the extraction of which is of potential importance in order to meet the current or future mineral needs of the region or nation.
S206.005	General comments	General comments - definitions	Amend	Seeks the provision of a definition for "quarry", derived from the NZ Planning Standards.	Include definition of "quarry": Quarry Has the same meaning as in the National Planning Standards (as set out below): means a location or area used for the permanent removal and extraction of aggregates (clay, silt, rock or sand). It includes the area of aggregate resource and surrounding land associated with the operation of a quarry and which is used for quarrying activities.
S206.006	General comments	General comments - definitions	Amend	Notes there is no definition for "aquatic offset", though notes the NRP currently has definitions for "biodiversity offset" and "offset". Concerned that "biodiversity offset" may be inappropriately applied without a definition for "aquatic offset". Notes the NPS-FM includes a definition for "aquatic offset", and that it would be inconsistent with the NPS-FM to omit the definition from PC1. Seeks for the NPS-FM definition to be inserted, noting that further amendments to provisions may be required to reference the term.	Insert new definition of "aquatic offset" as follows: Aquatic offset Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a measurable conservation outcome resulting from actions that are intended to: (b) redress any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, and remediation, measures have been sequentially applied; and (c) achieve no net loss, and preferably a net gain, in the extent and values of the wetland or river, where: (i) no net loss means that the measurable positive effects of actions match any loss of extent or values

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					over space and time, taking into account the type and location of the wetland or river; and (ii) net gain means that the measurable positive effects of actions exceed the point of no net loss
S206.007	General comments	General comments - definitions	Amend	Notes there is no definition for "aquatic compensation", though notes the NRP currently has a definition for "biodiversity compensation". Concerned that "biodiversity compensation" may be inappropriately applied without a definition for "aquatic compensation". Notes the NPS-FM includes a definition for "aquatic compensation", and that it would be inconsistent with the NPS-FM to omit the definition from PC1. Seeks for the NPS-FM definition to be inserted, noting that further amendments to provisions may be required to reference the term	Insert new definition of "aquatic compensation" as follows: Aquatic compensation Has the same meaning as in the National Policy Statement for Freshwater Management (as set out below): means a conservation outcome resulting from actions that are intended to compensate for any more than minor residual adverse effects on a wetland or river after all appropriate avoidance, minimisation, remediation, and aquatic offset measures have been sequentially applied
S206.008	General comments	General comments - stormwater management	Amend	Seeks the insertion of a specific policy relating to stormwater discharges from a quarry, to ensure clear direction that the rule aligns with.	Insert new Policy WH.P12A as follows (or wording to similar effect): Policy WH.P12A: Stormwater discharges from quarrying activities Provide for the discharge of stormwater, including where it is associated with new or redevelopment of impervious surfaces from a quarry, where: (a)The quarry is a significant mineral resource; and (b)The quarry is implementing good management practice including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including containment, treatment, management procedures, and monitoring; and (c)The discharge does not result in an inability to meet any target attribute state in Table 8.4.
S206.009	General comments	General comments - stormwater management	Oppose	Notes quarrying activities are considered "high risk industrial or trade premise" under the current rule framework, therefore subject to Rules WH.R4, WH.R11 and WH.R12. Opposes this framework due to consenting implications and limited consenting paths. Considers reasonable activities would require consent under the drafted provisions, despite their	Insert new Rule WH.R4A as follows (or wording to similar effect): Rule WH.R4A: Stormwater from quarrying activities - permitted activity The discharge of stormwater from a quarrying activity into water, or onto or into land where it may enter a surface water body or coastal water, including where it

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>scale or whether they have associated discharges. Notes operational stormwater discharges from Winstone's Belmont site would require consent as a non-complying activity. Notes there is no consideration for quarrying activities in the s32 evaluation and it is therefore unclear if the framework is intended to be applied as such. Considers the current approach is inconsistent with the RPS, which recognises the benefits of mineral resources and seeks to enable its ongoing use. The submitter notes amendments they seek for the RPS, which are relied on for PC1. Seeks the insertion of two rules relating to quarrying activities associated with significant mineral resources, being a permitted activity rule applying to all stormwater discharges; and a restricted discretionary activity rule where the permitted activity rule is not met, subject to stormwater discharges meeting the relevant target attribute states. Notes a similar approach in Rules WH.R8, WH.R9 and WH.R10 for airports and roading.</p>	<p>is associated with the use of land for the creation of new, or redevelopment of existing impervious surfaces, is a permitted activity, provided the following conditions are met:</p> <p>(a) The quarrying activity is of significant mineral resource; and</p> <p>(b) the discharge is not from, onto or into SLUR Category III land, unless the stormwater does not come into contact with SLUR Category III land, and</p> <p>(c) the discharge does not contain wastewater, and</p> <p>(d) if the discharge is to land where it may enter groundwater,</p> <p>(i) the discharge cannot cause or exacerbate the flooding of any other property, and</p> <p>(ii) the discharge is not located within 20m of a bore used for water abstraction for potable supply or stock water, and</p> <p>(e) if the discharge is into a surface water body or into coastal water the concentration of total suspended solids in the discharge shall not exceed:</p> <p>(i) 50g/m3 where the discharge enters a site or habitat identified in Schedule A (outstanding water bodies), Schedule C (mana whenua), Schedule F1 (rivers/lakes), Schedule F3 (identified natural wetlands), Schedule F4 (coastal sites), or Schedule H1 (contact recreation), or</p> <p>(ii) 100g/m3 where the discharge enters any other water,</p> <p>(f) the discharge shall also not cause any erosion of the channel or banks of the receiving water body or the coastal marine area, and</p> <p>(g) the discharge shall also not give rise to the following effects beyond the zone of reasonable mixing:</p> <p>(i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or</p> <p>(ii) any conspicuous change in the colour, or</p> <p>(iii) a decrease in water clarity of more than 1. 20% in a River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

S206.014	General comments	General comments - overall	Not Stated	<p>Considers there is a lack of consideration for quarrying activities through the drafting of the rules and the s32 evaluation. Considers that quarrying activities are not specifically anticipated under either of the rules frameworks introduced in PC1 for rural activities or urban activities. Considers that quarrying activities would be captured under the urban related rules, which would be onerous and would restrict continued operation of local quarries. Considers the current approach inconsistent with the RPS, which directs recognition of the benefits of mineral resources and their ongoing use. Considers the proposed approach inconsistent with national direction that provides for clear consenting pathways for beneficial activities such as quarrying activities, noting the NPS-FM and NES for Freshwater in particular. Also notes the NPS-IB and NPS-HPL provide a pathway for aggregate extraction and supply, which is tied with the implementation of the NPS-UD in providing for the</p>	<p>Seeks specific consenting pathway for the continuation of regionally significant quarrying activities within the Wellington Region.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				necessary infrastructure to deliver well-functioning urban environments.	
S206.015	General comments	General comments - overall	Not Stated	Considers prohibited activity status is not reasonable, based on a wide range of activities that would be captured under the proposed prohibited rules, noting that prohibited activity status is afforded to activities causing significant and unmitigable adverse effect, or that are fundamentally contrary to a planning document. Considers that neither a sufficient evidence base or evaluation has been provided for the prohibited activity status, or for the consideration of alternative activity statuses to appropriately manage the resource management issue. Further considers the non-complying activity status overused and where the purpose of the RMA and objectives of the plan can be met by a less restrictive regime, that it should be adopted, citing an Environment Court decision. Considers discretionary activity status to generally be more efficient and effective and non-complying activity status as a default where an activity is not otherwise provided for inappropriate, noting that quarrying activities would trigger non-complying activity status for earthworks. Considers the proposed approach inconsistent with national direction that provides for clear consenting pathways for beneficial activities such as quarrying activities, noting the NPS-FM and NES for Freshwater in particular, which provide for a discretionary consenting pathway for quarrying and clean filling activities. Considers non-complying activity status would undermine the ability to implement national direction by bundling resource consent applications into non-complying activity status.	Not stated
S206.016	General comments	General comments	Not Stated	Considers the definition for "high risk industrial or trade premises" would include quarrying activities, despite not resulting in discharges of hazardous	Provision of a specific rule framework for quarrying activities, similar to the approach taken for ports and airports, wherein restricted discretionary activity status applies for most

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		- definitions		substances, and therefore subject to Rules WH.R4, WH.R11 and WH.R12. Considers the inclusion of quarrying activities in these rules unreasonable, and would add onerous consenting requirements for low risk activities. Notes examples of small scale activities that would require resource consent despite all stormwater being captured and treated within the site.	discharges anticipated from an operational quarry. Rules to be linked to the TAS for the related Whaitua. Where a discharge would result in TAS not met for the part of the FMU, activity status to fall to non-complying.
S206.017	General comments	General comments - earthworks	Not Stated	Considers earthworks (excluding earthworks on a farm) will be at least a restricted discretionary activity, regardless of scale or adverse effect. Notes the conjunctive requirement was not intended for all clauses. Seeks an urgent variation is issued to correct the permitted rule. Notwithstanding this correction, opposes the rule framework and associated policy direction that restricts earthworks over winter months, as it does not account for long-term ongoing permanent earthwork activities that occur year-round, such as quarrying activities. Considers insufficient justification is provided in the s32 evaluation for the shut down period, including an assessment of costs and benefits, or direct and indirect effects to quarrying activities. Considers restrictions will increase cost and length of construction periods, and will impact supply of aggregate. Disagrees with the assumption that increased sediment discharges are more likely during winter months, noting that unpredictable rainfall events can occur at any time of year, which will increase with climate change. Further notes that receiving environments are less vulnerable during winter months as water temperatures are lower and flows are higher. Considers non-complying activity status for earthworks not meeting restricted discretionary conditions is onerous, noting that replacement earthworks consents for an operational quarry would be subject to the rule. Considers this does not recognise the importance of local source	Remove the shutdown period over winter months. Amend non-complying activity status to discretionary.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				aggregate and is contrary to the Regional Policy direction. Notes that where non-complying activity status is in practical terms no different than discretionary activity status, then the less onerous activity status is the most appropriate.	
S206.018	General comments	General comments - maps	Not Stated	Supports a nuanced approach to high erosion risk land, wherein the PC1 definitions differentiate between vegetation types. However, concerned with the accuracy and quality of the mapping referenced in the definitions.	Review mapping, or remove and the current approach relied on until robust mapping is undertaken.
S206.019	General comments	General comments - maps	Not Stated	Notes there is no definition for "greenfield development", and that the definition for "unplanned greenfield development" simply refers to greenfield development identified in the PC1 maps. Concerned the lack of a definition means any development in the mapped areas is captured as "greenfield development" and the associated rules. Notes conflict between the PC1 maps and district plan maps. Concerned that stormwater discharge from an impervious surface within an operational quarry that is subject to "unplanned greenfield development" would be a prohibited activity, noting that it is not possible to avoid all stormwater discharges within a quarry. Concerned the approach to managing greenfield development seeks to manage land use its itself, rather than an effect. Concerned that general rules for earthworks, and the creation of impervious surfaces, without any associated discharges to water, overlap with the jurisdiction of territorial authorities. Considers there is insufficient evidence in the s32 evaluation to support prohibiting unplanned greenfield development in all circumstances. Questions the efficiency and effectiveness of the proposed approach, noting there is no ability for joint territorial and regional plan change processes to be considered under the RMA. Notes the prohibited rules relates to the coastal marine area, therefore	Definition of greenfield development (and unplanned greenfield development) is defined to be specific to urban development and does not capture quarrying activities.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				requiring final approval from the Minister for Conservation, and that a district plan change would likely be undertaken after a plan change for the NRP, given that it must not be inconsistent with a regional plan. Concerned with the uncertainty and slowness of the private plan change process, and that resource consent would still be required after a plan change, therefore incurring costs and delays.	
S206.020	General comments	General comments - stormwater management	Not Stated	Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided.	Other forms of aquatic offsetting are provided for and aquatic compensation is enabled where aquatic offsetting can not be achieved. Retain financial contribution offsetting as optional.
S206.021	General comments	General comments - stormwater management	Not Stated	Acknowledges that rules may apply to stormwater discharges to a surface water body from a stormwater network, however considers it is ultra vires to manage effects before this point, citing case law which holds that the regulation of discharges into water under s15 of the RMA does not apply to discharges into the pipes that form a reticulated system.	Make amendments such that rules only relate to discharges from a stormwater network, rather than into a stormwater network.
S206.022	General comments	General comments - fresh water	Not Stated	Concerned that several provisions are subject to the Freshwater Planning Process (FPP) where freshwater is only a peripheral issue to which the provision relates. Considers this an inappropriate	Review the scope of FPP versus Schedule 1 processes. Only provisions where freshwater is the primary issue to be subject to the FPP; remaining provisions allocated to Schedule 1.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				use of the FPP, giving rise to jurisdictional problems such as restricted appeal rights. Considers improper allocation results in delays and costs, and is exacerbated by the restrictive activity statuses proposed.	
S206.023	2 Interpretation	Earthworks	Oppose	Seeks for Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua to include all exemptions provided in the existing definition of earthworks. Notes the use of "and" implies all earthworks exclusions are conjunctive and seeks clarification that the exclusions are disjunctive through the use of "or". Supports clarification provided to exemption clause (i) of the existing definition.	<p>Amend definition as follows:</p> <p>For Whaitua Te Whanganui-a-Tara and Te Awarua-o-Porirua Whaitua only: The alteration or disturbance of land, including by moving, removing, placing, blading, cutting, contouring, filling or excavation of earth (or any matter constituting the land including soil, clay, sand and rock); but excludes gardening, cultivation, and disturbance of land for the installation of fence posts. Earthworks do not include:</p> <ul style="list-style-type: none"> (a) cultivation of the soil for the establishment of crops or pasture, or (b) the harvesting of crops, or (c) thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, or (d) the construction, repair, upgrade or maintenance of: <ul style="list-style-type: none"> (i) pipelines, or (ii) electricity lines and their support structures, including the National Grid, or (iii) telecommunication structures or lines, or (iv) radio communication structures, or (v) firebreaks or fence lines, or (vi) a bore or geotechnical investigation bore, or (d) repair or maintenance of existing roads and tracks, and airfield runways, taxiways, and parking aprons for aircraft, or (e) maintenance of orchards and shelterbelts, or (f) domestic gardening, or (g) repair, sealing or resealing of a road, footpath, driveway, or (h) discharge of cleanfill material to a cleanfill area

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>Except that, for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20, 'earthworks' has the same meaning as given in section 3 of the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017.</p> <p>Amend definition as follows:</p> <p>For all other whaitua: The disturbance of a land surface from the time soil is first disturbed on a site until the time the site is stabilised. Earthworks includes blading, contouring, ripping, moving, removing, placing or replacing soil or earth, by excavation, or by cutting or filling operations, or by root raking. Earthworks do not include:</p> <ul style="list-style-type: none"> (a) cultivation of the soil for the establishment of crops or pasture, and or (b) the harvesting of crops, and or (c) thrusting, boring, trenching or mole ploughing associated with cable or pipe laying and maintenance, and or (d) the construction, repair, upgrade or maintenance of: <ul style="list-style-type: none"> (vii) pipelines, and or (viii) electricity lines and their support structures, including the National Grid, and or (ix) telecommunication structures or lines, and or (x) radio communication structures, and or (xi) firebreaks or fence lines, and or (xii) a bore or geotechnical investigation bore, and or (e) repair or maintenance of existing roads and tracks, and airfield runways, taxiways, and parking aprons for aircraft, and or (f) maintenance of orchards and shelterbelts, and or (g) domestic gardening, and or (h) repair, sealing or resealing of a road, footpath, driveway, and or (i) discharge of cleanfill material to a cleanfill area

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S206.024	2 Interpretation	High risk industrial or trade premise	Oppose	Opposes the activities which "may" be captured within the definition of high risk industrial or trade premise, noting some are unlikely to generate industrial or trade waste contaminants, citing "mineral extraction, refining and reprocessing, storage, and use" in relation to quarrying activities in particular. States no evidence is provided to suggest the listed activities are high risk industrial or trade premises and seeks their removal. Concerned that the activities may be predetermined as meeting the definition. Considers the existing definitions for "industrial activity" and "industrial trade waste" under the NZ Planning Standards are sufficiently clear. Opposes the use of the term contaminants as it increases the scope of the definition. Seeks that the definition is limited to the generation of hazardous substances, as defined in the NZ Planning Standards.	Amend definition as follows: High risk industrial or trade premise An industrial or trade premise that stores, uses or generates contaminants or hazardous substances on-site that are exposed to rain and could become entrained in stormwater. Activities that may occur at these premises could include: -boat construction and maintenance -commercial cement, concrete or lime manufacturing or storage -chemical manufacture, formulation or bulk storage, recovery, processing or recycling -fertiliser manufacture or bulk storage -storage of hazardous wastes including waste dumps or dam tailings associated with mining activities -petroleum or petrochemical industries including a petroleum depot, terminal blending plant or refinery, or facilities for recovery, reprocessing or recycling petroleum-based materials, -scrap yards including automotive dismantling, wrecking or scrap metal yards -wood treatment or preservation, or bulk storage of treated timber -mineral extraction, refining and reprocessing, storage, and use -explosives and ordnance production, storage, and use -electronics including the commercial manufacturing, reconditioning, or recycling of computers, televisions, and other electronic devices -waste recycling, treatment, and disposal -engineering workshops with metal fabrication, or electroplaters power stations, substations, or switchyards.
S206.025	2 Interpretation	Highest erosion risk land (plant forestry)	Oppose	Opposes the mapping associated with the definition. Considers the mapping too high level and unsubstantiated. Seeks for the existing approach (including the existing definition of "erosion prone land") to be retained until a robust vegetation and land stability mapping exercise is undertaken. Opposes the definition as being subject to the	Update mapping with accurate and evidence-based mapping, or delete definition and retain existing NRP definition: Erosion prone land The pre-existing slope of the land exceeds 20 degrees. Should the definition be retained, seek it be subject to the

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Freshwater Planning Process, and considers the definition and associated rules relate to soil conservation rather than freshwater. Considers the approach inconsistent with RPS Proposed Change 1, which is subject to the Schedule 1 Process.	Part 1 Schedule 1 Process and not the Freshwater Planning Process.
S206.026	2 Interpretation	Highest erosion risk land (pasture)	Oppose	Opposes the mapping associated with the definition. Considers the mapping too high level and unsubstantiated. Seeks for the existing approach (including the existing definition of "erosion prone land") to be retained until a robust vegetation and land stability mapping exercise is undertaken. Opposes the definition as being subject to the Freshwater Planning Process, and considers the definition and associated rules relate to soil conservation rather than freshwater. Considers the approach inconsistent with RPS Proposed Change 1, which is subject to the Schedule 1 Process.	Update mapping with accurate and evidence-based mapping, or delete definition and retain existing NRP definition: Erosion prone land The pre-existing slope of the land exceeds 20 degrees. Should the definition be retained, seek it be subject to the Part 1 Schedule 1 Process and not the Freshwater Planning Process.
S206.027	2 Interpretation	Highest erosion risk land (woody vegetation)	Oppose	Opposes the mapping associated with the definition. Considers the mapping too high level and unsubstantiated, noting that high erosion risk land (woody vegetation) is shown to be within an operational quarry. Seeks for the existing approach (including the existing definition of "erosion prone land") to be retained until a robust vegetation and land stability mapping exercise is undertaken. Opposes the definition as being subject to the Freshwater Planning Process, and considers the definition and associated rules relate to soil conservation rather than freshwater. Considers the approach inconsistent with RPS Proposed Change 1, which is subject to the Schedule 1 Process.	Update mapping with accurate and evidence-based mapping, or delete definition and retain existing NRP definition: Erosion prone land The pre-existing slope of the land exceeds 20 degrees. Should the definition be retained, seek it be subject to the Part 1 Schedule 1 Process and not the Freshwater Planning Process.
S206.028	2 Interpretation	Impervious surfaces	Amend	Considers the definition will capture a range of surfaces within a quarry. Notes from the s32 evaluation that it is intended for the impervious surface rules to capture urban development, however concerned that they would capture quarrying activities without a reasonable consenting pathway. Seeks for the definition to exclude	Amend definition as follows: Impervious surfaces Surfaces that prevent or significantly impede the infiltration of stormwater into soil or the ground, includes: roofs paved areas (including sealed/compacted metal) such as

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				impervious surfaces associated with quarrying activities.	roads, driveways, parking areas, sidewalks/foot paths or patios, and excludes: grassed areas, gardens and other vegetated areas porous or permeable paving slatted decks which allow water to drain through to a permeable surface porous or permeable paving and living roofs roof areas with rainwater collection and reuse any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed) any impervious surface associated with a quarrying activity
S206.029	2 Interpretation	Unplanned greenfield development	Amend	Seeks amendment in accordance with the submitter's relief sought for the insertion of a definition for "greenfield development". Considers the advice note inappropriate and unnecessary, and seeks its deletion.	Amend definition as follows: Unplanned greenfield development Greenfield development within areas identified as 'unplanned greenfield area' on maps 86, 87, 88 and 89 which also require an underlying zone change (from rural/non-urban/open space to urban) though a District Plan change to enable the development. Note: Unplanned greenfield areas are those areas that do not have an urban or future urban zone at the time of Plan Change 4 notification, 30th October 2023.
S206.030	5.4 Beds of lakes and rivers	Rule R128: New structures - permitted activity.	Oppose	Considers the proposed change will remove the ability to construct minor structures within the bed of a river without the need for resource consent, noting examples of structures that would be come discretionary activities. Notes the existing rule provides for minor structures (less than 10m2) and considers discretionary activity status for such structures onerous. Considers insufficient explanation is provided for the change in the s32 evaluation.	Changes are rejected and Rule R128 is retained as operative.
S206.031	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river -	Support	Supports the rule as it will negate the requirement for long term river diversions where they are permanent.	Retain as notified

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.			
S206.032	8 Whaitua Te Whanganui-a-Tara	Objective WH.O1: The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100.	Amend	Supports the long-term vision for Whaitua Te Whanganui-a-Tara, however seeks that restoration of Āhua should only occur where natural character has been degraded, otherwise considers there is an unrealistic requirement on what it is being restored and the baseline state. Considers the requirement for margins of freshwater bodies to be planted will not be practicable in all instances, such as where freshwater bodies are piped or of a concrete channel. Seeks amendment to "as far as practicable", noting that all types of waterbodies are captured, and planting may not be possible or desirable for some.	Amend Objective WH.O1: Objective WH.O1 The health of all freshwater bodies and the coastal marine area within Whaitua Te Whanganui-a-Tara is progressively improved and is wai ora by 2100. Note In the wai ora state: Āhua (natural character) is restored where it has been degraded and freshwater bodies exhibit their natural quality, rhythms, range of flows, form, hydrology and character. All freshwater bodies have planted margins as far as practicable All freshwater bodies and coastal waters have healthy functioning ecosystems and their water conditions and habitat support the presence, abundance, survival and recovery of At-risk and Threatened species and taonga species Mahinga kai and kaimoana species are healthy, plentiful enough for long term harvest and are safe to harvest and eat or use, including for manuhiri and to exercise manaakitanga Mana whenua are able to undertake customary practices at a range of places throughout the catchment.
S206.033	8 Whaitua Te Whanganui-a-Tara	Objective WH.O6: Groundwater flows and levels, and water quality, are maintained.	Amend	Considers the direction in (b) and (c) to "protect" is inconsistent with NPS-FM Policy 5, which requires freshwater and freshwater ecosystems are "maintained", noting that "protection" is only afforded to outstanding freshwater bodies and habitats of indigenous freshwater species under NPS-FM Policies 8 and 9. Considers protection a higher bar than maintain, potentially leading to perverse outcomes and an inability for reasonable development to occur. Seeks clarification on what "aquifer consolidation" refers to in (f).	Clarify what is "aquifer consolidation", and Amend Objective WH.O6: Objective WH.O6 Groundwater flows and levels, and water quality, are maintained at levels that: (a) ensure base flows or levels in surface water bodies and springs are supported and salt-water intrusion is avoided, and (b) protect maintain groundwater dependent ecosystems, and

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(c) protect maintain ecosystems in connected surface water bodies, and (d) ensure that groundwater is of sufficient quality for human and stock drinking water, and (e) ensure there is not a long-term decline in mean annual groundwater levels, including artesian pressures and (f) avoid aquifer consolidation.
S206.034	8 Whaitua Te Whanganui-a-Tara	Objective WH.09: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Concerned over whether the improvements sought are too ambitious and unrealistic in the proposed timeframe. Considers the requirement to move from the existing D state to B state for periphyton biomass; and from the existing C state to A state for E. Coli will require significant land use change. Considers (c) unrealistic, and that it does not account for seasonal shifts in water quality and ecological condition. Considers there is no certainty for what the expectations are.	Revise the improvement requirements of Table 8.4 or the timeframe to ensure that outcomes can be realistically achieved; And; Amend Objective WH.09: Objective WH.09 Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved by ensuring that: (a) where a target attribute state in Table 8.4 is not met, the state of that attribute is improved in all rivers and river reaches in the part Freshwater Management Unit so that the target attribute state is met within the timeframe indicated within Table 8.4, and (b) where a target attribute state in Table 8.4 is met, the state of that attribute is at least maintained in all rivers within the part Freshwater Management Unit, and (c) where any attribute in any river or river reach is in a better state than the target attribute state, that attribute is at least maintained at the better state in every river or river reach, and (d) where a huanga of mahinga kai and Māori customary use for locations identified in Schedule B (Ngā Taonga Nui a Kiwa) and is not achieved, the state of the river or river reach is improved.
S206.035	8 Whaitua Te Whanganui-a-Tara	Policy WH.P1: Improvement of aquatic	Amend	Considers (a) requires progressive reduction in the load and concentration of contaminants for all water bodies, regardless of whether improvement is required or not. Seeks clarification accordingly.	Amend policy as follows: Policy WH.P1: Improvement of aquatic ecosystem health Aquatic ecosystem health will be improved by: (a) progressively reducing the load or concentration of

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		ecosystem health.		<p>Considers (b) would apply to all habitats, including exotic. Notes the NPS-FM does not require restoration of all habitats, but is rather limited to indigenous wetland habitat, where the habitat is degraded. Seeks clarification accordingly.</p> <p>Considers it unclear what is being coordinated and prioritised in (d), and what "catchments that require changes to land use activities that impact water" means. Considers the clause should refer to enabling work programmes that provide for improvement. Suggests consideration as to whether clause is better suited as a method rather than a policy directive.</p>	<p>contaminants where improvement in water quality is required, particularly sediment, nutrients, pathogens and metals, entering water, and (b) restoring indigenous habitats that have been degraded, and (c) enhancing the natural flow regime of rivers and managing water flows and levels, including where there is interaction of flows between surface water and groundwater, and (d) co-ordinating and prioritising enabling work programmes in catchments that seek to improve aquatic ecosystem health require changes to land use activities that impact on water.</p>
S206.036	8 Whaitua Te Whanganui-a-Tara	Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Considers clause (a) prescribes the activity status of an activity, rather than focusing on an adverse effect. Notes "unplanned greenfield development" may be applied generally, given "greenfield development" is not defined, meaning that development within an area mapped as "unplanned" would be subject to this direction. Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to</p>	<p>Amend policy as follows:</p> <p>Policy WH.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants generated by urban development, and where there are more than minor residual adverse effects caused by stormwater contaminants requiring aquatic offsetting in first instance, which may include a requiring financial contributions as to an aquatic offset adverse effects from residual stormwater contaminants, and (b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and (c) imposing hydrological controls on urban development and stormwater discharges to rivers (d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and (e) stabilising stream banks by excluding livestock from</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>be provided. Acknowledges financial contributions may be an appropriate form of aquatic offset, however seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation.</p> <p>Supports the direction of clause (e), however notes the planting of riparian margins may not always be practicable.</p>	<p>waterbodies and planting riparian margins with indigenous vegetation where practicable, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>
S206.037	8 Whaitua Te Whanganui-a-Tara	Policy WH.P5: Localised adverse effects of point source discharge.	Amend	<p>Considers the policy implies clauses (a)-(e) must be avoided even within the mixing zone. Considers this is not a realistic requirement, as any discharge can cause at least one of those effects at a localised level. Seeks changes to clarify the policy focus on limiting those effects to the mixing zone, and avoiding significant adverse effects beyond the zone of reasonable mixing.</p>	<p>Amend policy as follows:</p> <p>Policy WH.P5: Localised adverse effects of point source discharge The localised adverse effects of point source discharges to freshwater and coastal water are as far as practicable retained within beyond the zone of reasonable mixing. are avoided or minimised Significant adverse effects beyond the zone of reasonable mixing must be avoided, including by avoiding the following effects: (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (b) any conspicuous change in colour or visual clarity, or (c) any emission of objectionable odour, or (d) the rendering of freshwater unsuitable for consumption by farm animals, or (e) any significant adverse effects on aquatic life including through: (i) change in temperature, or (ii) reduced dissolved oxygen in surface water bodies, or (iii) increased toxicity effects.</p>
S206.038	8 Whaitua Te Whanganui-a-Tara	Policy WH.P7: Discharges to groundwater.	Amend	<p>Considers the requirement that all discharges "shall not degrade" is not clear or directly measurable. Considers direction should be focused on "maintaining" groundwater quality based on its use, in accordance with NPS-FM Policy 5. Notes there is no indication on what "degraded groundwater" means, and considers it must be aligned with a limit depending on the use of the groundwater. Seeks</p>	<p>Amend policy as follows:</p> <p>Policy WH.P7: Discharges to groundwater All discharges to land that may enter groundwater, and discharges to groundwater, shall maintain not degrade the quality of groundwater quality to continue to provide for its existing and future use. and where the quality of groundwater quality is not meeting national guidelines is</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				the policy is split into two sentences to improve clarity.	degraded, existing discharges shall be managed in a way that to improves groundwater quality.
S206.039	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges .	Oppose	Considers the policy would apply to stormwater discharges from a quarry, and that the direction is not practicable. Considers the requirements appropriate for urban development, but not appropriate for non-urban activities. Seeks amendment to relate specifically to stormwater discharges from greenfield development, per the submitter's submission point for the definition of "greenfield development".	Amend policy as follows: Policy WH.P10: Managing adverse effects of stormwater discharges All stormwater discharges from greenfield development and associated land use activities shall be managed by: (a) using source control to minimise contaminants in the stormwater discharge and maximise, to the extent practicable, the removal of contaminants from stormwater, including through the use of water sensitive urban design measures, and (b) using hydrological control and water sensitive urban design measures to avoid, remedy or mitigate adverse effects of stormwater quantity and maintain, to the extent practicable, natural stream flows, and (c) installing, where practicable, a stormwater treatment system for stormwater discharges from a property or properties taking into account: (i) the treatment quality (load reduction factor), and (ii) opportunities for the retention or detention of stormwater flows or volume, including any flood storage volume required, and (iii) any potential adverse effects that may arise as a result of the stormwater treatment system or discharge, including erosion and scour, and localised adverse water quality effects, and (iv) inspections, monitoring and ongoing maintenance, including costs, to maintain functionality in terms of treatment quality and capacity, and (v) existing or proposed communal stormwater treatment systems in the stormwater catchment or sub-catchment, or part Freshwater Management Unit.
S206.040	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of	Oppose	Seeks the removal of "contaminants", noting that the term is all-encompassing. Considers the direction of clause (b) to avoid all contaminants is achievable. Considers that specific contaminants of	Amend policy as follows: Policy WH.P11: Discharges of contaminants hazardous substances in stormwater from high risk industrial or trade

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		contaminants in stormwater from high risk industrial or trade premises.		concern should be stated, otherwise the direction should be limited to hazardous substances. Considers the policy can only regulate discharges where they enter "water", in accordance with RMA s15. Considers the policy and associated rules imply "an existing or new stormwater network" is a receiving environment, noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers that rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but can not manage effects before that point. Considers if the reference is retained, that it must be clarified as being "from" the stormwater network.	premises The discharge of stormwater to water, including discharges via from the stormwater network, from a high risk industrial or trade premise shall be managed by: a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.
S206.041	8 Whaitua Te Whanganui-a-Tara	Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces.	Amend	Seeks consequential amendments in accordance with the submitter's relief sought for the insertion of a definition for "greenfield development".	Amend policy as follows: Policy WH.P14: Stormwater discharges from new and redeveloped impervious surfaces The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas caused by urban development reduced to the extent practicable, upon redevelopment, through implementing: (a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to: (i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and (ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and (b) where stormwater discharges will enter a river,

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					hydrological controls either on-site, or off-site via a communal
S206.042	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided. Acknowledges financial contributions may be an appropriate form of aquatic offset, however seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation.</p> <p>Considers the policy and associated rules imply "an existing or new stormwater network" is a receiving environment, noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers that rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but can not manage effects before that point. Considers if the reference is retained, that it must be clarified as being "from" the stormwater network.</p> <p>Seeks consequential amendments per the</p>	<p>Amend policy as follows:</p> <p>Policy WH.P15: Stormwater contaminant offsetting for new greenfield development Where there are more than minor residual adverse effects of residual (post-treatment) caused by stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via from an existing or new stormwater network, those effects must be managed by way of an aquatic offset or aquatic compensation, including through the following:</p> <p>(a) are to be provide an aquatic offset by way of a financial contribution in accordance with Schedule 30 (financial contribution), or</p> <p>(b) provide an aquatic offset in accordance with the principles for aquatic offsetting in Appendix 6 of the NPS-FM, and</p> <p>(c) where more than minor residual adverse effects cannot be offset, aquatic compensation must be provided in accordance with the principles for aquatic compensation in Appendix 7 of the NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				submitter's submission point for the definition of "greenfield development".	
S206.043	8 Whaitua Te Whanganui-a-Tara	Policy WH.P16: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers there is insufficient evidence in the s32 evaluation to justify the policy direction and to suggest that all new stormwater discharges from unplanned greenfield development will cause significant effects.	Delete policy
S206.044	8 Whaitua Te Whanganui-a-Tara	Policy WH.P25: Managing rural land use change.	Amend	Seeks amendment to clarify that the direction relates to primary production and not other rural land use. Considers the policy would apply to other land use activities in the rural environment, including quarrying. Suggests the term "primary production" is used to better reflect the direction.	Amend policy as follows: Policy WH.P25: Managing rural land use change Manage the actual and potential adverse effects of changing land use from low to higher intensity primary production rural land use by: (a) controlling rural land use change that is greater than 4ha and associated diffuse discharge where there is a risk the diffuse discharges of nitrogen, phosphorus, sediment or Escherichia coli may increase, and (b) only granting resource consent for such a change in land use when, in accordance with Policy P75, the diffuse discharge of nitrogen, phosphorus, sediment and Escherichia coli of the more intensive activity is demonstrated to be the same or less than the activities being replaced.
S206.045	8 Whaitua Te Whanganui-a-Tara	Policy WH.P27: Promoting stream shading.	Support	Considers shading streams is the most accessible and practicable method of reducing periphyton. Notes the use of "promoting" rather than "requiring" continues to enable other methods.	Retain as notified
S206.046	8 Whaitua Te Whanganui-a-Tara	Policy WH.P29: Management of	Amend	Considers the policy focuses on "risk" rather than effect. Considers the relevance of risk under the RMA is primarily associated with natural hazards rather than a potential discharge. Seeks replacement of risk with "adverse effects" to align	Amend policy as follows: Policy WH.P29: Management of earthworks The risk adverse effects associated with of sediment discharges from earthworks shall be managed by:

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		earthworks.		with RMA Part 2. Considers clause (a) refers to an outcome that is sought, rather than an activity or effect. Considers the direction of clause (b) to limit the amount of land disturbed is not always practicable.	<p>(a) requiring retention of soil and sediment on the land undertaking earthworks in accordance with using good management practices for erosion and sediment control measures that are appropriate to the scale and nature of the activity, and in general accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), for the duration of the land disturbance, and</p> <p>(b) where practicable, limiting the amount of land disturbed at any time, and</p> <p>(c) designing and implementing earthworks with knowledge of the existing environmental site constraints, specific engineering requirements and implementation of controls to limit the discharge of sediment to receiving environments, and</p> <p>(d) requiring erosion and sediment control measures to be installed prior to, and during earthworks and ensuring those controls remain in place and are maintained until the land is stabilised against erosion.</p>
S206.047	8 Whaitua Te Whanganui-a-Tara	Policy WH.P30: Discharge standard for earthworks.	Oppose	<p>Notes the policy refers to "an existing or new stormwater network" and "artificial watercourse" as a receiving environment. Considers the policy can only regulate discharges where they enter "water", in accordance with RMA s15, and that water within a stormwater network is not subject to Regional Council jurisdiction. Further notes artificial watercourses are often piped or within tanks and therefore not subject to RMA s15. Seeks changes to only refer to discharges to natural receiving waterbodies.</p> <p>Considers the requirement in clause (c) for a "suitably qualified person" to monitor the discharge is not always practicable and will be unreasonably costly. Seeks amendment to provide discretion and to provide for a "suitably trained person".</p> <p>Considers the policy particularly prescriptive, reflecting conditions of a rule or consent rather than</p>	<p>Amend policy as follows:</p> <p>Policy WH.P30: Discharge standard for earthworks The discharge of sediment from earthworks over an area greater than 3,000m² shall:</p> <p>(a) not exceed 100g/m³ at the point of discharge where the discharge is to a surface water body, or coastal water, stormwater network or to an artificial watercourse, except that when the discharge is to a river with background total suspended solids that exceed 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than:</p> <p>(i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>(ii) 30% in any other river, and</p> <p>(b) be managed using good management practices in accordance with the GWRC Erosion and Sediment Control Guidelines for the Wellington Region (2021), to achieve the discharge standard in (a), and</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

				<p>a policy directive.</p> <p>Submitter refers to their relief sought for the definition of "earthworks", to recognise current exceptions in the Operative NRP. Considers the policy will apply to earthworks of all kinds and scales. Considers the proposed policy and rule framework results in impracticalities due to the broad definition of earthworks, which is often not proportionate to the effects being managed.</p>	(c) where required , be monitored by a suitably qualified or trained person, and the results reported to the Wellington Regional Council.
S206.048	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	<p>Considers the policy does not anticipate activities that require earthworks year-round such as quarrying. Considers shutting down winter earthworks within an active quarry will adversely impact regional aggregate supply and the ability to respond to a natural disaster. Considers insufficient justification is provided in the s32 evaluation for the shut down period. Disagrees with the assumption that increased sediment discharges are more likely during winter months, noting that unpredictable rainfall events can occur at any time of year, which will increase with climate change. Further notes that receiving environments are less vulnerable during winter months as water temperatures are lower and flows are higher. Seeks removal of the policy and considers risk associated with unpredictable weather events can be managed through existing provisions.</p>	Delete policy
S206.049	8 Whaitua Te Whanganui-a-Tara	Rule WH.R1: Point source discharges of specific contaminants - prohibited activity.	Amend	<p>Seeks amendment to reference to "stormwater network", noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers the rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but can not manage effects before that point.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R1: Point source discharges of specific contaminants - prohibited activity The point source discharge of:</p> <p>(a) chemical cleaning products including vehicle cleaning products, detergents, bleach and disinfectant, or</p> <p>(b) paint and other substances used for the purpose of protecting surfaces (including stain and paint wash), or</p> <p>(c) solvents including paint stripper, or</p>

					<p>conditions of Rule WH.R5, and, (c) a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions), and (d) where stormwater directly or indirectly (through from an existing local authority stormwater network) discharges to a river, hydrological control is provided either: (i) on-site, or (ii) off-site through an existing local authority stormwater network or privately owned stormwater network that has been sized to accommodate the proposed stormwater discharges, and (e) stormwater contaminant treatment is provided that captures 85% of the mean annual runoff and directs it to a stormwater treatment system that treats in accordance with Schedule 28 (contaminant treatment) and is provided either: (i) on-site, or off-site through an existing local authority stormwater network or privately owned stormwater treatment system that has capacity to treat contaminant loads from the site.</p> <p>Matters of control</p> <ol style="list-style-type: none"> 1. The design and layout of the on-site stormwater treatment system, including the ongoing operational and management measures necessary to ensure that stormwater quality will meet the requirements of condition (e) of this rule 2. The adequacy of hydrological control measures either on-site or off-site, where stormwater will enter a river 3. Where an off-site (or a combination of on-site and off-site) stormwater treatment system is utilised, whether this has capacity, availability (timing) and appropriate authorisations to connect into 4. The long-term operational, maintenance and ownership requirements of the stormwater treatment system 5. Whether sufficient use of water sensitive urban design measures have been applied to the site design and layout 6. A financial contribution as required by Schedule 30

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(financial contributions) 7. Condition of consent to demonstrate and/or monitor compliance with conditions (d) and (e) of this rule Notification In respect of Rule WH.R6, applications are precluded from limited and public notification (unless special circumstances exist).
S206.053	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Amend	<p>Considers all new and redeveloped impervious surfaces within a high risk industrial or trade premise would trigger the rule. Considers there will be impracticalities if the definition of "high risk industrial or trade premise" applies to quarrying activities, noting examples of minor activities within a quarry that would require resource consent. Submitter is neutral to the rule, subject to other relief sought for the insertion of two rules relating to quarrying activities associated with significant mineral resources (Rules "WH.R4A" and "WH.R8A") being implemented.</p> <p>Seeks deletion of clause (b), in accordance with the submitter's relief sought for Policy WH.P15. Considers the potential to amend the clause to be "in accordance with Policy WH.P15" would not provide enough certainty as a condition.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through from an existing local authority stormwater network, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or Rule WH.R7, or prohibited under WH.R13 is a discretionary activity provided the following conditions are met: (a) the resource consent application includes a Stormwater Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and (b) if the proposal is for greenfield development a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).</p>
S206.054	8 Whaitua Te Whanganui-a-Tara	Rule WH.R12: All other stormwater discharges - non-complying activity.	Amend	<p>Considers there is insufficient evidence to support non-complying activity status for what is considered an anticipated activity. Submitter is neutral to the rule, subject to other relief sought for the insertion of two rules relating to quarrying activities associated with significant mineral resources (Rules "WH.R4A" and "WH.R8A") being implemented.</p>	<p>Amend rule as follows:</p> <p>Rule WH.R12: All other stormwater discharges - non-complying activity The: (a) discharge of stormwater onto or into land, including where contaminants may enter groundwater, that is not permitted by Rule WH.R2, or (b) discharge of stormwater into water or onto or into land</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>where it may enter a surface water body or coastal water, that is not permitted by Rule WH.R3, or a restricted discretionary activity under Rules WH.R8 or WH.R9, or (c) discharge of stormwater from a high risk industrial or trade premise that is not permitted by Rule WH.R4, or the use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater from a high risk industrial or trade premise that does not meet the conditions of Rule WH.R11, or (d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater into water or onto or into land where it may enter water, that is not permitted by Rule WH.R5, or a controlled activity under Rule WH.R6 or WH.R7, or a discretionary activity under Rule WH.R10 or WH.R11, or a prohibited activity under WH.R13, or (e) discharge of stormwater from a quarrying activity that is not permitted by Rule WH.R4A, does not meet restricted discretionary by Rule WH.R8A,.</p>
<p>S206.055</p>	<p>8 Whaitua Te Whanganui-a-Tara</p>	<p>Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.</p>	<p>Oppose</p>	<p>Opposes the rule due to constraining existing quarry operations. Notes land where existing quarry operations take place which is identified as "unplanned greenfield development" is prohibited from discharge from an impervious surface, despite holding existing consents. Notes the creation of impervious surfaces within an active quarry is inevitable. Considers the need for a private plan change to enable continued operation of a quarry is costly for what should be an anticipated activity. Considers a less restrictive activity status is adequate to effectively manage effects, and enables case-by-case assessment to provide discretion for appropriate activities to occur. Notes the prohibited activity status applies to any activity regardless of scale, nature or effect. Notes the intention of the rule indicated in the s32 evaluation is to account for new greenfield urban development not previously planned, but that the rule would apply to all</p>	<p>Either delete Rule WH.R13 in its entirety</p> <p>or</p> <p>Amend Rule WH.R13:</p> <p>Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity The use of land for new urban development and the associated discharge of stormwater from impervious surfaces from the urban development within unplanned greenfield development that directly enters direct into water, or enters onto or into land where it may enter a surface water body or coastal water, including through from an existing or proposed stormwater network, is a prohibited activity. Note Any urban development within an area of unplanned greenfield development proposals will require a plan change</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				development. Consider insufficient evidence is provided in the s32 evaluation to justify the rule applying to all development, particularly the costs and benefits of applying the framework to quarrying activities, noting the framework would prevent both existing and future quarrying activities. If the intent of the rule is to target urban development, seeks clarification accordingly; otherwise if the intent of the rule is to account for all development, seeks it is deleted entirely.	to the relevant map (Map 86, 87, 88 or 89) to allow consideration of the suitability of the site and receiving catchment(s) for accommodating the water quality requirements of the National Policy Statement for Freshwater Management 2020, and the relevant freshwater and coastal water quality objectives of this Plan. Any plan change process should be considered concurrent with any associated change to the relevant district plan, to support integrated planning and assessment.
S206.056	8 Whaitua Te Whanganui-a-Tara	Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity.	Oppose	Opposes the mapping associated with the definition of "high erosion risk land (woody vegetation)", per the submitter's submission on the definition. Considers the rule limiting as it does not allow vegetation clearance of the specified land for most land uses. Considers the existing approach under Rules R104-107 of the NRP is more fit for purpose, noting the s32 evaluation does not identify implementation issues with the existing rule framework. Prefers existing rules are retained; should proposed rules remain, seeks the permitted rule provides for additional clearance up to 200m2, noting clearance greater than 200m2 is a controlled activity. Opposes the rule being subject to the Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	<ol style="list-style-type: none"> 1. Review mapping and definition of "erosion prone land". 2. Consider Rule WH.R17 under a Part 1 Schedule 1 process. 3. Amend Rule WH.R17 as follows: Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity Vegetation clearance on highest erosion risk land (woody vegetation) and any associated discharge of sediment to a surface water body is a permitted activity provided the following conditions are met: (a) the vegetation clearance is: (i) to implement an action in the erosion risk treatment plan for the farm, or (ii) for the control of pest plants, or (iii) no more than 200 m2 per property of vegetation clearance on highest erosion risk land (woody vegetation) in any consecutive 12-month period, and (b) debris from the vegetation clearance is not placed where it can enter a surface water body.
S206.057	8 Whaitua Te Whanganui-a-Tara	Rule WH.R18: Vegetation clearance on highest erosion risk land - controlled activity.	Neutral	Opposes the mapping associated with the definition of "high erosion risk land (woody vegetation)", per the submitter's submission on the definition. Notwithstanding this, supports the rule as it provides reasonable certainty to landowners that consent will be granted. Considers the rules could anticipate capturing the majority of vegetation clearance applications sought where the permitted rule is not met. Opposes the rule being subject to the	<p>Review mapping and definition of "erosion prone land".</p> <p>Consider Rule WH.R18 under a Part 1 Schedule 1 process.</p> <p>Retain a controlled activity rule for vegetation clearance greater than 200 m2 over high erosion risk land.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	
S206.058	8 Whaitua Te Whanganui-a-Tara	Rule WH.R19: Vegetation clearance - discretionary activity.	Amend	Submitter is neutral to the rule, noting their support for Rule WH.R18, which is anticipated to capture most vegetation clearance that does not meet the permitted rule. Opposes the rule being subject to the Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	Review mapping and definition of "erosion prone land". Consider Rule WH.R18 under a Part 1 Schedule 1 process.
S206.059	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Amend	Notes the conjunctive requirement in clause (b) is an error, and has been corrected to "or" with RMA Clause 16. On the basis of this correction, the submitter is neutral to the rule. Notes the rule only relates to earthworks and not the associated discharge to water and considers this an error given the associated restricted discretionary and non-complying rules refer to the associated discharge. Considers condition (g) would create an inability for any earthworks to meet the rule, as any exposed sediment would result in a discharge onto land where it may enter a surface water body. Notes the rule would apply alongside Rule R91, which specifies further discharge parameters. Opposes the rule being subject to the Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	Consider Rule WH.R23 under a Part 1 Schedule 1 process. Amend Rule WH.R23 : Rule WH.R23: Earthworks - permitted activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including from a stormwater network, is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network. Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment Control Guide for Land Disturbing Activities in the Wellington Region (2021).
S206.060	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Opposes direction to avoid earthworks over winter months, per the submitter's submission on Policy WH.P31. Considers the rule, in conjunction with Rule WH.R25 and Policy WH.P31 effectively prohibits earthworks over winter months. Considers there is insufficient evidence to support this, and it is unreasonable for earthworks to cease over this period, particularly year-round activities such as quarrying. Considers the intent of the policy direction to minimise the risk of an uncontrolled discharge can be appropriately managed through matter of discretion 1. Therefore, seeks clause (b) and matter of discretion 8 are deleted.	Amend rule as follows: Rule WH.R24: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule WH.R23 is a restricted discretionary activity, provided the following conditions are met: (a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m3, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m3, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than: (i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or (ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year. Matters for discretion 1. The location, area, scale, volume, duration and staging and timing of works 2. The design and suitability of erosion of sediment control measures including consideration of hazard mitigation and the risk of accelerated soil erosion associated the staging of

Monitoring and reporting requirements</p>
S206.061	8 Whaitua Te Whanganui-a-Tara	Rule WH.R25: Earthworks - non-complying activity.	Oppose	Opposes non-complying activity status. Considers the rule, in conjunction with Policy WH.P31, effectively prohibits earthworks during winter months. Considers there is insufficient evidence to support this, and that it does not recognise activities that are required year-round. Seeks amendment to	<p>Amend rule as follows:</p> <p>Rule WH.R25: Earthworks - non-complying discretionary activity</p> <p>Earthworks, and the associated discharge of sediment into a surface water body or coastal water or onto or into land</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				discretionary activity status, subject to other relief sought for the insertion of two rules relating to quarrying activities associated with significant mineral resources (Rules "WH.R4A" and "WH.R8A") being implemented. Considers discretionary activity status will enable consideration of all relevant effects while accepting that not all earthworks will be contrary to the NRP.	where it may enter a surface water body or coastal water from earthworks, including via a stormwater network, that does not comply with Rule WH.R24 is a non-complying discretionary activity.
S206.062	9 Te Awarua-o-Porirua Whaitua	Objective P.O6: Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved.	Amend	Concerned over whether the improvements sought are too ambitious and unrealistic in the proposed timeframe. Considers the requirement to move from the existing D state to B state for periphyton biomass; and from the existing C state to A state for E. Coli will require significant land use change. Considers (c) unrealistic, and that it does not account for seasonal shifts in water quality and ecological condition. Considers there is no certainty for what the expectations are.	Revise the improvement requirements of Table 9.2 or the timeframe to ensure that outcomes can be realistically achieved; and Amend Objective P.O6: Objective P.O6 Water quality, habitats, water quantity and ecological processes of rivers are maintained or improved by ensuring that: (a) where a target attribute state in Table 9.2 is not met, the state of that attribute is improved in all rivers and river reaches in the part Freshwater Management Unit so that the target attribute state is met within the timeframe indicated within Table 9.2, and (b) where a target attribute state in Table 9.2 is met, the state of that attribute is at least maintained in all rivers within the part Freshwater Management Unit, and (c) where any attribute in any river or river reach is in a better state than the target attribute state, that attribute is at least maintained at the better state in every river or river reach, and (d) where a huanga of mahinga kai and Māori customary use for locations identified in Schedule B (Ngā Taonga Nui a Kiwa) and is not achieved, the state of the river or river reach is improved.
S206.063	9 Te Awarua-o-Porirua Whaitua	Policy P.P1: Improvement of	Amend	Considers (a) requires progressive reduction in the load and concentration of contaminants for all water bodies, regardless of whether improvement is required or not. Seeks clarification accordingly.	Amend policy as follows: Policy P.P1: Improvement of aquatic ecosystem health Aquatic ecosystem health will be improved by:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		aquatic ecosystem health.		<p>Considers (b) would apply to all habitats, including exotic. Notes the NPS-FM does not require restoration of all habitats, but is rather limited to indigenous wetland habitat, where the habitat is degraded. Seeks clarification accordingly.</p> <p>Considers it unclear what is being coordinated and prioritised in (d), and what "catchments that require changes to land use activities that impact water" means. Considers the clause should refer to enabling work programmes that provide for improvement. Suggests consideration as to whether clause is better suited as a method rather than a policy directive.</p>	<p>(a) progressively reducing the load or concentration of contaminants where improvement in water quality is required, particularly sediment, nutrients, pathogens and metals, entering water, and</p> <p>(b) restoring indigenous habitats that have been degraded, and</p> <p>(c) enhancing the natural flow regime of rivers and managing water flows and levels, including where there is interaction of flows between surface water and groundwater, and</p> <p>(d) co-ordinating and prioritising enabling work programmes in catchments that seek to improve aquatic ecosystem health require changes to land use activities that impact on water.</p>
S206.064	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities to achieve target attribute states and coastal water objectives.	Oppose	<p>Considers clause (a) prescribes the activity status of an activity, rather than focusing on an adverse effect. Notes "unplanned greenfield development" may be applied generally, given "greenfield development" is not defined, meaning that development within an area mapped as "unplanned" would be subject to this direction. Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic</p>	<p>Amend policy as follows:</p> <p>Policy P.P2 Management of activities to achieve target attribute states and coastal water objectives Target attribute states and coastal water objectives will be achieved by regulating discharges and land use activities in the Plan, and non-regulatory methods, including Freshwater Action Plans, by:</p> <p>(a) prohibiting unplanned greenfield development and for other greenfield developments minimising the contaminants generated by urban development, and where there are more than minor residual adverse effects caused by stormwater contaminants requiring aquatic offsetting in first instance, which may include a requiring financial contributions as to an aquatic offset adverse effects from residual stormwater contaminants, and</p> <p>(b) encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and</p> <p>(c) imposing hydrological controls on urban development and stormwater discharges to rivers</p> <p>(d) requiring a reduction in contaminant loads from urban wastewater and stormwater networks, and</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>compensation where aquatic offsetting is not able to be provided. Acknowledges financial contributions may be an appropriate form of aquatic offset, however seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation.</p> <p>Supports the direction of clause (e), however notes the planting of riparian margins may not always be practicable.</p>	<p>(e) stabilising stream banks by excluding livestock from waterbodies and planting riparian margins with indigenous vegetation where practicable, and (f) requiring the active management of earthworks, forestry, cultivation, and vegetation clearance activities, and (g) soil conservation treatment, including revegetation with woody vegetation, of land with high erosion risk, and (h) requiring farm environment plans (including Freshwater Farm Plans) to improve farm practices that impact on freshwater.</p>
S206.065	9 Te Awarua-o-Porirua Whaitua	Policy P.P5: Localised adverse effects of point source discharges	Amend	<p>Considers the policy implies clauses (a)-(e) must be avoided even within the mixing zone. Considers this is not a realistic requirement, as any discharge can cause at least one of those effects at a localised level. Seeks changes to clarify the policy focus on limiting those effects to the mixing zone, and avoiding significant adverse effects beyond the zone of reasonable mixing.</p>	<p>Amend policy as follows:</p> <p>Policy P.P5: Localised adverse effects of point source discharge The localised adverse effects of point source discharges to freshwater and coastal water are as far as practicable retained within beyond the zone of reasonable mixing. are avoided or minimised. Significant adverse effects beyond the zone of reasonable mixing must be avoided, including by avoiding the following effects: (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials, or (b) any conspicuous change in colour or visual clarity, or (c) any emission of objectionable odour, or (d) the rendering of freshwater unsuitable for consumption by farm animals, or (e) any significant adverse effects on aquatic life including through: (i) change in temperature, or (ii) reduced dissolved oxygen in surface water bodies, or (iii) increased toxicity effects.</p>
S206.066	9 Te Awarua-o-Porirua Whaitua	Policy P.P7 Discharges to groundwater	Amend	<p>Considers the requirement that all discharges "shall not degrade" is not clear or directly measurable. Considers direction should be focused on "maintaining" groundwater quality based on its use, in accordance with NPS-FM Policy 5. Notes there is no indication on what "degraded groundwater"</p>	<p>Amend policy as follows:</p> <p>Policy P.P7: Discharges to groundwater All discharges to land that may enter groundwater, and discharges to groundwater, shall maintain not degrade the quality of groundwater to continue to provide for its existing and future use, and wWhere the quality of</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				means, and considers it must be aligned with a limit depending on the use of the groundwater.	groundwater quality is not meeting national guidelines is degraded, existing discharges shall be managed in a way that to improves groundwater quality.
S206.067	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of stormwater discharges	Amend	Considers the policy would apply to stormwater discharges from a quarry, and that the direction is not practicable. Considers the requirements appropriate for urban development, but not appropriate for non-urban activities. Seeks amendment to relate specifically to stormwater discharges from greenfield development, per the submitter's submission point for the definition of "greenfield development".	Amend policy as follows: Policy P.P10: Managing adverse effects of stormwater discharges All stormwater discharges from new greenfield development and associated land use activities shall be managed by: (a) using source control to minimise contaminants in the stormwater discharge and maximise, to the extent practicable, the removal of contaminants from stormwater, including through the use of water sensitive urban design measures, and (b) using hydrological control and water sensitive urban design measures to avoid, remedy or mitigate adverse effects of stormwater quantity and maintain, to the extent practicable, natural stream flows, and (c) installing, where practicable, a stormwater treatment system for stormwater discharges from a property or properties taking into account: (i) the treatment quality (load reduction factor), and (ii) opportunities for the retention or detention of stormwater flows or volume, including any flood storage volume required, and (iii) any potential adverse effects that may arise as a result of the stormwater treatment system or discharge, including erosion and scour, and localised adverse water quality effects, and (iv) inspections, monitoring and ongoing maintenance, including costs, to maintain functionality in terms of treatment quality and capacity, and (v) existing or proposed communal stormwater treatment systems in the stormwater catchment or sub-catchment, or part Freshwater Management Unit.
S206.068	9 Te Awarua-	Policy P.P11: Discharge	Amend	Seeks the removal of "contaminants", noting that the term is all-encompassing. Considers the direction of clause (b) to avoid all contaminants is	Amend policy as follows: Policy P.P11: Discharges of contaminants hazardous

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	o-Porirua Whaitua	s of a contamina nt in stormwate r from high risk industrial or trade premises.		achievable. Considers that specific contaminants of concern should be stated, otherwise the direction should be limited to hazardous substances. Considers the policy can only regulate discharges where they enter "water", in accordance with RMA s15. Considers the policy and associated rules imply "an existing or new stormwater network" is a receiving environment, noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers that rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but can not manage effects before that point. Considers if the reference is retained, that it must be clarified as being "from" the stormwater network.	substances in stormwater from high risk industrial or trade premises The discharge of stormwater to water, including discharges via from the stormwater network, from a high risk industrial or trade premise shall be managed by: (a) having procedures and equipment in place to contain any spillage of hazardous substances for storage or removal, and (b) avoiding contaminants or hazardous substances being entrained in stormwater and discharged to a surface water body or coastal water, including via the stormwater network, or where avoidance is not practicable, implementing good management practice to avoid or minimise adverse effects on the environment, including reducing contaminant volumes and concentrations as far as practicable, and applying measures, including secondary containment, treatment, management procedures, and monitoring, and (c) installing an interceptor where there is a risk of petroleum hydrocarbons entering into the stormwater network, a surface water body or coastal water, and (d) avoiding or mitigating adverse effects of stormwater discharges on groundwater quality.
S206.069	9 Te Awarua- o-Porirua Whaitua	Policy P.P13: Stormwate r discharges from new and redevelop ed impervious surfaces.	Amend	Seeks consequential amendments in accordance with the submitter's relief sought for the insertion of a definition for "greenfield development", and to directly reference urban development as the activity the policy relates to.	Amend Policy P.P13 as follows: Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces The adverse effects of stormwater discharges from new greenfield development shall be minimised, and adverse effects of stormwater discharges from existing urban areas caused by urban development reduced to the extent practicable, upon redevelopment, through implementing: (a) an on-site stormwater treatment system or an off-site communal stormwater treatment system that is designed to: (i) receive at least 85% of the mean annual runoff volume stormwater generated from new and redeveloped impervious surfaces of the property, and (ii) achieve copper and zinc load reductions factors equivalent to that of a raingarden/bioretention device, and (b) where stormwater discharges will enter a river,

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					hydrological controls either on-site, or off-site via a communal
S206.070	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Amend	<p>Considers financial contribution provisions inconsistent with the NPS-FM, and limits the ability to implement the effects management hierarchy. Notes that aquatic offsetting or compensation is required by the NPS-FM where there are more than minor residual adverse effects, rather than residual adverse effects generally. Considers a contribution mechanism to address minor/residual effects unlikely to be effective or efficient, and concerned that financial contributions are the only form of offset that may be provided. Considers it contrary to the NPS-FM to not allow consideration for the principles set out in Appendix 6 of the NPS-FM. Notes the provisions limit the management of residual adverse effects to aquatic offsetting only, whereas the effects management hierarchy provides for aquatic compensation where aquatic offsetting is not able to be provided. Acknowledges financial contributions may be an appropriate form of aquatic offset, however seeks the policy does not frustrate the ability for other forms of aquatic offsetting or aquatic compensation.</p> <p>Considers the policy and associated rules imply "an existing or new stormwater network" is a receiving environment, noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers that rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but can not manage effects before that point. Considers if the reference is retained, that it must be clarified as being "from" the stormwater network.</p> <p>Seeks consequential amendments per the</p>	<p>Amend policy as follows:</p> <p>Policy P.P14: Stormwater contaminant offsetting for new greenfield development Where there are more than minor residual adverse effects of residual-(post-treatment) caused by stormwater contaminants from new greenfield development, roads (not already captured as part of a greenfield development) and state highways where the discharge will enter a surface water body or coastal water, including via from an existing or new stormwater network, those effects must be managed by way of an aquatic offset or aquatic compensation, including through the following:</p> <p>(a) are to be provide an aquatic offset by way of a financial contribution in accordance with Schedule 30 (financial contribution), or</p> <p>(b) provide an aquatic offset in accordance with the principles for aquatic offsetting in Appendix 6 of the NPS-FM, and</p> <p>(c) where more than minor residual adverse effects cannot be offset, aquatic compensation must be provided in accordance with the principles for aquatic compensation in Appendix 7 of the NPS-FM.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				submitter's submission point for the definition of "greenfield development".	
S206.071	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Oppose	Considers there is insufficient evidence in the s32 evaluation to justify the policy direction and to suggest that all new stormwater discharges from unplanned greenfield development will cause significant effects.	Delete policy
S206.072	9 Te Awarua-o-Porirua Whaitua	Policy P.P24: Managing rural land use change.	Amend	Seeks amendment to clarify that the direction relates to primary production and not other rural land use. Considers the policy would apply to other land use activities in the rural environment, including quarrying. Suggests the term "primary production" is used to better reflect the direction.	Amend policy as follows: Policy P.P24: Managing rural land use change Manage the actual and potential adverse effects of changing land use from low to higher intensity primary production rural land use by: (a) controlling rural land use change that is greater than 4ha and associated diffuse discharge where there is a risk the diffuse discharges of nitrogen, phosphorus, sediment or Escherichia coli may increase, and (b) only granting resource consent for such a change in land use when, in accordance with Policy P75, the diffuse discharge of nitrogen, phosphorus, sediment and Escherichia coli of the more intensive activity is demonstrated to be the same or less than the activities being replaced.
S206.073	9 Te Awarua-o-Porirua Whaitua	Policy P.P25: Promoting stream shading.	Support	Considers shading streams is the most accessible and practicable method of reducing periphyton. Notes the use of "promoting" rather than "requiring" continues to enable other methods.	Retain as notified
S206.074	9 Te Awarua-o-Porirua Whaitua	Policy P.P27: Management of	Amend	Considers the policy focuses on "risk" rather than effect. Considers the relevance of risk under the RMA is primarily associated with natural hazards rather than a potential discharge. Seeks replacement of risk with "adverse effects" to align	Policy P.P27: Management of earthworks The risk adverse effects associated with of sediment discharges from earthworks shall be managed by: Amend policy as follows:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		earthworks sites.		with RMA Part 2. Considers clause (a) refers to an outcome that is sought, rather than an activity or effect. Considers the direction of clause (b) to limit the amount of land disturbed is not always practicable.	<p>(a) requiring retention of soil and sediment on the land undertaking earthworks in accordance with using good management practices for erosion and sediment control measures that are appropriate to the scale and nature of the activity, and in general accordance with the GWRC Erosion and Sediment Control Guideline for the Wellington Region (2021), for the duration of the land disturbance, and</p> <p>(b) where practicable, limiting the amount of land disturbed at any time, and</p> <p>(c) designing and implementing earthworks with knowledge of the existing environmental site constraints, specific engineering requirements and implementation of controls to limit the discharge of sediment to receiving environments, and</p> <p>(d) requiring erosion and sediment control measures to be installed prior to, and during earthworks and ensuring those controls remain in place and are maintained until the land is stabilised against erosion.</p>
S206.075	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	<p>Notes the policy refers to "an existing or new stormwater network" and "artificial watercourse" as a receiving environment. Considers the policy can only regulate discharges where they enter "water", in accordance with RMA s15, and that water within a stormwater network is not subject to Regional Council jurisdiction. Further notes artificial watercourses are often piped or within tanks and therefore not subject to RMA s15. Seeks changes to only refer to discharges to natural receiving waterbodies.</p> <p>Considers the requirement in clause (c) for a "suitably qualified person" to monitor the discharge is not always practicable and will be unreasonably costly. Seeks amendment to provide discretion and to provide for a "suitably trained person".</p> <p>Considers the policy particularly prescriptive,</p>	<p>Amend policy as follows:</p> <p>Policy P.P28: Discharge standard for earthworks The discharge of sediment from earthworks over an area greater than 3,000m² shall:</p> <p>(a) not exceed 100g/m³ at the point of discharge where the discharge is to a surface water body, or coastal water, stormwater network or to an artificial watercourse, except that when the discharge is to a river with background total suspended solids that exceed 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than:</p> <p>(i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>(ii) 30% in any other river, and</p> <p>(b) be managed using good management practices in accordance with the GWRC Erosion and Sediment Control Guidelines for the Wellington Region (2021), to achieve the discharge standard in (a), and</p>

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				reflecting conditions of a rule or consent rather than a policy directive.	(c) where required , be monitored by a suitably qualified or trained person, and the results reported to the Wellington Regional Council.
S206.076	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Considers the policy does not anticipate activities that require earthworks year-round such as quarrying. Considers shutting down winter earthworks within an active quarry will adversely impact regional aggregate supply and the ability to respond to a natural disaster. Considers insufficient justification is provided in the s32 evaluation for the shut down period. Disagrees with the assumption that increased sediment discharges are more likely during winter months, noting that unpredictable rainfall events can occur at any time of year, which will increase with climate change. Further notes that receiving environments are less vulnerable during winter months as water temperatures are lower and flows are higher. Seeks removal of the policy and considers risk associated with unpredictable weather events can be managed through existing provisions.	Delete policy
S206.077	9 Te Awarua-o-Porirua Whaitua	Rule P.R1: Point source discharges of specific contaminants - prohibited activity.	Amend	Seeks amendment to reference to "stormwater network", noting that they are piped and therefore not considered "water" or subject to Regional Council jurisdiction. Considers the rule may apply to stormwater discharges to a surface waterbody from a stormwater network, but can not manage effects before that point.	Amend rule as follows: Rule P.R1: Point source discharges of specific contaminants - prohibited activity The point source discharge of: (a) chemical cleaning products including vehicle cleaning products, detergents, bleach and disinfectant, or (b) paint and other substances used for the purpose of protecting surfaces (including stain and paint wash), or (c) solvents including paint stripper, or (d) liquid fuels, including diesel, petrol, oil, grease, except where these have been treated by an interceptor system to collect hazardous contaminants and the treated discharge does not contain more than 15 milligrams per litre of total petroleum hydrocarbons, or (e) radiator coolant, or (f) cooking oil, or (g) cement wash, cement slurry and concrete cutting waste,

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S206.081	9 Te Awarua-o-Porirua Whaitua	Rule P.R10: Stormwater from new and redeveloped impervious surfaces-discretionary activity.	Amend	Seeks deletion of clause (b), in accordance with the submitter's relief sought for Policy P.P15. Considers the potential to amend the clause to be "in accordance with Policy P.P15" would not provide enough certainty as a condition.	Amend rule as follows: Rule P.R10: Stormwater from new and redeveloped impervious surfaces - discretionary activity The use of land for the creation of new, or redevelopment of existing impervious surfaces (including greenfield development and redevelopment of existing urbanised property) and the associated discharge of stormwater into water, or onto or into land where it may enter a surface water body or coastal water, including through from an existing local authority stormwater network, that is not permitted by Rule P.R5, or a controlled activity under Rule P.R6 or Rule P.R7, or prohibited under P.R12 is a discretionary activity provided the following conditions are met: (a) the resource consent application includes a Stormwater Impact Assessment prepared in accordance with Schedule 29 (impact assessment), and (b) if the proposal is for greenfield development a financial contribution is paid for the purpose of offsetting the adverse effects of residual stormwater contaminants. The level of contribution and when it is required is set out in Schedule 30 (financial contributions).
S206.082	9 Te Awarua-o-Porirua Whaitua	Rule P.R11: All other stormwater discharges - non-complying activity.	Amend	Considers there is insufficient evidence to support non-complying activity status for what is considered an anticipated activity. Submitter is neutral to the rule, subject to other relief sought for the insertion of rules relating to quarrying activities associated with significant mineral resources (Rules "WH.R4A", "WH.R8A", "P.R4A" and "P.R8A") being implemented.	Amend rule as follows: Rule P.R11: All other stormwater discharges - non-complying activity The: (a) discharge of stormwater onto or into land, including where contaminants may enter groundwater, that is not permitted by Rule P.R2, or (b) discharge of stormwater into water or onto or into land where it may enter a surface water body or coastal water, that is not permitted by Rule P.R3, or a restricted discretionary activity under Rules P.R8, or (c) discharge of stormwater from a high risk industrial or trade premise that is not permitted by Rule P.R4, or the use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater from a high risk industrial or trade premise that

**Proposed Change 1 to the Natural Resources Plan –

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>does not meet the conditions of Rule P.R10, or (d) use of land for the creation of new or redevelopment of existing impervious surfaces and the associated discharge of stormwater water or onto or into land where it may enter water, that is not permitted by Rule P.R5, or a controlled activity under Rules P.R6 or P.R7, or a discretionary activity under Rule P.R9, or a prohibited activity under Rule P.R12, or (e) discharge of stormwater from a quarrying activity that is not permitted by Rule WH.R4A, does not meet restricted discretionary by Rule WH.R8A,.</p>
S206.083	9 Te Awarua-o-Porirua Whaitua	Rule P.R12 - Stormwater discharges from new unplanned greenfield development - prohibited activity.	Oppose	<p>Opposes the rule due to constraining existing quarry operations. Notes land where existing quarry operations take place which is identified as "unplanned greenfield development" is prohibited from discharge from an impervious surface, despite holding existing consents. Notes the creation of impervious surfaces within an active quarry is inevitable. Considers the need for a private plan change to enable continued operation of a quarry is costly for what should be an anticipated activity. Considers a less restrictive activity status is adequate to effectively manage effects, and enables case-by-case assessment to provide discretion for appropriate activities to occur. Notes the prohibited activity status applies to any activity regardless of scale, nature or effect. Notes the intention of the rule indicated in the s32 evaluation is to account for new greenfield urban development not previously planned, but that the rule would apply to all development. Consider insufficient evidence is provided in the s32 evaluation to justify the rule applying to all development, particularly the costs and benefits of applying the framework to quarrying activities, noting the framework would prevent both existing and future quarrying activities. If the intent of the rule is to target urban development, seeks clarification accordingly; otherwise if the intent of the</p>	<p>Either delete Rule P.R11 in its entirety</p> <p>or</p> <p>Amend Rule P.R11: Rule P.R13: Stormwater from new unplanned greenfield development - prohibited activity The use of land for new urban development and the associated discharge of stormwater from impervious surfaces from the urban development within unplanned greenfield development that directly enters direct into water, or enters onto or into land where it may enter a surface water body or coastal water, including through from an existing or proposed stormwater network, is a prohibited activity. Note Any urban development within an area of unplanned greenfield development proposals will require a plan change to the relevant map (Map 86, 87, 88 or 89) to allow consideration of the suitability of the site and receiving catchment(s) for accommodating the water quality requirements of the National Policy Statement for Freshwater Management 2020, and the relevant freshwater and coastal water quality objectives of this Plan. Any plan change process should be considered concurrent with any associated change to the relevant district plan, to support integrated planning and assessment.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				rule is to account for all development, seeks it is deleted entirely.	
S206.084	9 Te Awarua-o-Porirua Whaitua	Rule P.R16: Vegetation clearance on highest erosion risk land-permitted activity.	Oppose	Opposes the mapping associated with the definition of "high erosion risk land (woody vegetation)", per the submitter's submission on the definition. Considers the rule limiting as it does not allow vegetation clearance of the specified land for most land uses. Considers the existing approach under Rules R104-107 of the NRP is more fit for purpose, noting the s32 evaluation does not identify implementation issues with the existing rule framework. Prefers existing rules are retained; should proposed rules remain, seeks the permitted rule provides for additional clearance up to 200m2, noting clearance greater than 200m2 is a controlled activity. Opposes the rule being subject to the Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	<ol style="list-style-type: none"> 1. Review mapping and definition of "erosion prone land". 2. Consider Rule P.R16 under a Part 1 Schedule 1 process. 3. Amend Rule P.R16 as follows: Rule WH.R17: Vegetation clearance on highest erosion risk land - permitted activity Vegetation clearance on highest erosion risk land (woody vegetation) and any associated discharge of sediment to a surface water body is a permitted activity provided the following conditions are met: (a) the vegetation clearance is: (i) to implement an action in the erosion risk treatment plan for the farm, or (ii) for the control of pest plants, or (iii) no more than 200 m2 per property of vegetation clearance on highest erosion risk land (woody vegetation) in any consecutive 12-month period, and (b) debris from the vegetation clearance is not placed where it can enter a surface water body.
S206.085	9 Te Awarua-o-Porirua Whaitua	Rule P.R17: Vegetation clearance on highest erosion risk land - controlled activity.	Neutral	Opposes the mapping associated with the definition of "high erosion risk land (woody vegetation)", per the submitter's submission on the definition. Notwithstanding this, supports the rule as it provides reasonable certainty to landowners that consent will be granted. Considers the rules could anticipate capturing the majority of vegetation clearance applications sought where the permitted rule is not met. Opposes the rule being subject to the Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	<p>Review mapping and definition of "erosion prone land".</p> <p>Consider Rule P.R17 under a Part 1 Schedule 1 process.</p> <p>Retain a controlled activity rule for vegetation clearance greater than 200 m2 over high erosion risk land.</p>
S206.086	9 Te Awarua-o-Porirua Whaitua	Rule P.R18: Vegetation clearance -	Amend	Submitter is neutral to the rule, noting their support for Rule P.R17, which is anticipated to capture most vegetation clearance that does not meet the permitted rule. Opposes the rule being subject to the Freshwater Planning Process, as it relates to	<p>Review mapping and definition of "erosion prone land".</p> <p>Consider Rule P.R18 under a Part 1 Schedule 1 process.</p>

**Proposed Change 1 to the Natural Resources Plan –
Submission Points Ordered by Submitter Alphabetically**

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		discretionary activity.		erosion and soil conservation rather than specifically freshwater.	
S206.087	9 Te Awarua-o-Porirua Whaitua	Rule P.R22: Earthworks - permitted activity.	Amend	Notes the conjunctive requirement in clause (b) is an error, and has been corrected to "or" with RMA Clause 16. On the basis of this correction, the submitter is neutral to the rule. Notes the rule only relates to earthworks and not the associated discharge to water and considers this an error given the associated restricted discretionary and non-complying rules refer to the associated discharge. Considers condition (g) would create an inability for any earthworks to meet the rule, as any exposed sediment would result in a discharge onto land where it may enter a surface water body. Notes the rule would apply alongside Rule R91, which specifies further discharge parameters. Opposes the rule being subject to the Freshwater Planning Process, as it relates to erosion and soil conservation rather than specifically freshwater.	Consider Rule P.R22 under a Part 1 Schedule 1 process. Amend Rule P.R22 as follows: Rule P.R22: Earthworks - permitted activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including from a stormwater network, is a permitted activity, provided the following conditions are met: (a) the earthworks are to implement an action in the erosion risk treatment plan for the farm, or (b) the earthworks are to implement an action in the farm environment plan for the farm, and or (c) the area of earthworks does not exceed 3,000m ² per property in any consecutive 12-month period, and (d) the earthworks shall not occur within 5m of a surface water body or the coastal marine area, except for earthworks undertaken in association with Rules R122, R124, R130, R131, R134, R135, and R137, and (e) soil or debris from earthworks is not placed where it can enter a surface water body or the coastal marine area, including via a stormwater network, and (f) the area of earthworks must be stabilised within six months after completion of the earthworks, and (g) there is no discharge of sediment from earthworks and/or flocculant into a surface water body, the coastal marine area, or onto land that may enter a surface water body or the coastal marine area, including via a stormwater network, and (h) erosion and sediment control measures shall be used to prevent a discharge of sediment where a preferential flow path connects with a surface water body or the coastal marine area, including via a stormwater network. Note Earthworks management guidance is available within the Greater Wellington Regional Council, Erosion and Sediment

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					Control Guide for Land Disturbing Activities in the Wellington Region (2021).
S206.088	9 Te Awarua-o-Porirua Whaitua	Rule P.R23: Earthworks - restricted discretionary activity.	Amend	Opposes direction to avoid earthworks over winter months, per the submitter's submission on Policy P.P29. Considers the rule, in conjunction with Rule P.R24 and Policy P.P29 effectively prohibits earthworks over winter months. Considers there is insufficient evidence to support this, and it is unreasonable for earthworks to cease over this period, particularly year-round activities such as quarrying. Considers the intent of the policy direction to minimise the risk of an uncontrolled discharge can be appropriately managed through matter of discretion 1. Therefore, seeks clause (b) and matter of discretion 8 are deleted.	<p>Amend rule as follows:</p> <p>Rule P.R23: Earthworks - restricted discretionary activity Earthworks and the associated discharge of sediment and/or flocculant into a surface water body or coastal water, or onto or into land where it may enter a surface water body or coastal water, including via a stormwater network, that does not comply with Rule P.R22 is a restricted discretionary activity, provided the following conditions are met:</p> <p>(a) the concentration of total suspended solids in the discharge from the earthworks shall not exceed 100g/m³, except that, if at the time of the discharge the concentration of total suspended solids in the receiving water at or about the point of discharge exceeds 100g/m³, the discharge shall not, after the zone of reasonable mixing, decrease the visual clarity in the receiving water by more than:</p> <p>(i) 20% in River class 1 and in any river identified as having high macroinvertebrate community health in Schedule F1 (rivers/lakes), or</p> <p>(ii) 30% in any other river, and (b) earthworks shall not occur between 1st June and 30th September in any year.</p> <p>Matters for discretion</p> <ol style="list-style-type: none"> 1. The location, area, scale, volume, duration and staging and timing of works 2. The design and suitability of erosion of sediment control measures including consideration of hazard mitigation and the risk of accelerated soil erosion associated the staging of works and progressive stabilisation 3. The placement and treatment of stockpiled materials on the site, including requirements to remove material if it is not to be reused on the site 4. The proportion of unstabilised land in the catchment 5. The adequacy and efficiency of stabilisation devices for sediment control 6. Any adverse effects on: <ol style="list-style-type: none"> (i) groundwater, surface water bodies and their margins,

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					<p>particularly surface water bodies within sites identified in Schedule A (outstanding water bodies), Schedule B (Ngā Taonga Nui a Kiwa), Schedule C (mana whenua), Schedule F (ecosystems and habitats with indigenous biodiversity), Schedule H (contact recreation and Māori customary use) or Schedule I (important trout fishery rivers and spawning waters)</p> <p>(ii) group drinking water supplies and community drinking water supplies</p> <p>(iii) mauri, water quality (including water quality in the coastal marine area), aquatic and marine ecosystem health, aquatic and riparian habitat quality, indigenous biodiversity values, mahinga kai and critical life cycle periods for indigenous aquatic species</p> <p>(iv) the natural character of lakes, rivers, natural wetlands and their margins and the coastal environment</p> <p>(v) natural hazards, land stability, soil erosion, sedimentation and flood hazard management including the use of natural buffers</p> <p>7. Duration of the consent</p> <p>8. Preparation required for the close-down period (from 1st June to 30th September each year) and any maintenance activities required during this period</p> <p>9. Monitoring and reporting requirements</p>
S206.089	9 Te Awarua-o-Porirua Whaitua	Rule P.R24: Earthworks - non-complying activity.	Oppose	<p>Opposes non-complying activity status. Considers the rule, in conjunction with Policy P.P29, effectively prohibits earthworks during winter months. Considers there is insufficient evidence to support this, and that it does not recognise activities that are required year-round. Seeks amendment to discretionary activity status, subject to other relief sought for the insertion of rules relating to quarrying activities associated with significant mineral resources (Rules "WH.R4A", "WH.R8A", "P.R4A" and "P.R8A") being implemented. Considers discretionary activity status will enable consideration of all relevant effects while accepting that not all earthworks will be contrary to the NRP.</p>	<p>Amend rule as follows:</p> <p>Rule P.R24: Earthworks - non-complying discretionary activity</p> <p>Earthworks, and the associated discharge of sediment into a surface water body or coastal water or onto or into land where it may enter a surface water body or coastal water from earthworks, including via a stormwater network, that does not comply with Rule P.R24 is a non-complying discretionary activity.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S206.090	12 Schedule s	Schedule 29: Stormwater Impact Assessments.	Neutral	Supports the promotion of best practice in the preparation of stormwater impact assessments, however opposes the schedule if it applied to quarrying activities. Subject to other relief sought for the insertion of rules relating to quarrying activities associated with significant mineral resources (Rules "WH.R4A", "WH.R8A", "P.R4A" and "P.R8A"), the schedule would not apply to quarrying activities and the submitter would be neutral.	Neutral, subject to relief sought for insertion of new Rules WH.R4A and WH.R8A being implemented; Or; Delete provision
S206.091	12 Schedule s	Schedule 30: Financial Contributions.	Neutral	Considers requirement of a financial contribution as offset may only be applied where it is optional, along with other forms of aquatic offsetting. Subject to relief sought by the submitter regarding Policy WH.P15 and Rule WH.R11, the submitter is neutral to the schedule. Notes the s32 states there is no "double-dipping" of development contributions as contributions collected by territorial authorities are for the installation and maintenance of pipes, whereas contributions collected by GWRC are for water quality improvements. Considers it unclear how GWRC and local authorities will distinguish between collected funds that are distributed to a stormwater network utility operator.	Neutral, subject to relief sought for Policy WH.P15 and Rule WH.R11 being implemented; Or; Delete provision
S206.092	12 Schedule s	Schedule 33: Vegetation Clearance Erosion and Sediment Management Plan.	Amend	Considers objective (d) under part B is not practicable, noting that restoring and revegetating is not always practicable, particularly for activities such as quarrying where surfaces remain exposed. Opposes the schedule being subject to the Freshwater Planning Process, as it directly relates to erosion and soil conservation rather than freshwater.	Consider Schedule 33 under a Part 1 Schedule 1 process. Amend Part B of Schedule 33: A Management objectives The Erosion and Sediment Management Plan must demonstrate that the measures adopted to address the identified risks will: (a) minimise sediment loss from the vegetation clearance by adopting, as a minimum, good management practice, and (b) avoid an increase in risk of loss of sediment to water relative to the risk of loss that exists from the land in a natural state, and (c) minimise the discharge of water and sediment resulting from the vegetation clearance into a surface water body, and

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
					(d) where appropriate , provide for the land to be restored and revegetated with appropriate species.
S206.093	13 Maps	Map 89: Unplanned greenfield areas - Hutt City Council.	Oppose	Notes Map 89 identifies part of the Belmont Quarry site as "unplanned greenfield development". Seeks mapping is updated to ensure that no part of the submitter's sites are captured as unplanned greenfield development to avoid misinterpretation.	Amend Map 89 to exclude Winstone's sites as unplanned greenfield development being parcels legally described as: Part Lot 1 Deposited Plan 22561, Lot 1 Deposited Plan 60552, Lot 5 Deposited Plan 322126, Lot 4 Deposited Plan 322126, Lot 100 Deposited Plan 322126, and Lot 1 Deposited Plan 28205
S206.094	13 Maps	Map 94: Highest erosion risk land (Woody vegetation clearance) - Te Whanganu i-a-Tara.	Oppose	Concerned with the accuracy of the mapping proposed for highest erosion risk land, particularly highest erosion risk land (woody vegetation), which currently includes land within the active Belmont Quarry as shown on map in Appendix 2 of submission. Seeks the mapping to be revised or removed entirely.	Update mapping with accurate and evidence-based mapping, or delete definitions and retain existing definition of "erosion prone land" as shown below: Erosion prone land The pre-existing slope of the land exceeds 20 degrees.

S255 Woodridge Holdings Ltd

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.001	General comments	General comments - consultation	Oppose	Concerned with lack of consultation with key landowners and the development community during the preparation of PC1.	Withdraw PC1 and consult all relevant parties before releasing a replacement.
S255.002	General comments	General comments - overall	Oppose	Little or no consideration of NPS-UD which has equal status and there is a disjoint between the outcomes being sought by the Territorial Authorities actively promoting development as required by the NPS-UD and the restrictive approach WRC is proposing via PC1.	Withdraw PC1 and review and amend all provisions in light of this issue.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.003	General comments	General comments - overall	Oppose	Considers PC1 uses vague language like "where practicable" which lacks clarity as to when stormwater treatment systems will and won't be required.	Review all provisions to remove or eliminate vague language.
S255.004	General comments	General comments - overall	Oppose	Considers PC1 repeats the same objectives, policies and rules with a different heading for a different catchment and this is an unnecessary complication Suggests a set of objectives, policies and rules which apply to all catchments and supplementary ones where a specific objective, policy or rule as necessary for a specific catchment.	Withdraw PC1, review all objectives, policies and rules and remove all duplications by combining them wherever possible.
S255.005	General comments	General comments - stormwater management	Oppose	Considers the long-term operational, maintenance and ownership requirements of the stormwater treatment system needed to be considered and determined before PC1 was notified, due to legal effect upon being released. Concerns about uncertainty whether the relevant TA will accept discharges into their existing systems or if they will approve extensions to those systems to accommodate additional development. Considers technical and legal issues would arise if TA's require all new sections of stormwater main to be held in private ownership and maintained by the upstream property owners.	Withdraw PC1 and review and amend all provisions in light of this issue.
S255.006	General comments	General comments - stormwater management	Oppose	Concerned that TA's will not allow discharges to their network if there is risk that the discharge could make them breach the PC1 requirements in relation to their network.	Withdraw PC1 and review all provisions in light of this issue and amend so that TA's are required to accept a discharge which meets the specified standards a permitted activity or has an appropriate GW resource consent.
S255.007	General comments	General comments - urban development	Oppose	Notes that PC1 does not include a Water Sensitive Urban Design Guide and so Council is asking developers via PC1 to implement measures into developments which it has not considered and provided guidance on. Considers this document should be prepared at the same time or before PC1	Withdraw PC1, review it and release it again when the Water Sensitive Urban Design Guide has also been prepared, in consultation with the relevant stakeholders.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				as typical water sensitive urban design measures are not going to work in large parts of the region due to the topography and the nature of the underlying material. Considers the approach makes it difficult for applicants to know what is likely to be acceptable under the rules and will result in a huge waste of time and resources for all parties involved.	
S255.008	12 Schedules	Schedule 30: Financial Contributions.	Not Stated	Opposes Schedule 30 and all objectives, policies and rules requiring a financial contribution and considers these an additional tax upon greenfield development. Notes PC1 makes several references to improving water quality. Resource consents are assessed in terms of their effects on the environment being "less than minor", "minor" or "more than minor". While positive effects can be used to offset negative adverse effects and s108(10) provides for financial contributions for the purpose of ensuring positive effects on the environment to offset any adverse effect, there is no requirement for the effects of a development upon the environment to be positive. Considers that development where the effects is less than minor should be consented, and that the contribution will flow through to house prices and contribute housing unaffordability.	Schedule 30 and all objectives, policies and rules requiring a financial contribution be deleted.
S255.009	2 Interpretation	Earthworks	Amend	Not stated	The second definition "For all other whaitua"/catchments should apply across the entire region. Add additional exclusions for activities as appropriate.
S255.010	2 Interpretation	Erosion and sediment management plan	Amend	Notes there are definitions for plantation forestry and vegetation clearance on highest erosion risk land, but no definition associated with earthworks generally.	Add a definition for an erosion and sediment control plan for general earthworks.
S255.011	2 Interpretation	Existing wastewater discharge	Amend	Considers one definition to two catchments and a different definition to all other catchments is inequitable and confusing.	Apply one definition to the entire region.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.012	2 Interpretation	Impervious surfaces	Amend	<p>Notes inconsistencies including porous or permeable paving which is permeable and is specifically excluded from the definition of impervious surfaces, when compacted metal is excluded. However, porous, or permeable paving, has to sit on top of a subgrade of compacted metal/gravel so that it does not settle over time. Questions if roof areas with rainwater collection and reuse, and any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed), are the same thing</p> <p>Notes that the 10,000 Ltr stormwater reuse tanks required by the KCDC District Plan are not designed to attenuate stormwater flows but to alleviate water supply issues and would have little impact upon stormwater flows. Considers a dedicated stormwater attenuation tank will empty over time and a level of attenuation for all rainfall events.</p>	Remove, "roof areas with rainwater collection and reuse" and "any impervious surfaces directed to a rain tank utilised for grey water reuse (permanently plumbed)" from the exclusions and add "roof areas with rainwater attenuation" and "any impervious surfaces directed to a rainwater detention device" to the exclusion.
S255.013	2 Interpretation	Mechanical land preparation	Amend	<p>Considers the approach to the definition is inconsistent with that for National Threatened freshwater species as it requires the reader to look up the National Environmental Standards for Plantation Forestry. Either they are referenced which requires people to look them up or they are referenced and the definition included. Suggests including a hyperlink to the definition in the referenced document.</p>	Consistency in the way all definitions are referenced.
S255.014	2 Interpretation	Redevelopment	Amend	<p>Considers the definition of redevelopment should not include the word redevelopment as that is what is being defined. Notes the definition uses the words "existing urbanized property" and "brownfield development" but does not define what these are. Suggests it will be hard to know what is an "upgrade" and what is minor maintenance.</p>	Amend definition along the following lines:

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				Suggests existing developments have consent or existing use rights and should have the right to replace existing hard surfaces without the need for resource consent and replacing an existing drive, where no household unit's or EHU'S are proposed is not a redevelopment but maintenance and the same applies to Councils' roads and other hard surfaces and infrastructure. If they are not being widened or lengthened and the surface area is the same or very similar then this is not redevelopment.	
S255.015	2 Interpretation	Stabilisation	Amend	Considers applying a definition to part of the region and nothing to the rest is inequitable and confusing. The definition should acknowledge that some areas inherently stable without the need to measures to be undertaken, eg.: exposed rock surfaces.	Provide one definition for the entire region. Amend to acknowledge that some areas are inherently stable and as such do not require stabilisation.
S255.016	2 Interpretation	Vegetation clearance (for the purposes of Rules WH.R20, WH.R21 and P.R19, P.R20)	Amend	Either they are referenced which requires people to look them up or they are referenced and the definition included. Suggests including a hyperlink to the definition in the referenced document.	Consistency in the way all definitions are referenced.
S255.017	3 Objectives	Objective O2	Amend	Notes the objectives refers to improving water quality. Resource consents are assessed in terms of their effects on the environment being "less than minor", "minor" or "more than minor". While positive effects can be used offset negative adverse effects and s108(10) provides for financial contributions for the purpose of ensuring positive effects on the environment to offset any adverse effect, there is no requirement for the effects of a development upon the environment to be positive.	All objectives and polies and rules should be reviewed and rewritten so that it is clear that improvements in water quality are not required but are encouraged.
S255.018	4 Policies	Policy P30: Biodiversit	Amend	Suggests policy is missing words, uses vague words and cannot be complied with if there are any	Amend wording "Manage the adverse effects of use and development [of land] on biodiversity, aquatic ecosystem health and mahinga kai to: ..." and be more specific by

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		y, aquatic ecosystem health and mahinga kai.		indigenous aquatic species and indigenous birds present.	removing the words "where practical" as they are vague. The wording or Item (e) relates to "Critical habitat for indigenous aquatic species and indigenous birds". But the wording covers every situation, not just "critical" ones such as breeding and migration. As a result, if there is any indigenous aquatic species or bird species in the area compliance cannot be achieved. It also uses the vague wording "where practical."
S255.019	5.4 Beds of lakes and rivers	Rule R151A: Ongoing diversion of a river - permitted activity.	Amend	Considers the rule is overly complicated and does not see the reason for differentiating between existing diversions associated with a structure and existing diversions which do not include structures, or the need to differentiate between diversions consented before or after PC1 became operative. Seeks for clause (a) the words "as at the date of this rule becoming operative" should be deleted, and a specific date inserted as the date at which the rule becomes operative will be harder to determine as time progresses. This change should be made where ever this or a similar reference is used.	Rule R151A: Ongoing diversion of a river - permitted activity An existing permanent diversion, that was lawfully established by way of a resource consent is a permitted activity [provided] all of the conditions of the resource consent which lawfully established the diversion have been complied with. Delete all use of the words "as at the date of this rule becoming operative" in PC1 and insert a specific date.
S255.020	6 Other methods	Method M36: Freshwater Action Plan programme.	Oppose	Considers that FAPs should be developed by WRC in consultation with all stakeholders. Concerned the method gives Council the ability to amend the FAP without formal consultation with the relevant community and considers formal consultation with all stakeholders, the catchment community and TA should be compulsory before any changes are made to a FAP.	Amend this and all other methods so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, including relevant landowners, catchment communities and TAs.
S255.021	6 Other methods	Method M37: Freshwater Action Plan for the Parangarau Lakes.	Amend	Notes the method does not mention formal consultation with the relevant catchment communities, territorial authorities (TA's) and stakeholders (including landowners).	Amend this and all other methods so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, catchment communities and TAs.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.022	6 Other methods	Method M38: Freshwater Action Plan for the Rangituhi catchment	Amend	Notes the method does not mention formal consultation with the relevant catchment communities, territorial authorities (TA's) and stakeholders (including landowners).	Amend this and all other methods so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, catchment communities and TAs.
S255.023	6 Other methods	Method 39: Freshwater Action Plan for Nationally Threatened freshwater species within Whaitua Te Whanganu i-a-Tara and Te Awarua-o-Porirua Whaitua.	Amend	Notes the method does not mention formal consultation with the relevant catchment communities, territorial authorities (TA's) and stakeholders (including landowners).	Amend this and all other methods so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, catchment communities and TAs.
S255.024	6 Other methods	Method M40: Fish passage action plan programme for Whaitua Te Whanganu i-a-Tara	Amend	Notes that formal consultation with the relevant catchment communities, TA's and stakeholders in the development of Fish passage Action Plan (FPAP is not mentioned).	Amend this and all other methods so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, catchment communities and TAs.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		and Te Awarua-o-Porirua Whaitua.			
S255.025	8 Whaitua Te Whanganui-a-Tara	Policy WH.P3: Freshwater Action Plans role in the health and wellbeing of waterways.	Amend	Notes that formal consultation with the relevant catchment communities, TA's and stakeholders in the development of Fish passage Action Plan (FPAP is not mentioned).	Amend this and all policies so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, catchment communities and TAs.
S255.026	8 Whaitua Te Whanganui-a-Tara	Policy WH.P10: Managing adverse effects of stormwater discharges.	Amend	Suggests wording of "where practicable" provides no clarity as to when stormwater treatment systems will and won't be required.	Remove the words "where practical" and be more specific.
S255.027	8 Whaitua Te Whanganui-a-Tara	Policy WH.P11: Discharges of contaminants in stormwater from high risk industrial or trade premises.	Amend	Considers P.P11 is an exact replica of WH.P11.	Combine provisions.
S255.028	8 Whaitua Te	Policy WH.P14:	Oppose	Considers "to the extent practicable" is vague and provides no clarity as to when stormwater treatment	Remove all vague wording and/or advise what "to the extent practicable" means.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Stormwater discharges from new and redeveloped impervious surfaces.		<p>systems will and won't be required.</p> <p>Item (a)(i) requires 85% of the mean annual runoff volume of stormwater to be treated but no allowance is provided for treating to a higher level, where that is possible. Considers this encourages people to do the minimum but incentivising through rates relief or reduced financial contribution payments could result in a higher level of treatment.</p> <p>Item (a) (ii) requires the installed stormwater treatment systems to "achieve copper and zinc load reductions factors equivalent to that of a raingarden. Bioretention device". but the targeted reduction for sediment zinc and copper in Tables 9.3 is 40% and Table 1 in Schedule 28: Stormwater Containment Treatment shows a 90% reduction. So Item (a) (ii) is in effect seeking a 90% reduction in copper and zinc discharges from a site to achieve the goal of reducing instream concentrations by 40%.</p> <p>Considers a 90% reduction of a site is onerous and as it is a larger reduction than necessary to achieve the goal in relation to the site. Considers development achieving more than a 40% reduction as required for their property should be compensated via rates relief or reductions in any financial contributions payable.</p>	<p>Provide incentives for treating more than 85% of the mean annual runoff volume of stormwater.</p> <p>Reduce the targeted reduction in copper and zinc per site to 40% or provide some form of financial compensation of achieving a higher treatment rate.</p> <p>Make the wording of (a)(ii) clear by specifying the percentage reduction required for copper and zinc rather than referring to reductions equivalent to a rain garden.</p>
S255.029	8 Whaitua Te Whanganui-a-Tara	Policy WH.P15: Stormwater contaminant offsetting for new greenfield development.	Oppose	<p>WH.P14(a)(i) requires 85% of the mean annual runoff volume of stormwater to be treated. No allowance is provided for treating to a higher level, where that is possible. Considers this encourages people to do the minimum but incentivising through rates relief or reduced financial contribution payments could result in a higher level of treatment.</p>	<p>Provide incentives for treating more than 85% of the mean annual runoff volume of stormwater.</p>
S255.030	8 Whaitua Te	Policy WH.P16:	Oppose	<p>Notes this policy is implemented through a new rule that would make landowners unable to apply for a</p>	<p>Delete policy</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
	Whanganui-a-Tara	Stormwater discharges from new unplanned greenfield development.		resource consent as such an activity is proposed to be prohibited which they consider effectively ring-fences the City. Considers it unlikely that GWRC would support a plan change application and this approach flies in the face of the local authorities' responsibility to provide for their own growth, and is a back-door way of achieving a very specific and unreasonable stormwater management approach.	
S255.031	8 Whaitua Te Whanganui-a-Tara	Policy WH.P31: Winter shut down of earthworks.	Oppose	Considers the policy is not effects based as not every earthworks project over 3,000m ² will have negative adverse effects if works are underway between 1 June and 30 September. Considers each job should be treated on its merits and conditioned accordingly.	Delete policy
S255.032	8 Whaitua Te Whanganui-a-Tara	Rule WH.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Oppose	Considers this ignores landowners existing use rights, noting that redeveloping a site without increasing the level of impervious surfaces than there would be no additional adverse effects upon the environment and the development should not have to provide any hydrological controls or additional treatment. Questions if this rule is relevant to sites which have >1,000m ² of impervious surfaces before redevelopment and <1,000m ² of impervious surfaces after development. Considers item (c)(ii) does not align with WWL Acceptable Solution V4 which requires rainwater tanks for new roof areas >40m ² (Table 1-1).	Remove all requirements to provide hydrological controls the area of impervious surfaces is reduced as part of a development. Align clause (c)(ii) with WWL Acceptable Solution V4 by increasing the area specified to 40m ² .
S255.033	8 Whaitua Te Whanganui-a-Tara	Rule WH.R6: Stormwater from new greenfield impervious surfaces -	Oppose	Notes that under WH.R5 the creation of new (ie: greenfield), or redevelopment of existing impervious areas of less than 1,000m ² are permitted provided the conditions are met and under WH.R7 the creation of new (ie: greenfield), or redevelopment of existing impervious areas between 1,000m ² and 3,000m ² are controlled provided the conditions are met. However under Rule WH.R6 the creation of	Remove all requirements to provide hydrological controls if the area of impervious surfaces is reduced as part of a development. Align clause(c)(ii) with WWL Acceptable Solution V4 by increasing the area specified to 40m ² .

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		controlled activity.		new impervious surfaces (ie: Greenfield Development) of between 1,000m ² and 3,000m ² are controlled provided the conditions are met. Therefore two controlled activity rules apply to Greenfield Developments where 1,000m ² and 3,000m ² of impervious surfaces are created. Controlled Rule WH.R6 at item (b) references permitted Rule WH.R6, notes a rule referring to itself makes no sense and the permitted rule is WH.R5. Matters for Control refer to "best practical option" and require 85% treatment.	
S255.034	8 Whaitua Te Whanganui-a-Tara	Rule WH.R7: Stormwater from new and redeveloped impervious surfaces of existing urbanised areas - controlled activity.	Amend	Considers rule uses vague wording and is unclear what "best practicable option" means.	Remove all vague wording and/or advise what "best practicable option" means. Provide incentives for treating more than 85% of the mean annual runoff volume of stormwater.
S255.035	8 Whaitua Te Whanganui-a-Tara	Rule WH.R11: Stormwater from new and redeveloped impervious surfaces - discretionary activity.	Amend	Not stated.	Provide incentives for treating more than 85% of the mean annual runoff volume of stormwater.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.036	8 Whaitua Te Whanganui-a-Tara	Rule WH.R13: Stormwater from new unplanned greenfield development - prohibited activity.	Oppose	Notes that under the RMA, to develop land for a land use it is not currently zoned for can be progressed either via a plan change or via a resource consent application. Considers making stormwater discharges from unplanned greenfield developments prohibited is excessive and is not necessary to ensure that the potential adverse effects of developing these areas are appropriately considered. Suggests making them a discretionary activity would result in all such land use needing a WRC resource consent and the potential adverse effects of these development upon the environment can be considered via that consent.	Amend so that unplanned greenfield developments area a discretionary activity.
S255.037	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks - permitted activity.	Oppose	Considers it will not be possible to comply with these rules as their conditions specify that there should be no discharge of sediment and suggests the majority small scale earthworks which are currently permitted would need a consent to ensure compliance is not an issue. Concern about GW resourcing to accommodate the costs generated by PC1. Considers WRC's own ESCP Guidelines don't consider or provide solutions for the level of treatment required, which is greater than that of a permitted stormwater discharge. Notes that as a result of these rules, the pre-earthworks development is allowed to discharge a prescribed level of SS and the post-development site is allowed to discharge a prescribed level of SS but the development phase is not allowed any, and topography and permeability in Wellington and Porirua makes treatment difficult.	Withdraw and redraft PC1 or amend Rules WH.R23 and P.P22 so that they allow an appropriate level of SS in any stormwater discharge. 50g/m3 to Schedule A sites and 100g/m3 to any other water body are noted in WH.R3 (notes these levels may need to be amended following submission by experts in this field).
S255.038	8 Whaitua Te Whanganui-a-Tara	Rule WH.R23: Earthworks -	Amend	Considers in most cases it will not be possible to comply with Items (c)(1v) and (c)(v) of Rule WH.R23 as they specify that there should be no discharge of sediment and therefore nearly all small scale earthworks which are currently permitted would	Amend Items (c)(1v) and (c)(v) so that they allow an appropriate level of SS ion any stormwater discharge. 50g/m3 to Schedule A sites and 100g/m3 to any other water body are noted in WH.R3 (notes these levels may need to be amended following submission by experts in this field).

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		permitted activity.		require a WRC consent. Notes the rule requires a level of treatment that is greater than that permitted under WH.R3. Notes the pre-earthworks development is allowed to discharge a prescribed level of SS and the post-development site is allowed to discharge a prescribed level of SS but the development phase is not allowed any, and topography and permeability in Wellington and Porirua makes treatment difficult. Notes the GWRC Guidelines referenced in the note below this rule are not designed to achieve "no discharge of sediment" but none of the measures specified, even the sediment retention ponds can be guaranteed to remove all sediment.	
S255.039	8 Whaitua Te Whanganui-a-Tara	Rule WH.R24: Earthworks - restricted discretionary activity.	Amend	Notes whilst there is greater potential for earthworks to have negative adverse effects during the winter period between 1 June and 30 September it does not automatically follow that all earthworks underway during this period will have negative effects. Considers each job should be treated on its merits and conditioned accordingly, and one of the matters for discretion under this rule is the "timing of the works". Notes the matter for discretion, "The proportion of unestablished land in the catchment.", is vague and gives an applicant no idea what % of disturbance is likely to be acceptable per catchment and makes the applicant reliant upon the actions of others. Questions if the % limit for a catchment is exceeded because there are multiple developments in the area, how does Council decide who goes first? Considers this could cause a trade competition issue.	Delete WH.R24(b) Provide guidance as to the % of a catchment which can be developed at onetime and guidance as to how "The proportion of unestablished land in the catchment." matter for discretion will work.
S255.040	9 Te Awarua-o-Porirua Whaitua	Policy P.P2: Management of activities	Amend	Item P.P2(b) is "encouraging redevelopment activities within existing urban areas to reduce the existing urban contaminant load, and", but the rules do not 'encourage' redevelopments to reduce urban contaminant loads they 'require' it.	Amend all rules so that they 'encourage' and do not 'require' developments to reduce urban contaminant loads in accordance with this policy.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		to achieve target attribute states and coastal water objectives.			
S255.041	9 Te Awarua-o-Porirua Whaitua	Policy P.P3: Freshwater Action Plans role in the health and wellbeing of waterways .	Amend	Notes the method does not mention formal consultation with the relevant catchment communities, territorial authorities (TA's) and stakeholders (including landowners).	Amend this and all other policies so that FAPs cannot be developed or amended without formal engagement of the relevant stakeholders, catchment communities and TAs.
S255.042	9 Te Awarua-o-Porirua Whaitua	Policy P.P6: Point source discharges .	Oppose	<p>Notes that P.P6(a) states that "any new discharge is inappropriate if contaminants in the discharge would cause the affected freshwater body to decline in relation to the target attribute state(s) for that part Freshwater Management Unit(s) and/or coastal water objective(s)" and questions if the policy is contrary to the rules as a permitted discharge under Rule WH.R5 and any discharge requiring a consent may in a very small way result in a decline in relation to the target attribute state(s) even if only for a small section of the water body.</p> <p>Notes P.P6(b)(i) refers to "upgrading the discharge" while P.P6(c)(i) refers to "improving the discharge" and suggests consistent terminology should be used.</p> <p>P.P6(b)(i) relates to existing point source discharges where TASs are met and states that they are only appropriate if a resource consent includes a defined</p>	<p>Amend the policy so that developments do not automatically contravene it even if permitted.</p> <p>Use consistent understandable terminology.</p> <p>Clarify the applicability of the policy.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
				<p>programme of work for upgrading the discharge. Considers it is not clear if this relates to land development, for example does a developer who is discharging to the TA network have to upgrade the TA network so that the quality of the discharge is improved? Questions if that is the case will the TA just refuse to accept any additional inputs, even if they comply with WH.R4 for not meeting the discharge standards. Considers this will lead to development ceasing and increased property prices.</p> <p>The same question applies to P.P6(c) relating to existing point source discharges where TASs are not met.</p>	
S255.043	9 Te Awarua-o-Porirua Whaitua	Policy P.P7 Discharges to groundwater.	Oppose	Considers this policy and specifically the words "shall not degrade the quality of groundwater" cannot be complied with as all stormwater discharges include some level of contamination and as so this policy would be contravened.	Amend the policy so that it can be met.
S255.044	9 Te Awarua-o-Porirua Whaitua	Policy P.P9: General stormwater policy to achieve the target attribute states and coastal water objectives.	Amend	Considers this is an exact replica of WH.P9 and could be rewritten into one policy.	Delete and rewrite into one policy.
S255.045	9 Te Awarua-o-Porirua Whaitua	Policy P.P10: Managing adverse effects of	Amend	Considers P.P10(a) and P.P10(c) are covering the same ground and both also use vague wording such as "to the extent practicable" and "where practicable".	Review to simplify and remove vague wording or provide a definition for "to the extent practicable" and "where practicable".

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		stormwater discharges			
S255.046	9 Te Awarua-o-Porirua Whaitua	Policy P.P12: Managing stormwater network discharges through a Stormwater Management Strategy.	Amend	Notes that P.P12(a) specifies a 15% reduction in copper in discharges and a 40% discharge in zinc to the coastal water management units of Onepoto Arm and Pāuatahanui Inlet but considers this is inconsistent with Table 9.3 which specifies 40% reduction for both.	Fix this inconsistency and review PC1 for other similar inconsistencies.
S255.047	9 Te Awarua-o-Porirua Whaitua	Policy P.P13: Stormwater discharges from new and redeveloped impervious surfaces.	Oppose	Policy supports the associated rule that 85% of mean annual runoff volume from new impervious surfaces must be treated which is considered to be excessive and unreasonable.	Delete policy
S255.048	9 Te Awarua-o-Porirua Whaitua	Policy P.P14: Stormwater contaminant offsetting for new greenfield development.	Oppose	Notes this policy is implemented through a new rule that would make landowners unable to apply for a resource consent as such an activity is proposed to be prohibited which they consider effectively ring-fences the City. Considers it unlikely that GWRC would support a plan change application and this approach flies in the face of the local authorities' responsibility to provide for their own growth, and is a back-door way of achieving a very specific and unreasonable stormwater management approach.	Delete policy

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.049	9 Te Awarua-o-Porirua Whaitua	Policy P.P15: Stormwater discharges from new unplanned greenfield development.	Not Stated	Notes this policy is implemented through a new rule that would make landowners unable to apply for a resource consent as such an activity is proposed to be prohibited which they consider effectively ring-fences the City. Considers it unlikely that GWRC would support a plan change application and this approach flies in the face of the local authorities' responsibility to provide for their own growth, and is a back-door way of achieving a very specific and unreasonable stormwater management approach.	Delete policy
S255.050	9 Te Awarua-o-Porirua Whaitua	Policy P.P28: Discharge standard for earthworks sites.	Amend	This policy relates to the discharge standards for earthworks sites and makes reference to discharge standard for turbidity to be measured using a new method of Total Suspended Solids. Notes this test requires a laboratory to measure and cannot readily be done in the field.	We request the Policy be amended to refer to an NTU standard.
S255.051	9 Te Awarua-o-Porirua Whaitua	Policy P.P29: Winter shut down of earthworks.	Oppose	Considers the policy is not effects based as not every earthworks project over 3,000m ² will have negative adverse effects if works are underway between 1 June and 30 September. Considers each job should be treated on its merits and conditioned accordingly.	Delete policy
S255.052	9 Te Awarua-o-Porirua Whaitua	Rule P.R2: Stormwater to land - permitted activity.	Amend	Considers P.R2 repeats WH.R2 and as such is unnecessary.	Combine into one rule. If it is not, comments regarding WH.R2 apply.
S255.053	9 Te Awarua-o-Porirua Whaitua	Rule P.R3: Stormwater from an existing individual property to surface water or	Amend	Considers P.R3 repeats WH.R3 and as such is unnecessary.	Combine into one rule. If it is not, comments regarding WH.R3 apply.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		coastal water - permitted activity.			
S255.054	9 Te Awarua-o-Porirua Whaitua	Rule P.R4: Stormwater from an existing high risk industrial or trade premise - permitted activity.	Amend	Considers P.R4 repeats WH.R4 and as such is unnecessary.	Combine into one rule. If it is not, comments regarding WH.R4 apply.
S255.055	9 Te Awarua-o-Porirua Whaitua	Rule P.R5: Stormwater from new and redeveloped impervious surfaces - permitted activity.	Amend	Considers P.R5 repeats WH.R5 and as such is unnecessary.	Combine into one rule. If it is not, comments regarding WH.R5 apply.
S255.056	9 Te Awarua-o-Porirua Whaitua	Rule P.R6: Stormwater from new greenfield impervious surfaces - controlled activity.	Amend	Considers P.R6 repeats WH.R6 and as such is unnecessary.	Combine into one rule. If it is not, comments regarding WH.R6 apply.
S255.057	9 Te Awarua-o-Porirua Whaitua	Rule P.R7: Stormwater from new and redeveloped	Amend	Considers P.R7 repeats WH.R7 and as such is unnecessary. Notes that (b) refers to activities permitted under P.R6 when P.R5 is the permitted rule.	Combine into one rule. If it is not, comments regarding WH.R7 apply.

Amend	<p>Considers unnamed streams in all schedules be given a reference and mapped, including provision of a hyperlink to the coordinates, so that the location can be more readily identified. Considers it not sufficient to state coordinates alone.</p> <p>Considers all streams with names should also be mapped and provided with a hyperlink so that it's easier to determine where they are, noting not everyone knows individual stream names and where they are and it can be difficult to determine their locations using the available online info.</p>	<p>Provide a reference and map all unnamed streams in all schedules and include the provision of a hyperlink to the coordinates.</p> <p>Map and provide a hyperlink to all streams with names.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.089	12 Schedule s	Schedule F5: Habitats with significant indigenous biodiversit y values in the coastal marine area.	Amend	<p>Considers unnamed streams in all schedules be given a reference and mapped, including provision of a hyperlink to the coordinates, so that the location can be more readily identified. Considers it not sufficient to state coordinates alone.</p> <p>Considers all streams with names should also be mapped and provided with a hyperlink so that it's easier to determine where they are, noting not everyone knows individual stream names and where they are and it can be difficult to determine their locations using the available online info.</p>	<p>Provide a reference and map all unnamed streams in all schedules and include the provision of a hyperlink to the coordinates.</p> <p>Map and provide a hyperlink to all streams with names.</p>
S255.090	12 Schedule s	B Freshwater Action Plan requireme nts.	Amend	Considers that FAPs should be developed by WRC in consultation with all stakeholders	Amend so that all stakeholders are recognised as being important to the development and implementation of FAP's.
S255.091	12 Schedule s	B3 Necessary actions.	Amend	Questions about rates relieve to treating more than 85% of your stormwater or retiring and planting areas which are not considered to be the highest risk erosion prone land but which still contribute sediment to the water bodies eg.: former forestry land or riparian areas.	Consider rates relief and other forms of financial support for a wider range of actions which will improve water quality.
S255.092	12 Schedule s	Table 1: Target load Reduction s for Copper and Zinc	Oppose	Notes the target load reductions for Coper and Zinc in Table 1 are 90 but the targeted reduction for zinc and copper in Tables 9.3 is 40%. Considers a 90% reduction of a site is onerous and as it is a larger reduction than necessary to achieve the goal in relation to the site. Considers development achieving more than a 40% reduction as required for their property should be compensated via rates relief or reductions in any financial contributions payable.	Reduce the targeted reduction in copper and zinc per site to 40% or provide some form of financial compensation of achieving a higher treatment rate.
S255.093	12 Schedule s	Schedule 29: Stormwater Impact	Oppose	Considers that as clause 8 requires specifies that SIA's need to include Cultural considerations to be informed by engagement with mana whenua, this makes consultation with Mana Whenua compulsory.	Amend this clause to that it is not in conflict with the RMA.

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
		Assessments.		Considers this is in conflict with the Clause 6(1)(f) of the Fourth Schedule of the RMA, and it should be amended so that it does not require consultation with mana whenua.	
S255.094	12 Schedule s	A Context	Amend	<p>Considers the wording of the first paragraph referencing is slightly misleading. Notes it uses the word "may" but s10 states that "A108(10) a financial contribution unless--</p> <p>(a) the condition is imposed in accordance with the purposes specified in the plan or proposed plan (including the purpose of ensuring positive effects on the environment to offset any adverse effect); and</p> <p>(b) the level of contribution is determined in the manner described in the plan or proposed plan."</p> <p>Notes while the NPS-FW requires water quality to be maintained or improved, s10 only requires "positive effects on the environment to offset any adverse effect" there is no requirement for overall effects to be positive and resource consents should be granted where the overall adverse effects of and application are less than minor.</p>	Amend text accordingly
S255.095	12 Schedule s	B Purpose	Oppose	Considers if brownfield development, which have existing use rights, are improving their discharges during redevelopment they should get a payment/rates reduction/credit.	Consider financial incentives for existing property owners who install water attenuation and or treatment devices.
S255.096	12 Schedule s	C Definition of an Equivalent Household Unit	Oppose	<p>Considers the paragraphs are confusing as there is no specific definition of what is average sized or a m2 size specified and this could vary from city to city.</p> <p>Notes the second paragraph talks about every 100m2 of non-residential development and new road/state highways (not directly sporting a greenfield development) being deemed to create one unit of impact and questions if 100m2 is one EHU or not.</p>	<p>Amend to provide clarity as to what is an EHU and what is not.</p> <p>Clarify how EHU are applied to hard surfaces that are not roofs eg.: roads, onsite paving and driveways, in all areas.</p>

Proposed Change 1 to the Natural Resources Plan – Submission Points Ordered by Submitter Alphabetically

Submission Point	Plan Section	Provision	Stance	Reasons	Decision Requested
S255.097	12 Schedule s	Tale D2. Financial contribu tion calculatio n s for non- residential greenfield developm ent and new roads/stat e highways	Amend	Considers the financial contribution timing needs to be defined and notes paying all financial/development contributions up front for an entire development can make the development uneconomic, with TA financial/development contributions typically paid when a developer applies for s224c certification or when a building consent is to be issued. Considers the proposed financial contributions should only be payable when there is an impact to water quality. Considers there also needs to be a mechanism for these contributions to be refunded if they are paid and a development or building does not proceed or is not completed in its entirety.	Consider and amend accordingly
S255.098	12 Schedule s	Schedule 31: Stormwate r Managem ent Strategy - Te Whanganu i-a-Tara and Te Awarua-o- Porirua.	Amend	Concerned that TA's will not allow stormwater discharges to their networks in the future as even a complying discharge may result in compliance issues at the point of discharge from their network to a water body.	Provide clarity that TA's will have to accept complaint discharges or discharges approved via a NRP consent.
S255.099	13 Maps	Map 27: Sites with significant indigenous biodiversit y values in the coastal marine area	Amend	Considers maps are basic and do not allow you to zoom into to a large enough scale to see exactly where boundaries are relative to property boundaries.	Provide TA District Plan style online maps.

		in coastal water.			
S183.070	3 Objectives	Objective O19: Biodiversity, aquatic ecosystem health and mahinga kai in freshwater bodies and the coastal marine area are safeguarded.	Amend	Not stated	Amend Objective O19 as follows Objective O19 Biodiversity, aquatic ecosystem health and mahinga kai in freshwater bodies and the coastal marine area are safeguarded such that: (a) water quality, flows, water levels and aquatic and coastal habitats are managed to maintain and improve biodiversity , aquatic ecosystem health and mahinga kai, and (b) where an objective in Tables 3.4, 3.5, 3.6, 3.7 or 3.8 is not met, a freshwater body or coastal marine area is meaningfully improved so that the objective is met within a reasonable timeframe, and (c) restoration of aquatic ecosystem health and mahinga kai is encouraged . undertaken and required where land is developed that contains freshwater bodies. Note For the purposes of this objective 'a reasonable timeframe' is a date for the applicable water body or coastal marine area inserted into this Plan through the plan change/s required by the RMA to implement the NPS-FM 2020, or 2050 2035 if no other date is specified by 31 December 2026.
S183.071	3 Objectives	Table 3.4 Rivers and Streams.	Amend	Not stated	Amend Table 3.4 as follows: Mahinga kai species, including taonga species, are present in quantities, size and of a quality that is appropriate for the area in a healthy ecological state and reflective of a healthy functioning ecosystem ¹⁸ Huangā of mahinga kai as identified by mana whenua are achieved.
S183.072	3 Objectives	Table 3.5 Lakes.	Support	Not stated	Not stated
S183.073	3 Objectives	Table 3.6 Groundwater.	Support	Not stated	Not stated

S113.012	8 Whaitua Te Whanganui-a-Tara	Policy WH.P12: Managing stormwater from a port or airport.	Support	Considers the Kaiwharawhara awa stands to benefit from an overall reduction of copper and zinc concentrations in stormwater systems.	Not stated
S113.013	12 Schedules	Schedule F1: Rivers and lakes with significant indigenous ecosystems.	Amend	Notes that both ākahi/freshwater mussel (<i>Echyridella menziesii</i>) (At Risk declining) and <i>E. aucklandica</i> (Threatened- Nationally Vulnerable) have been reintroduced to the upper catchment in Zealandia	Amend to add reach of tidal influence' to the inanga spawning habitat column. Amend to add kākahi/freshwater mussel (<i>Echyridella menziesii</i>) (At Risk declining) and <i>E. aucklandica</i> (Threatened- Nationally Vulnerable) to nationally threatened freshwater species column.
S113.014	12 Schedules	A2 Freshwater Action Plans required in Whaitua Te Whanganui-a-Tara.	Amend	Supports the existing list of attributes in Schedule 27 A2 Freshwater Action Plans required in Whaitua Te Whanganui-a-Tara. Suggests the addition of <i>E. coli</i> and deposited fine sediment to the Kaiwharawhara stream list of attributes for which Freshwater Action Plans is prepared. Notes both of these attributes are increasingly problematic for the whaitua with erosion increasing in severe weather events increasing sediment loading of the awa and significant wastewater pipe overflows introducing faecal matter to the awa (as noted by the baseline E rating).	Add <i>E. coli</i> and deposited fine sediment to the Kaiwharawhara stream list of attributes for which Freshwater Action Plans will be prepared.
S113.015	6 Other methods	6.16 Supporting improved water quality outcomes.	Support	Supports addressing and minimising the environmental impacts of fish barriers to promote diadromous species to complete their life cycles. Supports improved water quality outcomes with specific funding allocated towards stormwater and wastewater network upgrades.	Not stated
